- Implied mission requirements are tasks that are not required by law but are important tools used in mitigating risk. Implied mission requirements are also tasks that stakeholders expect FPS to carry out and that the Government Accountability Office (GAO) has consistently reported as FPS deficiencies. Implied requirements include activities such as Operation Shield, compliance assurance through covert security testing, recurrent officer training, and Federal Emergency Management Agency (FEMA) mission assignments.

All three categories include functions that are important to accomplishing the mission of FPS, but they also are illustrative of FPS' maturing role in the homeland security enterprise, providing security and response capabilities, the enabling of suspicious activity reporting and analysis, and daily interaction with tenants to build both situational awareness and culture of security awareness and preparedness at Federal facilities. The successful completion of the implied and supporting mission activities complements completion of the statutory mission activities—all necessary requirements for successful accomplishment of the statutory mission.

## **B. Budget Activities:**

FPS is a full-cost recovery operation. All expenses must be covered by revenues generated through either basic security fees, building-specific operation fees and administrative overhead, or reimbursable agency-specific operation fees and administrative overhead. The revenue to support the operational costs of FPS come from the basic security fees and the administrative overhead associated with building and reimbursable agency-specific charges.

FPS collects the following fees to fund law enforcement, security management, and support activities:

*Basic Security Charges:* In Fiscal Year (FY) 2013, a 74-cent per square foot charge will be assessed by FPS for all GSA-controlled space. The total square footage in GSA inventory varies from month to month but averages 365 million square feet. Basic security charges capture statutory and regulatory service requirements for activities such as law enforcement, information and intelligence sharing, and conducting security assessments, providing crime prevention and awareness training, coordination of Occupant Emergency Plan development, program administration of the PSO program, and MegaCenter alarm monitoring and dispatch operations.

*Building-Specific Charges:* These are charges assessed to Federal agency customers for building-specific security services, including acquisition and administration of PSOs, security equipment installation, operations, maintenance and repair, consultation on security fixtures, and contractor background suitability determinations. The charge includes a six-percent fixed administrative fee to fund FPS overhead costs; these funds are combined with the basic security fees collected above to cover all FPS operating costs. Building-specific security is based on security countermeasure requirements generated through an FSA or a customer request specific to a particular building.

*Reimbursable Agency Specific Charges:* Also called Security Work Authorizations (SWAs), these are reimbursable agreements between FPS and another Federal agency for the occupants of Federally owned or leased facilities requesting the same services provided as part of building-specific but provided to an individual customer rather than for an entire facility. Reimbursements consist of the direct cost of the goods and/or services provided, plus a six-percent fixed administrative fee; the administrative fee is combined with the basic security fees collected above to cover all FPS operating costs. Reimbursable agency-specific also includes other traditional reimbursable activity such as that required for American Recovery and Reinvestment Act, other Federal agencies' use of FPS firing ranges, and FEMA mission assignments.

Through the above fees, the following three strategic services are delivered:

#### Law Enforcement Services

Law enforcement services consume, analyze, and act on intelligence and other information necessary to enforce laws on Federal property through proactive engagement and appropriate response. Taken together, these law enforcement services form the foundation for FPS' efforts to meet the Secretary's statutory obligations to protect the people, buildings, grounds, and property that are owned, occupied, or secured by the Federal Government.

#### Security Management Services

Security management services provide protection and deterrent activities through the installation and monitoring of technical countermeasures, as well as the deployment of PSOs. These activities also include the necessary oversight, compliance auditing, covert testing, training, and related management activities related to managing such a program.

#### Resource Management

Resource management activities provide FPS the ability to establish and manage its resources and deliver them in a manner that meets mission objectives. This requires regular collection, review and reporting on workload, performance measures, and cost data ensuring that policies and procedures are operating as designed. FPS carries out its resource management activities in two categories: (1) business support operations comprised of indirect support functions, and (2) mission support functions that directly support FPS operations.

### **C. Budget Request Summary:**

For FY 2013, FPS projects the availability of \$1,301,824,000 in total collection authority. With this collection authority, FPS projects an operating budget of \$333,357,040 derived from: \$271,540,000 in basic security fee revenue, \$30,543,360 in building-specific administrative fee revenue, and \$31,273,680 in reimbursable agency-specific administrative fee revenue. Within this available funding, FPS will be able to support 1,279 full-time equivalents (FTE) in Fiscal Year (FY) 2013.

### III. Current Services Program Description by PPA

**Department of Homeland Security**  
**National Protection & Programs Directorate**  
**Federal Protective Service**  
**Basic Security**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Basic Security**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	<b>1,225</b>	<b>1,195</b>	<b>258,262</b>
<b>2012 Enacted Budget Authority</b>	<b>1,371</b>	<b>1,279</b>	<b>271,540</b>
<b>2013 Current Services</b>	<b>1,371</b>	<b>1,279</b>	<b>271,540</b>
<b>2013 Total Requested Budget Authority</b>	<b>1,371</b>	<b>1,279</b>	<b>271,540</b>
Total Change 2012 to 2013	-	-	-

FPS projects the availability of \$271,540,000 to be collected in FY 2013 basic security fees that will be available to sustain FY 2013 operations. This amount is estimated at the basic security fee of 74 cents per square foot. FPS will add these fees to the building-specific administrative fees of \$30,543,360 and the reimbursable agency-specific administrative fees of \$31,273,680 to support a total operating budget of \$333,357,040. Within this available funding, FPS will be able to support 1,279 FTE in FY 2013.

In the FY 2012 President’s Budget, FPS had estimated available revenue to support 1,371 FTE. The basic security fee increase of 8 cents per square foot (from \$0.66 per square foot in FY 2011 to \$0.74 per square foot in FY 2012) in FY 2012 was planned to allow FPS to hire 146 new positions, notwithstanding other requirements such as the transition from Immigration and Customs Enforcement to the National Protection and Programs Directorate, system development in Risk Assessment Management Program (RAMP), and the next generation Activity Based Costing (ABC) model which addresses the GAO concerns regarding FPS’ fee structure. Revised calculations after the FY 2012 submission resulted in estimated available revenue to support 1,279 FTE. Given the current fiscal environment and reductions that many FPS customer agencies are facing, no additional increase in security fees is requested. With requested resources, FPS will maintain a hiring plan of 1,279 FTE in FY 2013 and will manage risks within those resources. FPS is making progress in RAMP and next generation ABC model that ultimately will be able to align revenue collections to FPS activities.

## **CURRENT SERVICES PROGRAM DESCRIPTION:**

### **Basic Security**

In FY 2013, a 74-cent per square foot fee is assessed by FPS to all tenants in GSA-controlled space, including GSA, for vacant and out-leased space. Basic security charges capture statutory and regulatory service requirements for activities such as law enforcement, information and intelligence sharing, conducting security assessments, providing crime prevention and awareness training, program administration of countermeasure programs, MegaCenter alarm monitoring and dispatch operations, and all other capital investments and mission support and oversight activities.

Basic security charges, together with the administrative fees, fund the following FPS operating activities:

### **Law Enforcement**

FPS provides proactive and visible law enforcement services that regularly engage facility tenants and provide observation of Federal facilities to assess, detect, and interdict suspicious or illegal activity; to detect indications of pre-attack surveillance and planning; and to deter criminal and unauthorized activity. FPS Law Enforcement Security Officers (LESOs) provide a highly visible law enforcement presence and expand security coverage through targeted proactive patrol operations and engagement, which include bicycle patrol, motorcycles, K-9 sweeps, Operation Shield, selective heightened patrol coverage, countermeasure testing, inspections, and occupant outreach.

FPS is tasked with numerous special details such as high-profile trials at U.S. Courthouses, international border conferences, Presidential functions and inaugurations, dignitary details at assigned Federal facilities, and FEMA assignments during emergency and catastrophic events. Some of these details are short-term and end after a period of weeks; others are longer term and may run for months.

FPS responds to, investigates, and documents reports of crime, threats, alarms, and suspicious or unusual activities, and effects arrests when necessary. Responses may involve the use of K-9 or other specialized law enforcement capabilities, depending on the nature of the call.

### **Investigation and Intelligence**

FPS investigates crimes to identify and prosecute perpetrators; mitigates vulnerabilities; and consumes, synthesizes, and communicates intelligence information so that FPS stakeholders, as well as other Federal, State, and local agencies, can take appropriate actions to minimize vulnerabilities to emerging threats. FPS criminal investigators conduct criminal, internal misconduct, integrity, and threat investigations related to alleged or suspected criminal violations of Federal laws, as well as administrative investigations.

The FPS Regional Information Sharing Program is a comprehensive intelligence gathering and dissemination capability through continuous intelligence networking with Federal, State, and local law enforcement agencies. FPS shares this analyzed information on potential threats against Federal facilities in an assortment of intelligence and threat assessment products.

## **MegaCenters/Communications**

FPS integrates strategically located communication technologies to support its overall mission and engages in strategic partnerships with law enforcement and emergency management agencies nationally.

The four FPS MegaCenters monitor multiple types of alarm systems, closed-circuit television, and wireless dispatch communications within Federal facilities throughout the Nation. The related alarm-monitoring function for GSA and other Federally owned and leased facilities provides a dedicated and specialized service to ensure prompt dispatch of law enforcement and emergency first responders to situations at those facilities nationwide. Additionally, MegaCenter staff have created a collaborative partnership with third party alarm-monitoring companies nationally that monitor some GSA-leased facilities facilitating an FPS response. MegaCenters also serve as a unique and vital communications link between FPS law enforcement personnel on the street; contract security guards located at various Federal facilities; and other Federal, State, and local law enforcement entities, facilitating the swift and efficient flow of information for the U.S. and its territories.

The FPS MegaCenters are fully redundant communication and alarm centers. In the event of a partial or catastrophic failure at one center, all operations will be remotely switched and monitored at a “sister” location without disruption to alarm and communication services. FPS MegaCenters operate 24 hours a day, 7 days a week.

## **Countermeasure Program Administration**

FPS assesses facility threats, vulnerabilities, and consequences of successful threat events and recommends countermeasures, such as PSOs and/or technical security equipment, to mitigate risk and potential reoccurrence. Once the countermeasures are approved by the Facility Security Committee (FSC), FPS is responsible for procuring and overseeing the management of these countermeasure efforts.

Some of the activities performed include:

- Develop Post Orders. Collaborate with facility tenants to compose post orders specific to the facility and post to specify the actions taken by PSOs.
- Training and Certification. Provide critical training ensuring compliance with contract requirements.
- PSO Certifications. Certifications ensure that the PSO is medically cleared and properly trained to staff the post. This includes the background investigation(s), completion of all required forms, medical evaluation and weapons qualifications, first aid/CPR, and agency-specific training.
- Verification and Validation. Incorporates a robust program for FPS to monitor countermeasure performance and qualifications, ensuring compliance with contract requirements through site and/or post inspections, administrative audits, annual performance evaluations, and testing and oversight.

- Planning. FPS interacts with the FSC and GSA to ensure that approved security measures are fully integrated into the configuration of the site and/or building design.
- Design. FPS will identify the highest risk(s) associated with the site and/or facility and recommend design strategies to be integrated into and implemented during construction or build-out of space. It collaborates with facility tenants to address building- and agency-specific needs and requirements.
- Implementation. FPS is responsible for ensuring that each individual countermeasure is implemented and installed to effectively and efficiently mitigate the FSA-identified threat.
- Security Testing. Includes measures of the effectiveness of the countermeasures implemented.

### **Mission Support/Management Oversight**

Through 11 regions across the country, FPS carries out its resource management activities in two categories: (1) business support operations comprised of indirect support functions, and (2) mission support functions that directly support FPS operations. A small headquarters operation manages the frontline law enforcement and security professionals who oversee the delivery of protection and security operations, as well as coordinate the response to intelligence and other threat data across the country. This involves setting policies to mitigate and manage risk across the operation and administering the delivery of enterprise information technology systems, such as case management and reporting tools, systemic analysis of threat and investigation coordination, and the entire management and administrative operation required to support the organization.

Specific business support functions that are critical to the FPS operation include: human capital, administrative services, facilities/logistics, fleet management, space management, information technology, consolidated contracting, and financial management.

<b>2013 Total Requested Budget Authority</b>	-	-	<b>509,056</b>
Total Change 2012 to 2013	-	-	8,017

FPS requests \$509,056,000 in FY 2013 offsetting collection authority for ongoing building-specific operations. This request includes \$8,017,000 as a technical adjustment to increase offsetting collections authority. The increase will address contract security cost escalation related to increased requests for service, labor rate adjustments that were either projected or exceeded, and collective bargaining-related cost increases.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Building-Specific Security

A fee assessed to Federal agency customers for building-specific security services including acquisition and administration of PSOs, security equipment installation, operations, maintenance, and repair, consultation on security fixtures, and contractor background suitability determinations. The fee includes a six percent fixed administrative fee to fund FPS overhead costs for the security for a given facility. Building-specific security is based on security countermeasure requirements generated through an FSA or a customer request specific to a particular building. Building specific security charges fund the following countermeasure activities:

- Protective Security Officer Management Services – the contract PSO services provided by FPS are a key component of the security foundation provided by the agency. The security posts staffed by PSOs are placed at facilities based on individual risk assessments and are charged with mitigating specific vulnerabilities to identified credible threats. This is accomplished through one or more of the following functions provided by PSOs:

- Access Control. Ensures access to secured areas in accordance to access control procedures.
  - Control Center Operations. Integrates multiple countermeasures through monitoring of security equipment and facilitating communication with other posts or law enforcement as necessary.
  - Patrol and Response. Patrols and monitors the facility for safety, security, and enforcement purposes.
  - Screening. Identifies and interdicts unlawful, dangerous, or prohibited items to ensure they do not enter a secured area.
  - Visitor Processing. Identifying and documenting visits of individuals with no recurring visits.
- Technical Countermeasure Services - Technical Security Equipment countermeasures allow FPS to provide an integrated and cost effective level of protection. FPS achieves this through its national countermeasures program, which includes design, implementation and oversight, as well as collaborative efforts with Federal partners, such as the DHS Science and Technology Directorate and the Transportation Security Administration.

**Department of Homeland Security  
National Protection & Programs Directorate  
Federal Protective Service  
Reimbursable Agency Specific Security  
Program Performance Justification**  
(Dollars in Thousands)

<b>2011 Actual Obligations</b>	-	-	<b>426,153</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>513,020</b>
2013 Adjustments-to-Base	-	-	8,208
<b>2013 Current Services</b>	-	-	<b>521,228</b>
<b>2013 Total Requested Budget Authority</b>	-	-	<b>521,228</b>
Total Change 2012 to 2013	-	-	8,208

FPS requests \$521,228,000 in FY 2013 offsetting collection authority for ongoing reimbursable agency-specific security operations. This request includes \$8,208,000 as a technical adjustment to increase offsetting collections authority. The increase will address increased tenant-specific requirements and contract security cost escalation related to increased requests for service, wage rate increases, and collective bargaining-related cost increases.

FPS currently is reviewing a number of legacy delegations of law enforcement and protective security authority issued to other Federal agencies to determine whether continuing or extending them remains in the best interest of the Federal Government and the affected agency. The results of this review are expected to inform future requests for authority.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Reimbursable agency-specific security, also called Security Work Authorizations (SWAs), are reimbursable agreements (RA) between FPS and other Federal agencies. SWAs serve as the RAs for the occupants of Federally owned or leased facilities requesting the same services provided as part of building-specific but provided to an individual customer rather for an entire facility. Reimbursements consist of the direct cost of the goods and/or services provided, plus a six-percent fixed administrative fee to cover the costs of FPS.

#### **IV. Program Justification Changes**

**N/A**

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

*The revenues and collections of security fees credited to this account shall be available until expended for necessary expenses related to the protection of federally owned and leased buildings and for the operations of the Federal Protective Service[: Provided, That the Secretary of Homeland Security and the Director of the Office of Management and Budget shall certify in writing to the Committees on Appropriations of the Senate and the House of Representatives not later than December 31, 2011, that the operations of the Federal Protective Service will be fully funded in fiscal year 2012 through revenues and collection of security fees, and shall adjust the fees to ensure fee collections are sufficient to ensure that the Federal Protective Service maintains not fewer than 1,371 full-time equivalent staff and 1,007 full-time equivalent Police Officers, Inspectors, Area Commanders, and Special Agents who, while working, are directly engaged on a daily basis protecting and enforcing laws at Federal buildings (referred to as ``in-service field staff"): Provided further, That an expenditure plan for fiscal year 2012 shall be provided to the Committees on Appropriations of the Senate and the House of Representatives not later than 60 days after the date of enactment of this Act: Provided further, That the Director of the Federal Protective Service shall include with the submission of the President's fiscal year 2013 budget a strategic human capital plan that aligns fee collections to personnel requirements based on a current threat assessment].(Department of Homeland Security Appropriations Act, 2012.)*

### Reimbursable Agency-Specific Security Mission Statement

Reimbursable Agency-Specific Security, or Security Work Authorizations (SWAs) - FPS enters into SWAs with customer agencies to procure security measures beyond those included within Basic Security and Building-Specific Security. FPS does not request authority for these collections because the additional security services and contract guards are determined by the operational security needs of the customer agencies (e.g., an additional contract guard and closed circuit television cameras within a U.S. Citizenship and Immigration Services waiting room in a multi-tenant Federal building).

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	322	322	322	-
11.5 Other personnel compensation	85	85	85	-
12.1 Benefits	21	21	21	-
<b>Total, Salaries &amp; Benefits</b>	<b>428</b>	<b>428</b>	<b>428</b>	<b>-</b>

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.1 GSA rent	\$896	\$910	\$925	\$15

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. This portion of GSA Rent is reimbursed from The National Firearms and Tactical Training Unit of ICE. FY 2013 includes projected rent escalation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.3 Communications, utilities, and misc. charges	\$74	\$75	\$76	\$1

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$417,966	\$557,065	\$534,792	-\$22,273

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The contract PSOs and Security Systems programs are coded to this object class. FY 2013 includes a technical adjustment of \$8,208,000 to increase offsetting collections authority.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	\$6,467	\$6,570	\$6,675	\$105

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
31.0 Equipment	\$290	\$295	\$300	\$5

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. FY 2013 represents inflation from FY 2012 Enacted.

**Building-Specific Security Mission Statement**

Building-Specific Security is based on security countermeasure requirements specific to a particular building based on a FPS vulnerability assessment. The two components are the contract Protective Security Officers (PSOs) and Security Systems programs. The PSO Services includes access control, control center operations, patrol and response, screening, and visitor processing. The Security Systems program includes the purchase, installation, and maintenance of security equipment, such as cameras, alarms, magnetometers, and x-ray machines. FPS acquires security equipment assets based on their need, as identified through security assessments, and manages standard replacement schedules.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change

**Basic Security Mission Statement**

The Basic Security services include law enforcement services on Federally controlled property, preliminary investigations of incidents, and capture and arrest of suspects. This security also includes the 24-hour security alarm monitoring, nationwide dispatch services, facility security assessments, and assistance to Facility Security Committees.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	103,890	108,657	113,003	4,346
11.3 Other than full-time permanent	631	656	682	26
11.5 Other personnel compensation	17,745	18,455	19,194	739
12.1 Benefits	34,067	35,315	36,780	1,465
<b>Total, Salaries &amp; Benefits</b>	<b>156,333</b>	<b>163,083</b>	<b>169,659</b>	<b>6,576</b>

FY 2013 includes \$169,658,736 for salaries and benefits for 1,279 FTE.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	\$4,953	\$5,032	\$5,113	\$81

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
22.0 Transportation of things	\$13,721	\$13,193	\$12,665	-\$528

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. FY 2013 represents a \$528,000 decrease from the FY 2012 Enacted. The savings can be attributed to a gradual rightsizing of the FPS fleet.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.1 GSA rent	\$25,962	\$27,944	\$29,133	\$1,189

GSA Rent includes all payments to GSA for rental of space and rent-related services. FY 2013 includes projected rent escalation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.2 Other rent	\$220	\$224	\$227	\$3

Other rent includes all payments to a non-Federal source for rental space, land, and structures. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.3 Communications, utilities, and misc. charges	\$7,678	\$7,801	\$7,926	\$125

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011	FY 2012	FY 2013	FY 2012 to

	Actual Obligations	Enacted Budget Authority	Requested Budget Authority	FY 2013 Change
24.0 Printing	\$7	\$7	\$8	\$1

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$87	\$88	\$89	\$1

Advisory and assistance services includes services acquired by contract from non-Federal sources as well as from other units within the Federal Government. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$8,045	\$21,097	\$20,500	-\$597

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. FY 2013 continues planning and investment in the second generation Risk Assessment Management Program while the Modified Infrastructure Survey Tool is utilized as an interim solution.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$3,049	\$7,307	\$7,424	\$117

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. FY 2013 continues to fund forced-move facilities projects, of which many are related to the FY 2010 transfer from ICE to NPPD.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.4 O&M of facilities	\$18	\$18	\$19	\$1

Operation and maintenance of facilities includes all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal account. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	\$33,203	\$43,203	\$43,629	\$426

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. FY 2013 includes funding for information technology support billed through the DHS Working Capital Fund. In FY 2012, service was provided through a service level agreement with ICE.

including prisoners. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	\$2,402	\$2,440	\$2,479	\$39

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	\$2,516	\$2,556	\$2,597	\$41

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>32.0 Land &amp; structures</b>	\$15	\$15	\$16	\$1

FY 2013 represents inflation from FY 2012 Enacted.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>42.0 Insurance Claims and Indemnity</b>	\$47	\$48	\$49	\$1

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. FY 2013 represents inflation from FY 2012 Enacted.

# BUDGET REQUEST AND SUPPORTING INFORMATION

## Office of Health Affairs

### I. Appropriation Overview

#### **A. Mission Statement for Office of Health Affairs:**

The Office of Health Affairs (OHA) provides health and medical expertise in support of the DHS mission to prepare for, respond to, and recover from all threats. OHA's responsibilities include: serving as the principal advisor to the Secretary and FEMA Administrator on medical and public health issues; leading and coordinating biological and chemical defense activities; providing medical and scientific expertise to support DHS preparedness and response efforts; and leading the Department's workforce health and medical oversight activities. OHA also serves as the primary DHS point of contact for State and local governments on medical and public health issues.

OHA has four strategic goals that coincide with the strategic goals of the Department:

- 1) Provide expert health and medical advice to DHS leadership
- 2) Build national resilience against health incidents
- 3) Enhance national and DHS medical first responder capabilities
- 4) Protect the DHS workforce against health threats

#### **B. Budget Activities:**

The Office of Health Affairs budget is divided into five Program, Project and Activity (PPAs) areas:

##### **BioWatch Program:**

The BioWatch Program promotes the DHS mission to detect biological attacks by managing an early warning system designed to rapidly detect aerosolized biological threat agents that could be used in an intentional wide-area release causing harm to the population. This program deploys collection devices and analytical capability in more than thirty high-risk metropolitan areas, called BioWatch jurisdictions, throughout the nation. The BioWatch Program provides public health officials with a warning of a biological agent release before exposed individuals develop symptoms of illness. This "detect-to-treat" approach provides public health officials with an opportunity to respond aggressively to help mitigate the potentially catastrophic impact on the population of a biological agent release.

##### **Chemical Defense Program (CDP):**

The Chemical Defense Program (CDP) aims to provide Federal, State, and local governments with the knowledge and tools to build and sustain a viable framework for preparedness and

response to high consequence chemical events.

In order to accomplish this mission, the CDP has four main goals:

- 1) Integrate existing Federal chemical defense efforts and programs
- 2) Establish and build upon workforce preparedness processes and procedures to leverage and tie together existing state and local response capability
- 3) Support the enhancement of detection and communication technology
- 4) Develop national best practices guidance documents

The desired end result is to ensure local communities are adequately equipped (risk awareness, technology requirements, decision-support tools, protocols, and best practices) to take action with speed, skill, and effectiveness during a high consequence chemical incident. In order to accomplish this, the program's efforts are directed towards integrating risk assessments and detection capabilities into community preparedness, developing response protocols, and defining best practices.

#### **National Biosurveillance Integration Center (NBIC):**

NBIC collaborates with Federal, State, and local partners to collect, analyze, and share human, animal, plant, food, and environmental biosurveillance information from a myriad of monitoring systems. NBIC provides a Biosurveillance Common Operating Picture to senior decision-makers and partner agencies that provide a consistent, integrated picture of biosurveillance situational awareness for DHS and its partners.

#### **Planning and Coordination (P&C):**

Planning and Coordination is comprised of programs that primarily support Mission 5 of the Quadrennial Homeland Security Review (QHSR): Ensuring Resilience to Disasters and Maturing and Strengthening the Homeland Security Enterprise. The four programs included within this PPA are: Planning and Exercise Support; Food, Agriculture, Veterinary Defense; State and Local Coordination; and, Workforce Health & Medical Support (composed of the following branches: Occupational Health, Medical Liaisons, Medical First Responder, Medical Quality Management). These programs support this mission through a variety of activities directed both externally to Federal, State, and local stakeholders and internally within the Department.

Initiatives within the P&C PPA build resilience by providing appropriate information, resources and guidance to help State and local communities as well as the DHS workforce to bolster efforts to prepare for and respond to catastrophic health threats. In addition, through these initiatives, OHA provides health and medical expertise for formulating national preparedness, contingency planning at all levels, and supports exercises designed to improve preparedness and response to catastrophic incidents across the health security spectrum.

For example, *DHSTogether* and Medical Countermeasure programs provide resiliency to the DHS workforce by providing health and wellness resources. Other initiatives include the development of medical guidance for DHS personnel, the provision of standards and guidelines to DHS medical care providers, and the oversight of DHS quality improvement and medical training.

**Salaries and Expenses (S&E):**

The Salaries and Expenses PPA funds the salaries and benefits for all FTE within OHA and the activities of the Office of the Assistant Secretary (OAS). OAS supports OHA's mission by providing executive direction and leadership to all divisions and branches and ensures OHA's critical mission can be accomplished efficiently and effectively through policy coordination, communications, external relations, financial, human capital, strategic planning, and correspondence management. OAS also provides for the management of all relevant business operations including financial management, program analysis, facilities maintenance and planning, continuity of operations planning, human capital management, and information technology support.

In addition, S&E funds OHA's share of the DHS Working Capital Fund, office supplies, training for the entire organization, travel for senior management, and other various shared services.

**C. Budget Request Summary:**

OHA requests \$166.458 million, 110 full-time positions (FTP) and 101 full-time equivalents (FTE). This is a decrease of \$0.991 million from the FY 2012 Enacted. Funding requested provides for increased funding for the following programs: BioWatch's Generation-3 (Gen-3) and the Medical Countermeasure (MCM) Program.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

### Department of Homeland Security Office of Health Affairs

#### Summary of FY 2013 Budget Estimates by Program Project Activity/Appropriation

#### FY 2013 Requested Budget Authority (Dollars in Thousands)

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Office of Health Affairs  
BioWatch  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: BioWatch**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>90,845</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>114,164</b>
2013 Adjustments-to-Base	-	-	(28,774)
<b>2013 Current Services</b>	-	-	<b>85,390</b>
2013 Program Change	-	-	39,904
<b>2013 Total Requested Budget Authority</b>	-	-	<b>125,294</b>
Total Change 2012 to 2013	-	-	11,130

OHA requests \$125.294 million in FY 2013 for the BioWatch Program. Within this amount, \$85.390 million is to support BioWatch current operations and the Generation 2 (Gen-2) system, and \$39.904 million is for the Generation 3 (Gen-3) system.

Previous efforts for Gen-3 supported the efforts of Phase I of assay/characterization testing and the Chicago Field Test of candidate Gen-3 detectors. The next steps in the Gen-3 acquisition schedule include Phase II Performance Testing on candidate system(s) and initiating a Four-City OT&E effort.

Performance testing will ascertain the capability of production-ready systems to meet the Department’s biodetection goals prior to larger system procurements for OT&E.

The Gen-3 test and evaluation program is taking an incremental, risk-reduced approach by ensuring that each stage of testing begins only after the successful completion of previous testing efforts. Because of the lengthy time periods to prepare for some aspects of testing, select preparation activities may start earlier to minimize schedule delay if appropriate. The funding requested for the Gen-3 system will support these various stages of testing as follows:

- Stage 1: Performance Testing
  - Test Gen-3 detectors at independent test facility to characterize system performance. This includes assay evaluation, aerosol collector and identification subsystem testing, system level testing and environmental testing.
  - Conduct integration and testing activities for the IT backbone.

- Stage 2: Operational Testing and Evaluation
  - Procure long lead items for the Operational Test & Evaluation (OT&E)
  - Conduct operational and site preparation activities in BioWatch jurisdictions to support OT&E and further deployments
  - Conduct systems engineering, analysis and acquisition support to include readiness and modeling & simulation to support system sitings.
  - Continue the development of Gen-3 exercises, guidance and city-specific concept of operation (CONOPS) for BioWatch jurisdictions.
  
- Ongoing Gen-3 Program Efforts
  - Provide jurisdictional training, program management and Quality Assurance (QA) efforts.
  - Provide independent evaluation of testing results from the Performance Testing and OT&E

The request for continued funding of the Gen-2 system will enable the continuation of current operations in all jurisdictions in which the BioWatch program is presently deployed and operating.

Adjustments-to-Base include:

- Decrease of \$4.774 million for Management Efficiencies including:
  - \$0.926 million for Office of Federal Procurement Policy (OFPP) Directed Purchasing Savings and DHS Strategic Sourcing Initiative.
  - \$0.074 million for DHS Strategic Sourcing Initiative.
  - \$3.774 million to be achieved through contract reviews and internal spend plan reviews.
- Decrease of \$24.000 million for non-recurring costs for the Gen-3 system.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

OHA will achieve an OFPP Directed Purchasing Savings of \$0.926 million and DHS Strategic Sourcing Initiative (\$0.074 million) in the BioWatch program.

The BioWatch Program is the only Federally-managed, locally-operated, nationwide biosurveillance system designed to detect the intentional wide-area release of select aerosolized biological agents. The program has been operating in more than 30 high-threat metropolitan areas, called BioWatch jurisdictions, across the country. BioWatch protects millions of people by focusing on the early detection of a biological attack which is critical to the successful treatment of affected populations. The BioWatch Program also provides public health decision makers the time-sensitive and necessary information to respond, mitigate, and recover from a bioterrorist event. BioWatch is the only program that exercises and evaluates our national collective abilities to provide a detect-to-treat notification system alerting the U.S. civilian population to an aerosolized biological attack. While OHA oversees, coordinates, and provides technical support to the BioWatch Program at the Federal level, State and local public health authorities manage the day-to-day program. These State and local stakeholders use the information generated by the detection system as an important tool in deciding whether a biological event of public health significance has occurred.

This budget request includes funding for BioWatch current operations, as well as funding to conduct Gen-3 performance testing and to prepare for OT&E. The current operations request supports the existing Gen-2 system and provides funding for Public Health Service Officers (PHSOs) and support personnel who provide programmatic oversight as well as planning support for the development of new systems. The Gen-3 request builds on past funding for the Gen-3 system by continuing crucial testing and evaluation activities needed to deploy faster detectors. The Gen-3 system will advance current detection technology by providing an automated detection capability.

Current detection capabilities, termed Gen-2, consist of outdoor and a few indoor aerosol collectors whose filters are manually retrieved for transport to and subsequent analysis in a Laboratory Response Network facility. This system, while extremely beneficial, is labor intensive and the results may not be available until 12-36 hours after the release of a biological agent has occurred. In addition, this detection delay is unacceptable for indoor collector use because response actions following notification of an attack 36 hours earlier is problematic due to the time lapse. The transition to an automated detection system (i.e., Gen-3) will improve the time to detect to 4-6 hours, increase population coverage, and provide greater overall cost effectiveness.

The BioWatch Program's current Gen-2 system will be enhanced by the Gen-3 detection capability, which will be a fully autonomous and networked bio-detection system whose function mirrors that of the Gen-2 system, namely, to monitor the air for agents of biological concern. However, unlike the Gen-2 system, Gen-3 is a "laboratory-in-a-box." Sample collection, preparation, analysis, reporting, archiving, self-assessment, failure analysis, waste handling, and fault isolation all occur inside the detector. As a result, the Gen-3 system does not use the labor-intensive collection and transport of samples for laboratory analysis required with the Gen-2 system.

