

Non-Public School Assessment Information
2011-2012 National Blue Ribbon Schools Program

December 15, 2011

This information is provided for private schools interested in being nominated for the *National Blue Ribbon Schools Award* by the Council for American Private Education (CAPE) based on the criterion that the school is in the top 15 percent of the schools in the nation in reading and mathematics. Publishers of nationally normed achievement tests have provided “cutoff scores” that define the top 15 percent of schools in each of these two subject areas. The names of these tests and their publishers are

<u>Test Name</u>	<u>Test Publisher</u>
ITBS/ITED (Forms A, B, C, E)	Riverside Publishing
SAT – 9 th Ed (Form S)	Pearson Education, Inc.
SAT – 10 th Ed (Form A)	Pearson Education, Inc.
MAT 8 (Form V) *	Pearson Education, Inc.
Terra Nova 2 nd Edition (All Forms)	CTB/McGraw-Hill
Terra Nova 3	CTB/McGraw-Hill
CTP 4	Educational Records Bureau
SAT	College Board
ACT	ACT
NWEA	MAP
Performance Series **	Scantron

* Cutoff scores for the MAT 8 still define the top 10 percent, not the top 15 percent. The publisher has not yet provided cutoff scores for the top 15 percent. As soon as the cutoff scores for the top 15 percent are received, this document will be revised. Please note, however, that the top 10 percent cutoff scores provide a conservative comparison. If a school’s mean scale score or NCE meets or exceeds the top 10 percent cutoff score, it will also exceed the top 15 percent cutoff score.

** Cutoff scores based on school norms for the Scantron Performance Series have not been provided by the publisher. However, if the school average scores in each grade meets or exceeds the 85th **student** percentile (using the norms from the appropriate time of year), this will be a sufficient indicator that the school is in the top 15 percent in each grade tested.

If your school has student achievement assessment results on one of these nationally normed tests that appears to provide evidence that the school is in the top 15 percent of all schools nationally, review the tables provided below and find the two tables, one for reading and one for mathematics, for that test. Each table contains cutoff scores for each grade in which school norms were available. The cutoff score is the minimum score a school needs to be nominated as being in the top 15 percent of the schools in the nation for that test. Further details about these cutoff scores are provided on the next page.

Mean Scale Scores Corresponding to the 85th Percentile of National School Norms

The top 15 percent of schools are those schools that score at or above the 85th percentile. For the test identified under “Test Name,” the tables below provide

- the average (mean) scale score that corresponds to the 85th percentile in national **school** norms (Column 1), and
- the percentile equivalent of that average scale score in national **student** norms (Column 2)

for each grade in which school norms are available. Note that the Terra Nova 2 scores are given in NCEs, not scale scores.

The cutoff scores provided in Column 1 are provided for only one specific total or composite score in reading and one specific total or composite score in mathematics (look under “Score Name”). These total or composite scores were identified by the publisher as providing the most comprehensive coverage of reading that includes reading comprehension and the most comprehensive coverage of mathematics.

The school should examine its testing results and find the average (mean) scale score in reading and mathematics in each grade tested. If these results **equal or exceed** the average scale score that corresponds to the 85th percentile in national school norms in Column 1 **for both reading and mathematics in every grade** tested in the **most recent year administered**, this will be considered sufficient evidence that the school is in the top 15 percent of all schools nationally.

If the school’s testing results do not include average scale scores, but they do include the national percentile equivalent of the average scale score **based on student norms**, compare these results to the national student percentile equivalent for the 85th school percentile in Column 2. If these results **equal or exceed** the national student percentile equivalent in Column 2 **for both reading and mathematics in every grade** tested in the **most recent year administered**, this will be considered sufficient evidence that the school is in the top 15 percent of all schools nationally.

With the exception of the SAT and ACT, whose cutoff scores are based on testing done throughout the school year, and those tests that have cutoff scores for fall and spring norms, the cutoff scores are provided for spring norms. If a school administered a test with only spring cutoff scores during the fall or winter, the school may either use the comparison based on the spring norms or contact the publisher for comparable information based on norms for the appropriate time of year.
