## Monitoring of U.S. Imports of Tomatoes

Investigation No. 332-350

Publication 3817

November 2005

# Preface

---

Section 316 of the North American Free-Trade Agreement Implementation Act (NAFTA Implementation Act), Public Law 103-182, requires the U.S. International Trade Commission (Commission) to monitor U.S. imports of "fresh or chilled tomatoes" and "fresh or chilled peppers, other than chili peppers," until January 1, 2009. In response, the Commission instituted investigation No. 332-350, Monitoring of U.S. Imports of Tomatoes, and investigation No. 332-351, Monitoring of U.S. Imports of Peppers, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)).

This report on the Commission's monitoring investigation covers tomatoes for fresh-market use and for processing. The purpose of this monitoring, as expressed in the NAFTA Implementation Act, is to permit the Commission to conduct an expedited investigation and, if appropriate, recommend to the President provisional relief should a petition for relief be filed under section 202 of the Trade Act of 1974 with respect to imports from all countries, or a petition requesting such relief be filed under section 302 of the NAFTA Implementation Act with respect to imports from Canada or Mexico. Generally, such provisional relief would remain in effect, pending completion of the investigation by the Commission and the taking of final action by the President.

This report contains statistical information gathered by the Commission on the U.S. tomato industry in the course of its monitoring. This information includes (1) consumption and trade data (including U.S. imports and U.S. exports) and (2) other industry data (including U.S. production quantity, value, unit value, and harvested area; U.S. cost-of-production estimates; shipments; quantities available at major shipping points; and average U.S. retail and shipping-point prices). The information presented in this report on the U.S. tomato industry was obtained from a number of sources, including the U.S. Department of Agriculture, the U.S. Department of Commerce, the Florida Tomato Committee, the University of Florida Cooperative Extension Service, and various other State agencies. This report principally includes 2000-2004 data and partial-year data for 2004 and 2005.<sup>1</sup>

---

<sup>1</sup> Nothing in this report should be construed to indicate how the Commission would find in an investigation conducted under other statutory authority covering the same or similar subject matter.

Monitoring of U.S. Imports of Tomatoes

# Highlights

---

The following are highlights of the statistical data collected on tomatoes for fresh-market use and processing for the 2000-04 period.

## Fresh-market Tomatoes

---

- Apparent U.S. consumption of fresh-market tomatoes remained about the same in 2004 as in 2003 (table 1). Production quantity and value rose slightly from 2003 to 2004, while imports remained about the same. Export quantity and value rose considerably from 2003 to 2004. U.S. imports remain significant, accounting for nearly two-fifths of consumption volume (nearly one-half of consumption value) in 2004 (table 1). Principal U.S. trading partners for fresh-market tomatoes are Mexico and Canada (tables 3 and 5). Nogales, AZ continues to be the primary entry point for winter-season tomatoes from Mexico, with the bulk of such shipments having entered during the Florida growing season when no other domestic suppliers are in the U.S. market. Detroit and Seattle continue as the primary entry points for tomatoes from Canada, with the bulk of these shipments having entered during those months coinciding with peak domestic production in California and the rest of the United States. Florida and California remain the primary sources for U.S. fresh-market tomato production (table 24).
- Apparent U.S. consumption amounted to 2.4 million metric tons in 2004, essentially the same as in 2003; consumption in 2004 was valued at \$2.22 billion, down slightly from \$2.23 billion in 2003 (table 1). The ratio of import volume to consumption in 2004 was 39 percent, the same as that in 2003. U.S. production of tomatoes for fresh-market use was up by 2 percent from 1.61 million metric tons in 2003 to 1.64 million metric tons in 2004 (table 1). The value of production rose slightly from \$1.33 billion in 2003 to \$1.34 billion in 2004, with a unit value of \$0.82 per kilogram in 2004.
- Florida and California have been the two largest amount producing states of fresh-market tomatoes since 2000. In 2002, they accounted for 42 percent and 30 percent, respectively, of total U.S. production volume of tomatoes for fresh-market use (table 24). Other states with significant production volume during 2000-04 included Virginia, Ohio, Georgia, and Tennessee. Fresh tomatoes are harvested in Florida during October-June, in California primarily during June-November, and in most other States during March-September. U.S. harvested area of fresh-market tomatoes increased nearly 4 percent from 121,700 acres in 2003 to 126,400 acres in 2004 (table 24).
- U.S. exports of fresh-market tomatoes rose by 16 percent from 142,461 metric tons in 2003 to 165,841 metric tons in 2004 (table 1). U.S. export volume was down by 3 percent during January-June 2005 as compared with exports during the corresponding months in 2004 (table 3). Canada was the leading market for U.S. exports of fresh-market tomatoes throughout the 2000-04 period, accounting for 78 percent of the total volume (81 percent of value) in 2004.
- U.S. imports of fresh-market tomatoes fell by nearly 1 percent from 939,257 metric tons in 2003 to 931,970 metric tons in 2004 (table 1). Imports were valued at \$1.1 billion in 2004, about the same as that in 2003. Imports were down 5 percent in volume during January-June 2005 as compared with imports during the corresponding months in 2004. Mexico, the leading supplier of imports throughout the 2000-04 period, accounted for 84 percent, by