**Department of Homeland Security**  
**Office of Health Affairs**  
**National Biosurveillance Integration Center**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: National Biosurveillance Integration Center**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>5,693</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>12,013</b>
2013 Adjustments-to-Base	-	-	(5,013)

2013 Program Change	-	-	1,000
<b>2013 Total Requested Budget Authority</b>	-	-	<b>8,000</b>
Total Change 2012 to 2013	-	-	(4,013)

The National Biosurveillance Integration Center (NBIC) PPA requests \$8.000 million in FY 2013, which will fund technical support services, information technology operations and improvements, biosurveillance private sector data acquisitions and support coordination efforts with Federal, State, local and tribal governments.

Adjustments-to-Base include:

- Decrease of \$5.000 million for non-recurring costs of the National Collaborative for Bio-Preparedness.
- Decrease of \$0.013 million for Management Efficiencies to be achieved through contract reviews and internal spend plan reviews.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The National Biosurveillance Integration System (NBIS), the consortium of Federal partners, was established to rapidly identify, analyze and monitor biological events of national concern. NBIS collaborates among Federal and State partners to collect, analyze, and share human, animal, plant, food, and environmental biosurveillance information.

The mission of NBIS is to promote and coordinate effective and timely information gathering, analysis, and sharing regarding biological events of national concern in order to enhance recognition, reduce response time, and promote effective response.

As the managing partner of NBIS, the NBIC organizes data and information from multiple sources. The NBIS then determines those bio-events that have reached reporting thresholds and publishes reports using the Biosurveillance Common Operating Picture (BCOP) in versions for Federal partner agency users and for State and local stakeholders. The State and local BCOP, known as Minerva, has been piloted in a number of states and currently hosts nearly 150 users, many of whom work in the 72 fusion centers around the Nation. NBIC provides State and local Minerva users with the Daily NBIS Monitoring List emails that were previously only being sent to Federal BCOP users. Minerva was rolled out initially to four states – North Carolina, New Jersey, Minnesota, and Washington – in October 2010. Enhancements to Minerva will be conducted in FY 2012 and work will begin on developing means for local users to provide information via the platform.

In GAO Report 10-171: *Biosurveillance: Developing a Collaboration Strategy Is Essential to Fostering Interagency Data and Resource Sharing*, GAO recommended NBIC develop a new mission statement and purpose, address challenges of sharing, define roles and responsibilities, develop partner buy-in, and develop relevant performance metrics.

In response, OHA has drafted an integrated strategic plan for the NBIC in collaboration with the NBIS Member Agencies. The strategic plan utilizes an emergent strategy and outlines milestones for obtaining a fully functional integration center in partnership with the NBIS member agencies, State and local governments and the private sector in four critical areas: collaboration, data integration, analysis and reporting to produce high-quality and timely results. The strategy is focused on leveraging proven expertise in data integration and biosurveillance analytics while retaining DHS management. The core mission of collecting and sharing information across domains on incidents of potential national significance continues, but this emergent strategy hinges upon piloting promising proof of concept demonstrations, learning from them, and reinforcing their success. An important piece of the strategy, the North Carolina Bio-preparedness project integrates and fuses information at State, local, and private sector levels. OHA will continue to refine the work with its stakeholders to integrate the four critical dimensions of integrated biosurveillance. OHA plans to build upon existing and proven constructs to weave together and integrate the nation's biosurveillance system.

OHA has been a key partner and contributor in White House led biosurveillance strategy development. NBIS and the supporting structure provided by the NBIC plays a key role in the effective gathering, monitoring, and dissemination of information across human, animal, plant health, and food safety domains. It also has the ability to weave relevant information from the intelligence community to provide a more complete picture for both biosurveillance community practitioners and senior government decision makers.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Chemical Defense Program**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Chemical Defense Program**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>2,117</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>5,439</b>
2013 Adjustments-to-Base	-	-	(3,000)
<b>2013 Current Services</b>	-	-	<b>2,439</b>
2013 Program Change	-	-	(1,939)
<b>2013 Total Requested Budget Authority</b>	-	-	<b>500</b>
Total Change 2012 to 2013	-	-	(4,939)

The Chemical Defense Program (CDP) PPA requests \$0.500 million in FY 2013 to provide health and medical expertise related to chemical preparedness, detection, response, and resilience to provide a comprehensive approach to protection from a chemical attack.

Adjustments-to-Base include:

- Decrease of \$3.000 million for non-recurring costs.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Chemical Defense Program has transitioned from a singular focus on the Rapidly Deployable Chemical Defense System (RDCDS) system to one of planning, preparedness, response, and strategic interagency communication in order to comprehensively address the gaps in the chemical defense problem set. CDP aims to provide Federal, State, and local governments with the knowledge and tools to build and sustain a viable framework for preparedness and response to high consequence chemical events.

The program’s efforts are directed towards integrating risk assessments and detection capabilities into community preparedness, developing response protocols, and defining best practices. In addition, the program is focused on assessing the capabilities of commercially available detection equipment so that the program can guide communities toward acquiring the most effective and readily available technologies to protect against significant chemical threats at their high risk sites.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Planning and Coordination**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Planning and Coordination**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>3,621</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>6,162</b>

<b>2013 Current Services</b>	-	-	<b>5,375</b>
2013 Program Change	-	-	(468)
<b>2013 Total Requested Budget Authority</b>	-	-	<b>4,907</b>
Total Change 2012 to 2013	-	-	(1,255)

OHA requests \$4.907 million in FY 2013 for the Planning and Coordination (P&C) PPA. The funding requested in FY 2013 will continue the efforts in the Workforce Health and Medical Support arena and enable OHA to proceed with important work in the Food, Agriculture, and Veterinary defense area. The Planning and Exercise branch will now support all exercises within OHA, which are proposed to be transferred from BioWatch.

Adjustments-to-Base include:

- Decrease of \$0.375 million for Management Efficiencies to include:
  - \$0.273 million through OFPP Directed Purchasing Savings.
  - \$0.102 million to be achieved through contract reviews and internal spend plan reviews.
- Decrease of \$0.412 million to transfer funding for two positions from P&C to the Salaries and Expenses PPA.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

OHA will achieve an OFPP Directed Purchasing Savings of \$0.273 million in their Planning and Exercise Support Branch. They will reduce contractor support within this program to achieve this efficiency.

Planning and Coordination PPA is comprised of initiatives that primarily support QHSR Mission 5: Ensuring Resilience to Disasters. Major programs include: Planning and Exercise Support; Food,

Agriculture, Veterinary Defense (FAVD); State and Local Coordination; and Workforce Health & Medical Support (WH&MS).

### **Planning and Exercise Support Branch (PESB)**

The Planning and Exercise Support Branch (PESB) provides health and medical subject expertise in the development of Federal plans and policies related to natural and man-made events having catastrophic consequences on human and animal health. These plans and policies are germane to DHS, throughout the Federal government, and in support of preparedness and response activities at the State, local, territorial, and tribal level. In addition to planning and policy development, PESB develops, conducts, influences, and participates in a broad range of exercises, workshops, seminars, and facilitated discussions that advance national preparedness and response capability for threats having catastrophic health consequences, with a focus on chemical, biological, radiological and nuclear (CBRN) events. The PESB represents all DHS health security interests in the areas of planning, policy development, and exercise support, aligning these efforts into a single office.

In support of National Preparedness, PESB is participating in the development of a national preparedness goal, a national preparedness system, and the development of a number of frameworks to enhance national preparedness (Prevention, Protection, Preparedness, Mitigation, and Recovery). These products were directed by Presidential Policy Directive 8: National Preparedness (PPD-8), issued by the President in March 2011. While work is already underway, PESB expects that the workload to support this multi-year program will increase in the near term. The PPD-8 effort is consistent with the DHS QHSR and the OHA Strategic Framework. The resulting preparedness system will result in a full complement of frameworks and strategies that enhance national preparedness.

### **Food, Agriculture, and Veterinary Defense (FAVD)**

The Food, Agriculture, and Veterinary Defense (FAVD) Branch initiative leads the coordination of the Department's programs to ensure the security of our nation's food, agriculture, human and animal health. FAVD experts support the Department's efforts to enhance preparedness through capabilities development and facilitate the integration of the emergency management services community into Federal, State, local, territorial, and tribal food and agriculture sector disaster preparedness activities.

### **State and Local Coordination**

The State and Local Coordination initiative develops State and local guidance for health and medical experts to better access Federal grant and training programs which will improve public health preparedness capability. Additionally, this initiative facilitates the inclusion of State and local public health professionals within the national network of State and Local Fusion Centers which improves the sharing of public health threat information.

### **Workforce Health and Medical Support Division (WHMS)**

The Workforce Health & Medical Support (WHMS) Division is comprised of four branches, which lead the Department's workforce health and medical oversight activities:

- The Medical First Responder Coordination branch provides medical guidance, standards, policy, and outreach to medical first responder stakeholders
- The Occupational Health branch mitigates the adverse health impacts of work-related risks for the DHS workforce through medical guidance, programs, standards, and policy.
- The Medical Quality Management branch advises, consults, and assists DHS Components on issues related to the improvement of the quality, safety, efficiency, and effectiveness of health care for all stakeholders.
- The Medical Liaison branch provides medical guidance to the DHS Operational Components<sup>1</sup> on issues related to planning, policy, response and workforce health protection in order to ensure standardization and alignment with DHS headquarters' policy and mission.

#### Medical First Responder Coordination

This initiative ensures medical first responder coordination by providing support to DHS personnel who perform operational medical services. DHS has thousands of medical personnel deployed throughout the country, who provide care for wide-ranging and often remotely deployed personnel, from border agents in the Southwest desert, to DHS aviation personnel engaged in counternarcotics and counter-smuggling operations. OHA supports these personnel through the following: developing health guidance and policies; providing health protection in dangerous work environments; and facilitating health screening programs to help ensure that responders are able to support the Department's missions, while minimizing health threats and work-related disability.

#### Occupational Health

The WHMS initiative also focuses on DHS occupational health, which involves mitigation of adverse health impacts of work-related risks for the DHS workforce by developing strategy, policy, requirements and metrics for the medical aspects of a Department-wide occupational health and safety program. This is done in partnership with the Office of Safety and Environmental Programs within the Office of the Under Secretary for Management. OHA provides health and medical consultation resources to DHS Components on a 24/7 basis. OHA consultation services ensure regulatory compliance and consistency with industry best practices in support of various component missions with regard to medical, health, and safety considerations. The initiative also assists the Department's Office of the Chief Human Capital Officer in developing physical evaluation programs (pre-placement, fitness-for-duty, return-to-work, etc.) and performing post-incident analyses.

#### Medical Quality Management

The initiative ensures medical quality assurance by supporting the "One DHS" concept through the following: developing cross-DHS Emergency Medical Services (EMS) protocols; quality assurance standards, credentialing standards and validation processes; providing quality assurance and medical advice; advising FEMA on safety and environmental health housing issues and creating a medical oversight framework.

---

<sup>1</sup> DHS Operational Components consist of FEMA, TSA, USCG, CIS, CBP, ICE, USSS

Medical Liaisons

The initiative provides support to DHS Operational Components through providing medical and public health subject matter expertise. The Branch serves as the direct trusted agent of the Chief Medical Officer (CMO) to the components under the statutory mandate to the CMO. Advice in planning, response, workforce protection policy and direct medical reach back are provided. Working within OHA, the Medical Liaison Branch supports the traveler health restriction program and the medical first responder programs in DHS.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Salaries and Expenses**  
**Program Performance Justification**  
(Dollars in Thousands)

**PPA: Salaries and Expenses**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	<b>104</b>	<b>76</b>	<b>30,596</b>
<b>2012 Enacted Budget Authority</b>	<b>108</b>	<b>99</b>	<b>29,671</b>
2013 Adjustments-to-Base	2	2	(1,914)
<b>2013 Current Services</b>	<b>110</b>	<b>101</b>	<b>27,757</b>
<b>2013 Total Requested Budget Authority</b>	<b>110</b>	<b>101</b>	<b>27,757</b>
Total Change 2012 to 2013	2	2	(1,914)

Salaries and Expenses (S&E) PPA requests \$27.757 million in FY 2013, which will fund 110 full-time positions (FTP) and 101 full-time equivalents (FTE).

Adjustments-to- base include:

- Increase of \$0.412 million for the transfer of funding from the Planning and Coordination PPA for 2 FTE positions.
- Decrease of \$0.256 million for GSA Rent that is billed to OHA by the DHS Working Capital Fund (WCF).
- Increase of \$0.055 million for 0.5% pay inflation.
- Decrease of \$0.151 million for Management Efficiencies listed below:
  - PCS Costs \$0.012 million
  - General TDY and Travel \$0.100 million
  - Long-term TDY more than 30-days \$0.008 million
  - HQ Admin Efficiency across DHS \$0.031 million
- Decrease of \$1.975 million for the scaling down of office wide mission support contracts, staffing re-baseline, and reduction in assessed Working Capital Fund (WCF) fees.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The S&E PPA funds the salaries and benefits for all FTE within OHA and the activities of the Office of the Assistant Secretary (OAS). The Assistant Secretary and Chief Medical Officer leads a team of doctors, veterinarians, nurses, scientists, public health professionals, and other public servants whose expertise and skills contribute to achieving the Office’s mission. OAS provides executive direction

and leadership to all divisions and branches and ensures OHA's critical mission can be accomplished efficiently and effectively. OAS includes both the Immediate Office of the Assistant Secretary and Chief Medical Officer and the Office of the Chief of Staff.

The Immediate Office of the Assistant Secretary and Chief Medical Officer consists of the Assistant Secretary and Chief Medical Officer, the Deputy Assistant Secretary and Deputy Chief Medical Officer, General Counsel, Medical Advisors, a Futures Advisor, and a Global Health Security Advisor. These individuals advise the Assistant Secretary and Chief Medical Officer on specific, highly complex, strategic medical and public health issues and policies.

The Office of the Chief of Staff consists of the Chief of Staff, Deputy Chief of Staff and the Office's policy, communications, correspondence, and executive support functions, and the management operations division (finance, acquisition, human capital, information technology, emergency preparedness, and continuity of operations, and facilities/property services).

In addition, S&E funds OHA's share of the DHS Working Capital Fund, office supplies, training for the entire organization, professional development certification, and continuing medical education, travel for senior management, and other shared services.

## IV. Program Justification Changes

**Department of Homeland Security  
Office of Health Affairs  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** BioWatch GEN 3  
PPA: BioWatch  
Program Increase: Positions 0, FTE 0, Dollars \$39,904

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	39,904
<b>Total Request</b>	-	-	<b>18,307</b>	-	-	<b>24,000</b>	-	-	<b>39,904</b>

Strategic Goals & Objectives: Preventing Terrorism and Enhancing Security

- Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear Materials and Capabilities

Ensuring Resilience to Disasters

- Goal 5.2: Enhance Preparedness

**Description of Item**

The BioWatch Program requires \$125.294 million in FY 2013. \$85.390 million is to support BioWatch current operations and the Generation 2 (Gen-2) system, and \$39.904 million is for the Generation 3 (Gen-3) system.

Previous efforts for Gen-3 supported the efforts of Phase I of assay/characterization testing and the Chicago Field Test of prototype candidate Gen-3 detectors. The next steps in the Gen-3 acquisition schedule include Phase II Performance Testing on production-ready candidate system(s) and initiating a four city OT&E effort. The Performance Testing will ascertain the capability of production-ready systems to meet the Department's biodetection goals prior to larger system procurements for OT&E. Each stage of testing begins only after the successful completion of previous testing efforts.

Funding requested for BioWatch Gen-3 will include:

- Stage 1: Performance Testing
  - \$3.1 M for the detection and decision support systems (to include assays and the Information Management System)
  - \$1.0 M for Systems engineering, analysis and acquisition (to include technology readiness assessment and modeling & simulation supporting site modeling)
  - \$4.1 M for Systems Test & Evaluation
- Stage 2: Operational Test and Evaluation
  - \$2.7 M for System Production, which funds the procurement of long lead items for the operational test
  - \$6.8M for development of guidance documents, city-specific CONOPS for OT&E and commensurate exercises
  - \$2.4 M for CONOPS training to support OT&E
  - \$16.6 M for operational and site activation to include site preparation and readiness
- Ongoing Gen-3 program efforts
  - \$0.4 M for data evaluation during testing
  - \$1.3M for program management
  - \$1.5 M continues to fund quality assurance evaluations

These activities are the continuation of multi-year efforts to test and evaluate the Gen-3 system for use across the nation.

### **Justification**

Current detection capabilities, termed Gen-2, reflect the best available technology in use. The Gen-2 system consists of outdoor aerosol collectors whose filters are manually retrieved for transport to and subsequent analysis in a BioWatch laboratory. This system, while extremely beneficial, is labor intensive and the data results may be time-delayed relative to the time of the attack. The new Gen-3 system is designed to significantly reduce the time between exposure to a biological agent and detection following a biological aerosol attack. This in turn will provide additional time critical to organizing and dispensing medical countermeasures to jurisdictions before people become symptomatic following exposure to a pathogen. Therefore, the more time available to organize an effective response, the more lives likely to be saved.

### **Impact on Performance**

The BioWatch Program supports Department's goal of ensuring resilience to disasters and/or terrorist attacks by providing the capability to detect bio-aerosol terrorist operations. The program is also aligned with OHA's responsibility to lead the Department's biodefense activities. An effective and timely detection capability is critical to achieving this goal.

With the FY 2013 request, the BioWatch Program's Gen-3 system will continue operational test and evaluation efforts to decrease detection time from 12-36 hours to 4-6 hours, which will allow localities to rapidly conduct response and mitigation efforts.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 2:** Medical Countermeasures Program  
PPA: Planning and Coordination  
Program Increase: Positions 0, FTE 0, Dollars \$1,900

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	1,900
<b>Total Request</b>	-	-	-	-	-	-	-	-	<b>1,900</b>

- Strategic Goal(s) & Objective(s): Mission 5: Ensuring Resilience to Disasters
- Goal 5.2: Enhance Preparedness
  - Goal 5.3: Ensure Effective Emergency Response
  - Goal 5.4: Rapidly Recover

**Description of Item**

In recognizing the risks and the need to protect the DHS workforce, OHA has developed a Medical Countermeasure (MCM) strategy that will mitigate the impact to employees and ensure national resilience. An MCM strategy is required by Executive Order (E.O.) 13527, “Establishing Federal Capability for the Timely Provision of Medical Countermeasures Following a Biological Attack.” Section 4 of the E.O. specifically mandates Federal agencies to establish mechanisms for the provision of MCM to ensure that the mission-essential functions of the executive branch continue following an attack, including DHS. The Department has a responsibility to provide MCM directly to its mission essential personnel to ensure continuity of operations.

**Justification**

The FY 2013 request will allow OHA to fulfill its responsibility of executing this critical mission. In addition to training, program support, and planning activities, this funding provides antivirals and antibiotics to cover the DHS workforce, those in care & custody, as well as critical contractors. Specifically, the FY 2013 request allows the MCM program to:

- Maintain DHS antibiotic stockpile at 325,000 level by rotating/replenishing expiring drugs
- Maintain DHS antiviral stockpile at 254,000 level by rotating/replenishing expiring drugs

- Pre-position antibiotics at 350 DHS Component locations (increase by 100 locations from FY 2012)
- Purchase initial stockpile of Potassium Iodide (KI) in amount of 20,000 courses

Funding will allow DHS to replenish the stockpile as it begins to expire in FY 2013 and support essential training and program support. Without the MCM program, DHS will not be able to sustain mission essential personnel in a biological or radiological event.

### **Impact on Performance**

The MCM Program supports DHS's goal of ensuring resilience to disasters and/or terrorist attacks by ensuring federal capability following a biological attack.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 3:** NBIC  
PPA:  
Program Increase: Positions 0, FTE 0, Dollars \$0

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	1,000
<b>Total Request</b>	-	-	<b>7,686</b>	-	-	<b>7,000</b>	-	-	<b>1,000</b>

- Strategic Goal(s) & Objective(s): Mission 1: Preventing Terrorism and Enhancing Security
- Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear Materials and Capabilities
- Mission 5: Ensuring Resilience to Disasters; Ensure Effective Emergency Response
- Goal 5.3: Ensure Effective Emergency Response

**Description of Item**

The National Bio-surveillance Integration Center (NBIC) PPA requests \$1.0 million in FY 2013, which will fund pilot projects that enhance technical support services, information technology operations and improvements, bio-surveillance private sector data acquisitions and support coordination efforts with Federal, State, local and tribal governments.

**Justification**

OHA requests funding within the NBIC PPA to implement NBIC’s newly developed strategy *National Biosurveillance Integration Strategy*. The NBIC or “The Center” was established to enhance the integration of U.S. biosurveillance efforts in 2007 under Public Law 110-53, “*Implementing Recommendations of the 9/11 Commission Act of 2007*” amended Title III of the Homeland Security Act of 2002 and assigned the Center to enhance the Federal government’s capability to rapidly identify, characterize, localize and track biological events of national concern; to disseminate information; and to oversee development and operation of the National Biosurveillance Integration System (NBIS – “The System”).

This *National Biosurveillance Integration Strategy* describes a vision for achieving the United States Government's biosurveillance goals to provide early detection and warning of a health incident of potential national significance, actionable and timely analysis, and ongoing situational awareness to support informed decision making. Any incident, once detected, must quickly be characterized to inform actions that will mitigate the situation. Information must be integrated and communicated effectively to create the situational awareness and support the expert analysis that enables leaders and responders to make optimum decisions, even in the face of incomplete or constantly changing information. NBIC's investments in "pilot projects" in 2013 will be focused on advancing the System's capabilities as well as informing planners on how a fully functional and operating system could be designed.

### **Impact on Performance**

NBIC will drive the development and evaluation of pilots that:

- Leverage current existing biosurveillance assets for an efficient, scalable, useable, and cost effective structure (incorporation of DHS data sets into the NBIS community)
- Apply new and existing successful analytic structures and tools for integration and user adoption
- Create an open supported information sharing and problem solving environment to promote key partner experimentation and collaboration
- Define measures and benchmarks for success and a design strategy to incorporate measurable integrated information sharing criteria
- Examine and clarify underlying assumptions for successful integration parameters and components

Measure the results after a defined period to determine success for a larger implementation of the process, tool, policy, etc.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** DHSTogether - Program Funding  
PPA: Planning and Coordination  
Program Decrease: Positions 0, FTE 0, Dollars \$(1,000)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	1,500
Program Decrease							-	-	(1,000)
<b>Total Request</b>	-	-	-	-	-	<b>1,500</b>	-	-	<b>500</b>

Strategic Goal(s) & Objective(s): Mission 5: Ensuring Resilience to Disasters

- Goal 5.2: Enhance Preparedness
- Goal 5.3: Ensure Effective Emergency Response
- Goal 5.4: Rapidly Recover

Maturing and Strengthening the Homeland Security Enterprise

**Description of Item**

The total request for the *DHSTogether* initiative is \$0.500 million in the Planning & Coordination PPA which is a \$1.000 million decrease to the program from FY12 funding levels. The \$0.500 million will support the *DHSTogether* Employee and Organizational Resilience Initiative to ensure that Department employees have the tools and resources to manage the stresses inherent in these occupations.

**Justification**

In late 2009, the Secretary of DHS tasked OHA with the creation of an employee resilience and wellness program with guidance from a new leadership level component taskforce. OHA approached this task with a focus on building a strong development team, analyzing existing data to define the program, and reaching out across the Federal government to learn about best practices of the top Federal workplaces.

In January 2010, the new initiative, called “*DHSTogether: Building a more resilient workforce,*” was introduced to employees through a “Safety Stand Down” event and the *DHSTogether* Component Leadership Task Force held their inaugural meeting (*DHSTogether* Task Force).

During the initial training effort, approximately 190,000 employees heard from the Secretary and other Component leaders, watched a video training presentation about resilience, and most notably, participated in facilitated dialogue with supervisors and coworkers about methods to improve the workplace. Feedback from the Safety Stand Down training and dialogues were collected and continue to be incorporated as part of the program's development.

Moving forward, OHA will utilize an overarching resilience framework that will unify existing activities and provide a platform for leadership and to build a culture of support. Further development of the *DHSTogether* program to meet the strategic and recommended level of effectiveness will require dedicated funding and resources.

The *DHSTogether* Task Force has outlined various immediate actions, including the following items that fall into the following strategic pillars:

#### STRATEGIC COMMUNICATIONS

OHA is collaborating with the Office of Public Affairs to develop and implement a *DHSTogether* communications strategy that informs leadership and employees on resilience issues and initiatives. The initial communications message, identified through the feedback from the Safety Stand-down, focuses on mental health and the need to better inform our employees on their ability to seek help without adversely affecting their security clearance.

#### DEPARTMENT-WIDE TRAINING

The training strategies and requirements include the development, production and delivery of employee and supervisor training specific to the prevention of employee suicide and risk identification. In collaboration with Office of the Chief Human Capital Officer (OCHCO) and Federal Law Enforcement Training Center (FLETC), leadership/supervisory training will be developed that incorporates resilience and suicide prevention concepts into existing mandatory supervisor and Leadership Training Curricula and administered by OCHCO. Also, OHA, in collaboration with FLETC and OCHCO will develop DHS-wide peer support and peer support coordinator training to address critical incident stress management needs throughout the Department.

OHA and OCHCO will provide a DHS-wide individual health risk assessment and management tool. This health risk assessment will allow DHS to better understand the education, support and training needs of our workforce, and how to target needs to the appropriate subgroups. This initiative also incorporates a uniform data collection policy for tracking and measuring resiliency data.

#### CONSISTENCY OF POLICIES, PROCEDURES, AND PROGRAMS FOR DHS

OHA and OCHCO are working with the *DHSTogether* Task Force to identify and develop consistent policies, procedures, and programs that support employee and organizational resilience across the Department. Incorporating best practice models, OHA and OCHCO will be leading the process to disseminate these to all DHS Components and support the roll-out of successful pilot programs across the Department.

#### Impact on Performance

*DHSTogether* will focus the program on efforts which will effectively deploy and communicate the DHS-Wide Resilience training and carryout the DHS-wide Health Risk Assessments. .

## **DHS-Wide Resilience and Wellness Training**

DHS*Together* will develop, distribute and apply the training necessary to create a supportive DHS culture that empowers employees to seek help by raising awareness and increasing access to resources. The implementation of DHS-Wide training programs provides a consistent message to employees that the issue of resilience and wellness is important and a leadership priority.

Implementation of DHS-Wide Resilience training will provide the DHS workforce with the necessary skills to help themselves and others in need. Best practices from the Department of Defense have shown that encouragement for help seeking behavior is best delivered through standardized training delivery.

## **DHS-Wide Health Risk Assessment**

The DHS-wide Health Risk Assessment will impact the Department's ability to quantify our workforce's baseline resilience and well-being. Implementation of a Health Risk Assessment is the only mechanism for assessing our employees; existing assessment mechanisms such as the Employee Viewpoint Survey and Federal Employee Health Benefits Health Risk Data do not provide quantifiable metrics for baseline assessment of the DHS workforce.

Due to the size of the Department, it is difficult to provide consistent resources to all DHS employees. Execution of an online Health Risk Assessment ensures the entire workforce will have access to consistent and standardized resources and will provide DHS*Together* with a risk assessment that quantifies the baseline resilience and wellness of our workforce.

## **DHS-Wide Health Risk Assessment**

The DHS-wide health risk assessment and management tool will impact the Department's ability to quantify our workforce's baseline resilience and wellbeing. Implementation of a Health Risk Assessment is the only mechanism for assessing our employees; existing assessment mechanisms such as the Employee Viewpoint Survey and Federal Employee Health Benefits Health Risk Data do not provide quantifiable metrics for baseline assessment of the DHS workforce.

Due to the size of the Department it is difficult to provide consistent resources to all DHS employees, execution of an online Health Risk Assessment ensures the entire workforce will have access to consistent and standardize resources and will provide DHS*Together* with a risk assessment that quantifies the baseline resilience and wellness of our workforce.

**Department of Homeland Security**  
**Office of Health Affairs**  
**Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 2:** Chemical Defense Program  
PPA: Chemical Defense Program  
Program Decrease: Positions 0, FTE 0, Dollars \$(1,939)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	2,439
Program Decrease							-	-	(1,939)
<b>Total Request</b>	-	-	<b>2,034</b>	-	-	<b>5,439</b>	-	-	<b>500</b>

Strategic Goals & Objectives: Preventing Terrorism and Enhancing Security

- Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear Materials and Capabilities

Ensuring Resilience to Disasters

- Goal 5.2: Enhance Preparedness

**Description of Item**

The Chemical Defense Program (CDP) integrates risk assessments and detection capabilities into community preparedness, developing response protocols, and defining best practices. In addition, the program is focused on assessing the capabilities of commercially available detection equipment so that the program can guide communities toward acquiring the most effective and readily available technologies to protect against significant chemical threats at their high risk sites.

The CDP documents lessons learned and best practices captured during scheduled demonstration projects, in order to serve as future guidance for other communities to design chemical detection and defense frameworks tailored to their individual requirements and resource availability. The incorporation of lessons learned, with coordination among DHS Components and other Federal agencies is a critical component to the design of the chemical defense framework. Specifically, the future guidance documents from these endeavors will facilitate linking detection technologies to threat, risk and vulnerability assessments, preparedness efforts, and rapid response actions that will save lives.

## **Justification**

CDP will provide Subject Matter Expertise to advise the Secretary, the Chief Medical Officer and Components on the medical toxicology, industrial hygiene and responder workforce protection related to chemical threats.

## **Impact on Performance**

The program will maintain chemical defense expertise in order to support high-level Department priorities. CDP will review and provide input into chemical response planning and training curriculum development led by FEMA as well as co-chair and serve on several sub-Interagency Policy Committees (IPCs) led by the White House (e.g. Mass Decon Working Group, Homeland Presidential Directive (HSPD) – 22 Working Group) and other interagency efforts (e.g. Chemical Terrorism Risk Assessment (CTRA) subject matter expertise elicitation). In addition, additional funding (\$3.0 million) was provided in FY12 to support two demonstration projects; these efforts will be completed in FY13.

Strategic Goals & Objectives: Ensuring Resilience to Disasters

- Goal 5.2: Enhance Preparedness
- Goal 5.3: Ensure Effective Recovery and Response

**Description of Item**

The Planning and Exercise Support Branch (PESB) provides health and medical subject expertise in the development of Federal plans and policies related to natural and man-made events having catastrophic consequences on human and animal health. These plans and policies are germane to DHS, throughout the Federal government, and in support of preparedness and response activities at the State, local, territorial, and tribal level. State and Local Initiatives (SLI) serve as a coordinator of all state and local community activities across OHA to develop preparedness and response capabilities and ensure information sharing.

**Justification**

In support of National Preparedness, PESB participated in the development of a National Preparedness Goal, a National Preparedness System, and the development of a number of frameworks to enhance national preparedness (Prevention, Protection, Preparedness, Mitigation, and Recovery). These products were directed by Presidential Policy Directive 8: National Preparedness (PPD-8), issued by the President in March 2011. While work is already underway, PESB expects that the workload to support this multiyear program will increase in the near term. The PPD-8 effort is consistent with the DHS Quadrennial Homeland Security Review and the OHA Strategic Framework. The resulting preparedness system will result in a full complement of frameworks and strategies that enhance national preparedness.

In addition to planning and policy development, PESB develops, conducts, influences, and participates in a broad range of exercises, workshops, seminars, and facilitated discussions that advance national preparedness and response capability for threats having catastrophic health consequences, with a focus on chemical, biological, radiological and nuclear (CBRN) events. The PESB represents all DHS health security interests in the areas of planning, policy development, and exercise support, aligning these efforts into a single office.

As the coordinator of all State and local community activities across OHA, SLI provides the following:

- Health Security guidance, communication and coordination activities to the state and local public health and homeland security partners.
- Technical assistance and support to health security partners facilitates development of health security capabilities and establish information exchange mechanisms to share appropriate CBRN and health-related threat intelligence with state and local public health officials, first responders, and other state, local, tribal, and territorial customers.
- State and local public health officials' security clearances that are critical for the sharing of classified CBRN and health threat information.

Additionally, the Planning and Exercise Support Branch will be further reduced by \$.273 million for management efficiencies as mentioned in the P&C narrative. The total FY13 program budget for PESB and SLI is \$1.040 million.

### **Impact on Performance**

The total FY13 program budget for PESB and SLI is \$1.300 million, a reduction of \$1.370 million from FY12. PESB will implement 50% of the exercises initially planned for FY13, with the remaining exercises implemented in future years, as outlined in the Multiyear Exercise Plan (MEP). The purpose of the Multiyear Exercise Plan (MEP) is to provide a framework that coordinates with the FEMA National Exercise Division efforts, recognizing their responsibility with implementing the National Exercise Program, the Senior Officials Exercise Program, and various other projects that involve planning, conducting, and evaluating emergency preparedness exercises among stakeholders in the Homeland Security Enterprise.

