

## Summary of Primary Corrective Actions to Address Asbestos Concerns

February 24, 2012

- Barricading and posting areas of concern to restrict access – Initial postings are complete, with a few new areas being identified
- Identifying and removing fragments or residual material suspected to contain asbestos from the 200 East and West areas –
  1. Completed actions at the 272E, 284E, 284W, and “Industrial 7” (seven industrial facilities that were demolished) sites.
  2. Walking down Plutonium Finishing Plant (PFP) facilities.
  3. Identified asbestos-containing steam lines in need of stabilization and posting.
- Expanding and placing additional soil/gravel covers over former demolition sites
- Continuing to wash and relocate equipment from the “Industrial 7” sites
- Conducting sampling of the 2266E Facility and vehicles that were adjacent to demolition sites
- Establishing contractor Industrial Hygiene hotlines
