**FEDERAL LABORATORY CONSORTIUM
FOR TECHNOLOGY TRANSFER**

FLC *advancing federal
research and technology*

The Federal Laboratory Consortium for Technology Transfer (FLC) and the National Technical Information Service (NTIS) continuously collaborate on the process of Federal Technology Transfer.

The FLC is the nationwide network of federal laboratories that provides the forum to develop strategies and opportunities for linking laboratory mission technologies and expertise with the marketplace. The FLC consists of more than 250 federal laboratories.

As an agency of the U.S. Department of Commerce, the NTIS mission is to provide for the acquisition, archiving and dissemination of technological, scientific, and engineering information. Much of this permanent repository of information is the result of research conducted by federal laboratories that are members of the FLC. The collaborative effort of the FLC and NTIS ensures the perpetual availability of this vital research to American businesses and industries.

“Very often the work described in these [early NTIS] reports was never published in the open journal literature, or published only in a very condensed form. I have repeatedly found that information in these documents gave important inspiration for my new research, or, in some cases, preventing me from “re-inventing the wheel.” ...NTIS provides a valuable service.”

Subject Category Codes/Classification

NTIS classifies citations into 39 subject categories. Each of these subject categories is divided into subcategories. This method provides sorting categories for both hard and soft sciences. All subject categories consist of three character codes: two numerics and one alpha character. The numeric codes represent entire categories the alpha codes are used to designate subcategories within these broad categories. The number of NTIS subcategories posted to an information product average from three to five, although there are some reports with more.

The National Technical Reports Library (NTRL) enhances accessibility to the NTIS technical reports collection. It provides access to:

- Bibliographic records of more than 2,000,000 technical reports
- Downloadable full text of 700,000 of these reports in PDF format

Subscription rates are based on institutional FTE levels.

The NTRL operates on a system interface that allows users to do queries on the large NTIS bibliographic database. The intent is to broadly expand and improve access to over 2 million bibliographic records (pre-1960 to present) and 700k full-text documents in PDF format that are directly linked to that bibliographic database.

For more information, go to:

<http://www.ntis.gov/products/ntrl.aspx>

Attention NTIS and NTRL Customer,

In our combined efforts to continue to provide our customers with multiple product format options while streamlining internal processes, the decision has been made to discontinue the microfiche format, as one of several product formats we offer. This discontinuance will occur as of June 1, 2012.

The decision to discontinue the microfiche format was carefully considered as we have offered this format for many years. However during the past ten-year period the selection of this format by our customers has decreased dramatically as NTIS introduced an ever-increasing number of products in digital format. With the 2009 introduction of the National Technical Reports Library (NTRL) the reduction in microfiche requests accelerated even further, as many of our corporate and academic customers migrated from microfiche to the online NTRL. Our intent to streamline our internal processes will allow us to widely expand our digital product offerings to better serve the needs of our customers.

In addition to the popular digital format, NTIS will continue to provide scientific and technical products in a variety of tangible formats including Paper, CD-ROM and DVD.