The MEP will be updated and refined annually. It provides OHA with a roadmap to follow in accomplishing the priorities described in the OHA Strategic Framework. Each priority is linked to a corresponding National Priority, and, if applicable, an Improvement Plan action. Each priority is further linked to the associated target capabilities being developed and evaluated during the training and exercises that will then help the jurisdictions obtain the appropriate capabilities.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

*For necessary expenses of the Office of Health Affairs, \$166,458,000; of which \$27,757,000 is for salaries and expenses and \$85,390,000 is for BioWatch operations: Provided, That \$53,311,000 shall remain available until September 30, 2014, for biosurveillance, BioWatch Generation 3, chemical defense, medical and health planning and coordination, and workforce health protection: Provided further, That not to exceed \$2,500 shall be for official reception and representation expenses.*

#### **Explanation of Changes:**

No substantive changes

### Chemical Defense Program Mission Statement

OHA Chemical Defense Program provides health and medical expertise related to chemical preparedness, response, and resilience in support of a Chemical Defense Architecture to ensure an end-to-end approach to Chemical Defense. In addition, the Chemical Defense Program is working in cooperation with the Transportation Security Administration in developing and implementing a test and evaluation process that would allow independent testing to chemical detector specifications and support the Transit Security Grant Program. As part of the architecture design, the Chemical Defense Program is in the process of developing methods to identify requirements and planning responses activities in the event of a chemical attack.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.8 Special Service Pay	355	237	237	-
<b>Total, Salaries &amp; Benefits</b>	<b>355</b>	<b>237</b>	<b>237</b>	<b>-</b>

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	<b>\$52</b>	<b>\$89</b>	<b>\$51</b>	<b>-\$38</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 requested funding level reflects changes associated with field testing to evaluate the effectiveness and efficiency of the RDCDS system.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$332	\$232	\$32	-\$200

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 requested funding level reflects changes in commitment by OHA to engage industry experts in advisory and assistance services associated with field testing to evaluate the effectiveness and efficiency of the RDCDS system.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$1,378	\$5,242	\$180	-\$5,062

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 requested funding level reflects OHA's review of services to other government agencies, such as EPA and the national labs with which CDP partners.

**National Biosurveillance Integration Center Mission Statement**

The National Biosurveillance Integration Center (NBIC) provides early detection, characterization, and situational awareness of biological events of potential national significance. NBIC operates by acquiring, integrating, analyzing, and disseminating biosurveillance information from human, animal, plant and environmental data. NBIC collaborates with federal and state partners to collect, analyze, and share human, animal, plant, food, and environmental biosurveillance information from a myriad of monitoring systems. NBIC provides a Biosurveillance Common Operating Picture (BCOP) to senior decision-makers and partner agencies. The BCOP provides a consistent, integrated picture of biosurveillance situational awareness throughout the country.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.8 Special Service Pay	685	645	654	9
12.1 Benefits	6	-	-	-
<b>Total, Salaries &amp; Benefits</b>	<b>691</b>	<b>645</b>	<b>654</b>	<b>9</b>

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$4,930	\$12,549	\$7,232	-\$5,317

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 requested funding level reflects a change in commitment by OHA to revisit the NBIC focus and a review of costs associated with the University of North Carolina Biosurveillance pilot(NCB).

**BioWatch Mission Statement**

The BioWatch Program promotes the DHS mission of detection of biological attacks by managing an early warning system designed to rapidly detect aerosolized biological threat agents that could be used in an intentional release causing harm to the population. This program deploys collection devices and analytical capability in more than thirty high-risk metropolitan areas throughout the nation. The BioWatch Program provides public health experts with a warning of a biological agent release before exposed individuals develop symptoms of illness. This “detect-to-treat” approach provides public health officials with an opportunity to respond aggressively to eliminate or substantially mitigate the potentially catastrophic impact on the population of a biological agent release.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.8 Special Service Pay	855	1,247	1,100	(147)
<b>Total, Salaries &amp; Benefits</b>	<b>855</b>	<b>1,247</b>	<b>1,100</b>	<b>(147)</b>

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	\$192	\$268	\$300	\$32

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request funding level reflects a change in travel associated with Gen-2 operations as well as preparations for the Gen-3 autonomous detectors.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	\$34,655	\$51,147	\$61,800	\$10,653

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request funding level reflects a commitment by OHA to engage industry experts in advisory and assistance services associated with Developmental Test and Evaluation (DT&E); Operational Test and Evaluation (OT&E); Test and Evaluation Support; the BioWatch National Workshop; Jurisdictional Training; Laboratory Operation and Support; Quality Assurance Support; and Program Management.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.3 Purchases from Gov't accts.</b>	\$22,890	\$21,412	\$15,349	-\$6,063

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 request funding level reflects changes to some Interagency agreements for: Assays; the development of Autonomous Detectors; Guidance; Site Modeling; Engineering/Data Analysis; Developmental Test and Evaluation (DT&E); Field Operation and Support; Public Health and Preparedness Support; Logistics Support; and Special Events Support.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	\$1,802	\$17,011	\$14,550	-\$2,461

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (c) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2013 requested funding level reflects the purchases for supplies and materials associated with reagents and other supplies related to Lab and Logistics Support.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	\$40	\$10,000	\$4,245	-\$5,755

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2013 requested funding level reflects changes associated with the revised Gen-3 project schedule and associated Information Management Systems, Low Rate Initial Production (LRIP); Systems Integration Laboratory; and Engineering Data.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>41.0 Grants/Subsidies/Contributions</b>	\$30,380	\$31,415	\$27,950	-\$3,465

Grants/Subsidies/Contributions includes cash payments to States, other federal agencies, associations, individuals, commissions, proceedings, or projects. The FY 2013 requested funding level reflects changes associated with funding to jurisdictions through cooperative agreements for current operations and deployment and jurisdictional preparation for OT&E of autonomous detectors.

**Salaries and Expenses Mission Statement**

The Office of Health Affairs (OHA) serves as the Department of Homeland Security's principal authority for all medical and public health matters. OHA provides medical, public health, and scientific expertise in support of the DHS mission to prepare for, respond to, and recover from all threats. The Salaries and Expenses (S&E) PPA funds all FTEs within OHA. The S&E PPA also provides programmatic funding for the Office of International Affairs and Global Health Security, which oversees the Department's global health security initiatives, including the international aspects of pandemic influenza planning and international lessons learned from public health crises. In FY 2010 and 2011, the S&E PPA also provided programmatic funding for the Office of Component Services, which is responsible for establishing policy, standards, requirements and metrics for the Department's health and safety programs, and provides protective and operational medical oversight, credentialing, and medical quality management across DHS.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	8,402	11,615	12,100	485

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Emergency Management Agency Salaries and Expenses**

### **I. Appropriation Overview**

#### **A. Mission Statement:**

The FEMA Salaries and Expenses (S&E) appropriation (formerly Management and Administration) provides core mission funding for the development and maintenance of an integrated, nationwide capability to prepare for, mitigate against, respond to, and recover from the consequences of major disasters and emergencies regardless of cause, in partnership with other Federal agencies, State, local, and tribal governments, volunteer organizations, and the private sector. The account supports core operations for all FEMA organizations, providing resources for mission activities and administrative support. S&E resources are directed to both headquarters and regional operations.

#### **B. Budget Activities:**

Activities are organized according to the following program/project/activity (PPA) structure:

- Administrative and Regional Offices (ARO)
- Preparedness and Protection
- Response
- Recovery
- Mitigation
- Mission Support
- Centrally Managed Accounts

In accordance with the Joint Explanatory Statement accompanying P.L 112-74, the above PPAs supersede the three PPAs used in the previous Management and Administration appropriation:

- Operating Activities – included in all seven of the new PPAs
- Urban Search and Rescue – included in the new Response PPA
- National Capital Region Coordination (NCRC) – included in the Administrative and Regional Offices PPA

#### **B.1 Administrative and Regional Offices**

ARO incorporates the essential command and control functions of the Agency. Administrative coordinates all policy, strategic planning, resources, managerial, and administrative actions to include the Federal Coordinating Officers, NCRC, and the Evaluations and Assessment Program. Regional Operations includes the leadership, management, and mission support functions of the 10 FEMA Regions. The Regions execute the operational direction received from headquarters to ensure that FEMA can execute its primary mission: preparedness, protection, response, recovery, and mitigation.

## **B.2 Preparedness and Protection**

*Preparedness.* The preparedness mission seeks to reduce the loss of life and property and protect the Nation by planning, training, exercising, and building the emergency management profession. As manager and coordinator of the preparedness cycle, FEMA provides assistance, support, and leadership to help Federal, State, tribal, and local governments and the private sector build the operational capabilities needed to implement preparedness strategies successfully.

*Protection.* The protection mission seeks to protect our Nation's constitutional form of government and ensures that a system is in place to warn our citizens of impending hazards. FEMA is responsible for supporting the enhancement of protection capabilities for all hazards, which in turn helps to integrate the tools and mechanisms for capability building across mission areas; streamlines the delivery of assistance to State, tribal, and local governments, as well as nongovernmental entities; and leverages existing intergovernmental coordination infrastructures. FEMA's primary continuity business lines and associated continuity activities include: Continuity Planning, Continuity Training and Exercises, and Continuity Operations.

## **B.3 Response**

The Response mission seeks to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA conducts response operations in partnership with State, tribal, and local governments; interagency Federal partners; nongovernmental organizations; and the private sector.

FEMA executes response operations through established incident management and incident support entities that capitalize on FEMA's nationwide organizational structure, occupying specific disaster facilities at the national headquarters level, in the affected Regional office, and in temporary field locations established near the scene of a disaster or emergency. FEMA's response operations include logistics, search and rescue, disaster emergency communications, and planning.

## **B.4 Recovery**

The Recovery mission seeks to support communities in rebuilding so that individuals, civic institutions, businesses, and governmental organizations can function on their own, return to normal life, and protect against future hazards.

FEMA's recovery mission is accomplished through a combination of programs and functions that provide direct and indirect support. These include the Stafford Act Declaration process, recovery planning, and programs specifically designed to assist both individuals and local governments that have been affected by disasters.

## **B.5 Mitigation**

The mitigation mission seeks to reduce or eliminate long-term risks to people and property from hazards and their effects. Mitigation benefits society by creating safer communities, enabling people

to recover more rapidly from floods and other disasters, and reducing the financial impact on Federal, State, tribal, and local governments and communities. FEMA's mitigation mission is accomplished through the following basic mitigation business lines: Risk Analysis, Risk Reduction, and Risk Insurance.

### **B.6 Mission Support**

Mission Support provides the corporate support, tools, and resources that the agency needs to build, sustain, and improve its primary mission of preparedness, protection, response, recovery, and mitigation. Functions include information technology, human capital management, acquisition management, security, and administration which include facilities management, records management, and occupational health and safety.

### **B.7 Centrally Managed Accounts**

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management, which includes streamlining cost factors and prompt payment. The authority and responsibility for the individual accounts are assigned by the FEMA Office of the Chief Financial Officer (OCFO) to the individual functional proponents.

*Section III: Current Services Program Description by PPA* provides additional details on the functions by operational element.

### **C. Budget Request Summary:**

The FY 2013 Budget request of \$789.172 million reflects FEMA's priority to manage resources more effectively. FEMA remains committed to supporting the Department of Homeland Security's (DHS) strategic priorities while prioritizing requirements throughout the Department. Our focus has been to maintain and strengthen the Agency's ability to respond to disasters while reducing costs and improving the efficiency of our operations. FEMA's swift and effective response to the tornadoes, floods, earthquakes, and hurricanes of 2011 demonstrates the impact of internal capacity that FEMA has developed in recent years, which will be maintained at the requested level.

### **FEMA Responds to Hurricane Irene.**

In late August 2011, Hurricane Irene made landfall in Puerto Rico (August 22<sup>nd</sup>) and then made her way to the Atlantic Coast where she made landfall over Eastern North Carolina's Outer Banks (August 27<sup>th</sup>). She then proceeded up the Atlantic coastline causing havoc from North Carolina to Vermont before dissipating on August 29<sup>th</sup>.

Situational Awareness -- FEMA and its Federal partners, through FEMA's National Response Coordination Center (NRCC) and its Regional Response Coordination Centers (RRCC) in Region I (Boston), Region II (New York), Region III (Philadelphia), and Region IV (Atlanta) monitored the storm and stayed in close contact with their respective State emergency management agencies ensuring that they had the Federal support that they needed.

Response Teams – Prior to Hurricane Irene making landfall in Puerto Rico, the Hurricane Liaison Team quickly flew to Miami and set up inside the National Oceanic and Atmospheric Administration’s (NOAA) National Hurricane Center. FEMA deployed a total of 18 Incident Management Assistance Teams (IMATs) to coordinate with State, tribal, and local officials to identify needs and shortfalls affecting potential disaster response and recovery activities. Six National Urban Search and Rescue (US&R) teams, comprised of more than 500 personnel, were activated. Mobile Emergency Response System (MERS) assets were located strategically along the entire East Coast to support emergency response communications needs. For example, when the State of Vermont’s emergency operations center was made inoperable due to flooding, FEMA provided work space, equipment, and communications support to ensure the continued operation of Vermont’s State response.

Logistics Management – Logistics personnel established Incident Support Bases at Fort Bragg, North Carolina; Westover Army Reserve Base in Massachusetts; and Fort Dix, New Jersey, to support Federal response operations and to proactively stage essential commodities (i.e., generators, meals, water, cots, blankets, infant & toddler kits, and durable medical supplies), which allowed FEMA to quickly move needed supplies through the affected States.

Community Relations – Hundreds of community relations specialists were deployed to the affected States, meeting with disaster survivors and explaining the Federal services and resources that were available. The services and resources included: the registration process; mass care and emergency assistance; voluntary agencies; Individual & Household Programs; and the location, services, and hours of the Disaster Recovery Centers (DRCs). DRCs are locations where disaster survivors can meet one-on-one with representatives from State, local, Federal, and voluntary agencies to learn about disaster assistance programs that can help them start rebuilding and recouping their losses. For Hurricane Irene, DRCs were opened in New York, New Jersey, Connecticut, Vermont, and Puerto Rico, and as of December 2011, more than \$488 million in disaster assistance had been approved.

### **Preparedness Increases Community Resilience in Responding to the 2011 Spring Tornadoes.**

FEMA provides State and local governments with preparedness grant dollars to enhance their capabilities and to build community resilience. The success of these grant programs has been experienced and can be seen in a variety of events across the country, including the responses in Joplin, Missouri, and Tuscaloosa, Alabama.

The tornado that ravaged Joplin, Missouri, on May 22, 2011, was met by local response and recovery teams, reducing reliance on Federal recovery teams and FEMA’s Disaster Relief Fund.

More than 11 million emergency management personnel across the Nation have benefitted from training and exercise programs.

### **Whole Community**

FEMA is committed to increasing individual preparedness and engaging with members of the community as vital partners in enhancing the resiliency and security of our Nation through a “Whole

Community” approach. As a concept, Whole Community is a means by which residents, emergency management practitioners, organizational and community leaders, and government officials collectively can understand and assess the needs of their respective communities and determine the best ways to organize and strengthen their assets, capacities, and interests. By doing so, a more effective path to societal security and resilience is built.

The FY 2013 Budget reflects FEMA’s commitment to helping mature and strengthen the homeland security enterprise in this challenging fiscal environment while maintaining the Agency’s ability to fulfill its emergency management mandate.

*Proposed funding levels for specific PPAs are as follows:*

**Salaries and Expenses (S&E):** FEMA requests \$789.172 million, 3,771 positions, and 3,576 FTE. This represents a net decrease of \$197,956 million, and a decrease of 726 positions, and 695 FTE as compared to FY 2012 Enacted (P.L 112-74), with directed transfers.

*For FY 2013, 726 positions and 681 FTE will be funded with transfer from the State and Local Programs appropriation.*

The change from FY 2012 is explained by a series of adjustments as described below.

**(1) PPA – Administrative and Regional Offices:** FEMA requests \$214.603 million, 1,458 positions, and 1,366 FTE. This represents a net increase of \$78.338 million, an increase of 601 positions, and 552 FTE as compared to FY 2012.

**(2) PPA – Preparedness and Protection:** FEMA requests \$73.153 million, 128 positions, and 124 FTE. This represents a net decrease of \$102.728 million, and a decrease of 510 positions and 482 FTE as compared to FY 2012.

**(3) PPA – Response:** FEMA requests \$171.897 million, 832 positions, and 801 FTE. This represents a net decrease of \$54.331 million, a decrease of 280 positions, and 255 FTE as compared to FY 2012.

**(4) PPA – Recovery:** FEMA requests \$55.423 million, 420 positions, and 398 FTE. This represents a net decrease of \$22.95 million, a decrease of 192 positions, and 183 FTE as compared to FY 2012.

**(5) PPA – Mitigation:** FEMA requests \$27.110 million, 76 positions, and 72 FTE. This represents a net decrease of \$16.565 million, a decrease of 107 positions, and 102 FTE as compared to FY 2012.

**(6) PPA – Mission Support:** FEMA requests \$152.806 million, 857 positions, and 815 FTE. This represents a net decrease of \$66.627 million, a decrease of 238 positions, and 225 FTE as compared to FY 2012.

**(7) PPA – Centrally Managed Accounts:** FEMA requests \$94.180 million, 0 positions, and 0 FTE. This represents a net decrease of \$13.093 million, and no change to positions and FTE as compared to FY 2012.

Administrative and Regional Offices  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Administrative and Regional Offices**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	-
<b>2012 Enacted Budget Authority</b>	-	-	-
2013 Adjustments-to-Base	601	552	78,338
<b>2013 Current Services</b>	<b>1,458</b>	<b>1,366</b>	<b>214,603</b>
<b>2013 Total Requested Budget Authority</b>	<b>1,458</b>	<b>1,366</b>	<b>214,603</b>
Total Change 2012 to 2013	1,458	1,366	214,603

FEMA requests \$214.603 million, 1,458 positions, and 1,376 FTE for Administrative and Regional Offices.

- Increase of \$100.54 million, 817 positions, and 765 FTE transferred from the Response, Recovery, Mitigation, and Mission Support PPAs for disaster efforts conducted in the Regions by the Regional Administrators
- Increase of \$0.475 million for pay inflation
- Decrease of \$10.0 million, 17 positions, and 17 FTE for Evaluations and Assessment in FY 2012 Enacted to be funded through transfer from the State and Local Programs appropriation in FY 2013
- Decrease of \$12.277 million, 199 positions, and 182 FTE for preparedness and protection efforts conducted in regions by Regional Administrators, funded in the FY 2012 Enacted base, to be funded through transfer from the State and Local Programs appropriation in FY 2013
- Decrease of \$400 thousand for management efficiencies in National Capital Region Coordination

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Administrative and Regional Operations incorporates the essential command and control functions of the Agency. The following activities directly support FEMA’s mission to support our citizens and first responders to ensure that as a Nation we work together to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

## 1) **Office of the Administrator:**

The Administrator and the Deputy Administrator have the ultimate responsibility for providing leadership and direction that enables FEMA to accomplish the Agency's mission: to support our citizens and first responders to ensure that as a Nation we work together to build, sustain, and improve our capability to prepare for, protect against, respond to, recover from, and mitigate all hazards.

Collaborating with State, local governments and other emergency providers to build a national system of emergency management, the Administrator integrates the Agency's emergency preparedness, protection, response, recovery, and mitigation responsibilities to confront the challenges of a natural disaster, act of terrorism or other manmade disaster. The Administrator coordinates the implementation of a risk-based, all-hazards strategy that assists the President in carrying out functions of the Stafford Act.

As the principal advisor to the President, Homeland Security Council, and the Secretary of the Department of Homeland Security (DHS) for all matters relating to emergency management in the United States, the Administrator provides advice on request to any of these entities.

The **Office of Senior Law Enforcement Advisor** enhances communication and coordination between FEMA and State, local, and tribal law enforcement. The Law Enforcement Advisor is an integral part of FEMA's senior leadership team – participating in planning meetings and consequence management during a crisis.

The **DHS Center for Faith-Based and Neighborhood Partnerships** (DHS Center) builds, sustains, and improves effective partnerships between government sectors and faith-based and community organizations. Located within FEMA, DHS Center attends to faith-based and community organization engagements and partnerships across DHS.

The **National Advisory Council (NAC)** advises the Administrator on all aspects of emergency management. The NAC incorporates State, local, and tribal government and private sector input in the development and revision of the national preparedness goal, the national preparedness system, the National Incident Management System (NIMS), the National Response Plan, and other related plans and strategies.

The members of the NAC are appointed by the Administrator, and, to the extent practicable, represent a geographic (including urban and rural) and substantive cross-section of officials, emergency managers, and emergency response providers from State, local, and tribal governments, the private sector, and nongovernmental organizations.

The **Office of the Executive Secretariat (OES)** serves as the primary point of contact for FEMA's Office of the Administrator for coordinating departmental tasking, briefing material, and official correspondence. The OES is the central coordination point within FEMA responsible for ensuring proper and expeditious action on all tasks and correspondence addressed to and from FEMA.

### *A. Office of External Affairs*

The mission of the Office of External Affairs (OEA) is to engage, inform, and educate all of FEMA's stakeholders in support of the agency's programs and initiatives to achieve its mission. OEA accomplishes its mission by coordinating and maintaining visibility of public and internal communications; advising FEMA program and support offices on decision-making regarding policies,

plans, and actions that affect stakeholder, media, and congressional audiences; and organizing outreach efforts targeted at principal stakeholders to include local, State, and tribal governments, the private sector, foreign partners, and the American public.

OEA accomplishes critical aspects of FEMA's overall strategic goals by implementing the "Whole Community" concept and striving to improve communications—along with the sharing of best practices—among all emergency management personnel. OEA also delivers the expertise necessary to effectively lead public disaster communications in a unified manner and executes a targeted national public readiness initiative to build and sustain preparedness through the Ready Campaign.

OEA provides operational services to FEMA's mission for Intergovernmental Affairs, International Affairs, Legislative Affairs, Private Sector Initiatives, Public Affairs, and the Ready Campaign.

**Intergovernmental Affairs (IGA)** serves as FEMA's primary national-level liaison for State, Local, Tribal, and Territorial officials and governments and the associations that represent their interests. The division forges trusting relationships with stakeholder groups at every level in order to facilitate open and effective communication about the needs and capabilities of the communities FEMA is charged with serving. IGA identifies issues, answers questions, and offers solutions to its intergovernmental partners, and also facilitates partner participation in the FEMA policy development process. IGA works in tandem with the other elements of OEA to ensure that accurate, relevant, and clear information reaches community and elected leaders affected by disaster so that they can adequately inform constituents about Federal programs, knowledge and services. IGA's efforts speed the flow of disaster aid to victims by effectively involving local players in the response process. IGA provides State legislators with information that can help them enact appropriate disaster legislation that interacts cohesively with Federal programs and laws.

The **International Affairs Division (IAD)** is the hub for FEMA's engagement with the international emergency management community. IAD engages with foreign emergency management partners and multilateral organizations under the authority of existing U.S. treaties, agreements, and presidential directives. IAD facilitates information exchanges regarding technical assistance and other subject matter expertise among international emergency management stakeholders to strengthen our Nation's global capacity to respond to disasters. IAD also manages FEMA's involvement in the interagency civil emergency planning effort through the North Atlantic Treaty Organization. The division supports FEMA employees traveling internationally on official business, facilitates participation in international training and exercises, coordinates 300 to 400 foreign visit requests each year, and supports DHS in international policy work related to emergency management.

IAD's programs and activities expand FEMA's body of knowledge on emergency management best practices through the exchange of information with international partners; for example, FEMA can improve its ability to handle man-made disasters by benefiting from the expertise of a country more familiar with suicide bombing attacks. The division also advises the FEMA Administrator and DHS leadership on international emergency management cooperation and strategic priorities in this field. Further, IAD acts as FEMA's main point of contact for international organizations, embassies, and consulates.

The **Public Affairs Division (PAD)** coordinates FEMA's public message with the goal of providing information to the American public that helps them prepare for, respond to, recover from, and mitigate disasters in their area, and also serves as the primary point of contact with the media. The division provides consistent, clear communications to both internal and external audiences about

FEMA's activities, responsibilities, policies, and initiatives. Public Affairs coordinates with other Federal agencies and internal FEMA program offices to develop and execute communications strategies including: the dissemination of current policy information; the tracking and management of media contacts; and the support and maintenance of FEMA's Web and social media strategies. PAD's programs and activities provide disaster survivors with timely, accurate information and also facilitate the maintaining of effective, ongoing relationships with the media in order to promote FEMA's programs and goals.

The **Legislative Affairs Division (LAD)** serves as FEMA's primary liaison to the United States Senate and House of Representatives on emergency management issues. The division works with U.S. Congressional Authorization and Appropriations committees, Members of Congress, and their professional office staff to accomplish this goal effectively. LAD responds to congressional inquiries related to all topics ranging from government-wide policies to individual constituent casework and also provides critical updates, reports, and analysis regarding the Agency's operations, programs, and policies. LAD is responsible for notifying Congress about future agency initiatives, policies, and programs; coordinating the development of congressional hearing testimony and briefings by FEMA senior officials; and developing and implementing strategies to advance FEMA's legislative initiatives and other interests that relate to Congress.

The **Private Sector Initiatives Division (PSD)** is FEMA's primary non-acquisition point of coordination and dialogue between the Agency and the Nation's tens of millions of large and small businesses, trade associations, universities, think tanks, and their extended network of members and employees. The PSD is a driver of positive change within the agency, delivering new, innovative ways to engage this national network of resources and individuals in emergency management at every level. The division researches and documents private sector best practices that contribute to the emergency management mission; advises senior leadership on ways to improve emergency response efforts through private sector involvement and engaging private sector stakeholders in more meaningful ways in everything from policy development to exercises and planning; and leverages extensive national networks to get critical information directly into the hands of people who need it.

By incorporating the private sector into emergency management through the division's programs and initiatives, FEMA accomplishes one of its core objectives of building a "Whole Community" concept and strengthens communities' abilities to respond to disaster at the local level. The division's work is high-impact and high-profile, helping to speed delivery of aid in disasters through nontraditional means of outreach and providing new tools, resources, and methods of stakeholder engagement.

The **Ready Campaign** develops and executes a national public service advertising campaign designed to educate and empower the American people to prepare for and respond to disasters affecting their families and communities. Launched in 2003, the Ready Campaign involves the public in emergency management efforts by increasing awareness regarding potential hazards, providing knowledge and tools to facilitate preparedness and response capabilities locally, and helping disaster survivors become a resource in the "Whole Community" approach to emergency management. The Ready Campaign also works closely with the Citizen Corps program, which is the local-level effort to increase the preparedness of the American public and businesses.

The Ready Campaign is more than just awareness, it is about actions individuals can take to resist, recover from or better adapt to adversity created by disruptions, emergencies or disasters. Additionally, the campaign is a resource for the emergency management community to educate neighbors and friends on how they can provide aid to one another in the first phase of a response.

## ***B. Office of Policy and Program Analysis***

The Office of Policy and Program Analysis (OPPA) fosters strategic coherence across FEMA by leading and coordinating the development and implementation of Agency policy, strategy, program analysis and evaluation, and FEMA's use of the Defense Production Act authorities.

**Policy Division** leads and coordinates development of policies that support effective and efficient delivery of Agency programs across the full spectrum of preparedness and emergency management, and to represent agency interests in departmental, national, and international policymaking. This office also supports FEMA leadership in the identification, development, and implementation of the Agency's policy priorities and represents FEMA on DHS-policy matters. In addition to these efforts, the Policy Division develops, oversees, and coordinates the Agency's policy process, including chairing the FEMA Policy Working Group, and coordinates, tracks, and analyzes Agency responses to General Accountability Office and Office of Inspector General reports and recommendations.

**Defense Production Act Division (DPA)** provides guidance and support to DHS and other Federal agencies to develop plans and programs to expedite and expand the supply of critical resources from the private sector for homeland security, emergency preparedness, response, and recovery activities, and critical infrastructure protection and restoration. The DPA Program is responsible for implementing FEMA's DPA functions enabling OPPA to provide guidance and support for use of DPA authorities by FEMA and other DHS components; advises the National Security Council on issues of national security resource preparedness and on the use of DPA authorities; and provides for the central coordination of DPA plans and programs by Federal departments and agencies.

**Program Analysis & Evaluation Division (PA&E)** gives FEMA an independent analysis and evaluation capability that enhances decision-making, program performance transparency, and accountability. PA&E conducts program analyses, which include analyses and evaluations of alternative plans, programs, components, personnel levels, and budget submissions; and the formulation of the Future Years Homeland Security Program. PA&E also helps develop strategic requirements and capabilities to include: establishing a common strategic requirements development system for all of FEMA; assessing current operations capabilities; and validating and prioritizing organizational capabilities to determine risks and gaps for FEMA senior leadership.

**Strategic Planning & Analysis Division (SP&A)** helps FEMA to make innovative and informed decisions on the Agency's short-term strategic direction and to identify future drivers or requirements affecting emergency management operations in the future. This is accomplished by leading the development and implementation of FEMA's strategic planning process, to include development of FEMA's 3-5 year Strategic Plan and long-term driver and trend analysis in support of the Strategic Foresight Initiative, which will proactively monitor changing drivers and trends in emergency management in 15 years. SP&A also establishes and maintains an enterprise-wide risk framework to aid the Agency's planning, programming, and decision making efforts and ensure linkage to the DHS integrated risk management efforts. These efforts, along with providing guidance to help the Agency make innovative and informed decisions about FEMA's long-term direction and facilitating integrated strategic thinking, planning, and decision-making, enables FEMA to be in a better position to conduct its overall mission and determine future requirements.

### *C. Office of Equal Rights*

The Office of Equal Rights (OER) serves the Agency and the Nation by promoting affirmative employment, a discrimination-free workplace, and equal access to FEMA programs and benefits. OER proactively pursues a workforce that reflects the Nation's labor force for its employees, and a workplace climate that fully embraces the core values of accountability, compassion, diversity, integrity, partnership, respect, and trust. OER performs its mission by providing expert guidance and proactive support to all its customers, including State and local government officials, and the American people. The overarching goals of the office are to bring the fullest human value to the work of the Agency and to fulfill the office responsibilities under the Federal law. The office is organized into three sections: Civil Rights – manages the Federally Assisted and Federal Conducted Programs; Informal Equal Employment Opportunity (EEO) Programs – manages EEO counseling, dispute resolution, and training; and, formal EEO Programs – manages formal EEO complaint processing and investigations. OER encompasses the following activities and elements:

**Federally Assisted and Federally Conducted Programs and Investigations** entitles any person eligible to receive disaster aid or other services from FEMA to receive those benefits without discrimination. The Civil Rights Program provides Technical Assistance and Complaints Resolution services. Technical assistance is provided through policy guidance to the agency in meeting Civil Rights mandates. In disaster operations, the staff works closely with community organizations to resolve tensions and eliminate potential complaints. The office also provides assistance to FEMA and the national emergency management community in the effort to make publications, programs, and facilities accessible to people with disabilities. Complaints resolution is attempted for anyone who believes they have been discriminated against in the receipt of services or benefits from FEMA.

**EEO Program** enforces all Federal discrimination laws that cover all FEMA personnel, including Disaster Assistance Employees (DAE) and applicants for employment. Through the EEO program, OER provides a variety of services: including equal rights training for managers, supervisors, and employees; developing and maintaining an informal and formal EEO discrimination complaint process; investigating formal complaints of discrimination, increasing resolution of complaints through Alternative Dispute Resolution (ADR); and proactively recruiting employees and Special Emphasis programs.

### *D. Office of the Chief Counsel*

The Office of the Chief Counsel (OCC) supports FEMA's efforts to reduce loss of life and property and protect the Nation from all hazards by providing the Agency with high-quality legal advice, counsel, risk analysis, and dispute resolution services through a knowledgeable, accessible, responsive, and solution-oriented network of innovative and ethical legal professionals. The OCC is comprised of the following eight divisions.

**Response and Recovery Legal Division** is responsible for providing legal advice to the Response and Recovery Directorate. The Response Branch also manages Cadre of On-call Response/Recovery Employees (CORE) and DAE field counsel cadres that deploy to disasters across the country; and the Recovery Branch manages legal teams at the Louisiana and Mississippi recovery offices.

