REPLY TO
ATTN OF: SED:PGJ/10-SED-0161SUBJECT: CORRECTIVE ACTION PLAN IN RESPONSE TO OFFICE OF HEALTH, SAFETY
AND SECURITY (HSS) BERYLLIUM ASSESSMENTTO: I. R. Triay, Assistant Secretary
for Environmental Management, EM-1, HQ

Attached please find the Richland Operations Office (RL)/Office of River Protection (ORP) Corrective Action Plan (CAP) developed in response to the HSS beryllium inspection at Hanford. This CAP was developed in conjunction with the Hanford Atomic Metals Trade Council and the Beryllium Awareness Group, and the President and Chairperson, respectively, of those organizations are signatories to the list of corrective actions contained within the CAP. RL and ORP provided briefings to HQ staff from EM and HSS during the development of this CAP, including a site visit by EM-HQ staff. Briefings were also provided to the Hanford Advisory Board and HSS during the development of the CAP. As this CAP contains many actions and associated due dates, RL and ORP request EM approval at your earliest convenience. Once the CAP is approved, RL, ORP and the affected contractors will enter the appropriate actions into their respective corrective action management systems and track actions to closure.

If you have any questions, please contact us, or you may contact Doug Shoop, RL Deputy Manager, on (509) 376-7395.

Corrective Action Plan

**Independent Oversight Inspection of the Hanford Site
Chronic Beryllium Disease Prevention Program**

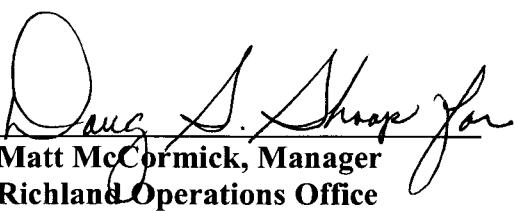

August 2010

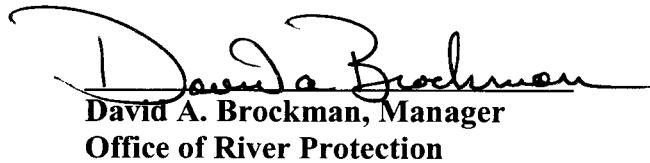

Corrective Action Plan

Independent Oversight Inspection of the Hanford Site Chronic Beryllium Disease Prevention Program

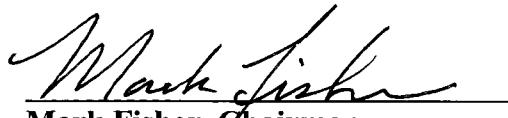

The corrective actions contained within this Corrective Action Plan were developed in coordination with the Richland Operations Office, Office of River Protection, Beryllium Awareness Group, and Hanford Atomic Metal Trades Council.

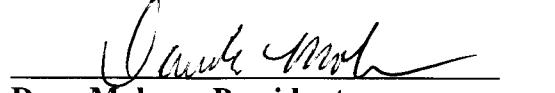

Matt McCormick, Manager
Richland Operations Office

David A. Brockman, Manager
Office of River Protection

Mark Fisher
Beryllium Awareness Group

Dave Molnaa, President
Hanford Atomic Metal Trades Council

Executive Summary

The DOE Headquarters Office of Health Safety and Security (HSS) conducted an assist visit to evaluate the status of implementation of the Hanford Site Chronic Beryllium Disease Prevention Program (CBDPP). The visit was conducted over a 3 month timeframe, beginning in February of 2010 and concluding with the issuance of the inspection report on June 2, 2010. The report identified 4 Findings and 12 Cross-Cutting Opportunities for Improvement (OFIs), which are discussed in detail in the following sections of this Corrective Action Plan (CAP). The CAP also addresses the contractor specific recommendations and appropriate cross-cutting recommendations contained in the appendices of the report.

During the course of the assist visit, RL and ORP identified necessary actions for DOE and the site contractors based on out-briefs conducted by the inspection team. Several quick fix items were identified and implemented by RL and ORP. A letter of direction was sent to the site contractors involved in the visit that contained 11 specific actions to be completed within 30 days of the letter and instructions to develop implementation plans for 4 other actions. Those actions have been completed and verification of completion was performed by RL and ORP.

Upon issuance of the final report, RL and ORP directed the affected site contractors to identify dedicated resources to participate in the development of this CAP. DOE also directly involved representatives from the Beryllium Awareness Group (BAG) and the Hanford Atomic Metals Trade Council (HAMTC) in the development of the CAP. The Hanford Advisory Board (HAB) is being provided regular status briefings by RL and ORP, which is the level of involvement requested by the HAB Chairperson.

RL and ORP are committed to addressing the Findings, OFIs, contractor specific recommendations, as well as the applicable OFIs in Appendix H, contained in the HSS report. Each Finding, OFI and recommendation was identified, binned, and assigned a specific identifier. Each of these specific elements will have a responsible individual, start date, and completion date, as documented in this CAP. The attached spreadsheet provides the specific action to be implemented, responsible organization and staff, and start and end dates. Table 1 provides a general description of the areas covered by the Findings and OFIs.

Table 1

Findings	OFIs
Beryllium Inventory and Assessment	Hanford-wide CBDPP Implementation Plan
Beryllium Training	Communication
Beryllium Epidemiological Analysis	CBDPP Improvement Plan Effectiveness
Beryllium Work Controls	Medical Surveillance, Medical Removal, and Counseling

RL has established an Independent Beryllium Oversight Team (IBOT), under the direction of the RL Quality Assurance Manager, to assist RL and ORP during the implementation of this CAP by conducting closure verification audits, independent sampling and other oversight responsibilities as assigned by the QA Manager. RL has directed the Mission Support Contractor to obtain independent resources to support the IBOT.

Implementation of the majority of the corrective actions contained in this CAP is expected to take six months from the date of EM HQ approval and HSS concurrence of the CAP. RL/ORP, or the affected contractors, will verify closure of each CAP item, and will conduct effectiveness reviews to ensure corrective actions have properly addressed the Findings and OFIs in the HSS report. An additional three months may be needed to address any additional actions identified by these effectiveness reviews. During this timeframe, RL and ORP will provide updates to EM HQ. At the conclusion of this period, RL and ORP will extend an invitation to the HSS team to re-evaluate the implementation of the Hanford Site CBDPP.

Introduction

An independent inspection was conducted by the U.S. Department of Energy (DOE) Office of Health, Safety and Security (HSS) at the request of the Assistant Secretary for Environmental Management (EM) in response to concerns regarding the adequacy of implementation of the Hanford Site chronic beryllium disease prevention program (CBDPP). This CBDPP was developed as the implementing document for the requirements of the beryllium rule – 10 CFR 850, *Chronic Beryllium Disease Prevention Program*.

The inspection focused on the implementation of the current Hanford Site CBDPP, which covers the four EM operating contractors – CH2M-Hill Plateau Remediation Company (CHPRC), Mission Support Alliance (MSA), Washington Closure Hanford (WCH), and Washington River Protection Solutions (WRPS) – and the site medical contractor, AdvanceMed Hanford (AMH). The inspection evaluated the current practices for protecting workers against beryllium hazards at the Hanford Site and the beryllium medical surveillance programs for current workers. The inspection was conducted in a transparent manner that engaged representatives of various stakeholder groups, including the HAB, the BAG, and the HAMTC. Independent medical and technical experts from National Jewish Hospital and Simon Fraser University were included on the HSS team to further bolster independence and technical credibility.

The inspection resulted in 4 Findings and 12 Cross-Cutting Opportunities for Improvement (OFI):

Finding #1: RL and ORP have not ensured that contractor baseline beryllium inventory and hazard assessments have been completed, as required by 10 CFR 850.20, 10 CFR 850.21, and the corresponding portions of the CBDPP.

Finding #2: RL and ORP have not ensured that several categories of workers at the Hanford Site are receiving the minimum beryllium-related training, as required by 10 CFR 850.37 and 10 CFR 851.25.

Finding #3: AMH has not always analyzed medical, job, and exposure data for employees diagnosed as sensitized or having CBD and thus is not collecting information needed to identify workers at risk

for exposure, understand the beryllium health risks, and identify appropriate actions to improve the CBDPP, as required by the CBDPP, 10 CFR 850.39, and 10 CFR 850.34.

Finding #4: WRPS, CHPRC, MSA, and WCH have not ensured that their work planning and control processes and their implementation of those processes in beryllium-controlled facilities and areas are sufficient to fully ensure protection of workers, co-located employees, and transient personnel, as required by 10 CFR 850.22 through 10 CFR 850.30, 10 CFR 850.38, and the corresponding portions of the CBDPP.

OFI #1: RL should promptly direct AMH to develop a comprehensive improvement plan that addresses the deficiencies and opportunities for improvement identified in this report.

