Subject: Snohomish PUD Network Segmentation Proposal

Gentlemen:

Idaho County Light & Power Cooperative is an NT and GTA customer serving approximately 3,600 consumers in north central Idaho.

I would like to offer the following comments on the Integrated Network Segmentation Analysis presentation by Snohomish Public Utility District ("Snohomish") at the Transmission Pre-Rate Case Workshop on August 22, 2012.

The Board and Management of Idaho County Light & Power finds the Snohomish proposal completely unacceptable and strongly urges Bonneville to reject it or any similar segmentation concept. The definition Bonneville currently uses for its network segment appropriately and equitably allocates the costs the of the Federal transmission system while fulfilling the agency's core mission to encourage the widest possible diversified use of Federal energy and provide the rural communities and farms of the Northwest with electricity. Again please, reject this proposal.

Thank you for your consideration.

Jay G. (Jake) Eimers, Gen. Mgr.