**Mission Support Legal Division** provides legal services related to acquisition and contracting, ethics, equal employment opportunity, fiscal policy and procedures, human capital, information and privacy, property, records management, technology use, and tort claims, primarily to activities of the Mission Support Bureau, OCFO, OER, and the FEMA Law Enforcement Advisor.

**Federal Insurance and Mitigation Legal Division** provides legal services related to the National Flood Insurance Program (NFIP), Flood Map Modernization, Mitigation grant programs, National Dam Safety Program, National Earthquake Hazards Reduction Program, the Office of Environmental Planning and Historic Preservation, and for other programs and activities administered by the Federal Insurance Mitigation Administration (FIMA).

**Protection and National Preparedness (PNP) Legal Division** provides legal services related to the PNP Directorate in coordinating preparedness and protection-related activities throughout the Agency. Legal counsel includes, but is not limited to, issues involving grants; planning; training; exercises; individual and community preparedness; assessments; lessons learned; and continuity and national capital region coordination. This Division also provides legal advice to the United States Fire Administration (USFA).

**Regulatory Affairs Legal Division** provides legal advice and counsel on matters relating to regulations.

**Chief of Staff for Legal Policy Legal Division (CSLP)** provides oversight, visibility, and legal policy integration across OCC functional divisions to ensure consistency and consideration of cross-program or Agency-wide implications. The CSLP also provides professional direction and legal oversight for OCC's Regional Counsel who advise the Regional Administrators in properly carrying out their missions and functions. The CSLP also supports the OEA, the Office of Disability Integration and Coordination, the Center for Faith-Based and Community Initiatives, OPPA, the Government Accountability Office and Office of Inspector General Liaison Office, and the National Advisory Council Designated Federal Official.

**Professional Development Division** is responsible for managing a professional development program for the OCC staff that includes workforce readiness through training, credentialing, and developing professional capabilities and resources aligned with OCC's operational goals at the Field, Regional, and National levels.

**Alternative Dispute Resolution Division** provides ADR services for FEMA under the Administrative Dispute Resolution Act of 1996. The ADR Office offers a wide range of dispute resolution processes and tools to engage Agency personnel in preventing and managing conflicts. The ADR Office customizes various ADR techniques and tools to deepen the conflict management, strategic decision-making, and collaborative problem solving skills of Agency personnel.

#### ***E. The Office of the Chief Financial Officer***

OCFO provides funds control, financial information, financial operations, and financial policy support to FEMA's management and oversight organizations. The Chief Financial Officer (CFO) is the principal advisor to the Administrator, Deputy Administrator, and other Agency leadership on matters relating to FEMA's financial resources. OCFO is comprised of three line-operating divisions: the Financial Management Division, the Budget Planning and Analysis Division, and the Financial Systems and Management Reporting Division. The operating divisions are supported by three staff functions: Risk Management and Compliance, Financial Policy, and Field-Based Financial Operations.

**Financial Management Division** performs all accounting services for 94 FEMA appropriations accounts. It reconciles accounts and ensures accuracy of trial balances for the preparation of financial statements and accompanying footnotes. It also manages debt collection activities. Division personnel perform the invoice approval and payment processes for all mission assignments, reimbursable activities, and other intergovernmental payments. They ensure timely and accurate recording of grant obligations and process final closeouts in the financial system, as well as coordinate with internal and external entities to ensure compliance with DHS/FEMA policies, and legislation and directives related to financial controls.

**Budget Planning and Analysis Division** performs an ongoing role in the planning, formulation, justification, analysis, and execution of FEMA's operating, mitigation, and disaster budgets. The Budget Division has the primary responsibility for making recommendations to the Administrator and presenting FEMA's portion of the President's Budget to the Department, the Office of Management and Budget (OMB), and Congress. The Budget Division monitors the Agency's execution activities for conformance with executive and legislative intent and provides program management and oversight of current year and prior year funding.

**Financial Systems and Management Reporting Division** provides technical support to implement and maintain the OCFO financial management systems/interfaces. The staff also furnishes accurate, relevant, and timely financial information to clients across the Agency, the Department, and Congress.

**Risk Management and Compliance Unit** is responsible for developing and implementing the Agency's internal controls program. Working in conjunction with the DHS financial management staff, the FEMA Risk Management and Compliance unit manages the annual audit of financial Statements, coordinates testing and corrective actions to improve improper payments, and coordinates the review of internal controls as required by OMB Circular A-123.

**Financial Policy Unit** develops Agency-wide policies, procedures, and standards for all financial management functions and promulgates these and related government-wide financial management requirements throughout the Agency. This unit is also responsible managing and addressing specific questions related to FEMA travel policy.

**Field-Based Financial Operations Unit** is responsible for managing and directing FEMA's field-based financial management activities including budget formulation and execution, finance and accounting operations, and risk management. This unit provides management and oversight to the field-based financial staff, including Recovery Office financial directors, Joint Field Office financial leads, and OCFO comptrollers. This team is responsible for formulating and executing operating budgets for open disasters, working closely with program management to determine multi-year financial requirements for public assistance, individual assistance, and hazard mitigation projects for open disasters.

## **2) Regional Operations**

The Regional Operations mission cuts across all FEMA missions and disciplines. Regional Operations includes the leadership, management and mission support functions and staff of the 10 FEMA Regions, and a small headquarters coordination and liaison office. The Regions execute the operational direction received from headquarters to ensure that FEMA can build, sustain, and improve capability to prepare for, protect against, respond to, recover from, and mitigate against all hazards.

The **Office of Regional Operations** at Headquarters is located within the Office of the Administrator and serves as the Agency's office to facilitate coordination of policy, managerial, resource and administrative actions between headquarters and the Regional Offices. The Office of Regional Operations also works to help ensure that FEMA policies, programs, administrative and management guidance are implemented in the Regions in a manner consistent with the Agency's overall goals.

The principal functions of the office are: (a) serving as liaison among the Regional Administrators and headquarters leadership to ensure successful collaboration as one team; (b) advising headquarters leadership on matters affecting or impacting the Regions; and (c) providing guidance to Regional Administrators on policy, programs, operations, and administrative matters.

### **Regional Administration**

Each Regional Office – led by a Regional Administrator – reports to the FEMA Administrator and is an operational component that closely resembles the structure and scope of the Agency. The Regional Offices support the development of a Regional, all-hazards, risk-based emergency management system of preparedness, prevention, protection, response, recovery, and mitigation through close working relationships with Federal agencies, States, tribal nations, localities, business and industry, and State and local volunteer organizations.

The Region is the principal conduit for:

- Coordinating and managing Federal support to respond and recover from disasters and emergencies
- Impact assessments and recommendations for the issuance of disaster or emergency declarations under the Stafford Act
- Administration of cooperative agreements, grants, and other financial assistance
- Providing technical assistance regarding emergency and disaster prevention, protection, planning, preparedness, mitigation, response, recovery, and continuity programs
- Promoting and managing risk analysis and risk reduction initiatives to mitigate damages and loss
- Managing preparedness efforts through planning, training, exercises, assessments, and corrective actions
- Intra-regional coordination among Federal agencies, State, Tribal, territory, and local governments, voluntary and private organizations, advisory councils and working groups, local communities, and the public

### **Regional Empowerment**

'Regional Empowerment' is an overarching principle within the current Administrator's Intent in pursuit of the Regional offices having the responsibility, authority, and resources required to enable them to implement FEMA's programs pursuant to the guidance, policy, doctrine, and standards established by Headquarters offices.

### **3) Office of Federal Coordinating Officer (FCO) Operations**

The mission of the Office of FCO Operations is to lead, train, equip, and manage FEMA's FCOs to ensure their availability for rapid deployment in response to any disaster; deliver training to develop and sustain FCO professional competencies; and coordinate FCO assignments to meet the on-scene needs of FEMA and its emergency management partners.

Members of the FCO cadre provide leadership during disaster declarations, regional level exercises, certification and qualification exercises, and during annual national-level exercises. They also serve as subject matter experts and instructors in support of National Preparedness goals. While the support to the FCO cadre is funded in the S&E appropriation, FCO salaries and benefits and other expenses, when deployed in response to a presidentially declared disaster, are funded primarily in the DRF.

### **4) Office of National Capital Region Coordination**

NCRC enhances preparedness and promotes resiliency by enabling better communication and planning between and among Federal, State, local, regional, nonprofit, and private sector stakeholders in the NCR. Established by Congress in the Homeland Security Act of 2002 (section 882), NCRC's work addresses a major gap identified on 9/11 within the National Capital Region (NCR), which is home to a uniquely large number of Federal Departments and Agencies, numerous State and local jurisdictions, and our Nation's Capitol, among others.

To enhance the region's emergency response capability, NCRC and its staff members currently develop, coordinate, and implement interagency activities and plans for the NCR by serving as a key member on committees at the Federal, State, and local levels. NCRC's efforts include chairing and/or supporting the following: Joint Federal Committee (JFC); Consequence Management Subcommittee for National Special Security Events; Senior Policy Group (SPG); the Metropolitan CIOs; and, committees sponsored by the Metropolitan Washington Council of Governments and other key stakeholders. Through these organizations, the NCRC plays a critical role in coordinating and improving workforce preparedness and integration between and among NCR jurisdictions by sharing best practices and resources as appropriate.

The NCRC also provides real-time NCR-specific situational awareness and information sharing to emergency management and homeland security stakeholders in the NCR through the FEMA NCR Watch Desk reports, by maintaining the NCR portal in the Homeland Security Information Network (HSIN) and providing continuing interoperability technical support, as needed. The NCR Watch desk is the only DHS entity within the NCR that provides real time situational awareness support to the full spectrum of emergency management and homeland security stakeholders in the NCR.

To further address the need for improved coordination and information sharing among Federal, State, and local governments within the National Capital Region, NCRC has worked with its stakeholders to identify and address the following priority areas and ultimately improve the planning and preparedness efforts within the region:

- Federal Coordination - Fosters preparedness, resilience, and unity of effort among Federal Departments and Agencies by facilitating Federal interagency coordination on emergency and homeland security planning efforts within the NCR.

- Regional Governance and Integration - Ensures innovative solutions and a whole community approach to emergency management by proactively engaging, collaborating with, and providing leadership among Federal, State, and local partners within the NCR.
- Situational Awareness and Information Sharing - Provides DHS and Federal, State, and local partners with real-time access to accurate information for emerging incidents, events, and training activities within the NCR.
- Regional Risk Reduction - Promotes understanding of all-hazards risks and supports regional risk analysis efforts in order to collaboratively set priorities and design solutions to ensure a strong response capability in the NCR.
- Technology and Interoperability Coordination - Organizes and supports efforts to improve interoperability of information (video, voice, data) and integration for information sharing among key Federal, State, local, and regional partners in the NCR.

## **5) Evaluations and Assessments**

The Evaluations and Assessment Program assesses national preparedness and grant effectiveness, communicates these assessments through annual reports, and collects, shares, and monitors lessons learned and corrective actions from real-world events and exercises. The program is managed by FEMA's National Preparedness Assessment Division (NPAD), which is under Protection and National Preparedness. As part of this mission, NPAD identifies, tracks, and monitors corrective actions and lessons learned from exercises and real-world events, supporting the homeland security and emergency management community's continual need to change, adapt, and innovate. Evaluations and Assessments will be funded through management and administration transfers into the Salaries and Expense appropriation from the State and Local Programs appropriation.

**Department of Homeland Security  
Federal Emergency Management Agency  
Preparedness and Protection  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Preparedness and Protection**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	-
<b>2012 Enacted Budget Authority</b>	-	-	-
2013 Adjustments-to-Base	(510)	(482)	(112,728)
<b>2013 Current Services</b>	<b>128</b>	<b>124</b>	<b>63,153</b>
2013 Program Change	-	-	10,000
<b>2013 Total Requested Budget Authority</b>	<b>128</b>	<b>124</b>	<b>73,153</b>
Total Change 2012 to 2013	128	124	73,153

FEMA requests \$73.153 million, 128 positions, and 124 FTE.

**Adjustments to Base**

- Increase of \$0.048 million for pay inflation.
- Decrease of 109.776 million, 510 positions and 482 FTE for preparedness and protection efforts included in the FY 2012 Enacted base that will be funded through a transfer from the State and Local Programs appropriation in FY 2013.
- Decrease of \$3.0 million for nonrecurring Integrated Public Alert & Warning System (IPAWS) requirements.

**Program Changes**

- Increase of \$10.0 million for Mount Weather Capital Improvement projects.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Protection and National Preparedness (PNP) is responsible for the coordination of preparedness and protection related activities throughout FEMA. This responsibility encompasses grants, planning, training, exercises, individual and community preparedness, assessments, reporting and tracking lessons learned via the National Exercise Program, continuity, and national capital region coordination. PNP conducts assigned mission sets through four directorates (National Preparedness, Grant Programs, National Continuity, National Capital Region Coordination) consisting of 20 divisions and four offices. National Continuity Programs are funded within the Preparedness and Protection PPA as described below. National Capital Region Coordination is funded in the ARO PPA as described

above. National Preparedness and Grant Programs are funded through management and administration transfers into the Salaries and Expense appropriation from the State and Local Programs appropriation.

## **1) National Continuity Program**

FEMA's National Continuity Programs Directorate (NCP) serves the public by preserving our Nation's constitutional form of government across a wide range of potential threats and emergencies. NCP serves as the President's lead agent for ensuring the first National Essential Function of the Executive Branch, ensuring the continuance of our Nation's constitutional government under all conditions. NCP performs this mission by coordinating activities across all levels of Federal, State, territorial, local, and tribal governments. NCP is comprised of the Office of the Assistant Administrator, Continuity of Operations (COOP) Division, Operations Division, Readiness Division, Integrated Public Alert Warning System (IPAWS) Program Management Office (PMO), and the Mount Weather Emergency Operations Center (MWEOC).

### ***A. Continuity of Operations Division***

Having a solid COOP program is the cornerstone to ensuring that government can continue to provide essential services to the public throughout a range of disasters at all levels of government. The COOP Division:

- Leads FEMA's efforts to ensure comprehensive and consistent COOP preparedness across Federal, State, territorial, tribal, and local governments
- Develops, promulgates, and delivers a variety of products tailored to the needs of these governments to ensure that governments at all levels can continue to perform their essential functions in support of the American people
- Coordinates the integration of continuity preparedness capabilities and provides consistent continuity planning guidance and assistance to continuity planners in identifying their essential functions
- Supports these planners in developing the capabilities for the continuance of those essential functions in response to all hazards for the Federal Executive Branch, States, territories, tribal nations, and local government jurisdictions.

Throughout the United States, the COOP Division develops and promulgates continuity directives and guidance for the Federal Government in the form of directives and requirements, and to our non-Federal partners in the form of guidance. At all levels of government it also:

- Provides continuity outreach
- Develops, updates, and provides an extensive training and certification program
- Develops and provides valuable continuity workshops and exercises
- Provides continuity program assessments to the President of the United States, elected officials, and agency heads that enable them to make program improvements
- Coordinates Federal Executive Branch efforts to develop and improve continuity capabilities throughout the interagency community, with a focus on always maintaining the ability of all Federal departments and agencies (D/A) to perform the eight National Essential Functions through the performance of their individual Mission Essential Functions and Primary Mission Essential Functions (PMEF)

- Leads the management and implementation of the FEMA HQ, FEMA Regions, and other FEMA Component Continuity Programs, ensuring FEMA's readiness to perform its essential functions during any continuity event

### ***B. Contingency Programs (Readiness Division)***

NCP's Readiness division develops, maintains, and provides an array of continuity information technology systems and communications assets that provide the Executive Office of the President, the DHS Secretary, and the FEMA Administrator and other senior Federal leaders with a robust capability that allows them to maintain situational awareness before, during, and after a continuity event. These resources span the full spectrum of the National Security/Emergency Preparedness (NS/EP) community.

The Readiness Division also:

- Plans, programs, and manages operations, maintenance, and lifecycle updates and enhancements of these assets to satisfy evolving and extremely complex objectives
- Tracks and influences changes in intra-and interagency business rules and policies, and tracks and monitors stakeholder and security requirements to ensure interoperability and integration of all assets with which they must operate and coexist
- Ensures that critical national security systems are available and evolve as necessary to meet continuity mission requirements
- Maintains the continuity communications architecture for all of FEMA to include HQ and the regions, as well as the architecture for High Frequency (HF) communications with the States and territories

Two of the systems that this Division operates, maintains, and improves are the Readiness Reporting System (RRS) and FEMA National Radio System (FNARS). RRS provides direct support to the White House for collecting and reporting the continuity readiness posture of the Executive Branch D/As. The RRS also allows D/A leadership to report on their ability to perform PMEFs within their respective agencies. Since the RRS is the only reporting tool in the Government used to report this capability during an event or every 30 days, it has become a vital component within the continuity repertoire for reliable and timely situational awareness.

FEMA NCP also fills the role of lead agent/Program Management Office (PMO) for the FNARS system. This high-frequency, automatic link establishment (HF-ALE) system serves as the primary backup communications system that allows senior leadership to collaborate across the country and with States and territories during a natural disaster or continuity event. For example, during the National Level Exercise (NLE 11), FEMA exercised this system capability in support of a massive earthquake scenario, which projected catastrophic damage and disruption to the public and private telecommunications infrastructure. During this exercise, where there was a major communications outage within the New Madrid Seismic Zone, FEMA used FNARS as the primary means of communications to receive updates from the States and FEMA regions, to communicate with FEMA Headquarters, and to facilitate command and control within the affected areas.

### ***C. Continuity of Government (Operations Division)***

The Operations Division is responsible for ensuring the DHS Secretary and FEMA Administrator has the ability to advise the President and implement the plans and programs of the Federal Government for continuity of government. The Operations Division provides a single point-of-contact for assessing and implementing continuity plans across the Federal Executive Branch during an event that could potentially threaten the national security of the United States by threatening the Federal Executive Branch's ability to provide essential services to the public. Before, during, and after an event, this Division is responsible for:

- Analyzing the ability of Federal D/As to perform their essential functions
- Monitoring and assessing the status and operational capabilities of individual and collective D/As
- Developing and formulating courses of action for Secretary and Administrator consideration to restore Federal Executive Branch essential functions
- Coordinating implementation of courses of action
- Monitoring and tracking the implementation of chosen courses of action
- Providing continual updates on the strategic relocation of government activities

In FY 2011, FEMA's PNP Office established the Continuity Readiness Cell (CRC) within NCP. As part of a coordinated Federal Executive Branch effort, the CRC offers the Secretary of Homeland Security, the FEMA Administrator, and other senior leaders and decision-makers with a comprehensive repository of executive branch continuity capability information. This information includes long-term issues and readiness capabilities required to ensure the continuation of the eight National Essential Functions and Federal D/A PMEFs in an all-hazards environment. When long-term relocation of the Federal Government is required, the CRC will also provide analytical and decision support, prioritized resource allocation recommendations, and other government reconstitution-related needs.

To ensure that FEMA leadership is available and able to perform their essential functions in support of Continuity of Government and disaster response, this Division also implements and maintains the Operation Rendezvous relocation program. This program is responsible for coordinating the evacuation, relocation movement, and accountability of key leadership and staff to COOP sites utilizing the Federal (and Mutual Aid) Emergency Response Official (F/ERO) Repository system. The F/ERO Repository system aligns with the President's cybersecurity policy and provides the capability for public safety and security officials to validate the identities and attributes of continuity personnel for access permissions to relocation sites.

### ***D. Integrated Public Alert & Warning System (IPAWS) Program Management Office***

Executive Order (EO) 13407 established a policy requiring the United States to have an effective, reliable, integrated, flexible, and comprehensive system to alert and warn the American people. The Department of Homeland Security designated FEMA as the lead to implement the Executive Order. NCP established a program office to implement IPAWS. When IPAWS is completed it will:

- Allow the President of the United States to speak to the American people under all emergency circumstances, including conditions of war, terrorist attack, or natural disaster

- Build and maintain an effective, reliable, integrated, flexible, and comprehensive alert and warning system
- Enable Federal, State, territorial, tribal, and local alert and warning emergency communication officials to access multiple broadcast and other communications pathways for the purpose of creating and activating alert and warning messages related to any hazard impacting public safety and well-being
- Reach the American public before, during, and after a disaster
- Diversify and modernize the Emergency Alert System (EAS)
- Create an interoperability framework by establishing or adopting standards such as the Common Alerting Protocol (CAP)
- Enable alerts and warnings for those with disabilities and those without an understanding of the English language
- Partner with NOAA to enable seamless integration of message transmission through national networks

Two primary programs within the IPAWS Program Management Office are the Primary Entry Point (PEP) station expansion and modernization project, and the IPAWS-Open Platform for Emergency Networks (OPEN) application development project. The core of the National EAS are FEMA-connected private radio stations known as PEP Stations. These stations can provide national warning information prior to, during, and after emergencies. FEMA provides communications equipment and emergency generators that enable PEP stations to continue broadcasting warning and safety information to the public throughout an event. Building upon 36 legacy stations, the IPAWS program is establishing an additional 41 PEP stations to provide direct broadcast coverage to at least 90 percent of the American public and modernizing the legacy stations to include protection from EMP hazards and modernized fuel management and spill containment measures.

IPAWS-OPEN is a FEMA mission-critical application that provides for access and authentication of alert messages from public safety officials and integration of alert communications systems. By integrating access to EAS, Commercial Mobil Alerting System, NOAA Weather Radio system, and Internet communications services, public safety officials at all levels can provide timely alerts to citizens in danger over multiple communications paths simultaneously and at no additional cost. A key new capability enabled by IPAWS-OPEN is the ability for local officials to send geo-targeted alerts to cellular devices using technology other than voice or SMS text channels that are likely to be congested during an emergency.

### ***E. Mount Weather Emergency Operations Center***

MWEOC is a 564-acre DHS facility approximately 64 miles west of Washington, D.C. MWEOC provides the infrastructure necessary to support COOP, Incident Management, classified programs, and other all-hazards activities for multiple Federal Executive Branch D/As. For example, MWEOC hosts the DHS/FEMA HQ COOP site as well as provides space for use by several D/As for their storage, offices, and operations. MWEOC also supports a variety of disaster response and continuity missions. It is a hub for our Nation's emergency response activities. In addition, MWEOC provides operational space for and maintains the capability to coordinate, track, and synchronize the relocation of key leadership and staff from the DHS and FEMA Emergency Relocation Groups (ERG) members to perform their essential functions. ERG members serve as emergency personnel responsible to perform their Agency mission-essential functions.

MWEOC's assets include:

- Offices and classified meeting space
- Dormitory and training rooms
- Cafeteria that seats more than 280 personnel
- Fully equipped fire department and emergency medical unit with an ambulance service operated and staffed by FEMA employees
- Health unit
- Federal police force providing 24/7 security
- Motor pool
- Storage facilities
- Electrical redundancy

In accordance with its Master Plan, MWEOC is in the middle of a massive infrastructure upgrade to demolish antiquated buildings and replace them with modern facilities capable of supporting 21st century technology and today's Federal D/A requirements. MWEOC has worked hard to improve internal financial and acquisition processes to allow more rapid use of and accountability over larger projects while maintaining operational capabilities.

## **2) Technical Assistance**

The Technical Assistance (TA) program provides specialized expertise and services delivered through direct assistance to State and local homeland-security and emergency management agencies. The TA program addresses areas of greatest State and local need; is committed to transferring and institutionalizing knowledge at the State and local levels; and provides a menu of services that is responsive to national priorities. The services provided through this program increasingly address complex challenges requiring specialized expertise that requesting agencies do not possess. TA will be funded through management and administration transfers into the Salaries and Expense appropriation from the State and Local Programs appropriation.

**Department of Homeland Security  
Federal Emergency Management Agency  
Urban Search and Rescue Response System  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Urban Search and Rescue Response System**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	-
<b>2012 Enacted Budget Authority</b>	-	-	-
2013 Adjustments-to-Base	(280)	(255)	(48,098)
<b>2013 Current Services</b>	<b>832</b>	<b>801</b>	<b>178,130</b>
2013 Program Change	-	-	(6,233)
<b>2013 Total Requested Budget Authority</b>	<b>832</b>	<b>801</b>	<b>171,897</b>
Total Change 2012 to 2013	832	801	171,897

FEMA requests \$171.897 million, 832 positions, and 801 FTE in the Response PPA.

Adjustments to Base

- Increase of \$0.253 million for pay inflation
- Increase of \$0.56 million transferred from the Recovery PPA for the Declarations Unit move from the Recovery Directorate to the ORR Front Office
- Decrease of \$35.017 million, 280 positions and 255 FTE transferred to the ARO PPA for response efforts conducted in the regions by the Regional Administrators
- Decrease of \$12.137 million for a one-time programmatic increase in the FY 2012 Enacted Salaries and Expenses appropriation for the US&R Response System.
- Decrease of \$0.846 million for a reduction to Regional Planning program costs
- Decrease of \$0.8 million for a reduction to the FY 2013 National Level Exercise Program
- Decrease of \$0.111 million for a reduction to the Field Operations – Communications Equipment

Program Changes

- Decrease of \$6.233 million for the elimination of the Pre-positioned Equipment Program

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Response mission seeks to conduct emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies; evacuating survivors; providing food, water, shelter, and medical care to those in need; and restoring critical public services. FEMA

conducts response operations in partnership with State, tribal, and local governments; interagency Federal partners; nongovernmental organizations; and the private sector.

## **1) Office of Response and Recovery**

In FY 2011, the organization of OAARR was completed. The OAARR oversees all gubernatorial requests for emergency declarations and major disasters declared by the President in compliance with the Robert T. Stafford Disaster Relief and Emergency Assistance Act. It is comprised of the Executive Office, Executive Communication and Coordination Group, Strategic Integration Group, Disaster Management and Support Environment, and the Declarations Unit.

The OAARR also provides strategic level coordination, resource integration leadership, and oversight to FEMA's major operational components. This includes the Office of Readiness and Assessment, the Recovery Directorate, the Response Directorate, the Logistics Management Directorate, and the FCO.

### ***A. Executive Office***

The Executive Office is responsible for providing direct support to the Associate Administrator and Deputy Associate Administrator for Response and Recovery in a number of different areas. This support includes scheduling, long range planning, administrative support, preparing reports, conducting research, and integration of subordinate element mission execution.

### ***B. Executive Communication and Coordination Group (ECCG)***

The ECCG enables and supports the execution of ORR and subordinate organization programs through the representation, development, review, communication, and coordination of policies, guidance, strategies, and programmatic activities with internal and external partners and stakeholders. ECCG coordinates the responses to and addresses a wide variety of issues and inquiries from sources internal and external to FEMA; carries out administrative, programmatic, analytical, research, guidance, policy, and outreach activities; and responds to significant and special assignments that have broad national impact. ECCG communicates and coordinates with ORR stakeholders on broad and emerging policy issues, programs, and guidance that have national scope and impact.

### ***C. Strategic Integration Group (SIG)***

The SIG conducts strategic planning, coordination, and synchronization activities with subordinate ORR organizations to ensure collaborative and aligned program operations and resource utilization that complements and supports ORR long-term goals and objectives.

The SIG acts as a transformation, change, and knowledge management agent; leverages private and public sector best practices where applicable; and coordinates and ensures implementation of initiatives consistent with the vision and goals of the ORR. It also reviews future budget cycles to align ORR goals, objectives, activities, accomplishments, resources, and facilitates the proper and timely funding of key response, recovery, and logistics initiatives.

#### ***D. Disaster Management Support Environment (DMSE)***

The DMSE office enables FEMA to accomplish its response, logistics, and recovery missions by improving access to accurate, timely, and relevant information. DMSE has developed functionality and capability where necessary to increase the speed, effectiveness, and efficiency of business processes through the Situational Awareness Viewer for Emergency Response and Recovery (SAVER<sup>2</sup>). Initial efforts were focused on incorporating functionality and informational data feeds within SAVER<sup>2</sup>. Through SAVER<sup>2</sup>, essential data aligned with the Core Capabilities in Presidential Policy Directive - 8 (PPD-8) and the Whole Community Doctrine will be transparently available within the entire disaster enterprise. At maturity, SAVER<sup>2</sup> will provide enhanced critical information flow throughout the DMSE.

#### ***E. Declarations Unit***

The Declarations Unit processes all gubernatorial requests for emergency declarations and major disasters for the President, as well as, all other related actions to include appeals, cost-share adjustments, requests to reopen an incident period or expand the incident type under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. §§ 5121-5208. It is the mission of the Declarations Unit to ensure that each gubernatorial request for assistance meets the statutory and regulatory requirements and is processed as expeditiously as possible.

#### ***F. Office of Readiness and Assessment***

The Office of Readiness and Assessment develops and implements the FEMA Readiness Assessment Program (F-RAP). F-RAP determines and reports an overall level of readiness by FEMA to fulfill its disaster response, recovery, and logistics missions. F-RAP focuses on three areas: validation of FEMA Unified Readiness Reporting System submissions from FEMA components, identification of the “Readiness Enablers” or elements that enable any operational unit to deliver their required functions (Doctrine, Organization, Training, Material and Equipment, Leadership, Planning, Personnel, and Facilities), and providing support to FEMA elements through Operational Analysis assistance.

The program provides recommendations to leaders about ways to improve the readiness status of their respective response and recovery elements, as well as provides a framework for collecting, analyzing, and applying operational information to improve the Agency’s ability to respond to and recover from incidents regardless of their cause. Thus, FEMA leadership is provided with an important objective evaluation of FEMA component readiness, efficiency, effectiveness, and in addition is provided fact-based information for improved decision-making and resource allocation.

## **2) Response Directorate**

FEMA’s Response Directorate provides and coordinates the core Federal response capabilities needed to save lives, minimize suffering, and protect property in communities throughout the Nation overwhelmed by the impact of an incident, regardless of cause. Response program activities encompass the coordination of all Federal emergency management response operations, response planning, and integration of Federal, State, tribal, and local disaster programs in order to ensure

efficient and effective delivery of immediate emergency assistance to individuals and communities impacted and overwhelmed by these disasters, emergencies, or acts of terrorism.

The Directorate strives to strategically address the future through establishing, maintaining, and growing program areas, including doctrine, exercises, deliberate planning, and operations and disaster emergency communications support, as well as intra- and interagency coordination. The Directorate addresses training and career development for Response staff, as well as the development of Response internal governance. During FY 2011, the Incident Workforce Management Office (IWMO) (formerly the Disaster Reserve Workforce Division (DRWD)) was transferred to the Response Directorate, where it will now work alongside the developers of the FEMA Qualifications System (FQS). This strategic realignment will better serve the customers and stakeholders by allowing one organizational entity to provide coordination and direction of qualification and certification of the FEMA workforce through experience, training, and demonstrated performance.

Beginning in FY 2010, and continuing through FY 2013, the Directorate has been pursuing development of the FQS through the Disaster Relief Fund (DRF). The staff for the program is funded through the Salaries and Expenses account. The FQS is a performance-based approach to workforce qualification and certification of incident management and incident support positions activated to support disasters. This approach seeks to improve FEMA's response and recovery services by identifying required competencies and tasks for disaster personnel and fostering knowledge and skill development within those competencies to successfully perform the tasks. The FQS is guided by operational requirements, current doctrine, and drives FEMA's training curriculum for disaster workers at all organizational levels.

The FQS was built upon and expands the former DRWD credentialing initiative. The individual cadres utilized their existing DRWD position task books as a foundation for their work on the FQS products, moving from a training focus to an Incident Command System (ICS)-compliant, performance-based focus on more robust, measurable competencies and tasks that support increased functional ability across each cadre.

The Response Directorate encompasses the following programs:

***A. Office of the Assistant Administrator***

The Office of the Assistant Administrator provides strategic and operational guidance and leadership to all stakeholders, including FEMA headquarters, regional offices, and interagency partners. It ensures that Federal emergency response systems and capabilities are properly poised to support States and communities. Key functions include providing leadership necessary to integrate the Nation's emergency response teams, systems, and capabilities; coordinating all Federal emergency management disaster operational planning and programs; and executing the response mission through its three major program areas – operations, planning, and disaster emergency communications.

***B. Training, Exercise, and Doctrine Office***

The Training, Exercise, and Doctrine (TED) Office develops clear and well-communicated incident management and incident support doctrine; guides the development of standards and training; and validates capabilities and concepts through exercises, which promote the professionalization of FEMA's emergency managers in accordance with the NIMS. FEMA doctrine builds upon NIMS and

the National Response Framework to describe FEMA's core tenets, concepts, methods, and processes for serving disaster survivors. The Training Unit develops, pilots, and coordinates delivery of training courses to FEMA Response staff members based on this doctrine. Finally, the Exercise Unit tests and evaluates core systems and procedures to ensure effectiveness in the delivery of FEMA's incident management and support. TED validates FEMA staff's ability to perform incident management and support core competencies as well as concepts and processes put forth in doctrine and informs the revision of doctrinal materials and training courses.