volume, of total imports of fresh-market tomatoes in 2004 (table 5). U.S. imports of fresh-market tomatoes from Canada rose by 3 percent in volume from 2003 to 2004 and accounted for 14 percent of total imports in 2004. The bulk of imports from Canada are believed to have been greenhouse-grown tomatoes.

- U.S. imports of fresh-market cherry tomatoes rose by 13 percent in volume from 2003 to 2004 and amounted to 37,970 metric tons in 2004, with Mexico accounting for 94 percent of total imports in 2004 (table 6). Import value fell by about 4 percent from \$58.0 million in 2003 to \$56.0 million in 2004. Imports of cherry tomatoes were down considerably during January-June 2005 as compared with the corresponding months in 2004. U.S. imports of fresh-market roma tomatoes amounted to 350,420 metric tons in 2004, an increase of 1 percent from 346,531 metric tons in 2003 (table 7). Mexico accounted for 99 percent annually of total imports during the 2000-04 period. Imports were down by 7 percent in volume during January-June 2005 as compared with imports during January- June 2004.
- U.S. imports of other fresh-market tomatoes amounted to 334,698 metric tons in 2004, down by 14 percent from 389,757 metric tons in 2003 (table 8). Imports from Mexico and Canada accounted for 99 percent of total import volume in 2004. Monthly U.S. imports of fresh-market tomatoes from Mexico, entered on a July-June crop-year basis, amounted to 750,823 metric tons during July 2004-June 2005, up slightly from 747,778 metric tons during July 2003-June 2004 (table 9). In recent years, about 60 percent of total annual volume of U.S. imports of all fresh-market tomatoes from Mexico entered through the Nogales Customs District. In recent crop-years, more than one-half of total average annual imports from Mexico entered during January-April, overlapping the middle of the Florida growing season.
- U.S. imports of all fresh-market tomatoes (principally greenhouse-grown) from Canada, entered on a July-June crop-year basis, rose by 5 percent from 131,160 metric tons during 2003-04 to 137,939 metric tons during 2004-05 (table 10). During July 2004-June 2005, about 67 percent of total U.S. import volume of fresh-market tomatoes from Canada entered through the Detroit and Buffalo Customs Districts into Eastern U.S. markets. Seattle is also a principal Customs District of entry from Canada, especially for Western U.S. markets. During the same July 2004-June 2005 period, 44 percent of total crop-year import volume from Canada entered during March-June, coinciding with the latter half of the normal Florida shipping season.
- U.S. imports of fresh-market tomatoes from the Netherlands (the third largest import source), entered on a July-June crop-year basis, fell by 37 percent from 13,925 metric tons in 2003-/04 to 8,746 metric tons during 2004-05 (table 11). During July 2004-June 2005, nearly 54 percent of total imports from the Netherlands entered through the New York Customs District and about three-fifths of total crop-year imports entered during November-June, coinciding with the entire normal Florida shipping season.
- Average U.S. monthly retail prices of fresh-market tomatoes have trended upward in recent years, from \$1.48 per pound annually in July 2003-June 2004 to \$1.69 per-pound annually in July 2004-June 2005 (table 33). Average monthly shipping–point prices rose significantly from \$0.34 per pound in 2003/04 to \$0.48 per pound in 2004/05. These prices usually vary a great deal throughout the season.