OFI #2: RL and ORP should promptly direct operating contractors to identify and prioritize identified deficiencies (including those identified in this report and others identified by other assessments or gap analyses) and, where warranted, develop timely corrective actions and/or interim protective measures.

OFI #3: On a priority and risk basis, RL and ORP should require operating contractors to develop and implement comprehensive implementation plans for completing efforts to achieve full and effective implementation of the site CBDPP.

OFI #4: RL and ORP should consider ensuring that site contractors strengthen their processes for baseline beryllium inventories and hazards assessments.

OFI #5: RL, ORP, and contractor organizations should determine methods to strengthen assessment and issues management processes for beryllium processes and activities.

OFI #6: RL, ORP, and contractor organizations should identify appropriate timely actions to ensure that accurate information about beryllium is available.

OFI #7: To ensure the long-term effectiveness of the CBDPP, RL and ORP should consider further formalizing expectations and governance of the CBDPP (i.e., maintenance and implementation).

OFI #8: RL and ORP should identify actions to improve communications with stakeholder organizations and use their feedback and experience as a resource to improve the Hanford Site CBDPP.

OFI #9: RL should strengthen support mechanisms and communications with beryllium-affected workers.

OFI #10: RL, ORP, and contractor organizations should identify actions to raise site managers' and supervisors' awareness of the risks to workers associated with legacy beryllium contamination and to build trust among workers.

OFI #11: DOE line management should ensure that adequate assessments of the CBDPP are performed.

OFI #12: EM should closely monitor site progress in implementing and improving the CBDPP at the Hanford Site and take an active role in ensuring timely and effective implementation. This OFI is not addressed by this CAP.

Corrective Action Methodology

A process based on DOE O 470.2B, Independent Oversight and Performance Assurance Program, Attachment 2, Contractor Requirements Document was used by RL and ORP to develop this CAP. The following key steps define the process:

- Examination of the findings statements and supporting data documented in the report.
- Determination of the causal factors for each finding.
- Development of corrective actions for the findings and OFIs.
- Assignment of responsibilities for the corrective actions.
- Development of an Oversight Plan to provide identification of performance expectations and measures to monitor corrective action effectiveness.
- Final acceptance of the CAP by RL/ORP prior to submittal to EM-HQ for approval.

Additionally, RL and ORP developed a strategy to address each OFI and each recommended actions attributed to each site contractor in the appendices of the report.

Corrective Action Plan Development

RL and ORP evaluated the corrective actions in this CAP to ensure that all the specific details of the findings and OFI statements in the report are addressed. RL/ORP and the affected contractors performed a root cause analysis to determine that, collectively, the corrective actions will address CBDPP programmatic weaknesses and therefore will resolve, and prevent recurrence, of the findings.

Corrective Action Plan Structure

The CAP structure is as follows:

Identifier: F-1, F-2, etc. is the identifier sequence for the findings with OFIs being identified in the same method, e.g. OFI-1, OFI-2, etc.

Finding/OFI Statement: Finding or OFI as stated in the report.

Finding/OFI Manager: Individual accountable for closure of the finding or OFI.

Analysis Results: A summary of the assignment of causal factors and other supporting information. This activity was performed only for the findings identified in the report.

Extent of Condition Review: A summary of the review performed to identify the scope and depth of the issue within the appropriate contractor or DOE organization. This activity was performed only for the findings identified in the report.

Corrective Actions: Table showing descriptions of corrective actions taken or to be taken, deliverable, action owner, planned completion date, and what actions(s) will be taken to address performance measurement and effectiveness verification.

Review and Approval of Contractor Corrective Actions

This CAP was a collaborative effort between RL, ORP, the BAG, HAMTC, AMH, CHPRC, MSA, WCH and WRPS in order to achieve consistency in the methodology used to evaluate the report, evaluate the findings and OFIs, identify the causal factors and the develop corrective actions. The BAG and HAMTC actively participated in the development, review and concurrence with this CAP. Their participation was invaluable in assuring all concerns were properly addressed and to help gain acceptance by the workforce and other stakeholders. RL and ORP provided EM headquarters regular status updates during the development of this CAP, including an update to Headquarter EM staff during a site visit. Status briefings were also provided to members of the Hanford Advisory Board (HAB) and HSS staff.

Corrective Action Plan Reporting and Closure

The affected site contractors will enter the corrective actions identified for findings and OFIs into their respective corrective action management systems. Actions will be tracked and verified in accordance with contractor specific procedures.

RL and ORP will enter the corrective actions identified for RL and ORP findings and OFIs into the RL and ORP corrective action management systems to monitor implementation progress. RL and ORP will track all CAP actions through project management mechanisms and provide quarterly reporting of CAP progress to EM Headquarters.

Effectiveness Verification of Corrective Actions

Effectiveness reviews will be performed by the assigned contractor or DOE organization as outlined in the Independent Beryllium Oversight Plan. The effectiveness reviews will be conducted after the associated actions are completed and sufficient time has passed to verify corrective actions have precluded recurrence. These reviews can be done by any approved methodology as deemed appropriate by the Finding Owner. Individuals that are assigned to lead these reviews will be independent of the responsibility for the corrective actions contained in the CAP.

RL/ORP or contractor independent oversight organizations will verify the completion of each action in the CAP as appropriate. In addition, RL/ORP will request that HSS perform a final, independent effectiveness review of the completed actions. The Office of Standards and Quality Assurance (EM-23) onsite representative will evaluate closure verification activities in coordination with the IBOT and RL Quality Assurance Manager. Continued evaluation of the effectiveness of the Hanford Site CBDPP will be conducted through the Integrated Safety Management System process and regular oversight activities performed by RL, ORP, the IBOT and contractor management self-assessment groups.

Causal Analysis

As requested in the HSS report, RL/ORP and the site contractors performed Causal analysis of the applicable findings. RL/ORP performed this analysis for Findings 1 and 2, AMH for Finding 3 and the remaining contractors for Finding 4. The following information was extracted from the Causal analysis reports prepared by each party. The entire reports are available for review.

Finding F-1 (RL, ORP)

Finding ID: F-1

Finding Statement:

RL and ORP have not ensured that contractor baseline beryllium inventory and hazard assessments have been completed, as required by 10 CFR 850.20, 10 CFR 850.21, and the corresponding portions of the CBDPP.

Finding Manager: Pete Garcia, Division Director, Safety and Engineering Division

Analysis Results:

This was the first formal independent assessment of the newly generated site-wide CBDPP. However, an earlier review of the Hanford beryllium program was conducted by the Hanford Joint Council for Resolving Employee Concerns, which issued an assessment report on March 23, 2002. The report was used as the basis for performing a root cause analysis and for developing corrective actions to fix the problems identified in the report. There was later an independent assessment conducted by FHI to determine if the corrective action process had been effective for the CBDPP issues identified. That report listed 4 findings and 10 observations that were subsequently analyzed and corrected. Some of the same issues, or types of issues, were identified in the HSS report.

The single site-wide CBDPP was approved in May, 2009. However the individual contractors used procedures to implement the portions they believed applied to them, which led to an inconsistent implementation approach and concern among the stakeholders that the process was inadequate. The very nature of the regulation, which is performance based for some requirements, leads to interpretation. Interpretations are by nature subjective and open to dispute. The process used to develop the site-wide program was not adequately coordinated with external stakeholder organizations and thus did not adequately reflect their expectations. A lack of appropriate DOE guidance also contributed to this issue (A4B1C01).

The DOE field element offices RL and ORP conducted formal surveillances and Operational Awareness reviews over the period of 5 years from January 2005 to February 2010. While deficiencies were noted, most notably the issue on training which surfaced again during the HSS assessment, they were resolved and the programs implemented by the site contractors were believed

to be adequate. This leads to the conclusion that the corrective actions for these previously identified problems or events were not adequate to prevent recurrence (A4B1C09). In addition, it also indicates that the oversight processes used to monitor these activities did not identify the problems documented by the HSS team in the inspection report (A4B1C04).

RL and ORP office resources are in place to ensure contractor performance. These resources spend many hours reviewing programs and data to complete assessments and oversight reviews. These resources were also utilized for responding to issues associated with issuance of the new Hanford operating contracts. This competition for resources took away from the primary duties of ensuring the contractors were performing adequately in many aspects (A4B2C03).

The American Recovery and Reinvestment Act of 2009 provided funding to accelerate cleanup of some areas of the Hanford site. This funding started to arrive for implementation in about April of 2009. The nature of the work to be performed under this act includes complex and dangerous work to be performed by new workers, some of which have little or no experience at the Hanford site. The priority for some of the resources was shifted to ensure the new projects received adequate oversight to ensure the worker's safety. The need for additional personnel to perform oversight was noted and resources were requested, only to be denied. Thus it was not an unknown problem, but one that had to be dealt with (A4B2C05).