**The Training Unit** improves Response Directorate Incident Workforce readiness through training and professional development. The Training Unit ensures that resources are aligned with the Response Directorate's operational response at the field, regional, and National levels. Additionally, the unit utilizes FEMA's core capabilities to develop response-specific professional development opportunities for all Response staff and teams. By delivering comprehensive response training, the Training Unit prepares and trains individuals and teams through set standards in order to deploy and respond to disasters. The Training Unit develops the standards, which will drive exercises.

**The Exercise Unit** contributes to the development and execution of operational exercises by providing response-oriented consultation, advisement, and program expert knowledge, as well as by coordinating with other agencies to provide critical interaction and participation in national-level response exercises. The type and level of support is dependent upon the needs identified for each exercise, and is closely coordinated with the National Preparedness Directorate's Homeland Security Exercise and Evaluation Program. The Exercise Unit develops the input, which will drive the revision and update of training and doctrine. A key component of the Exercise Unit's responsibility is to develop no-notice exercises, Thunderbolts, to evaluate and maintain readiness of FEMA's nationwide response assets.

**The Doctrine Unit** conducts comprehensive reviews and revisions of the Response Directorate's guiding documents, identifies voids, and creates new documents in order to guide FEMA response operations at the incident, regional, and national levels. The unit reviews, revises, updates, and/or develops incident management and support doctrinal materials incorporating NIMS components, terminology, principles, and policies in accordance with Homeland Security Presidential Directive 5 (HSPD-5) and PPD-8. In addition, the Doctrine Unit designs and implements a comprehensive and permanent program for continual development and maintenance of FEMA disaster operations doctrinal materials that guides FEMA response operations at the incident, regional, and National levels. The Doctrine Unit develops the materials on which training will be based and the standards on which exercises are evaluated.

### ***C. Incident Workforce Management Office***

The IWMO (formerly DRWD) deploys and supports a professional disaster workforce of personnel ready for the national, all-hazard response needs of FEMA headquarters and regional leadership and assists in the deployment of responders from FEMA's full-time workforce and the DHS-supported surge capacity force when required.

**The Deployment Unit** manages and administers the ADD personnel deployment system for the incident workforce and the surge capacity force throughout the entire spectrum of FEMA's preparedness, response, recovery, and mitigation missions. The unit implements, manages, and improves standardized deployment processes for all-hazards response and provides personnel visibility

and oversight of deployment processes including the tracking of personnel during pre-event (availability), event (deployment), and post-event (demobilization) cycles of an incident. The staff applies metrics to ensure that staffing requirements are met in the timeframe required, generates ad hoc reports to audit deployment decisions and employee deployment status, and monitors and executes the day-to-day tasks needed to maintain the accuracy and the integrity of employee records and the deployment system.

**The Readiness Unit** manages and coordinates all aspects of cadre and surge readiness and provides oversight for the surge and volunteer workforce programs that will ultimately roster more than 40,000 persons within the Department. The Readiness Unit will assess force structure and coordinate activities with FEMA leadership and key program officials. The unit coordinates directly with Departmental headquarters and component agencies on surge capacity force selection, training, exercises and readiness, manages all facets of external surge capacity force training requirement validation, accountability of individual and cadre/surge readiness status, and manages the FTV Program.

**The FEMA Qualifications System Unit** establishes the system for qualification and certification of the FEMA workforce through experience, training, and demonstrated performance. FQS ensures a qualified workforce based on performance standards, and establishes minimum, consistent, and fair qualification requirements for all workforce positions regardless of employment status. FQS also works to strengthen the training and qualification standards for all workforce positions by implementing improvements based on analysis.

**The Cadre Coordination Unit** is responsible for the communication, coordination, and outreach of workforce procedures and program guidance to the national and regional cadre managers and liaisons on workforce deployment, readiness, and FQS. The unit guides the creation of information technology systems that support the deployment, recording, tracking, and reporting of FQS, medical assessment recording and reporting, and similar systems. Further, it is responsible for communicating, coordinating, and strengthening partnerships and for working with regional operations to ensure effective relationships are maintained between FEMA headquarters and the field. The unit sponsors and develops routine communications via monthly conference calls, office visits, and other media and works with the F-RAP team to develop surveys and other tools to assess customer fulfillment and satisfaction.

#### ***D. Operations Division***

**The Operations Division Management Office** is responsible for the management and coordination of the core Federal disaster response teams, resources, and programs needed to support the regions; interagency partners; and State, tribal, and local governments, voluntary agencies, and disaster survivors impacted by a major disaster or emergency, regardless of cause. The Operations Division achieves its mission through the Response Coordination Branch, Field Operations Support Branch, and US&R Branch (National US&R Response System).

**The Response Coordination Branch (RCB)** is responsible for the management and coordination of FEMA's operation and coordination centers across the Nation, maintaining situational awareness of all-hazards incidents that may impact the United States and its territories. The branch coordinates the operations of the NRCC, the National Watch Center, the FEMA Operations Center, the Future Operations Section, and FEMA liaisons to other government agencies.

During steady state and activations, the RCB supports disaster response and resource planning; monitors potential or developing events, and provides situational awareness to FEMA leadership, DHS leadership, and the White House national security staff to inform decision makers. The RCB coordinates the activities of FEMA liaisons strategically detailed to U.S. Northern Command, the FBI's National Joint Terrorism Task Force, DHS National Operations Center (NOC), and the National Hurricane Center (NHC).

**The National Response Coordination Center** is a multi-agency center that provides overall Federal support coordination for major disasters and emergencies, including catastrophic incidents and emergency management program implementation. The NRCC activates to coordinate with the affected region(s) and provide needed resources and policy guidance to support an incident. When activated, the NRCC supports disaster response and resource planning; monitors potential or developing events, and provides situational awareness to the Administrator of FEMA and other senior leadership, the Secretary of DHS and other DHS leadership, and the White House NSS to inform decision-making. The NRCC supports regional and field component operations, and implements coordination of national-level disaster response activities and resource prioritizations and allocations.

**The National Watch Center (NWC)** maintains a 24/7 national situational awareness of potential, developing, or ongoing situations which may require a Federal response to an incident/event. The NWC links RRCCs, State EOCs, regional DHS components, National and regional Department and agency leads for ESFs, State fusion centers, Joint Terrorism Task Forces, Department of Defense (DOD) Operations Centers, and other key Federal, State, and local operational centers. It supports the collection and distribution of pre-incident information to the DHS NOC for development of a national common operating picture. The NWC provides situational awareness and information sharing for all-hazards incidents that may require Federal response to include planning and response operations at the classified level.

**The FEMA Operations Center (FOC)** is the official notification point for FEMA and supports the DHS and Executive Branch departments and agencies with several classified and unclassified programs authorized by National Security Presidential Directive 51, HSPD-20, the Federal Civil Defense Act of 1950, 50 USC, Appendix 2251, and Executive Order 12656. The FOC facilitates distribution of warnings, alerts, notifications, and bulletins about events that may require a Federal response to the Federal, State, and local emergency management community using a wide variety of communications systems such as the National Warning System, the Washington Area Warning System, the national-level EAS; and the Emergency Notification System.

The FOC supports the NRCC and implements a myriad of notifications to all Federal departments and State EOCs as well as activating emergency management staff. The FOC's multifaceted communications and operations capabilities enable it to receive, generate, and disseminate critical, time-sensitive information to senior decision makers at all government levels. The FOC receives, analyzes, and disseminates all-hazards information within FEMA and DHS and to other departments and agencies, as well as to disaster response team members.

**The Future Operations Section (FOS)** serves as a support element to the NWC, NRCC, RRCCs, response teams, and FEMA senior leadership by providing analysis of threats, both natural and man-made, that present a potential for Federal support and/or assistance. The support includes pre-identification of threats, identification of planning requirements, coordination with internal and external stakeholders, and the development of executable operations plans, courses of action, and recommendations for consideration. During an event, the FOS assesses the operations tempo and

determines future short-term needs, such as staffing, and equipment. It maintains situational awareness of developing events outside of the ongoing operations to facilitate rapid response, prioritization, and shifting of assets, as required.

**The Field Operations Support Branch (FOSB)** provides program management and support of the National and Regional IMATs. The Branch supports doctrine development and conducts internal OREs to ensure IMAT readiness. The Branch also coordinates FEMA's operational requirements for the National Airborne Operation Center and other operations.

**The National Incident Management Assistance Teams**, with support provided by the FOSB, provide the initial National rapid response to major incidents, disasters, special events, and exercises. The primary mission of the National IMATs is to deploy rapidly to an incident or threatened area, state, or FEMA region to work with the affected State(s) to identify and satisfy initial requirements for Federal assistance. IMATs coordinate and integrate interjurisdictional response in support of the affected State(s) or U.S. territory(s). Additionally, IMATs specialize in management and assistance for chemical, biological, radiological, nuclear, and explosives (CBRNE) incidents. National IMATs provide initial situational awareness for Federal decision-makers, and support the initial establishment of a unified command. IMATs provide multidisciplinary emergency management and may include members from the interagency community.

**The National (Urban Search and Rescue) Response System** funds 28 Task Forces across the country to provide a coordinated, national, all-hazards response capability for locating, extricating, and stabilizing survivors of structural collapse resulting from natural and man-made causes, including those involving terrorism and hazardous materials. If a disaster event warrants national US&R support, FEMA will deploy the three closest task forces within six hours of notification, and additional teams as necessary. The role of these task forces is to support State and local emergency responders' efforts to locate victims and manage recovery operations. Each task force consists of two 31-person teams, four canines, and a comprehensive equipment cache. US&R task force members work in four areas of specialization: search, to find victims trapped after a disaster; rescue, which includes safely digging victims out of tons of collapsed concrete and metal; technical, made up of structural specialists who make rescues safe for the rescuers; and medical, which cares for the victims before and after a rescue

Among its many activities, US&R is responsible for interaction with sponsoring agencies and operational groups; management roles, including managing cooperative agreements with the task forces, providing budget, training and exercises; and field operations roles, including cadre management, cache management, alerts and notifications, activations and deployments, and event and after action reporting. In addition, US&R is responsible for the strategic role of ESF-9 coordination, which includes concepts such as force multipliers to augment our task forces with other search and rescue resources from the State and or local responders.

### ***E. Planning Division***

**The Planning Division Management Office** leads the development of deliberate plans across the Federal Government for catastrophic incidents. The Division coordinates and is responsible for deliberate, adaptive, interagency analysis and plans for potential/actual incidents while directing regional planning efforts for all-hazard events; providing oversight in the development and maintenance of special programs focused on CBRNE hazards to communities throughout the Nation

impacted by an incident, regardless of cause. In addition to all-hazard planning, the Division is responsible for Remote Sensing, National Special Security Events, and the National Hurricane Program (NHP). Further, the Division is accountable for integrating and aligning all FEMA's response planning efforts, coordinating the efforts of the Emergency Support Leadership Group (ESFLG), and continuing to lead the agency's Whole Community, maximum of maximum efforts, as well as supporting the implementation of PPD-8.

**The National Hurricane Program** provides evacuation preparedness technical assistance to State, tribal, and local governments, including the preparation of hurricane evacuation studies and technical assistance in developing evacuation plans, assessing storm surge estimates, evacuation zones, evacuation clearance times, transportation capacity, and shelter capacity. The NHP also provides for post-storm assessments and other special hurricane analyses, develops hurricane evacuation studies, and maintains and annually trains more than 3,000 State and local end users in the Hurricane Evacuation decision assistance software package.

NHP helps to ensure an understanding by State and local authorities of all hurricane hazards and their communities' vulnerabilities to these hazards. The program consistently also provides a common operating software to view hurricane forecasts and hurricane evacuation study information; to provide the most accurate and up-to-date storm surge data for risk assessments and operational decision-making; to provide sound guidance for planning and preparedness activities at regional and national levels; and to maintain currency and effectiveness of NHP products and services.

**The Chemical, Biological, Radiological, Nuclear, and Explosives Branch** supports FEMA's all-hazards response mission through the development and maintenance of capabilities and programs that enable FEMA to respond to the consequences of a CBRNE disaster. This includes supporting the development of CBRNE policies, protocols, and procedures during both crisis and consequence management phases of a CBRNE response. The Branch accomplishes this mission by leveraging subject matter expertise in nuclear, radiological, chemical, and biological, and high-explosive hazards from within FEMA, the interagency, and the scientific community in support of FEMA's mission. This includes advising FEMA leadership during a CBRNE incident; initiating mission assignments; and activating appropriate emergency response teams for CBRNE incidents. The Branch coordinates the Improvised Nuclear Device Response and Recovery (INDRR) Program, the Nuclear Incident Response Team (NIRT), the Domestic Emergency Support Team (DEST), and the Nuclear/Radiological Incident Prevention Program (NRIPP).

**The Improvised Nuclear Device Response and Recovery Program** supports FEMA's role as the Departmental lead for response and recovery efforts associated with the terrorist use of an IND, which is a device designed to result in a nuclear fission reaction that would result in a complex catastrophic disaster in a major urban area that would severely challenge the Nation's ability to respond effectively in a timely manner. While all emergencies begin as local events, it can be anticipated that an IND would overwhelm State and local resources, and a rapid well-coordinated Federal response with locals and States is required for life-saving activities and long-term support.

The Integrated Planning Guidance for FY 2011-2015 identifies FEMA as the Departmental lead for response and recovery efforts associated with the terrorist use of an IND. FEMA developed an IND strategy and implemented an IND Response and Recovery Program. The resulting INDRR Program works to align organizational and strategic direction that affects project and program goals and objectives and works collectively with the intra- and interagency, and with State, regional, and local

agencies to resolve issues within a structured approach where roles and responsibilities for response and recovery to an IND incident are shared.

**The Nuclear Incident Response Team** is comprised of specialized teams managed day-to-day by the Department of Energy's (DOE) National Nuclear Security Administration (NNSA) and the Environmental Protection Agency (EPA). The teams are operationally controlled by DHS/FEMA when activated to provide expert technical advice and support in disaster response operations and other needs involving nuclear weapons incidents, radiological incidents, lost or stolen radioactive material incidents, and acts of nuclear terrorism. The FEMA Administrator is responsible for establishing standards and certifying when those standards have been met; conducting joint and other exercises and training and evaluating performance; and providing funds to DOE and EPA, as appropriate, for homeland security planning, exercises and training, and equipment.

**The Domestic Emergency Support Team (DEST)** is a rapidly deployable, interagency team of experts within the United States Government, staffed from FEMA, FBI, DOD, DOE, Health and Human Services (HHS), and EPA. The DEST provides guidance concerning WMD threats and actual incidents or attacks. In accordance with the Post-Katrina Emergency Management Reform Act, the FEMA Administrator has the responsibility for directing the DEST. National Security Presidential Directives-46/15 further identify the DEST as a specialized interagency team designed to provide expeditiously expert advice, guidance, and support to the FBI On-Scene Coordinator (OSC) during a WMD incident or credible threat. FEMA is statutorily responsible for directing the operations of the DEST; coordinating the interagency team for mission planning purposes; and deploying as part of the team.

Besides providing interagency crisis management assistance, the DEST can provide information management support and enhanced communications to ensure the OSC maintains connectivity with national-level decision makers during an ongoing crisis. The DEST also can be organized to provide the expert advice required for certain explosive devices and their components including chemical, biological, nuclear, and radiological dispersal devices. Technical expertise and equipment is also available to operate in a contaminated environment in order to conduct onsite activities like threat sampling, technical measurements, tactical intelligence collection, evidence collection, and other actions.

**The Nuclear/Radiological Incident Prevention Program** was established to support the national response to nuclear and radiological threats. FEMA established the NRIPP to enhance the Department's ability to coordinate technical response operations to such threats, in coordination with the FBI as the lead of domestic counterterrorism. In accordance with the Federal Improvised Nuclear Device Concepts of Operations Plan, FEMA is responsible for representing DHS and for coordinating with the FBI, DOE, and DOD, on the deployment of radiation detection capabilities to support the FBI in search activities to detect, locate, and identify illicit nuclear or radiological materials. NRIPP, in coordination with DHS components, works with the FBI to develop plans, procedures, and tools to detect and locate illicit nuclear or radiological materials and supports FBI directed search activities during threats or incidents involving such materials. Support for policy development, program guidance, and contract oversight for the NRIPP is provided by the CBRNE Branch.

**The National Planning Branch** is responsible for deliberate and adaptive interagency planning at the Federal level in preparation for special security events, and for responding to and stabilizing a catastrophic event within 72 hours. The Branch has two sections, the Interagency Planning Section, and the Future Planning Section. The Interagency Planning Section is responsible

for leading the deliberate, comprehensive planning efforts for special security events, and incident response at the Federal level. This section coordinates the consolidation of interagency partner's roles, authorities, and actions into comprehensive plans to address special security events, and the Federal support to regional, State, tribal, and local response efforts. The Future Planning Section is responsible for deliberate planning for FEMA headquarters as an organization, for conducting analysis on a daily basis to maintain situational awareness and for building situational understanding, and for leading and coordinating adaptive planning at the Federal level during incident response and NRCC activation. Adaptive planning is the means by which existing plans are quickly adapted as required to better suit the specific incident. Adaptive planning is rapid, effective planning in a dynamic situation, is a force multiplier that will enhance response, and is conducted in short/no-notice timeframes.

**The Regional Planning Branch** develops coordinated and integrated DHS and FEMA Federal-level catastrophic disaster response plans, using a deliberate planning process. Regional plans are linked to National all-hazards plans and are developed in partnership with States and local communities. Whole community principles are incorporated throughout the planning process and reflected in the plans. The Branch serves as the point of contact for the regions in the Response Directorate for planning. The Regional Planning staff can deploy to the regions to further develop pre-event relationships, protocols, response processes, and a mutual understanding of other agencies roles, issues, and needs. The goal is to increase the plan-to-action ability to respond with little or no advance notice/warning to major disasters and incidents through rapid response with massive support.

#### *F. Disaster Emergency Communications Division*

**The Disaster Emergency Communications (DEC) Division Management Office** provides and leads integrated Federal communications support to emergency responders at all levels of government. It has a leading national role in the management, oversight, and development of emergency communications capabilities and doctrine. The Division develops and implements the capability to provide tactical voice, data, and video communications services before, during, and immediately after an incident to support emergency managers at all levels of governments. The DEC Division accomplishes its mission through two highly successful core program activities: RECCWGs and MERS.

**The Communications Integration Branch (CIB)** develops comprehensive and integrated Federal, regional, tribal, and State communications plans to ensure that FEMA is prepared to respond and is well integrated with emergency responders during response and recovery efforts nationwide. These planning efforts include the development of State Communication Annexes, development of regional plans, updating National-level contingency plans, and fulfilling additional requirements of these plans through the development of pre-scripted mission assignments. The CIB works to build communications policies that provide the scope and methods for using FEMA capabilities alongside partners and customers. In addition, the CIB works with the Tactical Emergency Communications Branch (TECB) to determine how the actions of external partners might affect communications capabilities and coordinates plans with external emergency communications providers to build a comprehensive communications support structure.

Through the CIB, the DEC Division manages the RECCWG National Program Office, which assesses emergency communications capabilities within the respective FEMA regions, facilitates disaster preparedness through the promotion of multi-jurisdictional and multi-agency emergency communications networks; and ensures that activities are coordinated with all emergency

communications stakeholders within the FEMA regions. The RECCWG budget aligns funding with disaster emergency communications requirements and responsibilities, to improve operational readiness, continuity of operations, and interoperability, and to ensure the effective use of all response communications assets to achieve mission success.

**The Tactical Emergency Communications Branch (TECB)/Mobile Emergency Response Support** significantly enhances FEMA's response coordination and execution across the full spectrum of incidents, both natural and man-made. TECB is engaging across the Federal Government, with State, tribal, and local agencies, and with other partners to help establish consistent doctrine, plans, tactics, techniques, and procedures to ensure effective communications interoperability, standards, and capabilities during Federally coordinated response operations. When disaster strikes, the TECB aggressively responds with mission critical technical support to assist deployed MERS coordinators, FEMA regional emergency communications coordinators, and Federal response teams to overcome near-term emergency communications challenges.

MERS is a national asset that provides rapid deployable and self-sufficient, command, control, and disaster emergency communications capabilities, tactical operations, and logistics support for the on-scene management of disasters. It is a key FEMA disaster response asset that plays an important role supporting disaster response and recovery operations. MERS supports Federal, State, tribal, and local disaster responders in several major areas including multi-media communications, information processing, logistics, and overall disaster operations and administration. Strategically positioned in six locations across the Nation, MERS detachments can support multiple field operating sites concurrently while building out disaster infrastructure for multiple incident areas of operation.

MERS provides a cost-effective solution to the National Response Framework, Emergency Support Function #2 requirements. The detachments are available 24 hours a day to deliver FEMA disaster emergency communications and other life-saving, live-sustaining infrastructure support services. The ability to deploy mobile command center Interim Operating Facilities, Joint Field Offices, and Disaster Recovery Centers allows emergency management staff and Federal response teams to focus on immediate response and recovery activities. MERS home station operations centers and specialists support FEMA's network of operations centers, providing situational awareness and reporting down to the incident site level.

Much work remains to improve disaster emergency communications interoperability with other Federal departments and agencies and emergency responders at State, tribal, and local levels of government. The DEC Division and the MERS FY 2013 Operating Plan provide day-to-day cross-cutting support to FEMA directorates, and ensures effective and efficient service delivery to relevant emergency management personnel during times of National disaster. Missions and function of DEC Division and MERS align with DHS QHSR Goal 5: Ensuring Resilience to Disaster; 5.3 - Ensure Effective Emergency Response; and 5.3.2 - Conduct effective disaster response operations. Establishing a sound budget for the DEC Division and the MERS Detachments supports the Response Directorate Strategic Planning Guidance/Operating Plan for FY 2013 by building a robust communications program that includes funding operations and maintenance for current mission requirements and enhances our ability to support incidents involving INDs, cyber attacks, and other full-spectrum response planning and operations.

### ***G. Business Management Division***

**The Business Management Division (BMD)** coordinates the major support requirements of the Directorate. The Division is charged with making decisions about the Response Directorate's mission needs and providing support for the day-to-day mission of the Directorate. BMD accomplishes this mission through the coordinated efforts of the Assets and Contracts Management Branch, the Human Resources Management Branch, the Financial Management Branch, and the Mission Assignment Program.

### **3) Logistics Management Directorate**

The Logistics Management Directorate (LMD) is FEMA's major program office responsible for policy, guidance, standards, execution, and governance of logistics support, services, and operations. LMD's mission is to provide an efficient, transparent, and flexible logistics capability for the procurement and delivery of goods and services necessary for an effective and timely response to and recovery from disasters.

LMD funding is organized in the following manner:

**Disaster Logistics Management - Management & Administration (M&A)** is responsible to plan, manage, and sustain the national logistics response and recovery operations, in support of domestic emergencies and special events – to act as the National Logistics Coordinator and Single Logistics Integrator for National incident support. It also functions as the Logistics National Cadre Manager for more than 1,000 DAEs.

- Front Office - provides comprehensive Logistics-related fiscal, personnel and administrative services, and coordination to achieve optimum mission requirements and capabilities
- Logistics Management Transformation Initiative - coordinates and manages emerging transformation initiatives and concepts such as the National Logistics Coordinator concept, Key Readiness Contracts, and the Demonstration Program: Logistics Capability Calculator.
- Business Management - integrates human resources management and strategies into the overall strategic objectives for LMD. Advises directorate leadership on human capital requirements and professional training development for operational missions and programs. Provides comprehensive financial management services for the five divisions, which include budget formulation, oversight, and financial document tracking. The division also manages the headquarters DAE Logistics cadre, which consists of more than 300 DAEs.

**Disaster Logistics Distribution Management Operations** manages FEMA's warehouse facilities and transportation systems used to receive, store, maintain, issue, distribute and track supplies, services, material and equipment.

**Disaster Logistics Property Accountability, Oversight, and Coordination** provides industry standards (using American Society for Testing and Materials voluntary consensus standards) quality assurance, customer assistance and technical reviews of property accountability, inventory services, and oversight of disposal and donations of agency disaster-funded supplies and equipment.

**Disaster Logistics Operations** manages and executes the coordination and communication, tracking and reporting for all-hazards operations and serve as the central reporting element for the NRCC on all logistics actions and operational activities.

**Disaster Logistics Plans and Exercises** develops and provides cohesive and synchronized logistics plans and exercises to achieve both short- and long-term readiness requirements.

**Department of Homeland Security  
Federal Emergency Management Agency  
Recovery  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Recovery**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	-
<b>2012 Enacted Budget Authority</b>	-	-	-
2013 Adjustments-to-Base	(192)	(183)	(22,950)
<b>2013 Current Services</b>	<b>420</b>	<b>398</b>	<b>55,423</b>
<b>2013 Total Requested Budget Authority</b>	<b>420</b>	<b>398</b>	<b>55,423</b>
Total Change 2012 to 2013	420	398	55,423

FEMA requests \$55.423 million, 420 positions, and 398 FTE in the Recovery PPA.

- Increase of \$0.124 million for pay inflation
- Decrease of \$22,514 million, 192 positions, and 183 FTE transferred to the ARO PPA for recovery efforts conducted in the regions by the Regional Administrators
- Decrease of \$0.56 million transferred to the Response PPA for the Declarations Unit move from the Recovery Directorate to the ORR Front Office

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Recovery mission supports individuals and communities affected by disasters of all sizes, including catastrophic events and terrorist attacks, in their efforts to recover.

**1) Recovery Directorate**

The Recovery Directorate provides program oversight for disaster assistance averaging more than \$8.0 billion annually. The Recovery Directorate oversees Federal disaster assistance programs; manages resources for readiness and recovery capability development; develops recovery strategies, policies, and doctrine for delivering assistance; plans for catastrophic events and continuity of operations; delivers grant assistance for community and individual recovery; and develops and coordinates partnerships.

The Recovery Directorate is also FEMA’s agent in the implementation of the National Disaster Housing Strategy, the National Disaster Recovery Framework (NDRF), the National Catastrophic Infrastructure Recovery Plan, ESF #3 (Public Works and Engineering), ESF #6 (Mass Care,

Emergency Assistance, Housing, and Human Services), and ESF #14 (Long-term Community Recovery).

The following Recovery Directorate programs/functions receive staffing and operating expenses support from the S&E appropriation:

***A. Office of the Assistant Administrator for Recovery***

The Office of the Assistant Administrator provides strategic leadership and direction to support and strengthen Recovery Directorate programs and activities through program analysis and evaluation; policy coordination and analysis; performance measurement and management; development of doctrinal guidance; information management, analysis, and reporting; and internal and external partner coordination and integration.

***B. National Disaster Recovery Planning Division***

The National Disaster Recovery Planning Division strengthens recovery programs and assistance by developing and coordinating national-level plans and exercises, including catastrophic, all-hazards, contingency, COOP, devolution planning; coordinating and leading ESF #14 - Long-term Community Recovery; and supporting FEMA Regional Office recovery planning activities.

The National Disaster Recovery Planning Division also is responsible for leading the development, implementation, and other activities associated with the NDRF. The NDRF describes the concepts and principles that guide recovery efforts in response to large-scale or catastrophic disasters; identifies scalable, flexible, and adaptable coordinating structures to align key roles and responsibilities; and links local, State, tribal and Federal governments, the private sector, and voluntary, faith-based, and community organizations that play vital roles in recovery.

***C. Public Assistance Division***

PA Division programs provide assistance to tribal, State, and local governments, and certain nonprofit organizations to alleviate suffering and hardship resulting from major disasters or emergencies declared by the President. The S&E appropriation funds PA full-time permanent employees, plus operating expenses for consistent implementation and management of PA programs including development and maintenance of policies and doctrine, planning, training development and delivery, technology sustainment, and outreach to improve integration and coordination. PA programs provide reimbursement for debris removal, emergency protective measures, and the repair, replacement, or restoration of disaster-damaged, publicly owned facilities and the facilities of certain private nonprofit organizations, funded by the DRF. These programs provide not less than 75-percent Federal cost-share reimbursement to States for actual costs.

***D. Individual Assistance Division***

IA Division ensures that disaster survivors have timely access to a full range of programs and services to maximize their recovery, through coordination among Federal, tribal, State, and local governments, voluntary agencies, and the private sector. IA programs and functions are executed under Sections 403, 408, 410, 415, 416, 425, and 426 of the Stafford Act and funded by the DRF. The S&E

appropriation funds all IA full-time permanent employees, plus operating expenses for consistent implementation and management of IA programs including development and maintenance of policies and doctrine, planning, training development and delivery, technology sustainment, and outreach to improve integration and coordination among Federal, tribal, State, and local governments, voluntary agencies, and the private sector.

#### ***E. National Processing Service Centers***

NPSCs are a key component of the Agency's ability to support survivors' resilience to disaster through recovery programs. The NPSCs are FEMA's full-service disaster assistance processing and solution centers responsible for: registering individuals for assistance by phone and via the Internet; verifying home and personal property losses through onsite inspections; processing applicant registrations to determine and communicate assistance eligibility; and responding to applicant questions by phone (and mail) throughout the disaster assistance process. Funding from the M&A appropriation supports approximately 300 full-time positions in the NPSCs as well as other activities, such as technology requirements needed to maintain call centers, equipment, and training.

#### ***F. Business Management Division***

The Business Management Division (BMD) provides the Recovery Directorate coordination of technology solutions, contracting, facility and asset management, financial management and contract closeouts, human resources support, training, and cadre management. Activities focus on improving efficiency, building sustainable business and workforce capabilities, supporting the implementation and modernization of service delivery with cost-effective technology systems and solutions, and effecting coordination with MSB and OFO to enable successful execution of Recovery programs and delivery of services.

**Department of Homeland Security

Mitigation  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Mitigation**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	-
<b>2012 Enacted Budget Authority</b>	-	-	-
2013 Adjustments-to-Base	(107)	(102)	(16,565)
<b>2013 Current Services</b>	<b>76</b>	<b>72</b>	<b>27,110</b>
<b>2013 Total Requested Budget Authority</b>	<b>76</b>	<b>72</b>	<b>27,110</b>
Total Change 2012 to 2013	76	72	27,110

FEMA requests \$27.110 million, 76 positions, and 72 FTE in the Mitigation PPA.

- Increase of \$0.023 million for pay inflation.
- Decrease of \$13.012 million, 107 positions, and 102 FTE transferred to the ARO PPA for mitigation efforts conducted in the regions by the Regional Administrators.
- Decrease of \$3.576 million for a one-time programmatic increase in the FY 2012 Enacted Salaries and Expenses appropriation for mitigation programs.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Federal Insurance and Mitigation Administration (FIMA) creates safer communities by reducing loss of life and property and preventing potential disaster losses. This is accomplished through three core competencies and one support activity: analyzing risk through identification and assessment; reducing risk through land use, building codes, and the Hazard Mitigation Grant Program; environmental planning and historic preservation; and, the regional and disaster support activity.

These core competencies and support activity work jointly to reduce the likelihood of future losses, to enable individuals to recover more rapidly from floods and other disasters, and to minimize the financial impact of disasters on the U.S. Treasury, States, and local and tribal communities.

**1) National Dam Safety Program (NDSP)**

As a critical element of the Nation’s infrastructure, dams bring water, power, flood control, recreation, economic possibilities, and many other advantages to people. Safe operations and maintenance are critical to sustaining these advantages and avoiding potential disaster. Since 1998, the recorded

number of deficient dams (those with structural or hydraulic deficiencies, leaving them susceptible to failure) has risen by 85 percent—from 1,818 to 4,095. While federally owned dams are in good condition, and there have been modest gains in repair, the number of dams identified as unsafe is increasing at a faster rate than those being repaired. The number of high-hazard potential dams (dams whose failure would cause loss of human life) is increasing dramatically. Since 1998, the number of high-hazard-potential dams has increased from 9,281 to 13,000 in 2009.

FEMA's role in addressing this problem is to aid States and communities in recognizing their risk and developing plans to mitigate that risk as the lead Federal agency for NDSP. FEMA coordinates efforts through collaborative partnerships between States, Federal agencies, and private sector and other stakeholders to secure the safety of these dams through research, training, and public awareness. The NDSP provides financial assistance to States' dam safety programs to support dam safety activities including:

- Inspecting and monitoring dams.
- Training dam safety staff and inspectors.
- Data analysis and research to support the improvement of State Dam Safety Programs.
- Preparation of Emergency Action Plans.
- Public awareness campaigns aimed at both the public and emergency management on the risks associated with dam failure.

