

# Science by the Seat of the Pants

## Examples and Experiences

Stephen Lehmann  
NOAA Scientific Support Coordinator  
New England Region

# The Hunt for Submerged Oil

## ➤ The question:

- “Can you guarantee me that this oil has not submerged?”

## ➤ The answer:

- No, but I can demonstrate the following:
  - 1. Whether oil is abundant in the water column
  - 2. Whether oil is abundant on the bottom

Fine Print: (Lack of abundance does NOT indicate absence)

# Review

- What causes submerged oil ?
  - Oil is heavier than the receiving water...
  - Oil entrains sediment (sand)...
  - Oil encounters vertical currents...
- If none of these conditions exist...

THE OIL CAN NOT SINK

Why? Sir Isaac Newton says so!

**Keep it simple**

**Can you prove  
that the oil will  
floats?**

**Oil**

**Receiving Water**

# How dense is this oil?

Now, cut the density of the test water in half.

Fresh Water  
SG = 1.00

Sea Water  
SG = 1.04

Test Water  
SG = 1.02

# Finding the Oil

## ➤ Spatial Data

- Data collected over a given area

## ➤ Point Data

- Data collected in a specific place

## ➤ Temporal Data

- Data collected over time

Sample  
Collection  
Devices

# Sorbent Chain Drag

# Sorbent Anchors

# Monitoring Plan

- Traps/Drags/Bombs deployed at **X** locations
  - Devices are checked at **Y** interval
  - Degree of oiling is observed and recorded
  - If oil is observed, **Z** action is taken
    - More traps (increases resolution)
    - More frequent monitoring (defines time of greatest impact,
- 

# Monitoring Types

- Sorbent Drag
  - Spacial Data
- Sorbent Anchors
  - Point Data
- Sorbent Traps
  - Temporal Data

# Case Study

- Little Lake, LA
- Crude oil
- “Fragmented” marsh
- Poor access

# Protecting Wildlife

## ➤ The Question

- Will the oil on the vegetation contaminate waterfowl (or other animals) who use it?
- Is there anyway to minimize contamination?

## ➤ The Answer

- I don't know, but I think I can measure the "stickiness" of the oil, draw conclusions from that and design a solution.

# The “Sorberent Duck”

I don't THINK so !

# Sorbent Duck

- Cut sorbent boom or “bilge pillow” attached to 50 ft. of line.
- The design is simple, inexpensive, made from available resources and fast.
- Method is repeatable and easy to explain.

# Sorbent Duck in Practice

Before

After

# Broadcast Barrier

- Which material will work best ?
- Must:
  - Broadcast
  - Stick on the oil
  - Be biodegradable
  - Provide good coverage
  - Be approved

# Bench Scale Test

**Documentation**

# Field Testing

# Sampling

# Implementation

# When is a beach clean?

- Home Heating Oil
- No sheening
- No visible oil
- 4 months until tourists

copyright 1999-92 philg@mit.edu

# Species at Risk

## ➤ The Question

- How do we ensure that the beaches will not impact the users ?

## ➤ The Answer

- We need to determine the pathway of exposure, the offending element and eliminate it.

## ➤ The problem

- You can't see it
- You can't feel it
- But...you can smell it!

## ➤ So...how do we determine “clean” ?

# Determining “Clean”

- If odor is the agreed pathway of “injury” to the resource users, then how is “clean” determined?

**Smell It!**

# Sensory Analysis

- Sensory Panel Design
- Analysis Methodology
- “Pass - Fail” Levels
- Sampling Collection Plan
- USE CONTROL SAMPLES

# The Orange:

It not just for breakfast anymore !

- Measure current velocity
- Measure current direction
- Measure erosion rate
- Identify natural collection areas

# Oranges As Drogues

## Coastal Sediment Cells

# Toxicity Testing On A Budget

# Toxicity

- A stream
- Chemical contaminants
- A previous fish kill

Is the water still lethal to fish ?

Lets torture some fish

# What is needed for *LC 50, Texas Style*

- Materials:
  - Cages, line, anchor
- Specimen:
  - Fish (what species ?)
- A Plan & Agreement (what is “success”)
- Being crazy enough to think you can sell this plan to your investors.

Lets torture some fish

# Shoreline Cleaning Chemicals

## ➤ Questions

1. Will shoreline cleaners be effective ?
2. Which shoreline cleaner should be used

Develop a Plan

Got Questions ?

Thank You