# Processed Tomatoes

---

- U.S. production of processed tomatoes has fluctuated widely in recent years. U.S. imports have fallen since 2002 while U.S. exports have risen steadily since 2002 (table 2). Canada and Mexico remain the principal markets for U.S. processed-tomato exports and the principal sources for U.S. imports, although there have been significant exports to Japan, Italy, and Korea (table 4) along with significant import volumes from Spain, Turkey, and Israel (table 23) in recent years. California has remained the primary source for U.S. production of processing tomatoes.
- U.S. production of tomatoes for processing rose by 25 percent from 8.9 million metric tons in 2003 to a record level 11.1 million metric tons in 2004 (table 2). The value of production was estimated at \$719.3 million in 2004, up by 25 percent from an estimated \$576.4 million in 2003. Unit values trended slightly downward throughout the 2000-04 period.
- California, Indiana, and Ohio have been the leading states producing fresh tomatoes for processing in recent years, with production in these states together accounting for 99 percent of total production volume in 2004 (table 26). Domestic harvested area of tomatoes for processing rose by 2 percent from 293,920 acres in 2003 to 300,620 acres in 2004; California accounted for 93 percent of total harvested area in 2004.
- U.S. exports of processed tomatoes amounted to 183,012 metric tons (valued at \$122.2 million) in 2004, up slightly from 182,557 metric tons (\$116.6 million) in 2003 (table 2). Canada, Mexico, Japan, and Korea were the leading U.S. export markets for processed tomatoes in 2004, together accounting for 82 percent of total export volume in that year (table 4). Export volume during January-June 2005 was up by 12 percent over the amount exported during the corresponding months of 2004.
- In 2004, U.S. imports of processed tomatoes were down by 6 percent from 39,928 metric tons in 2003 to 37,559 metric tons (table 23). Imports were valued at \$50.5 million in 2004, down by 3 percent from \$52.0 million in 2003. Canada, Israel, Mexico, Turkey, and Italy were the leading sources of imported processed tomatoes in 2004, together accounting for 77 percent of import volume in that year. Imports during January-June 2005 were down slightly in value from the level of the corresponding period of 2004.

<sup>1</sup> Data are for raw product intended for fresh-market use and are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram.

<sup>2</sup> Data are for fresh or chilled tomatoes (Schedule B No. 0702.00.0010, 0702.00.0030, and 0702.00.0050) on a fresh-weight basis.

<sup>3</sup> Data are for fresh or chilled tomatoes (Harmonized Tariff Schedule (HTS) subheadings 0702.00.20-0702.00.60) on a fresh-weight basis.

<sup>4</sup> Calculated by Commission staff using rounded numbers.

Note.—Production data are revised annually and data for the most recent calendar years may not match data presented in earlier reports.

Note.—Production data are estimated from raw product intended for fresh-market sales, whereas export and import data are shipments actually recorded. Thus, apparent consumption may be somewhat smaller and the ratio of imports to consumption somewhat larger than shown.

Source: Production data compiled by Commission staff from official statistics of the U.S. Department of Agriculture, National Agricultural Statistics Service, *Vegetables*, 2002 Summary: Jan. 2003, Vg 1-2(03), p. 5; 2003 Summary: Jan. 2004, Vg 1-2(04), p. 5; and 2004 Summary: Jan. 2005, Vg 1-2(05), p. 5; exports and imports compiled from official statistics of the U.S. Department of Commerce, except as noted.

2004 .....	.06	.67	1.35

<sup>1</sup> Data are for raw product intended for processing and are converted from pounds to kilograms using a factor of 2.20462 pounds per kilogram. U.S. production of processed tomato products on a processed-weight basis has not been reported for a number of years.