The FY 2013 budget request includes a performance-based approach for evaluating State performance that ultimately will afford us the opportunity to allocate grant funds based on State performance versus a funds distribution based on the number of regulated dams in each State.

## **2) National Earthquake Hazards Reduction Program (NEHRP)**

Congress established NEHRP in 1977, and authorized the member agencies to conduct research on the causes and effects of earthquakes, produce technical guidance to develop earthquake resistant design and construction standards, and develop techniques to educate the public about earthquake hazards and mitigation.

Ongoing efforts to support the creation and maintenance of disaster-resistant building codes and standards is a major focus of the NEHRP and is an important factor in reducing the losses from major U.S. earthquakes over the past 30 years.

Areas such as the New Madrid seismic zone in the central United States remain more vulnerable to extensive damage cause by earthquakes than other parts of the country, particularly the western United States. This is because western States adopted seismic building codes much earlier than those in the central United States did. Currently, Arkansas (adopted 2006); Indiana (adopted 2006), Mississippi (adopted 2003) and Tennessee (adopted 2006) have adopted statewide seismic building codes. Illinois and Missouri have not adopted statewide seismic codes, however many jurisdictions in those States have adopted them. State and local jurisdictions need to do more to improve the earthquake resistance of buildings and infrastructure in this part of the Nation.

Each year, approximately 3,000 to 4,000 earthquakes strike our Nation. FEMA, along with partners from the U.S. Geological Survey, the National Institutes of Standards and Technology and the National Science Foundation, works to help communities identify earthquake risk and develop plans for

reducing those risks. Specifically, NEHRP manages initiatives that reduce the risk to life and property from earthquakes, including the following:

- Translating research into technical guidance publications and best practices on seismic safety, building design and construction, building codes and standards, and reducing economic losses.
- Assisting State and local governments in building capabilities for determining potential damage and reducing the effects of earthquakes before they occur.
- Working with national codes and standards organizations to develop and improve seismic building standards.

### **3) Building Science Program**

Building Science Program develops mitigation guidance that focuses on creating disaster-resilient communities. The program's mitigation activities include:

- Acting as a Technical Services Bureau for FIMA and FEMA for the development and maintenance of over 100 technical manuals regarding evaluation, design, and construction standards for multiple hazards which are used by builders and building owners, designers, and local officials.
- Assessing structural resiliency in post-disaster environments through immediate deployment of mitigation assessment teams following disasters.
- Developing timely publications, guidance materials, tools, technical bulletins, and recovery advisories that incorporate the most up-to-date building codes, floodproofing requirements, and wind-resistant requirements for new construction or repairing existing buildings.
- Supporting the development and adoption of disaster-resistant model building codes and standards.
- Furthering development of the Risk Management Series for all-hazards mitigation.
- Providing building science technical support for NFIP and Hazard Mitigation Assistance programs.
- Providing building science technical support to public and private sector stakeholders.

### **4) Environmental Planning and Historic Preservation**

FEMA's Office of Environmental Planning and Historic Preservation (OEHP), located within FIMA, manages FEMA's responsibilities to be stewards of the natural and cultural environment and related compliance with all environmental planning and historic preservation laws, executive orders, and regulations across all FEMA programs. OEHP helps build a unity of effort across the emergency management team as it relates to EHP issues and requirements, and specifically, the OEHP is the functional authority on environmental planning and historic preservation (EHP), and oversees the development of all EHP regulations and policy, systems, human capital (including the EHP Disaster Workforce), outreach, and performance management aspects of these requirements. OEHP's mission is to help communities reduce the impact that disasters and emergency management decisions and operations have on the Nation's natural and cultural resources.

- OEHP also works closely with FEMA Directorates and Program Offices to provide technical assistance in integrating these stewardship responsibilities into program decision-making and implementation, and how to use the EHP process to further the Whole Community objectives

of stakeholder engagement and collaboration as part of the decision-making process. The EHP Strategic Plan, FY 2009-2013, has three major goals: build sustainable capabilities; strengthen operational effectiveness; and strengthen EHP partnerships.

## **5) Regional and Disaster Support Branch**

Regional and Disaster Support Branch works to define and manage FIMA's role in FEMA's response and recovery operations as well as to ensure regional integration into National programmatic issues. This responsibility requires the R&DS design consensus-based solutions to prepare the disaster workforce to consistently deliver program and technical assistance to affected local governments and disaster applicants, along with facilitating Regional input regarding crosscutting initiatives. The main goals of Regional and Disaster Support are:

- Translate Headquarters programs and initiatives into tools and resources to equip the Hazard Mitigation Disaster Workforce with standards, training, and job aides to consistently deliver hazard mitigation assistance in the disaster setting, and to further the efforts of FIMA programs
- Build and facilitate a National network of Regional Managers to effectively integrate FIMA's performance
- Coordinate FIMA disaster operations, National disaster policy analysis, and crosscutting program and administrative issues in support of the Regions and the Disaster Field organization

## **6) FIMA Mission Support Activities**

FIMA's mission support activities include management and oversight of Agency programs, business operations support, stakeholder engagement and outreach support, business process management and improvement activities, and information systems support activities.

**Department of Homeland Security  
Federal Emergency Management Agency  
Mission Support  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Mission Support**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	-
<b>2012 Enacted Budget Authority</b>	-	-	-
2013 Adjustments-to-Base	(238)	(225)	(66,627)
<b>2013 Current Services</b>	<b>857</b>	<b>815</b>	<b>152,806</b>
<b>2013 Total Requested Budget Authority</b>	<b>857</b>	<b>815</b>	<b>152,806</b>
Total Change 2012 to 2013	857	815	152,806

FEMA requests \$152.806 million, 857 positions, and 815 FTE in the Mission Support PPA.

- Increase of \$0.272 million for pay inflation
- Decrease of \$29.995 million, 238 positions, and 225 FTE transferred to the ARO PPA for mission support functions conducted in the regions by the Regional Administrators
- Decrease of \$13.662 million for a one-time programmatic increase in the FY 2012 Enacted Salaries and Expenses appropriation for IT modernization
- Decrease of \$0.5 million for a one-time programmatic increase in the FY 2012 Enacted Salaries and Expenses appropriation for unaccompanied minor registration
- Decrease of \$5.0 million for a one-time programmatic increase in the FY 2012 Enacted Salaries and Expenses appropriation for facilities repair.
- Decrease of additional \$2.54 million in the facilities repair program based on a new prioritization and ranking program
- Decrease \$1.19 million in information/telecommunications based on consolidation, prioritization, and needs analysis
- Decrease of \$0.6 million in the storage tank program plan
- Decrease of \$13.41 million for software licenses and data center O&M transferred to the DHS Working Capital Fund in the Centrally Managed Accounts PPA

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Mission Support Bureau (MSB) supports all facets of the Agency mission by providing strategic leadership to and assuring the timely, efficient, and effective delivery of administrative, property management, health and safety, human capital, IT, procurement, security services, and business

function capabilities. This community of capabilities supports the entire FEMA enterprise of mission activities that range from performing US&R; to taking in and managing requests for IA and PA grants; to approving and paying those grants; to managing flood insurance policies for the Nation's citizens.

The functional responsibilities of each MSB Office are detailed below.

## **1) The MSB Executive Office (MSB EO)**

MSB EO provides primary strategic oversight to and is focused on integrating activities within and seeking efficiencies among the five MSB component Offices. Additionally, specific EO responsibilities include the functions of the Component Acquisition Executive; coordinating administrative, human capital, and acquisition needs in FEMA's 10 Regional Offices; oversight of MSB-wide business process improvements; establishing and maintaining a highly responsive enterprise customer assurance capability; coordinating cross-Bureau COOP planning; and managing and overseeing basic administrative functions and activities.

## **2) The Office of the Chief Administrative Officer (OCAO)**

OCAO provides critical support to FEMA's mission through a full range of administrative and management services, including real and accountable property management; occupational safety, health and environmental programs; records management; printing and graphics support services; fleet support and management; support to Freedom of Information Act (FOIA) requests; and privacy protection to programs, partners, and stakeholders. In addition, OCAO is responsible for supporting MSB strategic and operational planning activities by providing assistance to all offices within the Bureau for the development and implementation of operational and tactical program-level plans that support FEMA and MSB strategic direction.

The portfolio of OCAO includes the Support Services and Facilities Management Division (SSFMD); the Occupational Safety, Health, and Environment (OSHE) Division; and the Records Management Division.

The **Support Services and Facilities Management Division** is responsible for managing real property and accountable personal property, products, services, and solutions, to include the acquisition, leasing, repair, maintenance, and disposal of fixed and temporary facilities, and inventory management of accountable personal property. SSFMD manages space optimization planning, furniture acquisition, public benefit conveyance, facilities support services, and the transit subsidy program. In addition, the Division provides or coordinates critical mission support services, such as mail management, graphic/multimedia support, publications ordering/shipment, fleet management, and printing for both steady-state and disaster support operations.

The **Occupational Safety, Health, and Environment Division** provides leadership, oversight, guidance, and support to ensure the protection of all FEMA employees and programs nationwide, through a Whole Community readiness approach which emphasizes the protection of operations, affected communities, and responding partners to reduce injuries and minimize loss of life by supporting both steady-state and disaster response operations, including the NIRT, the DEST, and IMATs. Divisional responsibilities are accomplished through an array of specific programs (such as

maintaining readiness of the National Safety and Health Cadre), planning and preparedness exercises, training programs (such as Collateral Duty Safety Officer and Safety Manager Training), evaluations, employee wellness and medical readiness, pre- and post-deployment operations; operational assessments, and compliance verification activities (such as Management Evaluation Technical Assistance Reviews, Life Safety and Environmental Regulatory Compliance Reviews).

The **Records Management Division and Privacy Office** administer statutory programs that include Records Management, Privacy Act, FOIA, Information Quality Act, Paperwork Reduction Act (PRA), and Federal Advisory Committee Act (FACA). These programs administratively support programs such as Correspondence Management, Forms Management, Directives Management, Research Service, and the National Archives and Records Administration (NARA) Reimbursable Program. They also administer the enterprise systems for the collection, preservation, management, safeguarding of records, correspondence, and historical research material.

### **3) The Office of the Chief Component Human Capital Officer (OCCHCO)**

OCCHCO recognizes that its first priority is to support FEMA's mission. As a strategic partner of leadership at all levels, OCCHCO implements and improves human capital (HC) programs that help the workforce achieve goals and meet future challenges. The OCCHCO HC goal is to provide a blueprint for the future, to ensure that the Agency hires and retains the people with the right skills to excel in meeting current and future challenges. Successful recruiting, training, career management, compensation, promotion management, performance management, and leadership all contribute toward growing a competent and diverse workforce. Through the OCCHCO strategic management of HC, FEMA will:

- Conduct workforce planning, prioritize and invest in closing skill gaps, align performance with strategic goals, and fully engage its employees in strengthening the workforce.
- Leverage existing technology and pursue new technology throughout the Agency to develop, implement, and manage HC strategies and services in partnership with OCIO and OCFO, and other entities.
- Systematically plan, measure, evaluate, and improve HC programs to achieve organizational results, legal and regulatory compliance, and taxpayer value.

Overall, provides leadership and direction to all agency stakeholders, including FEMA headquarters, regional offices, and interagency partners on HC programs, products, and services. It is responsible for the development and management of policies, programs, and activities designed to ensure the strategic management of the Agency's human capital assets. It is responsible for ensuring that the strategic management of human capital is integrated into all aspects of the Agency's operations. It also ensures compliance with Merit System Principles, Federal human resources (HR) laws, rules, and regulations; and manages the Administrator's Priority Workforce Enhancement Initiative.

OCCHCO programs and functions are organized across the following four divisions: the Workforce Effectiveness Division, Headquarters Operations Division, Field Operations Division, and Workforce relations Division. These divisions are supported by the OCCHCO Executive Resources Branch, OCCHCO Administrative Staff, the Career Development and Training Office, and the HR Information System Branch. All four divisions and supporting offices and branches work together in a unified and

integrated effort to retain, develop, and motivate FEMA's multifaceted employee workforce to reach its fullest potential.

#### **4) The Office of the Chief Information Officer (OCIO)**

OCIO supports FEMA's mission by maintaining and enhancing the Agency's IT infrastructure, and developing and enhancing key systems to support operating programs. The requested funding supports the mission by building, sustaining and improving the capabilities that provide operations and maintenance support for 90 applications; afford IT governance and administrative support for programs and offices; and deliver IT services (including information security, Internet, telecommunications, and desk-side technical help), support, and oversight across the enterprise which includes more than 20 fixed locations, over 9,000 employees, and during an event can include up to 25,000 employees, who support our citizens and first responders. Funding supports plans to build on its FY 2010 and 2011 successes of consolidating two data centers (SAVVIS and Plano, Texas) into the DHS Enterprise Data Center in southern Virginia. Funding also supports plans to improve management effectiveness by seeking cost-effective, reliable, secure, and innovative solutions through which to continue to deliver the Agency's services to Nation's citizens and first responders. Our IT initiatives are closely aligned with those who carry out the Agency's mission and with the broader framework provided by the President's Management Agenda, and relevant legislation and guidance.

To continue to ensure the sustained viability and resiliency of IT capabilities, we will continue to work toward the migration of applications from the Mount Weather facility and two other commercial data centers that are currently hosting FEMA mission support applications. OCIO will continue to take advantage of IT services offered at the DHS-enterprise level, such as email and internet collaboration services, that will improve capabilities and reduce costs. The OCIO is comprised of two divisions: the Operations Division and the Administration Division.

##### ***A. OCIO Operations Division***

The Operations Division provides IT services and capabilities to FEMA, other Federal Agencies, and State and local governments in support of our mission by building, sustaining, and improving our information systems, networks, and IT service centers. It provides leadership and guidance in conducting and maintaining IT enterprise infrastructure and for the management, design, development, acquisition, integration, and implementation of critical infrastructure products and systems, and assists in maintaining the CIO goals and standards. The Operations Division manages Operations Support, Software Development and Integration, Architecture, Engineering, and Enterprise Services, Regional Support, and IT Security.

The **Operations Support Branch** provides day-to-day operation, maintenance, control and security of the FEMA enterprise from headquarters sites thru the regions and including the extension of the enterprise into disaster field offices and sites.

The **Systems Development and Integration Branch** funding provides the establishment of leadership and support for the direction, design, development, testing and fielding of applications, systems, and infrastructure. Additionally, funding pays for the management of successful delivery of IT projects, such as efforts to improve the National Mass Evacuation Tracking System and Direct Assistance Replacement Assistance Consideration within scope, budget, and on schedule, using

leading-edge technologies, and Project Management Institute best practices coupled with world-class vendors obtained through innovative contract vehicles. The funding ensures that system development efforts follow the DHS systems engineering lifecycle and FEMA guidance to ensure the sustainability of projects.

The **Architecture, Engineering, and Enterprise Services Branch** is responsible for:

- Design and documentation of architectural blueprints and Information Communication Technology (ICT) infrastructure business plans
- Analyses of business requirements for planning future business direction, and evaluating current organizational position-benchmarking/maturity assessment
- Supporting the design and implementation of technical plans
- Improving business processes and automation

The **Regional Support Branch** serves as liaison between OCIO and regions providing oversight, first responder functionality, and comprehensive support to regional IT and various satellite facilities in order to improve coordination, standardization, uniformity, and operational compliance.

The **Information Technology Security Branch** provided management and control of all aspects of security vulnerabilities in our 90 systems, including:

- Conducting incident investigation, diagnosis, resolution, recovery and closure
- Establishing and maintaining security education and training programs
- Overseeing inspections, assessments, and assistance to our organizations, including the conduct and verification of security certification and accreditation activities
- Providing expertise as the OCIO agency expert on all computer security issues
- Providing the resources that direct the IT security program, which involves establishing and enforcing thorough and in-depth technical standards and procedures for security policy and ensuring adherence to laws and policy

#### ***B. OCIO Administration Division:***

OCIO Administration provides leadership and oversight to establish and direct the underlying business processes and functions necessary to effect efficient operations throughout the OCIO and supported missions across FEMA. Funding requested by the Administration Division is used to manage Independent Verification and Validation, Customer Advocates, Governance and Investment Integration, and Business Operations.

### **5) The Office of the Chief Procurement Officer (OCPO)**

OCPO provides a full range of acquisition services and business solutions to all FEMA programs, partners, and stakeholders, in support of both steady state and disaster activities and operations. OCPO ensures quality contracting in a timely manner, and delivers acquisition services using the most efficient and effective means possible, by:

- Providing pre- and post-award contracting and acquisition support to our customers which ensures stewardship of public funds by following the Federal acquisition regulations and the tenets of best practices in acquisition
- Conducting acquisition oversight and monitoring of internal controls pertinent to the

- acquisition process to detect and prevent fraud, waste, and abuse of acquisition resources
- Updating, maintaining, and providing access to electronic procurement systems, to ensure uniform as well as statutory and regulatory-compliant contract documents
- Improving the delivery of sound acquisition and business solutions and increasing the number of strategic sourcing opportunities
- Providing program management oversight and inventorying of acquisition programs, ensuring that acquisition lifecycle oversight complies with FEMA/DHS policies
- Conducting acquisition investment reviews

#### **A. Acquisition Operations Division**

The Acquisition Operations Division awards, modifies, and provides life-cycle oversight of acquisitions for both steady state and disaster/contingency requirements. Additionally, the Division coordinates and collaborates closely with program customers to develop and execute quality and timely acquisition solutions that fully support mission requirements.

#### **B. Acquisition Program and Planning Division**

The Acquisition Program and Planning Division educates and equips customers and stakeholders with the innovative tools, resources, and business solutions they need to make sound acquisition and business management decisions. The Division works with organizations and acquisition professionals to develop requirements and effective acquisition strategies, to include exploring opportunities for strategic sourcing; conducting acquisition portfolio reviews; providing acquisition guidance, governance and oversight of programs and the Acquisition Program Managers and Contracting Officer's Technical Representatives tiered training programs; and conducting extensive market research with industry through vendor outreach in a continuing effort to minimize contract risk and maximize the execution of FEMA's mission throughout the acquisition lifecycle.

#### **C. Acquisition Policy and Legislation Division**

The Acquisition Policy and Legislation Division informs contracting officers and contract specialists of existing acquisition policies and procedures that affect the way they do business; conducts special acquisition programs that directly support FEMA's mission; identifies and provides acquisition training opportunities that ensure currency of acquisition knowledge, skills, and abilities; provides and maintains access to electronic acquisition tools to create, maintain, and report contractual documents; and conducts acquisition oversight activities that monitor acquisition staff performance and that identify and correct internal control deficiencies.

### **6) The Office of the Chief Security Officer (OCSO)**

OCSO provides professional and comprehensive security services, programs, and activities designed to protect FEMA personnel, facilities, information, and equipment, including National security requirements. Security services are designed to support all agency personnel as well as internal and external customers. Policies and procedures are designed to positively affect fixed facilities and disaster operations throughout FEMA theaters of operations.

OCSO is comprised of five operating divisions that are supported by eleven branches.

***A. Field Operations Division (FOD)***

FOD provides and ensures that critical security services are provided at all FEMA disaster sites and special events and supports the Regional Security Officers. FOD coordinates and collaborates closely with disaster and recovery site customers to ensure the safety and security of all employees and assets.

The **Disaster Security Operations Branch** is responsible for ensuring that critical security services are provided at all FEMA disaster sites and special event assignments.

The **Regional Security Operations Branch** is responsible for supporting regional security operations through the Regional Security Officers.

***B. Support Operations Division:***

The Support Operations Division is responsible for the Counterintelligence, Information, Industrial, Operations, and Physical Security Programs, as well as the Identity Credential, Access Management, and HSPD-12 programs, including policies and procedures.

The **Asset Protection Branch** is responsible for the Physical Security Program including implementing policies and procedures for the protection and safeguarding of FEMA personnel, property, buildings, and facilities.

The **Administrative Security Programs Branch** is responsible for the counterintelligence, Information, Industrial, and Operations Security Programs. It implements policies and procedures for the protection of classified National Security Information and sensitive but unclassified information, the foreign travel and foreign visitors programs, and FEMA's counterintelligence program to prevent hostile or foreign intelligence agents from successfully gathering and collecting intelligence from FEMA.

The **Identity Credential and Access Management Branch** is responsible for the physical access control for all FEMA facilities and HSPD-12 card issuance.

***C. Program Protection Division***

The Program Protection Division is responsible for the oversight of security policies, programs, and established security standards to protect and safeguard the agency's personnel, property, and information to include national security objectives.

The **Special Security Program Branch** is responsible for National Security policy oversight and programs for protecting sensitive classified information received from the Intelligence Community and executing the Sensitive Compartmented Information (SCI) program within FEMA.

The **Personnel Security Branch** is responsible for initiating personnel security and suitability background investigations on all permanent full-time employees, DAEs, local hires, COREs, and contract employees, and for the periodic reinvestigations of applicants and employees.

#### ***D. Fraud and Internal Investigations Division***

The Fraud and Internal Investigations Division is responsible for conducting administrative employee misconduct inquiries and disaster fraud inquiries.

The **Law Enforcement Coordination and Investigation Branch** is responsible for administrative inquiries into employee misconduct, theft of Government property, conducting threat assessments against FEMA employees, investigating and collecting data on reports of suspicious activities under the DHS Suspicious Activity Reporting Program, and providing and coordinating personal protective details and escort functions and security training, and serving as FEMA's liaison to Federal, State, local, and tribal law enforcement agencies and to the FBI Joint Terrorism Task Force.

The **Fraud Prevention & Investigation Branches** identifies, impedes, mitigates, and prevents fraudulent losses of FEMA funds and assets through agency fraud awareness training, comprehensive research, investigation, and recoupment of funds.

#### ***E. Policy and Customer Service Unit (PCSU)***

PCSU provides comprehensive and efficient security solutions through practical policies and procedures ensuring the protection of FEMA personnel, facilities, information, and equipment. The Unit is comprised of three entities: Policy, Customer Service, and Background Compliance.

<b>2013 Total Requested Budget Authority</b>	-	-	<b>94,180</b>
Total Change 2012 to 2013	-	-	94,180

FEMA requests \$94.180 million, 0 positions, and 0 FTE in the Centrally Managed Accounts PPA.

- Increase of \$13.41 million for software licenses and data center O&M transferred to the DHS WCF in FY 2013 from the Mission Support PPA.
- Decrease of \$4.7 million for one-time facilities investments required in FY 2012 to achieve a reduced FEMA footprint and rent reductions in FY 2013 and beyond.
- Decrease of \$5.103 million for centrally managed account funded in the FY 2012 Enacted base that will be funded via a transfer from the State and Local Programs appropriation in FY 2013
- Decrease of \$1.5 million in Mount Weather rent to be achieved through relocation of FEMA personnel from Mount Weather to more cost-effective locations.
- Decrease of \$6.4 million in IT enterprise telecom to be realized through management efficiencies.
- Decrease of \$8.3 million in rent to be achieved FEMA-wide through consolidation of facilities to reduce the overall FEMA footprint.
- Decrease of \$0.5 million in transit subsidy benefits resulting from the legislative decrease in the maximum allowed transit subsidy in the National Capital Region.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Centrally managed accounts are critical bills that must be managed at the enterprise level to ensure efficient and effective cost management which includes streamlining cost factors and prompt payment.

Centrally managed accounts include:

- DHS WCF
- Mount Weather WCF contributions

- Rent
- Printing
- Postage
- Mail Operations (DHS Mail Facility Ops)
- Transit Subsidy Benefits
- Federal Protective Service (FPS) Guard Services
- Building Specific Security
- Office of Personnel Management (OPM) Investigations
- Wireless and Wireline Communications
- IT Project Management
- Long Haul (data) Circuits

### Description

The MWEOC is a 564-acre Department of Homeland Security facility approximately 64 miles west of Washington, D.C. MWEOC provides the infrastructure necessary to support COOP, Incident Management, classified programs, and other all-hazards activities for multiple Federal Executive Branch D/As. For example, MWEOC hosts the DHS/FEMA HQ COOP site as well as providing space for use by several D/As for their storage, offices, and operations. MWEOC also supports a variety of disaster response and continuity missions. It is a hub for our Nation's emergency response activities.

### Justification

MWEOC is in the middle of a massive infrastructure upgrade to renovate or replace antiquated buildings, truly transforming the complex into a modern facility capable of supporting the necessary technology and associated bandwidth required by today's Federal D/A tenants. This 2013 initiative will specifically allow for the rebuilding and repairing of critical IT infrastructure and continued capacity enhancements for space associated with Federal COOP efforts.

**Department of Homeland Security  
Federal Emergency Management Agency  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Elimination of the Pre-positioned Equipment Program  
PPA: Urban Search and Rescue Response System  
Program Decrease: Positions 0, FTE 0, Dollars \$(6,233)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)

Program Decrease							-	-	(6,233)
<b>Total Request</b>	-	-	<b>6,968</b>	-	-	<b>6,233</b>	-	-	<b>(6,233)</b>

**Description**

The Pre-positioned Equipment Program is a program to pre-position standardized emergency equipment to sustain and replenish critical assets used by State, local, and tribal governments in response to (or rendered inoperable by the effects of) natural disasters, acts of terrorism, and other man-made disasters.

**Justification**

In December 2011, FEMA initiated a bottom-up review (BUR) of the Pre-positioned Equipment Program to assess the validity of the program based on capital investments versus deployments of the Pre-positioned Equipment Program caches. The BUR analysis of the historical data indicates that the pre-positioned equipment resources have not been utilized since 2005 for disaster response and the return on investment has not been realized. Based on the BUR analysis, FEMA proposes to fully eliminate the Pre-Positioned Equipment Program in FY 2013.

## V. Exhibits and Other Supporting Material

### A. Justification of Proposed Legislative Language

**Department of Homeland Security  
Federal Emergency Management Agency  
Appropriation Language**

For necessary expenses of the Federal Emergency Management Agency, [\$895,350,000] \$789,172,000, including activities authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Cerro Grande Fire Assistance Act of 2000 (division C, title I, 114 Stat. 583), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), the Defense Production Act of 1950 (50 U.S.C. App. 2061 et seq.), sections 107 and 303 of the National Security Act of 1947 (50 U.S.C. 404, 405), Reorganization Plan No. 3 of 1978 (5 U.S.C. App.), the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.), and the Post-Katrina Emergency Management Reform Act of 2006 (Public Law 109-295; 120 Stat. 1394): *Provided*, That not to exceed \$2,500 shall be for official reception and representation expenses: [*Provided further*, That the Administrator of the Federal Emergency Management Agency may reprogram funds made available under this heading between programs, projects, and activities prior to April 16, 2012, notwithstanding section 503 of this Act: *Provided further*, That \$1,400,000 of the funds available for the Office of the Administrator of the Federal Emergency Management Agency shall not be available for obligation until the Administrator of the Federal Emergency Management Agency submits to the Committees on Appropriations of the Senate and the House of Representatives the National Preparedness Report required by Public Law 109-295 and a comprehensive plan to implement a system to measure the effectiveness of grants to State and local communities in fiscal year 2012: *Provided further*, That for purposes of planning, coordination, execution, and decision making related to mass evacuation during a disaster, the Governors of the State of West Virginia and the Commonwealth of Pennsylvania, or their designees, shall be incorporated into efforts to integrate the activities of Federal, State, and local governments in the National Capital Region, as defined in section 882 of the Homeland Security Act of 2002 (Public Law 107-296):] *Provided further*, That of the total amount made available under this heading, [\$41,250,000] \$27,513,000 shall be for the Urban Search and Rescue Response System, of which [not] *no funds* [to exceed \$1,600,000] *no funds* may be made available for administrative costs[; \$5,493,000 shall be for the Office of National Capital Region Coordination; not to exceed \$12,000,000]: *Provided further*, *That, of the total amount made available under this heading, \$22,000,000 shall remain available until September 30, [2013] 2014, for capital improvements and other expenses related to continuity of operations at the Mount Weather Emergency Operations Center[; and not less than \$13,662,000 shall be for expenses related to modernization of automated systems: *Provided further*, That the Administrator of the Federal Emergency Management Agency, in consultation with the Department of Homeland Security Chief Information Officer, shall submit to the Committees on Appropriations of the Senate and the House of Representatives a strategic plan, not later than 180 days after the date of enactment of this Act, for the funds specified in the preceding proviso related to modernization of automated systems, that includes--]*

[(1) a comprehensive plan to automate and modernize information systems to resolve current inefficiencies, integrate data, and aid in better] [performance of executing the Agency-wide mission;]

[(2) a description of the appropriations for each project and activity tied to mission requirements and outcomes, program management capabilities, performance levels, and specific capabilities and services to be delivered;]

[(3) the total estimated cost and projected timeline of completion for all multi-year enhancements, modernizations, and new capabilities proposed and underway covering a period] [of no less than 3 years;]

[(4) a detailed accounting of operations and maintenance and contractor services costs; and]

[(5) the current or planned acquisition programs including--]

[(A) how the programs align to mission requirements by defining existing capabilities, identifying known capability gaps between such existing capabilities and stated mission requirements, and explaining how each increment will address a known capability gap;]

[(B) how programs provide quantifiable information that aids in understanding national emergency management capabilities;]

[(C) how programs ensure information sharing among homeland security partners; and]

[(D) life-cycle costs for all acquisitions.]

### Mitigation Mission Statement

The mitigation mission seeks to reduce or eliminate long-term risks to people and property from hazards and their effects. Mitigation benefits society by creating safer communities, enabling people to recover more rapidly from floods and other disasters, and reducing the financial impact on Federal, State, tribal, and local governments and communities. FEMA's mitigation mission is accomplished through the following basic mitigation business lines: Risk Analysis, Risk Reduction, and Risk Insurance.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	-	16,973	6,826	(10,147)
12.1 Benefits	-	4,753	1,911	(2,842)
<b>Total, Salaries &amp; Benefits</b>	-	<b>21,726</b>	<b>8,737</b>	<b>(12,989)</b>

Salaries and Benefits includes costs for 72 FTEs. FY 2013 includes a decrease of \$12,989,000 to cover salaries and benefits for 102 FTEs transferred to the Administrative and Regional Offices PPA for mitigation efforts conducted in the regions by the Regional Administrators.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	0	\$8,193	\$4,617	-\$3,576

Advisory and assistance services include services acquired by contract from non-Federal sources as well as from other units within the Federal Government. FY 2013 includes a decrease of \$3,576,000 for a one-time programmatic increase in the FY 2012 Enacted Salaries and Expenses appropriation for mitigation programs.

**Preparedness and Protection Mission Statement**

The Preparedness mission seeks to reduce the loss of life and property and protect the Nation by planning, training, exercising, and building the emergency management profession. As manager and coordinator of the preparedness cycle, FEMA provides assistance, support, and leadership to help Federal, State, tribal, and local governments and the private sector build the operational capabilities needed to successfully implement preparedness strategies. The protection mission seeks to protect our Nation's constitutional form of government and ensures that a system is in place to warn our citizens of impending hazards. FEMA is responsible for supporting the enhancement of protection capabilities for all hazards, which in turn helps to integrate the tools and mechanisms for capability building across mission areas; streamlines the delivery of assistance to State, tribal, and local governments, as well as nongovernmental entities; and leverages existing intergovernmental coordination infrastructures. FEMA's primary continuity business lines and associated continuity activities include: Continuity Planning, Continuity Training and Exercises, and Continuity Operations.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	-	57,378	13,985	(43,393)
12.1 Benefits	-	16,065	3,916	(12,149)
<b>Total, Salaries &amp; Benefits</b>	-	<b>73,443</b>	<b>17,901</b>	<b>(55,542)</b>

Salaries and Benefits includes costs for 124 FTEs. FY 2013 includes a decrease of \$55,542,000 to cover S&B expenses for 482 FTEs for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	<b>0</b>	<b>\$1,949</b>	<b>\$918</b>	<b>-\$1,031</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. FY 2013 includes a decrease of \$1,031,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>22.0 Transportation of things</b>	<b>0</b>	<b>\$15</b>	<b>\$7</b>	<b>-\$8</b>

Transportation of Things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. FY 2013 includes a decrease of \$8,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>23.3 Communications, utilities, and misc. charges</b>	<b>0</b>	<b>\$2,916</b>	<b>\$1,374</b>	<b>-\$1,542</b>

Communications, utilities, and miscellaneous charges include all payments for rental or lease of IT equipment and services, postal services and rentals, and utility service. FY 2013 includes a decrease of \$1,542,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>24.0 Printing</b>	<b>0</b>	<b>\$170</b>	<b>\$80</b>	<b>-\$90</b>

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2013 includes a decrease of \$90,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	0	\$12,824	\$6,041	-\$6,783

Advisory and assistance services include services acquired by contract from non-Federal sources as well as from other units within the Federal Government. FY 2013 includes a decrease of \$6,783,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	0	\$38,764	\$15,260	-\$23,504

Other services include report contracted services with non-Federal sources that are not otherwise classified under Object Class 25. FY 2013 includes a decrease of \$23,504,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	0	\$16,237	\$7,648	-\$8,589

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. FY 2013 includes a decrease of \$8,589,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.4 O&M of facilities	0	\$1,022	\$481	-\$541

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. FY 2013 includes a decrease of \$541,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	0	\$568	\$267	-\$301

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. FY 2013 includes a decrease of \$301,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
26.0 Supplies and materials	0	\$597	\$281	-\$316

Supplies and materials are commodities that are ordinarily consumed, converted in the process of construction/manufacture, form a minor part of equipment/property, or other property of little monetary value. FY 2013 includes a decrease of \$316,000 that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	<b>0</b>	<b>\$3,037</b>	<b>\$1,431</b>	<b>-\$1,606</b>

Equipment includes all costs for the purchases of persona property of a durable nature or the initial installation of equipment when performed under contract. FY 2013 includes a decrease of \$1,606,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>32.0 Land &amp; structures</b>	<b>0</b>	<b>\$23,130</b>	<b>\$20,304</b>	<b>-\$2,826</b>

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to building, nonstructural improvements, and fixed equipment additions and replacements. FY 2013 includes a decrease of \$2,826,000 for preparedness and protection efforts that will be funded via a transfer from the SALP appropriation in FY 2013.

