## **★ Primary Seat Belt Laws**

### ***Tougher enforcement of seat belts laws saves lives***

#### ***The grim facts***

- In 2010, more than 22,000 people died as occupants in automobile crashes, nearly 45 percent of whom were unrestrained.
- When adults are buckled up, 87 percent of children are buckled up. When adults are not buckled up, only 58 percent of children are buckled up.
- NHTSA estimates that seat belts saved 12,546 lives in 2010. Had all passenger vehicle occupants age 5 and older used seat belts, an additional 3,341 lives could have been saved.
- Nearly three-quarters of all crash costs are paid by those not directly involved in crashes. In 2000, those not directly involved in crashes paid over \$170 billion.

#### ***Effective actions to save lives***

- Mandate primary enforcement for seat belt laws. According to the 2010 National Occupant Protection Usage Survey, seat belt use in primary enforcement law states was 88 percent, while seat belt use in secondary enforcement law states was only 76 percent.
- Apply seat belt laws to all vehicle seating positions. When used properly, seat belts reduce the risk of fatal injury to front seat passenger vehicle occupants by 45 percent and rear seat passenger vehicle occupants by 44 percent. From 1975 through 2010, seat belts saved more than 280,000 lives nationwide.
- Repeal existing legal provisions that insulate people from the financial consequences of not wearing seat belts.

#### ***What can you do to save lives and reduce injuries?***

- Make sure seat belts or child restraints are worn by everyone in your vehicle.
- Talk or write to your state and local lawmakers and urge them to support NTSB recommendations for seat belt use laws.