To ensure consistency across the Hanford site, a mandatory Site-Wide CBDPP was put into development starting in August of 2008. Development of this program was monitored closely by the DOE RL and ORP SMEs to ensure the requirements of 10 CFR 850 were addressed by the program. This was believed to be an effort that resulted in an adequate program being issued for implementation on June 16, 2009 (A4B1C01). However, the HSS investigation determined it was less-than-adequate (LTA).

The Hanford Advisory Board provided input into what they believed were inadequacies in the CBDPP implementation and the Beryllium worker compensation program. These letters were reviewed, analyzed and responses made. The reply from the HAB indicated they did not believe the responses were adequate, and that additional actions were still required. The DOE belief that the site-wide contractor CBDPP met the requirements of 10 CFR 850 perhaps clouded the responses.

The implementation of the CBDPP was directed by individual letter to the contractors by both RL and ORP. The contractor responses provided were mainly dealing with contract issues, not specifics on implementation. MSA letter MSA-0900129 provided the requested Integrated Implementation Plan. This plan was not accompanied by any meaningful gap analysis or significantly thought out resource loading. The oversight effort did not detect an issue with this process. Partly because of the perception that each contractor had a CBDPP process that was being adequately implemented, no additional specific oversight was scheduled to assess the development of the processes required to implement the new Site-Wide CBDPP.

Root Causes:

The methodology used for this Root Cause Analysis, Event and Causal Factor charting, along with the "Why" staircase, identified a combination of A4B1C01, A4B1C04, and A4B1C09 as root/apparent causes.

A4B1C01 is defined as a lack of understanding of existing policy and/or expectations, policy/expectations were not well-defined, or policy/expectation were not enforced. The CBDPP

was believed to be adequate to ensure compliance with the 10 CFR 850 performance based requirements. Based on the existing guidance, the DOE SMEs monitoring the development of the CBDPP believed the rule was adequately addressed by the site-wide CBDPP. That belief was supported by the fact that no significant issues were identified during routine surveillances and awareness reviews. Following the 2002 Hanford Joint Council report, issues that surfaced were relatively minor and didn't appear to indicate a significant weakness in the program itself. Many of the issues identified in the HSS report resulted from expectations for complying with performance based aspects of the rule that were not clearly articulated in the existing guidance. This causal factor was therefore determined to be a root cause.

A4B1C04 is defined as management follow-up or monitoring of activities did not identify problems. Had RL and ORP assessments and other oversight processes indicated consistent issues with the CBDPP implementation across the site, more attention would have been brought to bear on the implementation of the site-wide program developed. In addition, since the program was replacing an existing program for each contractor which was thought to be adequate, more frequent or in-depth monitoring was not scheduled or performed. Had the monitoring process been more proactive for the CBDPP, the shortcomings of the implementation would have been eliminated or significantly reduced. This causal factor was therefore identified as a root cause.

A4B1C09, defined as the corrective action for a previously identified problem or event was not adequate to prevent recurrence, was considered as a potential root cause. The base finding had been identified during earlier RL oversight and corrective actions implemented. However, the contractor failed to maintain the corrective actions through contract transitions. Had the corrective actions been maintained, this issue should have been eliminated or severely mitigated. It was not; therefore, this is being listed as a root cause.

A4B2C03 is defined as insufficient manpower to support identified goal / objective. Because resources were shifted to provide oversight for the major contract shift for operations at Hanford, there was less time available to ensure adequate oversight of site programs. While this may have mitigated the problem, the lack of depth on the oversight process as listed above would still have resulted in the problem identified. Therefore this causal factor is listed as a contributing cause.

A4B2C05 is defined as needed resource changes not approved/funded. RL/ORP recognized a need for more resources to ensure adequate oversight of both the normal contractor work and the additional work that was being brought in with the ARRA contracts. The request for additional resources was not granted. Because of this, existing resources were siphoned off to do double duty in monitoring ARRA issues and following contract transition issues. In-depth monitoring of the implementation of the CBDPP was not feasible due to competing priorities. Additional personnel would have allowed a better review of the implementation; however, the lack of depth on the oversight process as listed above would still have resulted in the problems identified. Therefore this causal factor is listed as a contributing cause.

Extent of Condition Review:

The Root Cause Team determined the extent of condition to be implementation of the requirements of 10 CFR 850 at the Hanford Site.

Corrective Actions:

1. For Root Cause A4B1C01 (Management Policy Guidance/expectations not well defined, understood or enforced), RL/ORP needs actions to correct the following:

- *Involvement of stakeholder/customers with the HSS technical experts to help assure that appropriate corrective actions are identified in the Corrective Action Plan (CAP).*

Corrective Action: RL/ORP will seek to involve Hanford stakeholder groups (BAG, HAMTC and HAB) during the development of the CAP for the HSS report. RL/ORP will also involve EM and HSS headquarters personnel during the development of the CAP and Oversight Plan. RL/ORP will obtain concurrence on the CAP from the BAG and HAMTC. RL/ORP will request that EM approve the CAP and HSS concur on the CAP.

Deliverable: Final CAP approved by EM-HQ, with concurrence from HSS, BAG and HAMTC.

- *Ensure collaborative agreement on the implementation of the corrective actions and the resulting revision of the CBDPP.*

Corrective Action: Using national and local experts and in collaboration with stakeholders, RL/ORP will establish a new technical basis and specific guidance for implementing 10 CFR 850 requirements. RL/ORP will ensure the CBDPP is revised to incorporate the new technical basis and guidance.

Deliverable: Revised Hanford Site CBDPP, with concurrence of the CBDPP Committee (BAG/HAMTC) and RL/ORP approval. RL/ORP will also request that HSS perform an effectiveness review of the implementation of the corrective actions.

2. For Root Cause A4B1C04 (Management follow-up or monitoring of activities did not identify problems), RL/ORP needs actions to correct the following:

- *Clear expectations of what is needed to correctly implement new guidance.*

Corrective Action: RL/ORP will ensure the CAP contains clearly defined deliverables that establish DOE expectations on correct implementation of processes, procedures and policies related to the implementation of the Hanford Site CBDPP.

Deliverable: Final CAP approved by EM-HQ, with concurrence from HSS, BAG and HAMTC.

- *Ensure there are requirements for contractors to provide adequate management oversight of the CBDPP and other site-wide safety programs at a sufficient level and depth.*

Corrective Action: During the implementation of the CAP and the associated revisions to the Hanford Site CBDPP, RL/ORP will ensure that a management self-assessment process is incorporated into the CBDPP that requires contractors to review each program element on a frequency that ensures the entire CBDPP is reviewed at least every three years. RL/ORP will implement a similar process.

Deliverable: Revised Hanford Site CBDPP, with concurrence of the CBDPP Committee (BAG/HAMTC) and RL/ORP approval.

Deliverable: Revised oversight planning process that requires DOE to review each program element on a frequency that ensures the entire CBDPP is reviewed at least every three years.

Deliverable: A Beryllium Oversight Plan which addresses oversight by RL/ORP and contractors, to verify adequate completion/implementation of the CAP.

3. For Root Cause A4B1C09 (Corrective Action for previously identified problem or event was not adequate to prevent recurrence. Note: issue is effective corrective actions were allowed to lapse or were not institutionalized), RL/ORP needs actions to correct the following:

- *Ensure configuration control of commitments and corrective actions.*

Corrective Action: RL/ORP will ensure the CBDPP captures commitments and corrective actions. RL/ORP will ensure the CBDPP cannot be revised except through a process including Be Committee review and approval.

Deliverable: Revised Hanford Site CBDPP, with concurrence of the CBDPP Committee (BAG/HAMTC) and RL/ORP approval

4. For Contributing Causes A4B2C03 (Insufficient Manpower to support identified goal/objective) and A4B2C05 (Needed resource changes not approved /funded), RL/ORP needs actions to correct the following:

- *Assess the level of resources available, request more if required, then provide adequate DOE monitoring of the contractor's oversight processes at an increased depth and level.*

Corrective Action: RL/ORP will analyze resources available to provide DOE monitoring of contractor activities associated with the implementation of the Hanford Site CBDPP in the Annual Workforce Analysis and Staffing Plan and, if needed, request additional resources.

Deliverable: RL/ORP Annual Workforce Analysis and Staffing Plan

Finding F-2 (RL, ORP)

Finding ID: F-2

Finding Statement:

RL and ORP have not ensured that several categories of workers at the Hanford Site are receiving the minimum beryllium-related training, as required by 10 CFR 850.37 and 10 CFR 851.25.

