ACL

The screenshot displays the ACL software interface. The title bar reads "Sample Project.ACL - ACL 9". The menu bar includes "File", "Edit", "Data", "Analyze", "Sampling", "Applications", "Tools", "Server", "Window", and "Help". The Project Navigator on the left shows a tree structure with "Sample Project.ACL" expanded to "Tables" > "Accounts_Payable" > "Ap_Trans". The main window shows a table with columns "Vendor Number", "Vendor Name", and "Vendor City". The table contains 16 rows of data. The status bar at the bottom indicates "Ap_Trans" with "102 Records".

ACL

- Pros
 - Most popular software package
 - ODBC compliant
 - Handles huge databases
 - ACLScript
 - Powerful scripting language
- Cons
 - Primarily written for audit work, not specifically for fraud work
 - Although a fraud module exists

IDEA

The screenshot displays the IDEA software interface with the 'Sample-Payments' table open. The interface includes a menu bar (File, Edit, View, Data, Analysis, Sampling, Tools, Window, Help), a toolbar with various icons, and a File Explorer on the left showing a tree of IDEA files. The main window shows a table with columns for ID, POSTED_BY, SUPPNO, and SUPP. The 'Sample-Payments' file is selected in the File Explorer, showing 185 records. The table data is as follows:

| | POSTED_BY | SUPPNO | SUPP |

The interface also shows a Properties panel on the right with sections for Database, Results, Indices, and Comments. The status bar at the bottom indicates 'Working Folder: C:\Program Files\IDEA\Samples', 'Number of Records: 185', and 'Disk Space: 15.07 GB'.

IDEA

- Pros
 - Popular with auditors
 - ODBC compliant
 - Handles huge databases
 - Scripting support
- Cons
 - Primarily written for audit work, not specifically for fraud work

Excel + ActiveData

- Pros
 - Works within Excel
 - Easy to learn
 - Brings many of IDEA and ACL's functions to Excel
 - Cheaper than IDEA or ACL
- Cons
 - Works within Excel
 - 65K record limit

Microsoft Access

- Pros
 - Easy database
 - Real database
 - SQL, multiple tables
 - Visual queries
 - Excellent ODBC front end
 - Reporting, Forms
- Cons
 - 250K record limit on internal database
 - Put SQL Server behind it, and you get around this
 - General application - not specific to data analysis

Picalo

- Data analysis toolkit with emphasis on fraud detection
- Community-supported
- Detectlets
 - Bridge the gap between non-technical analysts and technical analysts
 - Working toward an AI-based, automatic fraud detection program
- Get it free from <http://www.picalo.org/>

Picalo Architecture

Picalo

The screenshot displays the Picalo application interface. The main window shows a table of invoice data with columns: Invoice #, Date, Purchaser, Vendor Code, and Amount. The table contains 12 rows of data. Below the table is a shell window with a Python script that loads and views the 'chargestsv' table. A second window, titled 'Picalo', shows a similar table with 20 rows of data, including a 'find_unapproved_vendors.py' script in the shell.

Picalo

Picalo

- Pros
 - Scripting-based
 - Powerful
 - Based in the free Python language
 - Language has a lot of features and history
 - Free
 - ODBC compliant
- Cons
 - Scripting-based
 - No support

Specialized Tools

- SAS and SPSS
 - Statistical packages with fraud modules
 - Useful in specialized areas
- Scripting languages
 - Perl, VB.net, VBA, Ruby, Python
 - More difficult to learn, but useful for any type of automation
- Full-text search tools
 - WinGREP, Lucine, Sphinx
 - Good for email analysis, full text search
- Database packages
 - MySQL, PostgreSQL, SQL Server, etc.
 - Very useful when combined with a front end like ACL or IDEA
