**Domestic Distribution of U.S. Coal by Destination State,
Consumer, Destination and Method of Transportation,
2009
Final**

February 2011

Overview of 2009 Coal Distribution Tables

Introduction

The Coal Distribution Report – Annual provides detailed information on domestic coal distribution by origin state, destination state, consumer category, and method of transportation. Also provided is a summary of foreign coal distribution by coal-producing State.

This Final 2009 Coal Distribution Report – Annual, supersedes the data contained in the four Quarterly Coal Distribution Reports previously issued for 2009. This report relies on the most current data available from EIA’s various monthly, quarterly and annual surveys of the coal industry and electric power generation industry. In addition, the report contains actual annual data instead of imputed data for smaller electric generation plants that are excluded from the monthly filing requirements.

Table Format and Sources

The Electricity Generation sector in this report includes Electric Utilities, Independent Power Producers and Electric Utility Combined Heat & Power plants. Commercial Combined Heat & Power and Industrial Combined Heat & Power plants, which also submit data on the EIA-923, are included in the Industrial Plants (excluding Coke) and Commercial & Institutional sectors.

Coal receipts as provided in the Coal Distribution Report for the Electricity Generation sector are less than the total quantities reported on the EIA-923. During 2009, total coal receipts reported on the EIA-923 were 981,477 thousand short tons, compared with 928,864 thousand short tons for the Electricity Generation sector of the Coal Distribution Report. The Coal Distribution Report reflects the distribution of domestically produced coal. Therefore, coal imports from the EIA-923 survey are excluded. Other excluded categories are waste coal, for the Electricity Generation sector, plus all receipts for the Commercial Combined Heat & Power and Industrial Combined Heat & Power plants.

Coal distribution to Coke Plants is obtained from the Form EIA-5, “Quarterly Coal Consumption and Quality Report – Coke Plants.” The volume of coal distributed to coke plants excludes coal imports and is thus smaller than the volume of receipts at Coke Plants reported in the Quarterly Coal Report (QCR), which includes imports.

Coal distribution to Industrial Plants (excluding Coke) is obtained from the Form EIA-3, “Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation /Processing Coal Plants and Commercial and Institutional Coal Users” and Form EIA-7A, “Coal Production and Preparation Report.” The Coal Distribution Report volume reported for Industrial Plants (excluding Coke) is smaller than the volume of receipts at Industrial Plants in the QCR to the extent that the Coal Distribution Report excludes waste coal and imports.

Since 2008, the Residential & Commercial consuming sector has been replaced by the Commercial & Institutional sector, which excludes the residential sector and small amounts of coal used in the transportation fuel sector (primarily tourist steam railroads). Commercial & Institutional coal distribution is obtained from the Form EIA-3, “Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation /Processing Coal Plants and Commercial and Institutional Coal Users” and Form EIA-7A, “Coal Production and Preparation Report.”

Previously, on the EIA-6A survey form, it was not possible to identify refuse or waste coal¹, which was included in anthracite and bituminous distributions. Waste coal receipts are collected and separately identified on the EIA-923 and represent especially significant volumes in Pennsylvania and West Virginia. The Coal Distribution Report excludes waste coal and small volumes of synthetic coal that may have been distributed after all synthetic coal plants were closed.

Coal exports previously reported on the EIA-6A, are now obtained from the modified EIA-7A, “Coal Production and Preparation Report.” Coal exports may differ from the volumes reported in the QCR. Volumes reported in the QCR are obtained from the Bureau of the Census, U.S. Department of Commerce, "Monthly Report EM 545." Differences arise in the results of the surveys due to differences in survey frame populations, survey errors, assumptions and definitions. For example, in 2009 the Coal Distribution Report shows exports as 55,601 thousand short tons while the QCR shows exports of 59,097 thousand short tons.

Resolving Missing Data in the EIA-923 Records

In reporting the 2009 data, a number of respondents submitted their EIA-923 forms with a blank or null entry for origin state; a smaller number submitted forms without entering a transportation mode.

Application of computerized algorithms and a review of past plant receipts identified some of the coal origin States and the likely method of transportation. However, the origin state for 285 thousand short tons and the method of transportation for 909 thousand short tons could not be determined and are classified as “unknown” in the report tables.

¹ **Waste coal:** Usable material that is a byproduct of previous coal processing operations. Waste coal is usually composed of mixed coal, soil, and rock (mine waste). Most waste coal is burned as-is in unconventional fluidized-bed combustors. For some uses, waste coal may be partially cleaned by removing some extraneous noncombustible constituents. Examples of waste coal include fine coal, coal obtained from a refuse bank or slurry dam, anthracite culm, bituminous gob, and lignite waste.

**Domestic Coal Distribution 2009 Final by Destination State: Alabama

s Quantity is less than 500 short tons, but value is included in any associated total.

- = No data are reported.

Note: Total may not equal sum of components because of independent rounding. Data for all consumer categories are for coal receipts at those plants, with one exception. Coal distributed to industrial plants includes a small amount of coal consumed by coal preparation plants.
