## [True or False]

**Save energy, save dough, no matter where you go!** Want your city's water cleaned and pumped to your home? Of course you do, but did you know it takes a whole lot of energy to deliver every gallon of water? It does, so for goodness sake, turn off the water, and then, to save even more energy, replace your light bulbs with energy efficient ones.

\_\_\_\_\_ If every American home replaced just one light bulb with a light bulb that has earned the Energy Star stamp of approval, we would save enough energy to light 3 million homes for a year.

\_\_\_\_\_ A drippy faucet that leaks enough water to fill a soda bottle every 30 minutes will waste 2,192 gallons of water a year.

\_\_\_\_\_ The energy-saving ideas you use at home can also be used in school.

\_\_\_\_\_ The biggest use of electricity in most cities is supplying water and cleaning it up after it has been used. That's why wasting water is wasting energy.