**Urban Search and Rescue Mission Statement**

The National Urban Search and Rescue System is comprised of 28 task forces that provide a coordinated, national, all-risk capability to assist State and local governments in responding to structural collapse incidents when the President declares a major disaster or emergency under the Robert T. Stafford Disaster Relief and Emergency Assistance Act. These task forces are highly trained and possess the necessary expertise to extricate and medically treat victims in heavy rescue situations. Funding is used to operate and train the existing task forces, maintain the equipment caches, and replace/repair equipment that has been used in training and actual disasters.

**Office of National Capital Region Coordination Mission Statement**

The National Capital Region Coordination (NCRC) program advances homeland security, including all-hazards preparedness, in the National Capital Region (NCR). The program serves as a model for other regions of the country. NCRC focuses on developing and refining a common regional approach to homeland security that results in the integrated strategies and interoperability among Federal, State, local, regional and private/nonprofit stakeholders. NCRC's primary responsibilities include coordinating and participating in programs and initiatives aimed at enhancing the homeland security posture of the region. NCRC also plays valuable roles in events, drills, and exercises that occur annually in the NCR. NCRC also serves as a principal in the NCR's regional governance structure and coordinates with the NCR's Regional Emergency Support Function to improve preparedness in the NCR.

**Operating Activities Mission Statement**

Operating Activities includes the essential functions for all of FEMA's major mission organizations and directly supports FEMA's primary mission to reduce the loss of life and property and to protect the Nation from all hazards, including natural disasters, acts of terrorism, and other man-made disasters. Operating Activities leads and supports the Nation through a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

## **K. DHS Balanced Workforce Strategy**

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2014 budget.

Position Type	FY 2011 Actual		FY 2012 Request		FY 2012 Annualization		FY 2012 Follow-on		FY 2013 Increase		TOTAL FY 2011 – FY 2013 DHS Balanced Workforce Strategy

<b>Total</b>	-	-	<b>79</b>	<b>79</b>	<b>-3</b>	<b>-3</b>	<b>65</b>	<b>65</b>	-	-	<b>141</b>	<b>141</b>

### **FY 2013 DHS Balanced Workforce Strategy**

- FEMA plans to convert 65 more contractors to Federal employees in FY 2012 than the 79 reported in the FY 2012 President's Budget. These positions and FTE are included in the FY 2012 Base. FEMA currently has no plans to convert any contractors to Federal employees in FY 2013.

### **DHS Balanced Workforce Strategy Follow-on**

- The Office of the Chief Security Officer (OCSO) has five contracts in the amount of \$6 million that will have positions converted to Federal employees. 25 positions were requested in the FY 2012 Congressional Justification. After further review an additional three positions will be converted. The amount of funding needed to hire Federal employees is \$0.610 million.
  - Implementation Timeline – Contracts are not expected to overlap. The requirements to exercise follow-on options will be evaluated each year, however, three of the contracts will be eliminated immediately following the conversion and the others will only be reduced and will continue through period of performance. Staff assistants within each of the directorates' divisions will absorb some of the administrative work currently being completed by the contractors.
- The Office of Policy and Program Analysis (OPPA) has one contract which will be reduced by \$0.156 million that will have one position converted to a Federal employee. The amount of funding needed to hire the Federal employee is \$0.130 million. The inherently governmental functions were being completed by the two Federal staff assigned to this program; however, after reviewing the number of requests, the reauthorization of the Defense Production Act (DPA) this past year and the added responsibilities providing support for the chair of the DPA committee every other year, OPPA found that having additional Federal support would be more beneficial and offer some cost savings to the Government.
  - Implementation Timeline - Overlap is being anticipated for training purposes. The reduction to the contract should be effective no later than June 1, 2012; other functions of the contract will continue to be exercised.
  - This position will support our DPA Division, which currently only has two Federal employees, with the following functions:
    - Research and analysis of DPA issues including statutory authorities and Executive Branch guidance
    - Research and analysis of industrial base capabilities and the use of DPA authorities to address shortfalls
    - Drafting and editing of reports, briefings, testimony, and other DPA Program Division documents
    - Scheduling, organizing, attending and reporting on meetings related to the DPA and the DPA Committee
    - Evaluation of requests from DHS Components to use the DPA for homeland security purposes
- The Office of the Chief Financial Officer (OCFO) has 3 contracts in the amount of \$2.741 million that will have positions converted to Federal employees, which will eliminate or reduce contract cost. The amount of funding needed to hire Federal employees is \$1.784 million.

- Implementation Timeline – One contract will overlap for transition and training purposes. The requirements to exercise follow-on options will be evaluated each year; however, one of the contracts will be eliminated in mid-FY 2012 following the conversion and the other two will be reduced and will continue through period of performance. One of the contracts will require two Federal employees to absorb the work of the four contracting personnel.
- The Office of the Administrator – Center for Faith-Based and Neighborhood Partnerships (OA-CFBNP) has 1 contract in the amount of \$0.110 million that will have one position converted to a Federal employee, which will eliminate contract cost. The amount of funding needed to hire Federal employees is \$0.109 million. There will be no overlap between the conversion and the contract.
- The National Continuity Programs (NCP) has 16 contracts totaling \$13.334 million per year that will have positions converted to Federal employees, which will eliminate or reduce contract cost. Hiring 43 Federal employees to replace the work performed on these contracts or portions of these contracts will require an additional \$7.133 million in S&B funding per year. The projected savings over the next five years from converting these positions is approximately \$7.027 million, which includes funding not spent on remaining portions of these contracts or converted to S&B funding.
  - Implementation Timeline – The contract will overlap for transition and training purposes. The contract is scheduled to end in August/September of FY 2012. There will not be any responsibilities absorbed by current Federal employees.
- The National Capital Region Coordination (NCRC) has 1 contract in the amount of \$0.091 million that will have one position converted to a Federal employee, which will eliminate or reduce contract cost. The amount of funding needed to hire Federal employees is \$0.080 million.
  - Implementation Timeline –The contract will overlap for transition and training purposes. The contract is scheduled to end by June 30, 2012. There will not be any responsibilities absorbed by current Federal employees as this is a one-for-one conversion.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Emergency Management Agency State and Local Programs**

### **I. Appropriation Overview**

#### **A. Mission Statement:**

Through the appropriation for State and Local Programs (SLP), FEMA fulfills its role as the principal component of the Department of Homeland Security (DHS) responsible for preparing State and local governments to prevent, protect against, respond to, and recover from incidents of terrorism and other catastrophic events. The appropriation provides for grants, training, exercises, and other support to assist Federal agencies, States, territories, and tribal and local jurisdictions to prepare for terrorism and major disasters.

FEMA's FY 2013 budget for SLP has been revised to reflect a new grants structure and adjusted program funding levels. The new account structure for the SLP appropriation is now divided into three new categories: the National Preparedness Grant Program (NPGP), First Responder Assistance Programs (FRAP), and Management and Administration (SLP M&A). FEMA proposes to consolidate its current preparedness grant programs—with the exception of the Emergency Management Performance Grants (EMPG) and Firefighter Assistance Grants (AFG)—into a comprehensive preparedness grant program. NPGP will require grantees to develop and sustain core capabilities outlined in the National Preparedness Goal instead of requiring grantees to meet mandates from multiple individual, and often disconnected, grant programs. This also will streamline the grant process while taking into account both local requirements and contributions to national capabilities.

#### **B. Budget Activities:**

Protection and National Preparedness (PNP) is the FEMA component responsible for the coordination of protection and preparedness-related activities throughout the Agency, including grants, planning, training, exercises, individual and community preparedness, assessments, lessons learned, continuity, and National Capital Region Coordination (NCRC). PNP conducts its activities through four directorates (National Preparedness, Grant Programs, National Continuity, and NCRC) comprising 20 divisions and four offices. SLP funds are administered within PNP by two of those directorates, the Grants Programs Directorate (GPD), and the National Preparedness Directorate (NPD).

#### **Grant Programs Directorate**

GPD serves as the primary grants management organization within FEMA and manages all business functions for FEMA's extensive grants catalog. GPD also houses the Preparedness Grants Division, FEMA's program office dedicated to the Agency's suite of preparedness grants, administered in support of the Department of Homeland Security's overall mission. GPD's activities are described in greater detail in PPA-3: Management and Administration.

#### **National Preparedness Directorate**

NPD's mission is to provide the doctrine, programs, and resources to prepare the Nation to prevent, protect, mitigate, respond to, and recover from disasters while minimizing the loss of lives,

infrastructure, and property. NPD coordinates the enhancement of the Nation's readiness through its stewardship of the comprehensive preparedness cycle of planning, organizing, equipping, training, exercising, and improving through evaluation. NPD programs provide resources to support preparedness activities for State and local capabilities as outlined in Presidential Policy Directive-8 (PPD-8) on National Preparedness and the Homeland Security Act of 2002. NPD is responsible for administering the National Exercise Program; the National Training and Education Division, which includes the Emergency Management Institute and the Center for Domestic Preparedness; Evaluation and Assessments; Technical Assistance; Individual and Community Preparedness; and the National Integration Center. These programs are described in greater detail in PPA-3: Management and Administration.

In 2011, PNP led FEMA and the Federal interagency in the implementation of PPD-8: National Preparedness, which includes the development of a *National Preparedness Goal* and a *National Preparedness System*. The *National Preparedness Goal* establishes core capabilities for a secure and resilient Nation, including prevention, protection, response, recovery, and mitigation activities that will serve as the basis for preparedness activities within FEMA, throughout the Federal Government, and at the State and local levels. At all levels of government, using the core capabilities, jurisdictions, and agencies as outlined in the *National Preparedness System* will engage in a consistent preparedness process.

To achieve the *National Preparedness Goal*, and in support of the *National Preparedness System*, FEMA proposes to consolidate its current preparedness grant programs—with the exception of the EMPG and AFG—into a comprehensive preparedness grant program. NPGP will require grantees to develop and sustain core capabilities outlined in the *National Preparedness Goal* instead of requiring grantees to meet mandates from multiple individual, and often disconnected, grant programs.

Consolidating the preparedness grant programs will support the recommendations of the Redundancy Elimination and Enhanced Performance for Preparedness (REEPP) Grants Act, will further the Administration's initiatives to reduce the administrative burden on State and local governments, and will streamline the grant application process. This will enable grantees to focus on how Federal funds can add value to the jurisdiction's prioritization of threats, risks, and consequences while contributing to national capabilities. To further increase the efficiency of the National Preparedness Grant, FEMA will issue multiyear guidelines, enabling the Agency to focus its efforts on measuring progress towards building and sustaining national capabilities.

Starting in FY 2013, all FEMA-funded grant projects will be validated via peer review to ensure that projects support the development and sustainment of regional and national preparedness capabilities. The peer review process will incorporate components of the DHS/Infrastructure Protection State, Local, Tribal, and Territorial Government Coordinating Council and will engage representatives from stakeholder agencies from the jurisdiction receiving grant funds, peers from comparable jurisdictions, Federal preparedness coordinators, analysts from multiple State and Regional grant program offices, DHS component representatives, and representatives from national associations. Grantees will be asked to justify their prioritization decisions and how proposed projects will, over the lifecycle of funding, sustain current capabilities and/or address gaps in capabilities. Proposals for the development of new assets will be evaluated carefully to ensure that all new capabilities can be leveraged as national resources that will benefit the region as a whole in addition to the State or local jurisdiction. This

approach will expedite awards, while at the same time, increase accountability over the use of Federal grant funds. Additionally, direct involvement by regional FEMA representatives during the review process will assist in targeting funds for regionally critical projects, and will reduce the development of redundant assets within the Region.

### **C. Budget Request Summary**

In Fiscal Year (FY) 2013, DHS requests \$2,900,212,000 for SLP as described below:

- \$1,540,908,000: For grants under the NPGP
- \$1,080,000,000: For grants under the FRAP to include:
  - \$670,000,000: AFG (\$335,000,000 for Staffing for Adequate Fire and Emergency Response (SAFER) grants and \$335,000,000 for AFG)
  - \$350,000,000: EMPG
  - \$60,000,000: Training Partnership Grants (in place of the National Domestic Preparedness Consortium and the Continuing Training Grants Program)
- \$279,304,000: For Management and Administration, which includes the National Exercise Program, Center for Domestic Preparedness, Technical Assistance, Evaluation & Assessment, and those activities traditionally funded by transfer to the Salaries and Expenses appropriation.

<sup>1</sup> In FY 2011, funds appropriated for the management and administration of the grants, to include Firefighter Assistance Grants (AFG) but not Emergency Management Performance Grants (EMPG), were transferred to FEMA's Management and Administration appropriation. In FY 2012, funds appropriated for the management and administration of the grants, not including AFG and EMPG, were transferred to FEMA's Salaries and Expenses appropriation. The amounts shown in this PPA for these years represent funding appropriated for education, training, and exercises programs. In FY 2013, FEMA is proposing to consolidate all management and administration funding, including those supporting AFG and EMPG, under the Management and Administration PPA along with those funds typically appropriated for education, training, and exercises.

Total Change 2012 to 2013	-	-	491,432

FEMA requests \$1.541 billion in FY 2013 for this activity.

#### **CURRENT SERVICES PROGRAM DESCRIPTION:**

Over the past nearly 10 years, we have seen how Federal investments in State, territory, tribal, and local preparedness capabilities have developed significant national capacity to prevent, protect against, respond to, and recover from all kinds of disasters and threats. The FY 2013 National Preparedness Grant Program (NPGP) seeks to sustain and continue to build on these capabilities to create robust national capacity based on cross-jurisdictional and readily deployable State and local assets.

As recognized in the National Preparedness Goal, a secure and resilient Nation is one with the capabilities required across the whole community to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk. With this in mind, the FY 2013 NPGP will work to develop, maintain, and sustain core capabilities in the National Preparedness Goal.

#### **Purpose of the Program**

The FY 2013 NPGP will:

- Focus on the development and sustainment of the core capabilities identified in the National Preparedness Goal.
- Utilize the capability estimation process employed by applicants and verified by DHS to determine capability and resource deficiencies to inform the competitive process.

- Build a robust national preparedness capacity based on cross-jurisdictional and readily deployable State and local assets.

FY 2012 grants will prepare grantees for the transition to new requirements in FY 2013 in the following ways:

- Begin the process of transitioning from 16 separate preparedness grant programs<sup>2</sup> in FY 2011 to a more streamlined model within the construct of the FY 2012 appropriations.
- Continue the transition to address the core capabilities outlined in the National Preparedness Goal.
- Implement a two-year period of performance with very limited extensions.

### **Changes from Previous Years in FY 2013**

#### Elevate national preparedness capabilities by focusing on regionally and nationally deployable assets

Over the last 10 years, we have recognized that Federal Emergency Management and Homeland Security (EMHS) funds are most effective when they develop and sustain capabilities that are cross-jurisdictional, readily deployable, and multipurpose. We also know that threats, risks, hazards, and their consequences vary across the United States. Therefore, the NPGP will focus on the development and sustainment of National Incident Management System (NIMS)-typed capabilities that can be utilized nationally and regionally, like canine explosive detection teams, Urban Search and Rescue Teams, and Hazardous Materials (HAZMAT) teams, as well as other deployable assets.

As part of the peer review process, all EMHS resources will be considered in the context of their availability and utility to multiple jurisdictions, regions and the Nation. The peer review process will require that resources, regardless of funding source, are complementary and that mutual aid and similar agreements allow for their use across jurisdictional boundaries for a wide range of threats and hazards. This will aid in preventing the use of Federal funds to replicate capabilities that are in close proximity. Jurisdictions also must maintain membership in the Emergency Management Assistance Compact (EMAC) to facilitate the mutual aid of capabilities in order to be eligible for funding.

#### Building and sustaining core capabilities

The NPGP will optimize the development and sustainment of core capabilities as outlined in the National Preparedness Goal. Particular emphasis will be placed on building and sustaining capabilities that address high-consequence events that pose the greatest risk to the security and resilience of the United States and along its borders and that can be utilized to address multiple threats and hazards. Grantees will map their proposed investments to one or more specific core capabilities and will incorporate effectiveness measures that facilitate accountability. This clear linkage will enable all levels of government to collectively demonstrate how the proposed investment will build and sustain core capabilities necessary to strengthen the Nation's preparedness. The FY 2013 NPGP will encourage the use of complete lifecycle planning of inventories and resources. This will allow grantees to plan and budget for equipment upgrades, develop and maintain skills through training and exercises, and update plans and procedures to enable delivery of core capabilities across the prevention, protection, mitigation, response, and recovery mission areas.

#### Evaluation of new assets and capability requests

---

<sup>2</sup> Emergency Management Performance and Firefighters Assistance grant programs are not included.

Proposals from States and high-threat urban areas for the development of new assets and capabilities and for which a need is identified in the Threat Hazard Identification and Risk Assessment (THIRA) will be placed in a competitive pool. These proposals will be evaluated on the ability for a jurisdiction to build and sustain the capability as not just a local, but a nationally deployable resource that will increase one or more core capabilities for the region (i.e. FEMA Region).

#### Risk and vulnerability assessments

FEMA will base funding allocations on prioritized core capabilities as well as comprehensive threat/risk assessments and gap analyses. Specifically, allocations will consider current threat data (including domestic extremist threat input from the FBI), the needs identified in each State's THIRA, the Strategic National Risk Assessment and National Preparedness Report, and a regional risk assessment of gaps in national core capabilities (the FEMA Regional THIRA). Emphasis will be placed on building core capabilities that can be utilized nationally and regionally.

#### Consolidation of grants

To increase efficiency, FEMA will consolidate current grant programs into a comprehensive NPGP (excluding EMPG and Fire grants). The NPGP will enable grantees to develop and sustain core capabilities outlined in the National Preparedness Goal instead of requiring grantees to meet the mandates from multiple individual, often disconnected, grant programs.

Consolidating grant programs will support the recommendations of the Redundancy Elimination and Enhanced Performance for Preparedness Grants Act (REEPPG) and streamline the grant application process. This increased efficiency will enable grantees to focus on how Federal funds can add value to the jurisdiction's prioritization of threats, risks, and consequences while contributing to national preparedness capabilities.

#### Multiyear Program Guidance

To further increase the efficiency of the NPGP, FEMA will issue multiyear guidelines. Multiyear grants programs will enable FEMA to focus its efforts on measuring progress towards building and sustaining the core capabilities identified in the National Preparedness Goal.

#### Project Based Approach to Developing and Monitoring Capabilities

Starting in FY 2013, grant awards will be based on validated assessments of the needs and gaps for the jurisdiction and region where the project will be implemented. Consistent with the recommendations made in the 2011 REEPPG report, FEMA will use project-based monitoring as the principal means of measuring project progress. Project-based monitoring is a method of following projects from creation to completion, providing basic data to measure impact over time, improving accountability, and enabling FEMA to identify progress made in preparedness and determine current and future gaps.

#### Peer Review

All FEMA funded grant projects will be validated via peer review to ensure that projects support the development and sustainment of regional and national core capabilities. The peer review process will incorporate pieces of the DHS/Infrastructure Protection (IP) State, Local, Tribal, and Territorial Government Coordinating Council structure and engage representatives from stakeholder agencies from the jurisdiction receiving grant funds, peers from comparable jurisdictions, Federal preparedness coordinators and analysts from multiple State and Regional grant program offices, DHS component

representatives, and representatives from national associations. Grantees will be expected to justify why they prioritize funding particular projects and how these projects will, over the lifecycle of funding, sustain current capabilities as well as address gaps in capabilities. Proposals for the development of new assets will be evaluated carefully to ensure that all new capabilities can be leveraged as a national resource that will benefit the region as a whole in addition to the State or local jurisdiction. This approach will expedite awards, while at the same time, increase accountability over the use of Federal grant funds. Additionally, direct involvement by regional FEMA representatives during the review process will assist in targeting funds for regionally critical projects, and will reduce the redundancy of like assets throughout the Region.

### **Allocation of FY 2013 Grant Funding**

All NPGP awards will be risk-informed. FEMA will base funding allocations on prioritized core capabilities as well as comprehensive threat/risk assessments and gap analyses. FY 2013 funding will be prioritized across the following focus areas, each of which will be supported via one or more investment justification:

#### Core Capabilities

Since the focus of the NPGP is to develop and sustain the core capabilities identified in the National Preparedness Goal, the program will prioritize nationally deployable NIMS-typed capabilities. This will include funding that States typically invest in preparedness activities (including the portion of the Transit Security Grant Program (TSGP) that is allocated for operational packages) that could be utilized anywhere in the country via EMAC or other mutual aid/assistance agreements. Such capabilities are identified in the National Preparedness Goal and include mass search and rescue operations, intelligence and information sharing, border security and border protection operations, cybersecurity, community resilience, and economic recovery. In addition, a portion of this funding may be used by States and high-threat urban areas to sustain core capabilities that may or may not be deployable, such as interoperable communications systems, mitigation-related capabilities, and fusion centers. FEMA will prioritize funding based on whether:

- The capability is one of the core capabilities identified in the National Preparedness Goal
- The capability meets one of the NIMS resource types
- The applicant belongs to or is located in member States of EMAC, except for American Samoa and the Commonwealth of the Northern Mariana Islands, which are not required to belong to EMAC at this time
- The capability can be utilized anywhere in the Nation upon request
- The capability addresses a risk or hazard identified in both the FEMA Regional and State THIRA
- FEMA has determined that the capability is not redundant

Applications not meeting the above criteria will not be eligible for grant funding. It is anticipated that funding will be allocated in the following manner:

- Each State and territory will receive a base level of funding allocated in accordance with a population-driven formula such as that for the EMPG program.
- The remainder of the State awards will be determined competitively, based on the criticality of the specific capability according to the Regional THIRA as evaluated by the criteria

above, as well as the applicant's ability to complete the project within the two-year period of performance.

- FEMA will also take into account a grantee's prior performance in executing projects based on grant monitoring and amount of funds returned to the Treasury at the end of the period of performance.
- Priorities will vary by region according to the risks and hazards therein (i.e. hurricane risk for Gulf and East Coast states, terrorism for large urban areas, flooding in the Midwest and earthquakes and wildfires on the West Coast). The prioritization of deployable capabilities will bear directly on the FEMA Regional THIRA.

Another portion of the funding will be placed in a competitive pool for the development of new capabilities for which a need is identified in the THIRA and a corresponding resource estimation and implementation strategy are provided. These proposals will be evaluated by a national review panel for the ability for a jurisdiction to build and sustain the capability as not just a local, but a nationally deployable resource that will increase one or more core capabilities for the region (i.e. FEMA Region). All jurisdictions applying for competitive funds must affirm membership in EMAC and commit to regional and national deployment as needed. In addition, competitive applications will be required to address a capability gap identified in one of the FEMA Regional THIRAs, identify that the proposed new capability does not duplicate one that already exists within a reasonable response time and describe how the capability will be fully established within the two-year period of performance.

#### Enhancing Terrorism Prevention and Protection Capabilities:

As the terrorist threat to the United States has evolved, the terrorism prevention community has sought to enhance capabilities to detect and mitigate the threat posed by those who seek to carry out violent attacks against the people, government, or critical infrastructure of the United States. The threat posed by homegrown terrorism is real and not limited to a single ideology. Foreign terrorist groups affiliated with al-Qaida and individual terrorist thought leaders are actively seeking to recruit or inspire Westerners to carry out attacks against western and United States targets. The Nation must remain vigilant against homegrown and foreign terrorist threats.

In support of the National Preparedness Goal's Prevention and Protection core capabilities, the forthcoming National Prevention and Protection Frameworks, and the Strategic Implementation Plan (SIP) to the National Strategy on Empowering Local Partners to Prevent Violent Extremism in the United States, NPGP will seek to prioritize programs and initiatives that directly support local efforts to enable interdiction and disruption of terrorist activity through enhanced understanding and recognition of pre-operational activity and other crimes that are precursors or indicators of terrorist activity, in accordance with applicable privacy, civil rights, and civil liberties protections. Examples of such programs and initiatives include, but are not limited to, maturation and enhancement of fusion center and intelligence analysis activities, implementation of the Nationwide Suspicious Activity Reporting Initiative, and the "If you see something, say something" campaign to raise public awareness of terrorism and violent crime indicators.

#### Critical Infrastructure/Key Resources Protection (CIKR):

Finally, a priority focus area is critical infrastructure and key resource protection and long-term vulnerability reduction. This category includes physical security enhancements of:

- Level 1 and 2 CIKR sites in the National Critical Infrastructure Prioritization Program (NCIPP)
- Transit facilities on the Top Transit Asset List (TTAL)
- Port facilities identified in Port-Wide Risk Management Plans
- At-risk nonprofit organizations

A national review panel comprised of FEMA Federal Preparedness Coordinators, DHS Office of Infrastructure Protection, Transportation Security Agency, U.S. Coast Guard, Customs and Border Protection, Maritime Administration and others will review applications and allocate funding based on national risk prioritization using a combination of the existing TTAL, Maritime Security Risk Assessment Model score and NCIPP list.

### **Continuous Feedback**

DHS will continue to solicit stakeholder feedback to ensure NPGP enables all levels of government to build and sustain, in a collaborative way, the core capabilities necessary to prepare for incidents that pose the greatest risk to the security of the Nation.

<b>2013 Total Request</b>	-	-	<b>1,080,000</b>
Total Change 2012 to 2013	(96)	(96)	55,000

DHS requests \$1.080 billion in FY 2013 for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

***Firefighter Assistance Grants***

**Assistance to Firefighter Grants (AFG)**

The AFG program awards grants directly to fire departments and nonaffiliated EMS organizations throughout the United States to support one-year projects that improve the effectiveness and safety of the Nation's first responders in homeland security, firefighting, and emergency medical services (EMS) operations. Under its authorizing legislation, AFG must also expend a minimum of five percent of appropriated funds for fire prevention activities.

FEMA's GPD administers the program in cooperation with the U.S. Fire Administration. The entire AFG process is fully automated in an electronic grants system. Applicants apply online; grants are awarded electronically; grantees manage their grants (payment requests, amendments, etc.) online; and grants are monitored and closed out electronically. For FY 2012, eligible applicants again will be invited to submit an application for assistance in the following program areas most critical to enhancing the capabilities of the fire and EMS services:

- Operations and Safety programs, which include training, equipment, and personal protective equipment
- Firefighting Vehicle Acquisition program, which includes pumpers, brush trucks, tankers/tenders, rescue vehicles, ambulances, turntable ladder trucks with quintuple capabilities (quints), aerials, foam units, and fireboats

- Wellness/fitness activities
- Increasing the number of trained, "front-line" firefighters
- Modifications to facilities
- Fire Prevention and Safety (FP&S) activities, which include awareness and education, arson prevention, code enforcement, burn prevention, and firefighter safety research and development

Funding priorities for each of the funding activities are determined by DHS/FEMA and are based on the National Preparedness Goal and on recommendations from the Nation's fire service (represented by nine major fire service organizations). The applications that most closely relate to those announced priorities are reviewed by peer panels. Peer review panels typically commence within two weeks of the end of the grant application period and take three weeks to complete. Grant awards are based primarily on the results of the peer review panels.

### **Staffing for Adequate Fire and Emergency Response**

SAFER grants and FP&S grants provide support to fire departments and nonaffiliated EMS to improve the readiness and capability of local first responders during all-hazards emergencies, including firefighting and EMS operations. FEMA strongly encourages applicants, to the extent practicable, to seek, recruit, and hire post-9/11 veterans to increase their ranks within their department in order to take advantage of the provisions of the VOW To Hire Heroes Act of 2011. In FY 2013, FEMA anticipates a preference for all SAFER applicants to have a policy in place addressing their intent to implement strategies to support this Act and have recruiting efforts aimed at post-9/11 veterans.”

### ***Emergency Management Performance Grants Program***

EMPGs are formula grants provided to assist State and local governments to sustain and enhance the effectiveness of their emergency management program. Funds are provided to all 50 States and six territories as well as to the Federated States of Micronesia and the Republic of the Marshall Islands. FEMA provides States the flexibility to allocate funds according to risk and to address the most urgent State and local needs in disaster mitigation, preparedness, response, and recovery. Working within the standard Federal Government grant administration process, EMPG provides the support that State and local governments need to achieve measurable results in key functional areas of emergency management: 1) Laws and Authorities; 2) Hazard Identification and Risk Assessment; 3) Hazard Management; 4) Resource Management; 5) Planning; 6) Direction, Control, and Coordination; 7) Communications and Warning; 8) Operations and Procedures; 9) Logistics and Facilities; 10) Training; 11) Exercises; 12) Public Education and Information; and 13) Finance and Administration.

### ***Training Partnership Grants***

Funds for the Training Partnership Grants, formerly funded separately as the Continuing Training Grants and National Domestic Preparedness Consortium (NDPC), are managed and administered through the National Training and Education Division (summarized under PPA 4 below). Training Partnership Grants will be awarded on a competitive basis to entities (e.g., State, local, tribal, and territorial governments; universities and higher education institutions; and nonprofits) that have demonstrable expertise and can develop/deliver training and education curricula that tie to the core capabilities in the National Preparedness Goal.

The Training Partnership Grants program will aim to incentivize innovation in homeland security training techniques through its competitive approach to awarding funds. This new training initiative will not preclude the NDPC members and other traditional recipients of FEMA training grant funding from receiving awards. However, it will employ a competitive process to build on the solid foundation that exists by developing new training venues and vehicles to educate the State and local first responder community.

First-time grant recipients that are facility-based training and education centers and do well in the competitive process will be awarded grants to develop curricula and assist with other programmatic upstart costs as they establish a reimbursable training program or course. The grant funding for these recipients will be multiyear in nature but will be phased out over several years, as the grantee builds a customer base that will be expected to pay the new training provider for the services they receive.

Other grant recipients (including former recipients under the NDPC and Continuing Training Grants) can compete each year for funding and may receive awards, based on the merits of their respective proposals.

Any recipient receiving an award through the Training Partnership Grants program will be required to sustain the programs and courses developed with funding they collect from attendees. While Federal discretionary grant programs that typically focus on the first responder community differ in their list of eligible expenses, many of these programs permit their awarded funds to be expended on reimbursable training initiatives.

Total Change 2012 to 2013	813	783	63,377

FEMA requests \$279.304 million in FY 2013 for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Management and Administration PPA include both salaries and benefits and operating expenses for the following activities under the purview of FEMA's Protection and National Preparedness/Grants Program Directorate (GPD) and National Preparedness Directorate (NPD):

- Protection and National Preparedness Front Office
- Office of Counterterrorism and Security Preparedness
- Office of Preparedness Integration and Coordination
- Grants Program Directorate
- National Exercise Program
- Center for Domestic Preparedness
- Technical Assistance
- Evaluations and Assessments
- National Integration Center
- National Training and Education Division
- Emergency Management Institute
- Individual and Community Preparedness Division
- Salaries and Expenses

In addition, this PPA funds the salaries and benefits for headquarters and regional staff, travel, rent, printing and supplies, related preparedness activities, administration activities, and contributions to the DHS Working Capital Fund.

