<sup>1</sup>A person was defined as uninsured if he or she did not have any private health insurance, Medicare, Medicaid, Children's Health Insurance Program (CHIP), state-sponsored or other government-sponsored health plan, or military plan. A person was also defined as uninsured if he or she had only Indian Health Service coverage or had only a private plan that paid for one type of service, such as accidents or dental care.

<sup>2</sup>Excludes plans that paid for only one type of service, such as accidents or dental care.

<sup>3</sup>Includes Medicaid, CHIP, state-sponsored or other government-sponsored health plan, Medicare (disability), and military plans.

<sup>4</sup>Estimates are based on data collected from January through June.

NOTES: Data are based on household interviews of a sample of the civilian noninstitutionalized population. Coverage status is at the time of interview. The "Private health insurance" and "Public health plan" coverage categories are not mutually exclusive, and a small number of persons had both types of coverage and are included in both categories. The 2011 health insurance estimates are being released prior to final data editing and weighting, to provide access to the most recent information from the National Health Interview Survey (NHIS). These estimates are provided along with comparable estimates from the 2008–2010 NHIS. The resulting estimates for persons without health insurance are generally 0.1–0.3 percentage points lower than those based on the editing procedures used for the final data files. Occasionally, due to decisions made for the final data editing and weighting, estimates based on preliminary editing procedures may differ by more than 0.3 percentage points from estimates based on final files.