Finding Manager: Pete Garcia, Division Director, Safety and Engineering Division

Analysis Results: See Finding F-1

Root Causes: See Finding F-1

Extent of Condition Review: See Finding F-1

Corrective Actions: See Finding F-1

Finding F-3 (AMH)

Finding ID: F-3

Finding Statement:

AMH has not always analyzed medical, job, and exposure data for employees diagnosed as sensitized or having CBD and thus is not collecting information needed to identify workers at risk for exposure, understand the beryllium health risks, and identify appropriate actions to improve the CBDPP, as required by the CBDPP, 10 CFR 850.39, and 10 CFR 850.34.

Finding Manager: Brian Fawcett, SOMD

Analysis Results:

This focused on the following section from page 15 of the DOE/HSS Report, AdvanceMed Hanford Opportunity for Improvement #5, as follows:

“AMH has not always analyzed medical, job, and exposure data for employees diagnosed as sensitized or having CBD and thus is not collecting information needed to identify workers as risk for exposure, understand the beryllium health risks, and identify appropriate actions to improve the CBDPP, as required by the CBDPP, 10 CFR 850.39 and 10 CFR 850.34.”

AMH began the Risk Cause Analysis (RCA) by attempting to determine where the disconnect occurred that resulted in the lack of data analysis. In summary, based on input provided by the Subject Matter Experts (SME) at the RCA event the following root causes and solutions were identified:

Root Causes

Solutions

Limited IH data came electronically for registry submittal but not used internally	Develop process to use the limited IH registry data for SOMC to comply with 850.34.
Epidemiology procedure requiring Beryllium data analysis doesn't exist	Develop a procedure that supports Population Health Management Program document and provides compliance with 10 CFR 850
Epidemiology procedure requiring Beryllium data analysis doesn't exist	Incorporate data analysis requirement into Beryllium policy document
AMH compliance assessment based on compliance to CBDPP	Enhance assessment plans to start with first cross checking CBDPP against compliance with applicable CFRs
CBDPP inadequately addressed certain parts of 10 CFR 850.	Recommend revisions to CBDPP to provide clarification regarding data analysis requirement. Also address ambiguity of term "responsible employer."
Contractor IH data not integrated with SOMC	Site-wide IHDDC addressing these issues.
Job location, history data not easily available	Interview affected workers to determine where they've been working for other sources of exposure to Beryllium. Enter job location information into database for data analysis Create database for job location and history data.
Epidemiologist assumed existing program document adequate	Establish position based list of required procedures, starting with Epidemiologist
Case manager in sole possession of specific data	Take steps to ensure Epidemiologist has access to all data required for analysis
Ambiguous language "responsible employer" - used	Request revision, clarification within CBDPP document
Used form with incomplete Beryllium locations	Update Work History Questionnaire to include information how to locate the latest beryllium facilities on the web.

Corrective Actions: Corrective actions for this Finding are detailed in the spreadsheet attached to this CAP. No additional corrective actions were determined to be necessary.

Finding F-4 (CHPRC, MSA WCH, WRPS)

Finding ID: F-4

Finding Statement:

WRPS, CHPRC, MSA, and WCH have not ensured that their work planning and control processes and their implementation of those processes in beryllium-controlled facilities and areas

are sufficient to fully ensure protection of workers, co-located employees, and transient personnel, as required by 10 CFR 850.22 through 10 CFR 850.30, 10 CFR 850.38, and the corresponding portions of the CBDPP.

MSA Causal Analysis

Finding Manager: Paul Kruger

Analysis Results:

To support the Hanford projects rebid and consolidation of services, DOE in 2006 decided to include Site-Wide Safety Programs in each of the contracts. To facilitate this process, the Hanford Site-Wide Safety Program Plan (originally HNF-MP-41080) was developed and issued in June, 2009. The original purpose of this plan, as stated by the plan owner, was to get the programs developed, not to get them implemented.

Plan HNF-MP-41080 was developed following the implementation of two site-wide programs, the Hoisting & Rigging Program and the Hanford Site Lock Out / Tag Out Program, while the CBDPP was being developed and issued. A comment in one of the lessons learned from the development of those two site-wide programs that were discovered included the comment “run it like a project”. The concepts of project management principles, such as gap analysis, resource loaded schedule, and clearly identified training requirements, could have been used to make the plan more effective for implementation of the site-wide programs.

- Contributing Cause: A4B1C06 – Previous industry or in-house experience was not effectively used to prevent recurrence; defined as industry or in-house experience relating to a current problem that existed prior to the event, but was not assimilated by the organization.

The Site-Wide CBDPP was developed and approved by RL on May 14, 2009. At that point MSC-MP-41080 directs the development of an Implementation & Maintenance (I&M) Committee. Some of the stated key activities listed for the I&M Committee in the plan included establishing schedules, identifying resources, training and materials for implementation; also supporting assessments of implementation and effectiveness. The I&M Committee in this case is the CBDPP Committee, which does have a charter, but that charter did not address the items listed above, perhaps because it was issued before HNF-MP-41080 was issued (The charter was part of the approved program document on May 14, 2009). It was stated in letter MSA-0900129 that the committee did assist with the development of the integrated implementation plan promulgated to RL.

- Contributing Cause: A4B5C09 – Change-related documents were not developed or revised; defined as changes to processes resulted in a need for new forms of written communication which were not created or changes to existing documents which were not revised.

Had HNF-MP-41080 been issued and followed, there should have been an implementation schedule developed that included identifying the resources, specifics on training, and further

directions on how to implement this process and the oversight required to ensure compliance. Due to the lack of specific direction in the plan and the fact it had not been issued, it is unsure if this would have prevented the issue from occurring. This occurred even though at the inception of each site-wide safety program committee, specific training on the Site-Wide Safety Program Plan is given to ensure all participants understand the requirements.

In addition, the review of plan MSC-MP-41080 indicated that the implementation phase instructions could be consideration for another cause.

- Root Cause: A5B2C05 – Ambiguous instructions/requirements; defined as the instruction in written communication were unclear, uncertain, or interpretable in more than one way.

The plan, section 4.6, discusses the I&M Committee as functioning to maintain the long term stewardship of the selected program. It is virtually silent on implementation issues. Section 5.2 is the section that does discuss implementation for the I&M Committee, so there is a disconnect in the process.

When queried by the investigator, the Managers of the DOE Offices responsible for the implementation of the site-wide safety programs stated they were working as Senior Management Team (SMT) members per plan HNF-MP-41080. The SMT is specific to development of the site-wide program, not the implementation of that program.

The section of the plan that does have impact for implementation is 4.2 “DOE Field Offices”. In this section it states that DOE will assign a representative to the I&M Committees that will represent DOE Policy and Technical positions. Representatives were assigned. The plan goes on to state that Key Responsibilities and Duties of DOE include establishing priorities and major milestones/schedules. The plan does not make clear how those responsibilities are carried out.

- Root Cause: A5B2C05 – Ambiguous instructions/requirements; defined as the instruction in written communications were unclear, uncertain, or interpretable in more than one way.

In the clear light of an investigation, it is reasonable to assume there should have been things such as requiring a Gap Analysis be performed, Major Milestone resource loaded schedule developed, and several early intervention type assessments scheduled directed for each contractor as part of an implementation plan. These requirements were not part of the promulgated implementation schedule. These are all excellent project management tools used to implement complex processes. This is a very complex process with a decided lack of detailed information to go on in some cases. These items were not prescribed for a variety of reasons. One is that there is not procedural guidance to drive the expectation.

- Root Cause: A4B1C01 – Management Policy guidance / expectations not well defined, understood, or enforced; defined as Personnel exhibited a lack of understanding of existing policy and/or expectations, or policy/expectations were not well defined or policy/expectation is not enforced.

Had the plan specifically required use of implementation management or project management tools, or had lessons learned been clearly used to review the processes already implemented, this issue may not have occurred.

Root Causes:

A4B1C01 and A5B2C05 co-exist as root causes. The plan MSC-MP-41080 had some elements of the requirements, which if properly implemented, would have prevented this issue from happening or greatly reduced the problem. However, the plan clearly lacks specifics in implementation protocols that could have prevented this from occurring. Correction of these two issues with this plan will prevent a similar issue in subsequent implementations of site-wide safety programs.

Extent of Condition Review:

This issue exists for all new Site-Wide Safety Programs which require implementation. Mission Support Contract Performance Execution Plan, section 9.1, indicates that all of the elements in this implementation process could have been avoided had it been run through the Portfolio Management Implementation of Scope, which is supposed to provide “an integrated approach to planning, performance measuring, procurement, funding and budget analysis across government and contracting entities responsible for environmental cleanup at the Hanford Site.” To support this process, a new procedure, MSC-PRO-015, “Requirement Management Process”, was recently issued. Because this is a new process it will present a barrier to this occurring on a new or revised requirement other than site-wide safety programs, but did not have an effect on the implementation of the CBDPP.

