

**Domestic Distribution of U.S. Coal by Origin State,
Consumer, Destination and Method of Transportation, 2008
Final**

May 2010

2008 Changes in Coal Distribution Table Format and Data Sources

Introduction

The Coal Distribution Report – Annual provides detailed information on domestic coal distribution by origin State, destination State, consumer category, and method of transportation. Also provided is a summary of foreign coal distribution by coal-exporting State.

This Final 2008 Coal Distribution Report – Annual, supersedes the Preliminary 2008 Coal Distribution Report – Annual. This report relies on the most current data available from EIA's various monthly, quarterly and annual surveys of the coal industry and electric power generation industry. In addition, the report contains actual annual data instead of imputed data for smaller electric generation plants that are excluded from the monthly filing requirements.

Changes in Table Format and Sources

The data sources for the 2008 Coal Distribution Report reflect a major revision to EIA data collection surveys. The EIA-6A, "Coal Distribution Report – Annual," was discontinued at the end of 2007 and the new EIA-923, "Power Plant Operations Report" became the source of data for the electric generation sector. In 2008, almost 93 percent of all coal distributed was received by electric generation plants.

The Electricity Generation sector in this report includes Electric Utilities, Independent Power Producers and Electric Utility Combined Heat & Power plants. Commercial Combined Heat & Power and Industrial Combined Heat & Power plants, which also submit data on the EIA-923, are included in the Industrial Plants (Excluding Coke) and Commercial & Institutional sectors.

Coal receipts as provided in the Coal Distribution Report for the Electricity Generation sector are less than the total quantities reported on the EIA-923. During 2008, total coal receipts reported on the EIA-923 were 1,069,709,165 short tons, compared to 1,004,356,613 short tons for the Electricity Generation sector of the Coal Distribution Report. The Coal Distribution Report is meant to reflect domestic distribution of coal. Therefore, coal imports from the EIA-923 survey are excluded. Other excluded categories are waste coal, for the Electricity Generation sector, plus all receipts for the Commercial Combined Heat & Power and Industrial Combined Heat & Power plants.

Coal distribution to Coke Plants is obtained from the Form EIA-5, "Quarterly Coal Consumption and Quality Report – Coke Plants." The volume of coal distributed to coke plants excludes coal imports and is thus smaller than the volume of receipts at Coke Plants reported in the Quarterly Coal Report (QCR), which includes imports.

Coal distribution to Industrial Plants (Excluding Coke) is obtained from the Form EIA-3, "Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation /Processing Coal Plants and Commercial and Institutional Coal Users" and Form EIA-

7A, "Coal Production and Preparation Report." The Coal Distribution Report volume reported for Industrial Plants (Excluding Coke) is smaller than the volume of receipts at Industrial Plants in the QCR to the extent that the Coal Distribution Report excludes waste coal and imports.

Since 2008, the Residential & Commercial consuming sector has been replaced by the Commercial & Institutional sector, which excludes the residential sector and small amounts of coal used in the transportation fuel sector (primarily tourist steam railroads). Commercial & Institutional coal distribution is obtained from the Form EIA-3, "Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation /Processing Coal Plants and Commercial and Institutional Coal Users" and Form EIA-7A, "Coal Production and Preparation Report."

Previously, on the EIA-6A survey form, it was not possible to identify refuse or waste coal¹, which was included in anthracite and bituminous distributions. Waste coal receipts are collected and separately identified on the EIA-923. Waste coal volumes are especially significant in Pennsylvania and West Virginia. The Coal Distribution Report excludes waste coal and small volumes of Synthetic Coal that may have been distributed after all Synthetic Coal plants were closed. It is anticipated that EIA will introduce a separate set of tables to report on the distribution of waste coal.

Coal exports previously reported on the EIA-6A, are now obtained from the modified EIA-7A, "Coal Production and Preparation Report." Coal exports may differ from the volumes reported in the EIA QCR. Volumes reported in the QCR are obtained from the Bureau of the Census, U.S. Department of Commerce, "Monthly Report EM 545." It is expected that differences would arise in the results of the surveys due to differences in survey frame populations, survey errors, assumptions and definitions. For example, in 2008 the Coal Distribution Report shows exports as 66,268 thousand short tons while the QCR shows exports of 81,519 thousand short tons.

Resolving Missing Data in the EIA-923 Records.

As noted above, in 2008 EIA began using the new EIA-923 form to collect data on the electric generation sector. A significant number of respondents submitted their EIA-923 forms with a blank or null entry for origin State; a smaller number submitted forms without entering a transportation mode.

Additional follow-up survey efforts since the preliminary report was issued reduced the number of records without an origin state in the database to 460, accounting for approximately 3,715 thousand short tons of coal. Application of computerized algorithms

¹ **Waste coal:** Usable material that is a byproduct of previous coal processing operations. Waste coal is usually composed of mixed coal, soil, and rock (mine waste). Most waste coal is burned as-is in unconventional fluidized-bed combustors. For some uses, waste coal may be partially cleaned by removing some extraneous noncombustible constituents. Examples of waste coal include fine coal, coal obtained from a refuse bank or slurry dam, anthracite culm, bituminous gob, and lignite waste.

and a review of past plant receipts identified all coal origin States, while the volume of coal with an Unknown method of transportation was reduced to 4,403 thousand short tons. These records are identified in the report tables as Unknown Transportation Mode.

s Quantity is less than 500 short tons, but value is included in any associated total.

- = No data are reported.

Note: Total may not equal sum of components because of independent rounding. Data for all consumer categories are for coal receipts at those plants, with one exception. Coal distributed to industrial plants includes a small amount of coal consumed by coal preparation plants.

Sources: Electricity Generation: Form EIA-923, "Power Plant Operations Report;" Coke Plants: Form EIA-5, "Quarterly Coal Consumption and Quality Report - Coke Plants;" Industrial Plants Excluding Coke and Commercial and Institutional: Form EIA-3, "Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation/Processing Coal Plants and Commercial and Institutional Coal Users" and Form EIA-7A, "Coal Production and Preparation Report."
