1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change was calculated from unrounded data.

3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

4. The metropolitan area definitions used by BEA for its personal income estimates are the county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released in February 2004, March 2005, December 2006, November 2007, November 2008, and December 2009) for federal statistical purposes.