Corrective Actions:

In addition to the corrective actions assigned to MSA in the attached spreadsheet, the following corrective actions were identified as a result of the Causal analysis:

- 1) Change plan MSC-MP-41080 to include a separate section on implementation. Divorce this section from the maintenance of the program and make it an entity of its own. This process should be under the oversight of the Senior Management Team members who have the ability to commit to the requirements generated to accomplish complete implementation in a timely manner. This team should be directed and responsible for the development of the plan, have it approved through the SMT with final approval and dissemination by the appropriate Field Office/Contracting Officers that direct a consistent start and completion time. (A4B1C01, A4B1C06 & A4B5C09)
- 2) Clarify and remove any ambiguity in plan MSC-MP-41080 sections 4.2, 4.3, and 4.4 to specifically address the implementation process. This also applies to the implementation portion that is broken off of section 4.6 in corrective action 1 above. (A5B2C05)

- 3) Conduct an independent assessment as an effectiveness review of these corrective actions to ensure the process now performs as desired and the corrective actions were effective in making the change. The report for this review should include:
 - a) Problem Issue and summary of corrective actions
 - b) Approach/plan for conducting the review
 - c) Acceptance criteria
 - d) Results/conclusions
 - e) Recommendations/additional corrective actions.
 - f) An assignment of an overall effectiveness rating of Effective, Partially Effective, or Ineffective.
 - g) Capture any issue identified within the issue management process.

CHPRC Causal Analysis

Finding Manager: J. C. Hoffman, Director, Operations Program

Analysis Results:

The supporting language of the finding references Appendix D of the assessment report to identify the observed weaknesses in CHPRC's work control process with respect to beryllium. In the 'Work Controls' portion of Appendix D, the assessment report reviewed CHPRC's execution of beryllium exposure controls at the Plutonium Finishing Plant (PFP), the U-Plant Canyon, the Effluent Treatment Facility (Building 2025E), and the Groundwater Protection Warehouse (Building 1713H).

The assessment identified deficiencies in CHPRC's execution of beryllium interim-controlled facilities. These deficiencies included inappropriate use of limited scope procedures, inadequate execution of procedural instructions, incomplete postings, and inadequate communication regarding beryllium hazards.

Root Causes:

The root cause of these issues with the interim control process is that the execution of this limited duration activity was not adequately planned and communicated appropriately, A5B2C02, *Written Communication Content LTA*. The interim control actions were identified to be accomplished with limited concrete direction. The instructions for the activities were first communicated to project management via email and then through a Management Directive.

A related cause is A4B1C01, *Management Methods LTA*. The initial less than adequate guidance coupled with not well understood expectations and without appropriate level of management attention led to inconsistent application among CHPRC projects as noted by the team.

Extent of Condition Review:

The work control process issues are being addressed CHPRC wide. The interim control process for active facilities is no longer in use; all actions conducted as part of that process are being re-evaluated and, where necessary, re-performed under current or future processes.

Corrective Actions: Corrective actions for this finding are detailed in the spreadsheet attached to this CAP. No additional corrective actions were determined to be necessary.

WCH Causal Analysis

Finding Manager: Dale Bignell

Analysis Results:

Work planning and control deficiencies were evident at multiple facilities and for all four EM operating contractors, indicating a need for increased attention to the control of ongoing work involving the potential for exposure to beryllium. Deficiencies were identified in various aspects of procedures for hazard analysis regarding beryllium (e.g., job hazard analysis procedures that do not address beryllium hazards or controls).

The interfaces between contractors were not sufficiently defined to address the responsibilities and processes for work planning and control for beryllium activities performed in facilities controlled by other contractors. Procedures and practices were insufficiently defined and implemented for establishing and maintaining the boundaries of beryllium-controlled areas and for downgrading beryllium-controlled areas after cessation of dust-producing activities, as well as implementing the BWP. As a result, BWPs sometimes contained insufficient details or inappropriate requirements, or otherwise did not comply with CBDPP requirements. For example, a standing BWP for “no dust producing activities” included “removal of ceiling tiles” as a covered activity, and another standing BWP did not identify and controls. In some cases, beryllium controlled and interim-controlled facilities were not posted as required, and in other cases, postings did not conform to the CBDPP provisions. Appendices D through G identify the specific deficiencies applicable to the four EM operating contractors.

WCH concurs that work planning and control processes and the implementation of those processes in beryllium-controlled facilities and areas require improvement to fully ensure protection of workers, co-located employees, and transient personnel. The approach taken by WCH processes to ensure protection of the workers from Beryllium hazards was to use industry accepted practices which rely on the professional judgment of Industrial Hygienists. In order to ensure work planning and control processes result in further assurance of worker protection, additional procedural detail and documentation expectations are needed to shift from a judgment based control process towards a compliance based process.

The U.S. Department of Energy Headquarters Office of Safety, Health and Security (HSS) assessment of the Hanford Site Chronic Beryllium Disease Prevention Program resulted in four specific findings and numerous opportunities for improvement. An apparent cause analysis of finding four was performed using much of the provided cause analysis documented in the HSS report and comparisons between industry

standards for industrial hygiene practices and expectations established in the HSS assessment.

Root Causes:

A5B2C05: Ambiguous instructions/requirements.

A4B1CO1: Management policy guidance/expectations not well-defined, understood or enforced

Extent of Condition Review:

Implementation of 10 CFR 850

Corrective Actions: Corrective actions for this finding are detailed in the spreadsheet attached to this CAP. No additional corrective actions were deemed to be necessary.

WRPS Causal Analysis

Finding Manager: Ray Skwarek

Analysis Results:

Purpose: During the performance of an Independent Inspection of the Hanford Site Chronic Beryllium Disease Prevention Program (CBDPP), Washington River Protection Solutions, LLC (WRPS) the Tank Operations Contractor was evaluated along with the U.S. Department of Energy, Richland Operations (RL) and Office of River Protection (ORP) and the other three Environmental Management Contractors. The team evaluated the current practices for protecting workers against beryllium hazards at the Hanford Site and the beryllium medical surveillance programs for current workers. The results of this inspection were transmitted to WRPS via contract letter “Contract No. DE-AC27-08RV14800 – U.S. Department of Energy (DOE), Office of Health Safety and Security (HSS) Assessment of Hanford Site Chronic Beryllium Disease Prevention Program (CBDPP),” 10-ESQ-196, June 9, 2010, S. J. Olinger, ORP to C. G. Spencer, WRPS.

The purpose of this report to document the causal analysis completed for Problem Evaluation Request (PER) number WRPS-PER-2010-1773 established to track the issue for Finding #4 of the above report. The causal analysis was performed in accordance with Tank Operations Contractor procedure TFC-ESHQ-Q_C-C-01, “Problem Evaluation Request.”

Finding #4: WRPS, CH2MHill Project Remediation Company (CHPRC), Mission Support Alliance (MSA), and Washington Closure Hanford (WCH) have not ensured that their work planning and control processes and their implementation of those processes in beryllium-controlled facilities and areas are sufficient to fully ensure protection of workers, co-located employees, and transient personnel, as

required by 10CFR850.22 through 10CFR850.30, 10CFR850.38, and the corresponding portions of the CBDPP.

Background: WRPS has been party to the Hanford Site Chronic Beryllium Disease Prevention Program (CBDPP) (DOE-0342) established to integrate and implement the controls necessary to minimize exposure to beryllium of employees working at Hanford. This program establishes action levels and a background level for beryllium at the Hanford Site. This program also defines beryllium activities, beryllium-affected workers, beryllium-associated workers, acceptable levels of beryllium contaminated material, beryllium-controlled facilities, controlled areas (BCAs), and regulated areas (BRAs), and what is considered a clean facility. This program also establishes the Hanford Site Beryllium Work Permit (BWP), among other critical program attributes. The CBDPP was signed by all Hanford prime contractors for implementation on May 14, 2009.

WRPS implements the CBDPP through TFC-PLN-24, “Chronic Beryllium Disease Prevention Program Plan.” This document establishes the roles and responsibilities for the Safety and Health Program Manager, the Beryllium Coordinator, Operations/Project Industrial Hygienists, and Project Management. This plan defines the WRPS baseline beryllium inventory and tasks with potential exposure. The plan also manages beryllium-affected worker exposures, tracks performance feedback, and establishes subcontractor compliance.

Beryllium hazards are assessed via TFC-OPS-MAINT-C-01, “Tank Operations Contractor Work Control,” TFC-ESHQ-S_SAF-C-02, “Job Hazard Analysis,” and the invoked Beryllium Work Permit established for the Hanford Site.

