

To Secretary Donald Clark:

I am writing to you in regard to the article "Made in the USA? Well maybe" in the May-June 1997 Sheet Metal workers journal. He are letting too many things be made by foreign countries now because of cheaper labor and prices but in many cases cheaper material and inferior work. He have closed down our own factories putting thousands of people out of work and causing many of them to lose homes, cars, all they owned, and seem to feel no remorse. He send millions to people starving in foreign countries but if we looked through our states, would find we have them too. Most foreign countries we help don't appreciate us, and would stab us in the back if we turned around. A great deal of our debt is due to our overseas help. Now, in order to get out of debt we talk about changing help to our elderly and lessening Americas benefits. He are discriminated against, lied to enough, deceived at times as it is. Please don't allow them to lie to us on the "Made in America" logo we Americans are proud of. It means well made, dependable, and done by our own people which spells out employment. If they lie about something on our logo, which we depend on for truth, we can never trust them on anything. Please don't let it happen.