<sup>2</sup> Data are for prepared or preserved tomatoes (Schedule B No. 2002.10.0000, 2002.90.0060, and 2002.90.0080) on a processed-weight basis.

<sup>3</sup> Data are for frozen tomatoes (HTS subheadings 0710.80.40-0710.80.50) on a frozen-weight basis; dried tomatoes (HTS subheadings 0712.90.74 and 0712.90.78) on a dried-weight basis; and prepared or preserved tomatoes (HTS subheadings 2002.10.00, 2002.90.40, and 2002.90.80) on processed-weight basis.

<sup>4</sup> Calculated by Commission staff using rounded numbers.

Note.—Production data are revised annually and figures for the most recent calendar years may not match data presented in earlier reports.

Note.—Consumption of processed tomato products is not applicable since production is on a raw-product basis and imports include frozen, dried, and canned products on their respective processed-weight basis.

Note.—Unit values for U.S. tomato production are low, relative to those for exports and imports, because production includes only raw product intended for processing, not finished product. Exports and imports are finished products.

Note.—Beginning in 2000, U.S. imports of certain processed tomato products which had previously entered under HTS subheadings 2002.90.40 and 2002.90.80 were now entered under different HTS subheadings as a result of a Federal Court ruling. As a result, import data reported here are probably understating actual total canned-tomato imports

<sup>1</sup> Data are for fresh or chilled tomatoes (HTS subheadings 0702.00.20-0702.00.60) on a fresh-weight basis.

<sup>2</sup> Calculated by Commission staff using rounded numbers.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Unit values for tomatoes from such countries as Canada, Israel, and most EU countries are generally significantly higher than unit values for products from Mexico because they are believed to be primarily greenhouse-grown tomatoes.

Note.—Data for the European Union include only the EU-15 countries.

Total .....	.63	.63	.64	.86	.85	.79	.87

<sup>1</sup> Data are for fresh or chilled tomatoes (HTS subheadings 0702.00.2060, 0702.00.2065, 0702.00.4060, 0702.00.6060, and 0702.00.6065) on a fresh-weight basis.

<sup>2</sup> Calculated by Commission staff using rounded numbers.

Note.—Unit values for tomatoes from such countries as Canada, Israel, Morocco, and most EU countries are generally significantly higher than unit values for products from Mexico because they are believed to be primarily greenhouse-grown tomatoes.

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Data for the European Union include only the EU-15 countries.

<sup>1</sup> Data are for fresh or chilled tomatoes (HTS subheadings 0702.00.20-0702.00.60).

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Monthly data for each District and the “all other” grouping are calculated using unrounded data; monthly totals for all Customs Districts are rounded from the actual data reported; and crop-year Customs Districts totals for each District are calculated using rounded data.

<sup>1</sup> Data are for fresh or chilled tomatoes (HTS subheadings 0702.00.20-0702.00.60).

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Monthly data for each District and the “all other” grouping are calculated using unrounded data; monthly totals for all Customs Districts are rounded from the actual data reported; and crop-year Customs Districts totals for each District are calculated using rounded data.

<sup>1</sup> Data are for fresh or chilled greenhouse tomatoes (HTS subheadings 0702.00.2010 and 0702.00.6010).

Note.—Because of rounding, figures may not add to the totals shown.

Note.—Data for the European Union include only the EU-15 countries.

Note.—Monthly data for each District and the “all other” grouping are calculated using unrounded data; monthly totals for all Customs Districts are rounded from the actual data reported; and crop-year Customs Districts totals for each District are calculated using rounded data.

Subtotal . . . . .	4,468	4,536	4,644
Total production costs . . . . .	11,391	11,672	11,496

Note.—These are the most current data available.

Note.—These production-cost budgets are constructed based on input prices obtained from various industry sources and are believed to reflect typical costs of production for growers in a given production area, but do not necessarily reflect the actual industry average cost of production.

Note.—Because of rounding, figures may not add to the totals shown.
