

Linkage Between Failure to Comply and Generation Imbalance

We propose to reinforce the Failure to Comply Penalty by excluding over-generation from Generation Imbalance credits. This may be accomplished by adding an exception to the Generation Imbalance rate excluding from Generation Imbalance credits any over-generation resulting from a failure to comply during the hours of a dispatch, curtailment, redispatch, or load shedding order.

Adding the following proposed language to the current rate schedule would accomplish this goal:

e. Failure to Comply

No Credit is given for negative deviations (actual generation greater than schedules) for any hour(s) that the imbalance is a result of a party's failure to comply and reduce generation under Section II.B of the General Rate Schedule Provisions.