During the development of the HSS Report Corrective Action Plan, WRPS has agreed, with the other prime contractors, to implement changes with respect to:

1. Posting facilities being characterized (complete)
2. Modifying Beryllium Contamination Area (BCA) sign color through the CBDPP Committee
3. Sampling Beryllium-affected worker work areas via a site-wide process
4. Developing a site-wide pre-job checklist for Beryllium work
5. Supplementing the site-wide Beryllium Work Permit with a checklist to reinforce the need for BWPs
6. Developing a site-wide guide to address how to assess, document, and report beryllium exposures associated with radioactivity
7. Updating Beryllium Website to better communicate with workers
8. Developing a formal resolution form for multi-contractor work
9. Providing the WRPS Beryllium Assessment schedule to ORP
10. Implementing interim controls based on direction from ORP
11. Improving the definition of “dust producing activities” (criteria for BCAs and BRAs)
12. Developing a site-wide approach to handling dust producing work (use of physical barriers for BCAs and BRAs)

13. Developing a basis for downgrading personal protective equipment (PPE) via establishing a site-wide approach to dust producing work
14. Establishing a process for review and revision of BWPs
15. Communicating monitoring data
16. Addressing the 10CFR850 exemption for ATL (WRPS action)
17. Reviewing work control systems
18. Supporting the development and implementation of the site-wide process for use and down-posting BCAs
19. Review hazards assessment process
20. Review and update, as required, beryllium procedures in accordance with the CBDPP.

PER Problem Statement: WRPS has not ensured that work planning and control processes and their implementation of those processes in beryllium-controlled facilities and areas are sufficient to fully ensure the protection of workers, co-located employees, and transient personnel.

- (1) Why are the processes for beryllium-controlled facilities being questioned?

Questions exist as to the confidence of known beryllium facilities.

- (1a) Why is the number of beryllium facilities being questioned?

Legacy data was used to establish the beryllium baseline. WRPS upon receipt of the Tank Operations Contract (TOC) assumed responsibility for legacy beryllium facilities at Tank Farms. In 1999, along with the rule, the Hanford Site issued a listing of beryllium legacy facilities. Since then, four (4) additional TOC facilities have been evaluated and found not to have surface beryllium above natural background. In addition to the five (5) legacy beryllium facilities, low levels of beryllium may be present in liquid waste and sludge stored in sixteen (16) of the one-hundred seventy-seven (177) underground tanks. It is also known that beryllium-copper tools were a source of facility contamination. These tools were replaced in 2000 and tool removal was performed in accordance with a job-specific Job Hazards Analysis. The tools were disposed of as waste in accordance with applicable state and local requirements. Results of personal and area (tool crib) monitoring conducted during removal activities showed airborne exposures below detectable levels.

- (1b) Why would the number of beryllium facilities change?

Based on on-going assessment plans and improvements in sampling techniques and strategies developed by the site-wide CBDPP, additional sampling will occur and required controls will be implemented. Communication of change will be required to ensure worker understanding. Corrective actions developed to monitor and improve hazard applicability (reliability) include:

Communication

1. Update Beryllium Website (A4B5C06)
2. Develop a formal resolution form for multi-contractor work (A4B5C05)
3. Communicate monitoring data (A4B5C11)
4. Address the 10CFR850 exemption for ATL (WRPS action) (A4B5C01)

Sampling

5. Sample Beryllium-affected worker work areas via a site-wide process (A4B5C01)
6. Provide the WRPS Beryllium Assessment schedule to ORP (A4B5C02)
7. Implement interim controls based on direction from ORP (A4B5C02)

(2) Why is the implementation of the CBDPP being questioned?

Additional site-wide processes are being developed to address site-wide standardization.

(2a) Why are additional site-wide standards being sought?

Beryllium-sensitive workers continue to be diagnosed.

(2b) Why are additional workers being diagnosed?

There exists a potential for inadequate facility/hazard control.

Corrective actions to improve facility characterization and control:

Communication/Posting

1. Post facilities being characterized (complete)(A5B2C08)
2. Modify Beryllium Contamination Area (BCA) sign color through the CBDPP Committee (A5B1C04)

Site-wide Standards

3. Develop a site-wide pre-job checklist for Beryllium work (A5B4C02)
4. Supplement the site-wide Beryllium Work Permit with a checklist to reinforce the need for BWPs (A5B1C03)
5. Develop a site-wide guide to address how to assess, document, and report beryllium exposures associated with radioactivity (A5B2C08)
6. Improve the definition of “dust producing activities” (criteria for BCAs and BRAs) (A5B2C01)
7. Develop a site-wide approach to handling dust producing work (use of physical barriers for BCAs and BRAs) (A5B2C08)
8. Develop a basis for downgrading personal protective equipment (PPE) via establishing a site-wide approach to dust producing work (A5B2C08)
9. Establish a process for review and revision of BWPs (A5B3C01)
10. Support the development and implementation of the site-wide process for use and down-posting BCAs (A5B2C08)

Supplementation Reviews of Contractor Processes

11. Review work control systems (A5B2C01)
12. Review hazards assessment process (A5B2C01)
13. Review and update, as required, beryllium procedures in accordance with the CBDPP (A5B2C01).

Extent of Condition Review:

Implementation of 10 CFR 850

Corrective Actions: Corrective actions for this finding are detailed in the spreadsheet attached to this CAP. No additional corrective actions were deemed to be necessary.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
Finding #1: RL and ORP have not ensured that contractor baseline beryllium inventory and hazard assessments have been completed, as required by 10 CFR 850.20, 10 CFR 850.21, and the corresponding portions of the CBDPP. (CHPRC, MSA, WCH, WRPS, DOE)

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
47	F-1.7	RL/ORP will seek to involve Hanford stakeholder groups (BAG, HAMTC and HAB) during the development of the CAP for the HSS report. RL/ORP will also involve EM and HSS headquarters personnel during the development of the CAP and Oversight Plan. RL/ORP will obtain concurrence on the CAP from the BAG and HAMTC. RL/ORP will request that EM approve the CAP and HSS concur on the CAP.	Final CAP approved by EM-HQ, with concurrence from HSS, BAG and HAMTC.	RL	P. Garcia	6/3/2010	9/30/2010
48	F-1.8	Using national and local experts and in collaboration with stakeholders, RL/ORP will establish a new technical basis and specific guidance for implementing 10 CFR 850 requirements. RL/ORP will revise the CBDPP to incorporate the new technical basis and guidance.	Revised Hanford Site CBDPP, with concurrence of the CBDPP Committee (BAG/HAMTC) and RL/ORP approval. Also addressed by OFI-11.5.	RL/ORP	P. Garcia/W. Taylor	8/1/2010	8/1/2011
49	F-1.9	RL/ORP will ensure the CAP contains clearly defined deliverables that establish DOE expectations on correct implementation of processes, procedures and policies related to the implementation of the Hanford Site CBDPP.	Final CAP approved by EM-HQ, with concurrence from HSS, BAG and HAMTC.	RL	P. Garcia	6/3/2010	9/30/2010
50	F-1.10	During the implementation of the CAP and the associated revisions to the Hanford Site CBDPP, RL/ORP will ensure that a management self-assessment process is incorporated into the CBDPP that requires contractors to review each program element on a frequency that ensures the entire CBDPP is reviewed at least every three years. RL/ORP will implement a similar process.	Revised Hanford Site CBDPP, with concurrence of the CBDPP Committee (BAG/HAMTC) and RL/ORP approval. Also addressed by OFI-11.5.	RL/ORP	P. Garcia/W. Taylor	8/1/2010	8/1/2011
51	F-1.11	RL/ORP will ensure the CBDPP captures commitments and corrective actions. RL/ORP will ensure the CBDPP cannot be revised except through a process including Be Committee review and approval.	Revised Hanford Site CBDPP, with concurrence of the CBDPP Committee and RL/ORP approval	RL/ORP	M McCormick/D. Brockman	6/3/2010	8/1/2011
52	F-1.12	RL/ORP will analyze resources available to provide DOE monitoring of contractor activities associated with the implementation of the Hanford Site CBDPP in the Annual Workforce Analysis and Staffing Plan and, if needed, request additional resources.	RL/ORP Annual Workforce Analysis and Staffing Plan	RL	R. Corey	6/3/2010	9/30/2011

