Symposium

Safe Handling of Engineered Nanoscale Materials

Argonne National Laboratory
Chicago, Illinois
July 7-9, 2008

Join the five DOE Nanoscale Science Research Centers and internationally recognized experts at a 2-1/2 day symposium covering hazards and best practices for the management of nanoscale materials in R&D environments.

Attendance at the symposium will help DOE and DOE contractor personnel responsible for the implementation of DOE Secretarial Policy 456.1, *Nanoscale Safety*, to stay abreast of emerging findings relating to the types and severity of hazards posed by nanoscale materials and hazard control strategies tailored to R&D environments:

- **Reliable engineered and administrative controls**
- **Applicability and limitations of personal protective equipment**
- **Exposure assessment and air sampling**
- **Labeling conventions**
- **Transportation guidance**
- **Communication of risks to researchers and the public.**
