

April 1 Update

The satellite telemetry buoy attached to line trailing the whale continues to function. The data indicate the whale is still swimming, and generally moving northward. NOAA has suspended at-sea missions to the whale for the time being. The emergency response team is regrouping and considering if, when, where, and how a new mission can be mounted. For the latest on where the whale is and updates on the rescue efforts, visit the Center for Coastal Studies Web site: www.coastalstudies.org/rescue/latest.htm