* Lead organization for site-wide products is shown in bold.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
53	F-2	Finding #2: RL and ORP have not ensured that several categories of workers at the Hanford Site are receiving the minimum beryllium-related training, as required by 10 CFR 850.37.	Documented gap analysis of the training program for Be-associated workers against the requirements of 10 CFR 850.37, and implementation of corrective actions, if necessary.	MSA	R. Gilmore	6/30/2010	9/30/2010
54	F-2.1	Develop and implement training courses targeted to beryllium-associated workers other than beryllium workers as defined in 10 CFR 850. (Only applies to MSA.)	Documented review of the gap analysis and corrective actions.	RL/ORP	R. Corey/ W. Taylor	10/1/2010	11/30/2010
55	F-2.2	Provide all workers, support staff, and supervisors the appropriate beryllium training to enable them to effectively perform their jobs as required by applicable regulations.	Documentation of completion of the training required by the supporting items below by planners, Persons In Charge, and First line supervisors, ES&H support staff (including Industrial hygienists and IHTs), Human Resources personnel, Employee Concerns program personnel, Be Health Advocates (both contractor and site). Update qualification requirements for these positions to incorporate the training requirements of the supporting items below.	All Contractors and RL/ORP	See below	6/1/2010	12/30/2010
56	F-2.2.1	Require all personnel associated with beryllium work or beryllium workers to attend Beryllium Worker Training to ensure that they understand the roles, responsibilities, and expectations for beryllium workers. Ensure that personnel, such as planners; Persons In Charge; first line supervisors; building managers; BEDs; ES&H support staff (including industrial hygienists and IHTs); and Human Resources and employee concerns program personnel are included. 			Documented participation in beryllium registry training.	WRPS	L. Gurney	10/1/2010	12/1/2010
92	F-3.3	Coordinate with the BAG to improve the requirements in the Hanford CBDPP concerning the interface between AMH and the contractor industrial hygiene staff regarding beryllium workplace monitoring information and in the data analysis of newly diagnosed sensitized or CBD workers.	The revision to the CBDPP concerning the interface between AMH and the contractors, as part of the process in F-3.1.	All Contractors	See below	10/1/2010	12/1/2010
93	F-3.3.1	Establish a contractor safety and health staff/AMH coordination process to gather accurate and complete information on work histories for inclusion in the beryllium data analysis process. The process should consist of questionnaires and interviews so that examples and suggestions from staff familiar with the work environment can provide assistance to the workers.	This item shall be incorporated into the response for F-3.3.2.	AMH	B. Fawcett	11/1/2010	4/1/2011
			Support development of database and process per F-3.3.2 below.	CHPRC	M. Hughley	11/1/2010	4/1/2011
			Support development of database and process per F-3.3.2 below.	MSA	R. Gilmore	11/1/2010	4/1/2011
			Support development of database and process per F-3.3.2 below.	WCH	D. Bignell	11/1/2010	4/1/2011
			Support development of database and process per F-3.3.2 below.	WRPS	L. Gurney	11/1/2010	4/1/2011
94	F-3.3.2	In conjunction with the BAG/HAMTC, develop an integrated epidemiologic approach for beryllium worker data analysis that would include researching information on buildings, job tasks, classifications, year of first hire, EJTA data, and other such information that may have resulted in beryllium sensitization and CBD. Include the integration of data/information derived from medical surveillance with industrial hygiene/workplace risk factors. Include reinstatement of a work history questionnaire and supplement the questionnaire with interviews of affected workers to address relevant workplace risk factors.	1) Hire IH to conduct interviews, 2) Develop database and process, 3) Issue report analyzing data.	AMH	B. Fawcett	11/1/2010 2) 4/1/2011 3) 9/30/2011	1) 12/1/2010 2) 4/1/2011 3) 9/30/2011

* Lead organization for site-wide products is shown in bold.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date:
95	F-3.3	Charter a separate/independent epidemiologic study by a qualified entity (e.g., a university) to assemble the Hanford surveillance data in cohort design to clearly describe beryllium sensitization and CBD risk in the workforce and help identify opportunities for prevention. (This response only applies to MSA.)	In consultation with RL/ORP/BAG, develop scope of work and issue contract.	MSA	R. Gilmore	10/1/2010	5/1/2011
96	F-3.3.4	Interview workers who have been sensitized or developed CBD and that are not long-term employees who worked at Hanford before the beryllium rule was issued (e.g., employed at Hanford less than 12 years) to obtain as much detail about work history details as possible to identify potential locations or sources of beryllium contamination. (This response only applies to MSA.)	Develop and implement a public relations campaign to solicit information from former workers. The campaign shall be coordinated with the BAG/HAMTC before implementation.	MSA	R. Gilmore	9/1/2010	3/1/2011
97	F-3.3.5	Use the beryllium registry data as an important risk management tool that can assist medical and contractor safety and health staff in focusing their efforts and soliciting issues related to the CBDPP. (This response only applies to AMH.)	Host a documented teleconference with ORISE, contractors, including a BAG and HAMTC representative	AMH	B. Fawcett	1/1/2011	3/1/2011
98	F-3.3.6	Re-review the information related to the beryllium medical surveillance program. Track and analyze this data to identify the rates, times, and locations of Hanford workers' beryllium testing results, which may provide some trends or data to establish possible beryllium job tasks or locations of concern. (Only applies to AMH.)	Revise the medical surveillance program based on a documented review of other DOE-complex programs, such as Los Alamos, and coordinate with the BAG/HAMTC.	AMH	B. Fawcett	10/1/2010	3/1/2011
99	F-3.3.7	Use these improvement items when performing the current task to reinitiate and complete the data analysis that was deferred over the last few years. (This response only applies to AMH.)	Perform completed analysis of deferred data in accordance with 10 CFR 850.34(h).	AMH	B. Fawcett	1/1/2011	5/1/2011
100	F-3.3.8	Consistently apply the EJTA program across the site to include participation between the manager, employee, and IH and inform workers of their ability to either formally agree or disagree with the final EJTA form sent to medical.	Incorporated into the Response for F-3.1.2 Incorporated into the Response for F-3.1.2	AMH CHPRC MSA WCH WRPS	B. Fawcett M. Hughay R. Gilmore D. Bignell L. 144	F-4.11	Change plan MSC-MP-41080 to include a separate section on Implementation. This process should be under the oversight of the Senior Management Team.	Documentation of procedure change.	MSA	D. Jackson	8/24/2010	9/30/2010	
145	F-4.12	Clarify and remove any ambiguity in plan MSC-MP-41080 sections 4.2, 4.3, and 4.4 to specifically address the Implementation process.	Documentation of procedure change.	MSA	D. Jackson	8/24/2010	9/30/2010	
146	F-4.13	Conduct an independent assessment as an effectiveness review of these corrective actions to ensure the process now performs as desired and the corrective actions were effective in making the change. The report for this review should include: a)Problem Issue and Summary of Corrective Actions; b) Approach/Plan for conducting review; c) Acceptance criteria; d) Results/conclusions; e) Recommendations/additional corrective actions; f) Assignment of an overall effectiveness rating of Effective, Partially Effective, or Ineffective.	Documentation of the Effectiveness Review	MSA	M. Sheriff	6/30/2011	8/30/2011	
147	OFI-1	(1) RI should promptly direct AMH to develop a comprehensive improvement plan that addresses the deficiencies and opportunities for improvement identified in Appendix C of OFI's						
148	OFI-1	(1) RI should promptly direct AMH to develop a comprehensive improvement plan that addresses the deficiencies and opportunities for improvement identified in Appendix C of OFI's	Initiate and/or reinitiate various communication mechanisms directed at affected workers (both current and former) to ensure that correct and current information about this program is provided to these individuals.	Preparation of communication plan which addresses communication with affected workers.	AMH	K. Conley	9/1/2010	11/1/2010
149	OFI-1.1		Work with stakeholders to obtain, evaluate, and address the areas where there are misunderstandings about the current program that are possibly preventing participation. Set appropriate goals to achieve and ensure that there is follow-up on these goals.	Preparation of communication plan which addresses communication with stakeholders.	AMH	K. Conley	9/1/2010	11/1/2010
150	OFI-1.1.1			Approve communication plan.	RL/ORP	C. French/ E. Olds	9/1/2010	12/1/2010

* Lead organization for site-wide products is shown in bold.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
151	OFI-1.1.2	Once HSS resolves the conflicting requirements in 10 CFR 850 (see opportunity for improvement for HSS, below), RL and AMH should communicate to all potential volunteer participants the interpretation on releasing test results to employers for volunteer participants.	Prepare draft announcement communicating HSS interpretation to workers.	AMH	B. Fawcett	Pending HSS Resolution	9/1/2011
152	OFI-1.1.3	Ensure that the AMH information on the beryllium worker and the volunteer beryllium medical monitoring program is correct and that other resources providing this information are also correct. These resources include information on the AMH website, AMH printed materials, letters to affected workers, and informational emails from both contractors and DOE. Reassess this information and the implementation of the program on a periodic basis.	Proceduralize an annual review of the beryllium worker and volunteer beryllium medical monitoring program to ensure information is accurate, and perform and document the initial review.	AMH	B. Fawcett	Pending HSS Resolution	9/30/2011
153	OFI-1.1.4	Develop and implement additional targeted outreach tactics to these workers, with the goal of a specific increase in participation rates. Includes outreach tactics in quality improvement efforts in the near future.	Preparation of communication plan which addresses communication with affected workers.	AMH	K. Conley	9/1/2010	11/1/2010
154	OFI-1.2		Approve communication plan.	RL/ORP	C. French/E. Olds	9/1/2010	12/1/2010
155	OFI-1.2.1		Complete new algorithm for BelPT, X-ray and Spirometry which address OFI-1.2.1 and OFI-1.2.2 and implement. Algorithm will include clear indications for referral, restrictions (temporary and permanent) and beryllium work clearances. Update exam protocols and external referral process to include 2nd opinions with NJH to determine appropriateness of referral. Conduct training on the revised algorithms and incorporate into annual provider training requirements.	AMH	B. Fawcett	6/23/2010	9/30/2010
		Review and revise the beryllium exam test result protocols/algorithms to ensure that clear thresholds for temporary restrictions are included and that these processes may be easily followed by staff without specific expertise in beryllium.	Revise the chart/algorithm for the BelPT and the chest x-ray test procedures to include temporary restrictions as outlined above. If spirometry is part of the medical surveillance testing, develop an algorithm for spirometry results, and action plans depending on results.	AMH	B. Fawcett	6/23/2010	9/30/2010

* Lead organization for site-wide products is shown in bold.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
156	OFI-1.2.2	Integrate the various protocols, including using standard language, so that the process for medical surveillance is clear to all providers, not just one. For example, ensure indications for exam types, definitions of sensitization, and determination of when a referral is necessary are clearly specified.	Addressed by OFI-1.2	AMH	B. Fawcett	6/23/2010	9/30/2010
157	OFI-1.2.3	Conduct training on the revised test procedures with the AMH staff on a regular basis, not just once. Ensure that there is sufficient trained staff to keep the program running if someone is on vacation, leaves employment, or is on sick leave.	Addressed by OFI-1.2	AMH	B. Fawcett	6/23/2010	9/30/2010
158	OFI-1.3	Use the current risk communicator or a facilitator to establish and implement defined actions for solving beryllium-related questions and concerns from workers.	The AMH communication plan in item OFI-1.1 above will address actions for collecting and solving beryllium-related questions and concerns from workers.	AMH	K. Conley	9/1/2010	11/1/2010
159	OFI-1.3.1	Using the AMH risk communicators and contractor patient advocates, with input from the BAG, sponsor informational meetings by the Federal DOL, Washington State DOL and Industries (including the Office of Self-Insured Ombudsman), Penser North America, Inc., and/or Washington State Labor Council Project Help. Such meetings should be open to employees and their physicians. Provide fact sheets that clarify common errors in submitting documentation for claims and benefits.	The AMH communication plan in item OFI-1.1 above will address sponsoring and conducting informational meetings.	AMH	K. Conley	9/1/2010	11/1/2010
160	OFI-1.3.2	Utilize external expert risk communicators in conjunction with AMH personnel who are already involved in the beryllium program at Hanford to more effectively to solve beryllium-related issues at Hanford.	The AMH communication plan in item OFI-1.1 above will address the use of an external expert risk communicator to more effectively solve beryllium-related issues at Hanford.	AMH	K. Conley	9/1/2010	11/1/2010
161	OFI-1.3.3	Integrate either an AMH risk communicator or facilitator to establish defined goals for solving beryllium-related questions and concerns. Include site-specific data and topical expertise in as many as possible beryllium hazards group discussions to help focus the discussion on solving issues and providing accurate information.	The AMH communication plan in item OFI-1.1 above will address the use of a risk communicator to establish defined goals for solving beryllium-related questions and concerns.	AMH	K. Conley	9/1/2010	11/1/2010

242	OFI-9.8	Assist the site contractors in encouraging workforce participation in site-wide efforts related to beryllium, e.g. epidemiology studies, medical surveillance, historical beryllium activities on site	Hiring of a Beryllium Health Advocate (BHA) by MSA. Documented job duties for the new site-wide BHA that include the actions identified in OFI-9.3.	MSA	P. Kruger	8/1/2010	10/1/2010
243	OFI-9.9	Increase worker awareness of the contents of the Hanford Site Chronic Beryllium Disease Prevention Program and other sources of beryllium information	Development of a communications plan by the CBDPP Committee	CBDPP Committee	S. Sevdel, Chair, CBDPP Committee	6/1/2010	1/1/2011

* Lead organization for site-wide products is shown in bold.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
244	OFI-10	(10) RL, ORP, and contractor organizations should identify actions to raise site managers' and supervisors' awareness of the risks to workers associated with legacy beryllium	This item will be incorporated into the response for F-2.2.2 AMH	G. Baxter		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 CHPRC	J. Lehew		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 MSA	F. Armijo		6/1/2010	12/30/2010
245	OFI-10.1	Establish line management responsibility for implementation of all program elements	This item will be incorporated into the response for F-2.2.2 WCH	N. Brosse		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 WRPS	C. Spencer		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 RL/ORP	M. McCormick/ D. Brockman		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 AMH	K. Conley		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 CHPRC	M. Hughey		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 MSA	P. Aldridge		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 WCH	D. Bignell		6/1/2010	12/30/2010
246	OFI-10.2	Reinforce expectations that worker concerns are to be carefully considered and evaluated.	This item will be incorporated into the response for F-2.2.2 WRPS	L. Gurney/ L. Keith		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 RL/ORP	M. McCormick/ D. Brockman		6/1/2010	12/30/2010
247	OFI-10.3	To facilitate better communications and to build trust among workers, managers should be instructed on:					
			This item will be incorporated into the response for F-2.2.2 AMH	K. Conley		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 CHPRC	M. Hughey		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 MSA	P. Aldridge		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 WCH	D. Bignell		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 WRPS	L. Gurney/ L. Keith		6/1/2010	12/30/2010
			This item will be incorporated into the response for F-2.2.2 RL/ORP	M. McCormick/ D. Brockman		6/1/2010	12/30/2010
248	OFI-10.3.1	Medical surveillance programs, support for data analysis efforts, developing work histories of affected workers and identification of potential sources of exposures.

Corrective Actions for Hanford Site Chronic Beryllium Disease Prevention Program

MSP Line ID	ID	Action Items:	Deliverable	Owner*	Resource	Start Date:	Completion Date
249	OFI-10.3.2	Perceptions of influence, intimidation, retaliation, and low priority for worker safety and address them by various mechanisms, including surveys and increased use of designated worker advocates.	This item will be incorporated into the response for F-2.2.2 AMH	K. Conley	6/1/2010	12/30/2010	
			This item will be incorporated into the response for F-2.2.2 CHPRC	M. Hughey	6/1/2010	12/30/2010	
			This item will be incorporated into the response for F-2.2.2 MSA	P. Aldridge	6/1/2010	12/30/2010	
			This item will be incorporated into the response for F-2.2.2 WCH	D. Bignell	6/1/2010	12/30/2010	
			This item will be incorporated into the response for F-2.2.2 WRPS	L. Gurney/ L. Keith	6/1/2010	12/30/2010	
			This item will be incorporated into the response for F-2.2.2 RL/ORP	M. McCormick/ D. Brockman	6/1/2010	12/30/2010	
250	OFI-11	(11) DOE line management should ensure that adequate assessments of the CBDPP are performed(RL, ORP).					
251	OFI-11.1	Review the implementation of the Hanford CBDPP to verify that key milestones and deliverables have been completed and are effectively implemented.	Incorporate beryllium oversight activities into the DOE oversight planning process.	RL/ORP	R. Corey/ W. Taylor	8/1/2010	11/1/2010
252	OFI-11.2	Arrange for independent organizations to perform targeted reviews of program effectiveness at appropriate points in CBDPP implementation.	Incorporate beryllium oversight activities into the DOE oversight planning process.	RL/ORP	R. Corey/ W. Taylor	8/1/2010	12/30/2010
253	OFI-11.3	Perform oversight of their respective laboratory operations (the 222-S laboratories operated by WRPS with analytical and testing services provided by ATL under ORP, and WSCF managed by MSA under RL).	Incorporate beryllium oversight activities into the DOE oversight planning process.	RL/ORP	R. Corey/ W. Taylor	8/1/2010	11/1/2010
254	OFI-11.4	Schedule routine, continuing, and specific oversight of the implementation of the CBDPP and incorporate beryllium-related assessments and operational awareness activities into oversight plans and schedules.	Incorporate beryllium oversight activities into the DOE oversight planning process.	RL/ORP	R. Corey/ W. Taylor	8/1/2010	11/1/2010
255	OFI-11.5	In coordination with EM, RL/ORP will request that HSS conduct an effectiveness review of the implementation of corrective actions.	Documentation of request for effectiveness review.	RL/ORP	R. Corey/ W. Taylor	6/1/2011	9/30/2011