## **Protection and National Preparedness**

### ***Mission***

Protection and National Preparedness (PNP) is responsible for the coordination of preparedness and protection-related activities throughout FEMA. This responsibility encompasses grants, planning, training, exercising, individual and community preparedness, assessments, lessons learned, continuity, and National Capital Regional Coordination (NCRC). PNP's comprehensive and diverse mission has necessitated the merging of various programs with similar or complementary objectives and milestones in recent years. As such, PNP's budget is funded through two appropriations - the FEMA Salaries and Expenses (S&E, formerly Management and Administration) and SLP appropriations.

Organizationally, PNP comprises four directorates: NPD, GPD, National Continuity Programs (NCP), and NCRC. NCP and NCRC are funded in S&E while NPD, GPD, and the Office of the Deputy Administrator for Protection and National Preparedness are funded in SLP. The Office of the Deputy Administrator for PNP includes a small front-office executive staff and three functional offices: the Strategic Resource Management Office (SRMO), the Office of Counterterrorism and Security Preparedness (OCSP); and the Office of Preparedness Integration and Coordination (OPIC).

### ***PNP Front Office***

The Front Office Executive Staff includes a senior counselor, a senior policy advisor, an executive assistant, and a scheduler. The office is responsible for providing direct support to the Deputy Administrator in areas such as scheduling, long-range planning, and integration of Directorate crosscutting actions. In addition, the senior staff provides management and oversight of cross-Directorate programs and initiatives and represents the Deputy Administrator in a variety of engagements and forums.

### ***Office of Counterterrorism and Security Preparedness***

The Office of Counterterrorism and Security Preparedness was established to serve as the lead integrator of prevention and protection programs and policy within FEMA. To accomplish this task, OCSP engages with various intra-departmental policy boards and working groups such as the Information Sharing and Safeguarding Governance Board, the DHS Countering Violent Extremism Working Group, and the Homeland Security Intelligence Council.

### ***Office of Preparedness Integration and Coordination***

OPIC was established to ensure headquarters preparedness activities and initiatives are coordinated effectively and efficiently with the Regional Federal Preparedness Coordinators (FPC) and to integrate preparedness into activities in other FEMA elements. OPIC works closely with FEMA's Office of Regional Operations to coordinate preparedness programs with the FEMA Regions. OPIC also serves as PNP's lead office for coordination and partnership efforts with State emergency managers and State homeland security advisors.

### ***Strategic Resource Management Office***

SRMO aligns and coordinates all available PNP resources, including people, dollars, systems, and business processes and provides the Deputy Administrator with an overall, detailed view of the resources within PNP and business-related activities within the Agency and PNP. The office serves as PNP's budget office, coordinating directorate spend plans, congressional justifications, and related documents and serving as a single-point-of contact to FEMA's Office of Chief Financial Officer (OCFO) and the White House Office of Management and Budget.

### **Grants Program Directorate**

GPD is FEMA's primary grants-management organization and manages all business functions for the agency's extensive grants catalog. In January 2011, GPD realigned its internal organization to streamline the management of all FEMA grant programs and to improve the efficiency of the programmatic management of the agency's preparedness grants. As a result of that reorganization, GPD now comprises three separate divisions:

#### ***Grant Operations Division***

The Grant Operations Division serves as the centralized financial management support division for all FEMA grant programs. It develops and manages policy relating to the administration of FEMA grant programs and maintains and reports on a variety of grant program data.

#### ***Preparedness Grant Division***

The Preparedness Grant Division is the executive agent for FEMA's preparedness programs portfolio. It develops annual grant programs based on Congressional appropriations and executive branch direction and works directly with FEMA stakeholders to identify and resolve emerging grant-related issues in the emergency management and homeland security communities.

#### ***Resource Management and Business Administration Division***

The Resource Management and Business Administration Division develops and oversees GPD's budget, apportions allotments for the annual award process for all FEMA grants, and provides human capital, administrative, and logistical support to GPD.

In addition to GPD's structural changes, FEMA has dedicated its efforts to grant process improvements. FEMA established an Intra-Agency Grants Task Force (GPTF) to facilitate the exchange of ideas and information necessary to ensure that grants are administered consistently and effectively, to eliminate duplication of efforts, and to strengthen FEMA's pre- and post-award grant functions. Participants include: GPD, OCFO, ODIC, Office of Policy and Program Analysis (OPPA), NCP, NPD, Recovery, Logistics Management, U.S. Fire Academy, Office of the Chief Information Officer (OCIO), and the FEMA Regions. The initial focus areas for GPTF include:

- ND Grants
- Grant Drawdown and Monitoring
- A-133 Audits
- Grant Closeout
- Federal Funding Accountability and Transparency Act
- Administrative Sanctions and Debt Resolution
- Improper Payment Information Act
- Grants Compliance with Federal Regulations

In addition to the GPTF, FEMA has been an active participant in an initiative championed by the DHS Deputy Secretary to improve the performance of all DHS financial assistance programs.

### **National Preparedness Directorate**

NPD coordinates the doctrine and programs and contributes resources to prepare the Nation to prevent, protect, mitigate, respond to, and recover from disasters while minimizing the loss of lives, infrastructure, and property. NPD is responsible for coordinating the enhancement of the Nation's readiness through its stewardship of the comprehensive preparedness cycle of planning, organizing, equipping, training, exercising, and improvement through evaluation. NPD is responsible for administering the National Exercise Program (NEP); the National Training and Education Division (NTED), which includes the Emergency Management Institute (EMI) and the Center for Domestic Preparedness (CDP); Evaluation and Assessments; Technical Assistance; Individual and Community Preparedness; and the National Integration Center (NIC).

### ***National Exercise Program***

The mission of the NEP is to serve as the principal mechanism for examining the preparedness and readiness of the United States across the entire homeland security and emergency management enterprise. The program designs, coordinates, conducts, and evaluates exercises that rigorously test the Nation's ability to perform missions and functions that prevent, protect against, respond to, recover from, and mitigate all hazards.

As directed by DHS Secretary Napolitano and in close collaboration with our Federal interagency partners, the National Security Staff (NSS), the FEMA National Advisory Council, and other stakeholders, DHS/FEMA conducted an extensive effort in 2010 to revise and improve the NEP. The results of this extensive effort are reflected in a revised NEP, signed by the FEMA Administrator on March 18, 2011, which calls for more realistic, smaller-scale exercises that progressively build toward a capstone national-level exercise to be held every two years. The revised NEP ensures lessons learned and corrective actions are captured, shared, and addressed more readily following exercise completion. The development of a NEP implementation plan, led by FEMA and in collaboration with the interagency and external stakeholders, will be completed in FY 2012. The intent of the implementation plan is to provide the details of the program performance, scoping of individual department and agency involvement, exercise selection, and formulation of the exercise program. While key NEP reforms already are being implemented, full implementation is scheduled for January 1, 2013, with the initiation of the first full two-year progressive exercise cycle. The NEP reform process will continue to yield savings as economies of scope are realized. The 2013 Request for NEP, which represents a \$4 million reduction to the 2012 Enacted level, is a reflection of these initial efficiency gains.

FEMA will continue to plan and conduct National-level exercises (NLE) while reforming the NEP. In May 2011, NEP conducted NLE 11 to focus on a major earthquake scenario in the New Madrid Seismic Zone. The NEP currently is planning NLE 2012, which will examine the Federal Government's ability to implement prevention, protection, response and recovery plans, in coordination with State, local, private sector, public and international stakeholders, to a simulated cyber attack on government, public, and private sector systems.

The NEP also includes:

- Principal Level Exercises for the President and his Cabinet Level Secretaries
- Support for regional, State, and local exercises
- Terrorism prevention exercises
- Exercise guidance and templates for States and locals to use in their own exercises
- A corrective action program to track and monitor corrective actions from exercises
- A National Exercise Simulation Center to provide simulations, modeling, and role players during exercises and incorporate more technology into exercise planning, conduct and evaluation
- Support for the Lessons Learned Information Sharing System (LLIS) to share lessons learned and best practices from exercises and real-world events

### ***National Training and Education Division***

NTED provides management and administration (M&A) of the Training Partnership Grants. NTED training partners provide first responders and Government officials with training that improves their ability to prepare for, protect against, respond to, recover from, and mitigate, all-hazards incidents and acts of terrorism through the Homeland Security National Training Program. NTED currently manages funding for more than 60 training partners.

### ***Center for Domestic Preparedness***

CDP provides specialized all-hazards preparedness training to State, local, and tribal emergency responders on skills tied to national priorities, particularly those related to weapons of mass destruction (WMD).. To date, more than 80,000 students from State, local, and tribal agencies have been trained at CDP. It is the Nation's only live-agent training facility for civilian responders and it offers a unique environment that enables them to train using toxic nerve agents and live biological agents in safety. Within the funding provided, \$5.5 million is used to operate the Noble Training Facility (NTF), the only hospital facility in the United States dedicated solely to training hospital and healthcare professionals in disaster preparedness and response operations. The NTF addresses training gaps identified by the healthcare response community and trains healthcare professionals to meet all-hazard threats in a realistic hospital environment. In addition to developing and delivering emergency responder training at various levels for a broad range of emergency response disciplines, CDP also participates in efforts to standardize this training for State, local, and tribal responders, while maintaining training quality and gathering meaningful evaluation data for continuous program improvement and effective program management. CDP maintains a campus of 124 acres and approximately 900,000 square feet of training and support facilities.

### ***Technical Assistance (TA) Program***

FEMA's TA program provides specialized expertise and services to State and local homeland security and emergency management agencies. The TA program is designed to be an agile program that addresses areas of greatest State and local need. It is committed to transferring and institutionalizing knowledge at the State and local levels and provides a menu of services that is responsive to national priorities. The services provided through this program increasingly address complex challenges requiring specialized expertise that requesting agencies do not possess.

The program seeks to build and sustain capabilities by providing specific services and analytical capacities as well as preparedness guidance across two primary functional areas: (1) preparedness

technical assistance activities in support of the five homeland security mission areas (prevention, protection, response, recovery, and mitigation) and (2) homeland security grants management. This two-pronged approach ensures that initiatives measurably contribute to the enhancement of State and local homeland security programs and the specific homeland security capabilities they build and manage. These services result in expanded planning nationwide for large-scale and catastrophic events, expanded fusion center capabilities, more effective homeland security programs, improved grants management, and a transfer of knowledge and capabilities to State and local governments.

Since 2009, more than 175 TA deliveries have been made nationwide with deliveries in 2012 and 2013 expected to be comparable to or exceed 2010 levels.

### ***Evaluations and Assessments Program***

The Evaluations and Assessments Program is managed by FEMA's National Preparedness Assessment Division (NPAD) and supports the Agency's mission by working to measure overall national preparedness, as well as the effectiveness of preparedness programs, including grants. As part of this mission, NPAD identifies, tracks, and monitors corrective actions and lessons learned from exercises and real-world events, supporting the homeland security and emergency management community's continual need to change, adapt, and innovate. Evaluations and Assessments programs include the following.

#### ***Preparedness Reports***

The Evaluations and Assessments Program is leading the development of the National Preparedness Report described in PPD-8.

#### ***State Preparedness Report***

Each State or territory that receives Federal assistance must submit an annual report on its level of preparedness to FEMA. NPAD develops the format and analyzes these 56 reports to discern nationwide trends, identify areas for increased attention, and inform broader assessments of national preparedness.

#### ***Remedial Action Management Program/Corrective Action Program (RAMP/CAP)***

NPAD and the National Exercise Division are collaborating to refine the FEMA RAMP and the exercise CAP to ensure that they more accurately, consistently, and systematically track and disseminate corrective actions from exercises and real-world events. This is essential to affecting the change and evolution that spur sustained improvements in preparedness.

#### ***Lessons Learned Information Sharing (LLIS.gov)***

NPAD is enhancing and updating LLIS.gov in order to better serve the evolving needs of FEMA and Whole Community partners and improve linkages with other programs and systems that support the learning environment for the emergency management and homeland security communities.

#### ***Performance Measures and Metrics***

NPAD is responsible for developing and analyzing performance measures and metrics for PNP programs, including grants, community preparedness, and the Nation's overall preparedness. In FY 2012, NPAD is working with GPD to track metrics for State Homeland Security Grant Program (SHSGP) and Urban Area Security Initiative (UASI) grantees. For example, FEMA will track that all

equipment and training procured under the grants must be in support of the development or maintenance of an identified team or capability described and typed under the NIMS. Grantees also will report the percentage of SHSGP and UASI-funded personnel who are engaged in the Nationwide Suspicious Activity Reporting (SAR) Initiative and who have completed DHS's NSI training. These metrics will help define the accomplishments of these grantees to prepare for disasters and will contribute to the National Preparedness Report. NPAD also is developing performance objectives for the new National Preparedness Goal.

NPAD tracks data on program metrics and milestones to meet the goals of the DHS Strategic Plan. FEMA established new strategic measures in FY 2011 with ambitious targets for FY 2012 and FY 2013. For example, FEMA has set targets to increase the number of corrective actions completed by DHS to improve performance following NLEs from a baseline of 13 in FY 2010 to a total of 60 in FY 2013.

### **National Integration Center**

The NIC provides guidance to ensure integrated preparedness and operations across all mission areas – Protection, Prevention, Mitigation, Response, and Recovery – and supports its Federal, State, local and tribal partners as they work to achieve the National Preparedness Goal.

The NIC provides a comprehensive national system that improves the Nation's capability across the Whole of Community to prepare for, prevent, protect against, respond to, recover from, and mitigate all hazards through the development, sustainment, and evolution of the National Incident Management System (NIMS), National Response Framework (NRF), and Comprehensive Planning Guide 101 (version 2): Developing and Maintaining Emergency Operations Plans. The NIC serves as the Executive Agent and is responsible for the interagency implementation of PPD-8: National Preparedness to include development and implementation of the National Preparedness System to achieve the National Preparedness Goal of a secure and resilient Nation.

As a component of FEMA's National Preparedness Directorate (NPD), the NIC is the program office within the Federal Government responsible for leading the adoption, implementation, maintenance, and continuous refinement of the NIMS as well as the development and/or promotion of preparedness doctrine, policy, guidance, job aids, and other tools related to the NIMS, NRF, and CPG-101. Additionally, the NIC coordinates the National Credentialing and Resource Typing Programs, which includes developing and maintaining the policies, standards, and procedures to ensure that emergency response and public safety personnel are qualified, properly identified, and equipped.

### ***Emergency Management Institute***

EMI is the emergency management community's flagship training institution, and provides training to Federal, State, local, tribal, volunteer, public, and private sector officials to strengthen emergency management core competencies for professional, career-long training. EMI directly supports the implementation of the NIMS, the NRF, the National Disaster Recovery Framework (NDRF), and the NPG by conveying necessary knowledge and skills to improve the Nation's capability to prepare for, protect against, respond to, recover from, and mitigate all hazards. EMI trains more than 2 million students annually. Training delivery systems include residential onsite training; offsite delivery in partnership with emergency management training systems, colleges, universities; and technology-based mediums to conduct individual training courses for emergency management personnel across the

Nation. State, local, and tribal organizations rely on EMI as the source for emergency management and response training and a curriculum to deploy at their own academies. Evaluation data as well as direct feedback from communities such as Tuscaloosa, Alabama, following its recent tornado, credit EMI's training programs with communities' success in successfully managing disasters and emergencies.

### **Individual and Community Preparedness Division (ICPD)**

The mission of ICPD is to harness the power of every individual through whole-community planning, education, training, and volunteer service to make communities safer, stronger, and better prepared to respond to the threats of terrorism, crime, public health issues, and disasters of all kinds. This mission is accomplished through a national network of State, local, and tribal Citizen Corps Councils, and partner programs such as the Community Emergency Response Teams (CERT). Citizen Corps Councils build on community strengths from all sectors to engage community leaders, organizations and the public with government in whole-community planning and integration of nontraditional resources for all-hazards preparedness, and community resilience. Citizen Corps Partner Programs such as CERT, Medical Reserve Corps, and Volunteers in Police Service and Affiliates such as the American Red Cross and National Voluntary Organizations Active in Disasters promote and implement the joint mission to educate and train citizens for active roles in community preparedness including prevention, protection, mitigation, response, and recovery.

## IV. Program Justification Changes

**Department of Homeland Security  
Federal Emergency Management Agency  
State and Local Programs  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** PPA Adjustments  
 PPA: National Preparedness Grant Program  
 First Responder Assistance Programs  
 Management and Administration  
 Program Increase: Positions 0.0, FTE 0.0, Dollars \$483,986

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							907	876	1,396,226
Program Increase							-	-	483,986
<b>Total Request</b>	-	-	<b>2,095,867</b>	<b>94</b>	<b>93</b>	<b>1,265,403</b>	<b>907</b>	<b>876</b>	<b>1,880,212</b>

**Description of Item**

FEMA requests \$1,540,908,000 in FY 2013 for the NPGP PPA; \$60,000,000 for Training Partnership Grants under the FRAP PPA; and \$279,304,000 under the Management and Administration (SLP M&A) PPA.

**Justification**

FEMA’s FY 2013 budget for SLP has been revised to reflect a new structure and adjusted program funding levels. The new account structure for the SLP appropriation is now divided into three new categories: the NPGP, FRAP, and SLP M&A. FEMA proposes to consolidate its current preparedness grant programs into a comprehensive preparedness grant program - NPGP. EMPG and AFG (shown separately below) will be reflected under the FRAP PPA. NPGP will require grantees to develop and sustain core capabilities outlined in the National Preparedness Goal rather than requiring grantees to meet mandates from multiple individual, and often disconnected, grant programs. This also will streamline the grant process while taking into account both local requirements and contributions to national capabilities.

**Department of Homeland Security  
Federal Emergency Management Agency  
State and Local Programs  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 2:** Emergency Management Performance Grants  
PPA: First Responder Assistance Programs  
Program Increase: Positions 0.0, FTE 0.0, Dollars \$10,500.0

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	339,500
Program Increase							-	-	10,500
<b>Total Request</b>	<b>15</b>	<b>15</b>	<b>339,004</b>	<b>15</b>	<b>15</b>	<b>350,000</b>	<b>-</b>	<b>-</b>	<b>350,000</b>

**Description of Item**

DHS requests \$350,000,000 in FY 2013 for EMPG under the FRAP PPA.

**Justification**

Historically, DHS has requested a percentage of EMPG funding be made available for the management and administration of the grants. For FY 2013, DHS requests that this funding and associated positions be moved to the SLP M&A PPA and to increase available grant funding by that same amount. While the appropriated amount would not change, the amount available to award as grants would increase by \$10.5 million.

**Department of Homeland Security  
Federal Emergency Management Agency  
State and Local Programs  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 3:** Firefighter Assistance Grants  
PPA: First Responder Assistance Programs  
Program Increase: Positions 0.0, FTE 0.0, Dollars \$28,750.0

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	641,250
Program Increase							-	-	28,750
<b>Total Request</b>	-	-	<b>782,805</b>	<b>81</b>	<b>81</b>	<b>675,000</b>	-	-	<b>670,000</b>

**Description of Item**

DHS requests \$670,000,000 in FY 2013 for AFG under the FRAP PPA.

**Justification**

Historically, DHS has requested a percentage of AFG funding be made available for the management and administration of the grants. For FY 2013, DHS requests that this funding and associated positions be moved to the SLP M&A PPA and to increase available grant funding. While the appropriated amount would decrease by \$5 million, the amount available to award as grants would increase by \$28.8 million.

## V. Exhibits and Other Supporting Material

### A. Justification of Proposed Legislative Language

For grants, contracts, cooperative agreements, and other activities, [\$1,349,681,000] \$2,900,212,000 shall be allocated as follows[, which shall be distributed, according to threat, vulnerability, and consequence, at the discretion of the Secretary of Homeland Security based on the following authorities]:

[(1) The State Homeland Security Grant Program under section 2004 of the Homeland Security Act of 2002 (6 U.S.C. 605): *Provided*, That notwithstanding subsection (c)(4) of such section 2004, for fiscal year 2012, the Commonwealth of Puerto Rico shall make available to local and tribal governments amounts provided to the Commonwealth of Puerto Rico under this paragraph in accordance with subsection (c)(1) of such section 2004.]

[(2) The Urban Area Security Initiative under section 2003 of the Homeland Security Act of 2002 (6 U.S.C. 604).]

[(3) The Metropolitan Medical Response System under section 635 of the Post-Katrina Emergency Management Reform Act of 2006 (6 U.S.C. 723).]

[(4) The Citizen Corps Program.]

[(5) Public Transportation Security Assistance and Railroad Security Assistance, under sections 1406 and 1513 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (6 U.S.C. 1135 and 1163), including Amtrak security: *Provided*, That such public transportation security assistance shall be provided directly to public transportation agencies.]

[(6) Over-the-Road Bus Security Assistance under section 1532 of the Implementing Recommendations of the 9/11 Commission Act of 2007 (6 U.S.C. 1182).]

[(7) Port Security Grants in accordance with 46 U.S.C. 70107.]

[(8) The Driver's License Security Grants Program in accordance with section 204 of the REAL ID Act of 2005 (49 U.S.C. 30301 note).]

[(9) The Interoperable Emergency Communications Grant Program under section 1809 of the Homeland Security Act of 2002 (6 U.S.C. 579).]

[(10) Emergency Operations Centers under section 614 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5196c).]

[(11) Buffer Zone Protection Program Grants.]

[(12) Organizations (as described under section 501(c)(3) of the Internal Revenue Code of 1986 and exempt from tax section 501(a) of such code) determined by the Secretary to be at high risk of a terrorist attack:]

*(1) \$1,540,908,000 shall be for the National Preparedness Grant Program for the purpose of achieving the National Preparedness Goal: Provided, That grants may be awarded on a competitive basis to achieve the National Preparedness Goal through the protection of critical infrastructure and key resources, the development and sustainment of capabilities, including nationally deployable resources to prevent and protect against terrorism and to respond to, recover from, and mitigate against all hazards: Provided further, That any grant made under the National Preparedness Grant Program, to the extent possible, be based on effectiveness determinations and threat and hazard identification and risk assessments: Provided further, That grants made under the National Preparedness Grant Program may provide a minimum allocation of funding to each state and territory, including the District of Columbia;*

(2) \$670,000,000, to remain available until September 30, 2014, shall be for necessary expenses for programs authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.), of which \$335,000,000 shall be available to carry out section 33 of that Act (15 U.S.C. 2229 et seq.) and of which \$335,000,000 shall be available to carry out section 34 of that Act (15 U.S.C. 2229a): Provided, That, in making such grants, the Secretary may grant waivers from the requirements in subsections (a)(1)(A), (a)(1)(B), (a)(1)(E), (c)(1), (c)(2), and (c)(4)(A) of section 34 of that Act (15 U.S.C. 2229a);

(3) \$350,000,000 shall be available for necessary expenses for emergency management performance grants, as authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 7701 et seq.), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), and Reorganization Plan No. 3 of 1978 (5 U.S.C. App.);

(4) \$60,000,000 shall be for Training Partnership Grants for the purpose of achieving the National Preparedness Goal: Provided, That any grant be awarded based on the result of full and open competition; and

(5) An amount not to exceed \$279,304,000 shall be transferred to the Federal Emergency Management Agency "Salaries and Expenses" account for management and administration of the grant programs, to include salaries and expenses, training, exercises, and technical assistance:

*Provided*, [That of the amount provided under this heading, \$50,000,000 shall be for Operation Stonegarden and no less than \$100,000,000 shall be for areas at the highest threat of a terrorist attack: *Provided further*, That \$231,681,000 shall be for training, exercises, technical assistance, and other programs, of which \$155,500,000 shall be for training of State, local, and tribal emergency response providers: *Provided further*,] That for grants under [paragraphs] *paragraph* (1) [through (12)], applications for grants shall be made available to eligible applicants not later than 60 days after the date of enactment of this Act, that eligible applicants shall submit applications not later than 80 days after the grant announcement, and the Administrator of the Federal Emergency Management Agency shall act within 65 days after the receipt of an application: *Provided further*, That notwithstanding section 2008(a)(11) of the Homeland Security Act of 2002 (6 U.S.C. 609(a)(11)), or any other provision of law, a grantee may use not more than 5 percent of the amount of a grant made available under this heading for expenses directly related to administration of the grant: [*Provided further*, That 6.8 percent of the amounts provided under this heading shall be transferred to the Federal Emergency Management Agency "Salaries and Expenses" account for program administration: *Provided further*, That for grants under paragraphs (1) and (2), the installation of communication towers is not considered construction of a building or other physical facility:] *Provided further*, That grantees shall provide reports on their use of funds, as determined necessary by the Secretary of Homeland Security: *Provided further*, That in fiscal year [2012] 2013: (a) the Center for Domestic Preparedness may provide training to emergency response providers from the Federal Government, foreign governments, or private entities, if the Center for Domestic Preparedness is reimbursed for the cost of such training, and any reimbursement under this subsection shall be credited to the account from which the expenditure being reimbursed was made and shall be available, without fiscal year limitation, for the purposes for which amounts in the account may be expended; (b) the head of the Center for Domestic Preparedness shall ensure that any training provided under (a) does not interfere with the primary mission of the Center to train state and local emergency response providers; and (c) subject to (b), nothing in (a) prohibits the Center for Domestic Preparedness from providing training to employees of the Federal Emergency Management Agency in existing chemical, biological, radiological, nuclear, explosives, mass casualty, and medical surge courses pursuant to 5 U.S.C. 4103 without reimbursement for the cost of such training.

#### [FIREFIGHTER ASSISTANCE GRANTS]

[For necessary expenses for programs authorized by the Federal Fire Prevention and Control Act of 1974 (15 U.S.C. 2201 et seq.), \$675,000,000, to remain available until September 30, 2013, of which \$337,500,000 shall be available to carry out section 33 of that Act (15 U.S.C. 2229) and \$337,500,000 shall be available to carry out section 34 of that Act (15 U.S.C. 2229a): *Provided*, That not to exceed 5 percent of the amount available under this heading shall be available for program administration.]

#### [EMERGENCY MANAGEMENT PERFORMANCE GRANTS]

[For necessary expenses for emergency management performance grants, as authorized by the National Flood Insurance Act of 1968 (42 U.S.C. 4001 et seq.), the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), the Earthquake Hazards Reduction Act of 1977 (42 U.S.C. 7701 et seq.), and Reorganization Plan No. 3 of

1978 (5 U.S.C. App.), \$350,000,000: *Provided*, That total administrative costs shall not exceed 3 percent of the total amount appropriated under this heading].

### State and Local Program Grants Mission Statement

This program provides resources to support preparedness projects that build State and local capabilities as outlined in the National Preparedness guidelines, the Target Capabilities List, and the National Strategy for Homeland Security of 2007.

**Department of Homeland Security  
Federal Emergency Management Agency  
State and Local Programs

**National Preparedness Grants Program Mission Statement**

To support the National Preparedness Goal, the National Preparedness Grant Program (NPGP) is a new comprehensive grants program designed to develop, sustain, and leverage core capabilities across the country in support of national preparedness, prevention, and response. The NPGP also will streamline the grant process while taking into account both local requirements and contributions to national capabilities.

**Emergency Management Performance Grants Mission Statement**

EMPG is a formula grant provided to assist State and local governments to sustain and enhance the effectiveness of their emergency management program. Funds are provided to all 50 States and six territories as well as to the Federated States of Micronesia and the Republic of the Marshall Islands. FEMA provides States the flexibility to allocate funds according to risk and to address the most urgent State and local needs in disaster mitigation, preparedness, response, and recovery.

## **K. DHS Balanced Workforce Strategy**

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2014 budget.

Included within the 2013 Budget, the DHS requests \$8 million and 221 full-time permanent positions for the FY 2011 - FY 2013 DHS Balanced Workforce Strategy.

Position Type	FY 2011 Actual		FY 2012 Base		FY 2012 Annualization		FY 2012 Follow On		FY 2013 Increase		TOTAL FY2011 – FY2013 DHS Balanced Workforce Strategy

**Annualization of FY 2012 Base DHS Balanced Workforce Strategy**

FEMA requests \$8 million to support the salaries and benefits of the 221 positions established through the FY 2011-2013 DHS Balanced Workforce Strategy. FEMA has identified 37 contracts under Protection and National Preparedness that will be either terminated or reduced as a result of in-sourcing. Funding for these positions is included in the amount transferred to and reported under FEMA's Management and Administration appropriation.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Emergency Management Agency Radiological Emergency Preparedness**

### **I. Appropriation Overview**

#### **A. Mission Statement for Radiological Emergency Preparedness**

The Radiological Emergency Preparedness Program (REPP) assists State, tribal, and local governments in the development and conduct of offsite radiological emergency preparedness plans within the emergency planning zones of Nuclear Regulatory Commission (NRC) licensees of commercial nuclear power facilities. REPP's historical success lies in its ability to integrate and enhance Federal, State, tribal, and local governments' preparedness planning and response capabilities for all types of radiological emergencies. REPP is responsible for recovering 100 percent of funds for anticipated REPP activities that are generated through user fees charged to each participating reactor licensee. Funds that are available for obligation in a given year rely on the level of collections received in the prior fiscal year.

#### **B. Budget Activities:**

FEMA requests budget authority in FY 2013 to:

- In conjunction with State, tribal, local, and industry officials, ensure that all elements of required levels of 'reasonable assurance' for public safety determination are gained and maintained relating to operating nuclear power generating stations.
- Conduct joint FEMA/NRC rulemaking and policy development activities as they relate to offsite planning and preparedness, to include implementing Presidential Policy Directive (PPD)-8.
- Educate Federal, state, tribal, and local stakeholders on refined or newly developed REPP guidance and how it should be incorporated into REPP plans and exercise programs.
- Leverage and integrate expertise and capabilities from the Department of Homeland Security (DHS)/National Protection and Programs' Infrastructure Protection (IP), and FEMA's Response, Recovery, Mitigation, External Affairs, and Protection and National Preparedness components to better enhance FEMA's posture when responding to incidents involving REPP communities.
- Conduct necessary offsite planning and preparedness reviews pertaining to proposed new reactor licensing and construction efforts.
- Conduct radiological training courses for Federal, State, tribal, and local emergency planning, preparedness and response personnel.
- Maintain an integrated network system to aid Federal, State, tribal, and local emergency response providers in preparedness, planning, training, and exercising.
- Collaborate and coordinate with the Integrated Public Alert and Warning System in the development of related guidance.
- Maintain the functionality of the Federal Radiological Preparedness Coordinating Committee (FRPCC) as a coordinating body for radiological preparedness across the Federal Government.
- Integrate lessons learned and corrective actions from the Japan Fukushima disaster.

**C. Budget Request Summary:**

In FY 2012, REPP realized program efficiencies that resulted in an overall decrease in program requirements of \$932,000. This amount was credited back to Nuclear Regulatory Commission (NRC) licensees as an offset to its FY 2013 offsetting collections.

REPP estimates 2013 offsetting collection authority to be \$38.7 million. This represents anticipated fee authority of (\$1.4) million.

<b>2013 Total Request</b>	<b>170</b>	<b>170</b>	<b>(1,443)</b>
Total Change 2012 to 2013	-	-	(38,574)

FEMA requests to utilize \$37.3 million in FY 2012 offsetting collections for FY 2013 operating expenses in support of REPP. This funding will support 170 positions and provide for FY 2013 program costs.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Drills and Exercises:

REPP conducts and evaluates exercises and drills in the communities surrounding commercial nuclear power plants. In FY 2013, REPP will support and evaluate approximately 30 biennial exercises in the states and counties within the Emergency Planning Zones of NRC licensees of commercial nuclear power plant facilities. REPP is developing a human capital utilization policy document that will allow REPP to leverage its Federal staff experience and decrease the reliance on contractors, thus reducing costs for this activity.

Ongoing terrorism-based drills continue to increase REPP’s nuclear and radiological preparedness responsibilities. REPP also actively supports other FEMA, DHS, Department of Defense, and Federal partners involved in improvised nuclear device (IND) and radiological dispersal device (RDD) planning and exercises, as these programs share common elements with REPP’s primary mission.

#### New Reactor Licensing Process:

The New Reactor Licensing Program is a joint effort between the FEMA and the NRC. Both organizations share a common objective of maximizing public health and safety through the evaluation of emergency plans and conduct a qualifying exercise prior to start up of proposed new reactor applicants. This ensures that during the process of constructing new reactors and prior to any power generation, there is “reasonable assurance” that both onsite and offsite personnel can take the appropriate protective measures to protect public health and safety.

#### Rulemaking and Policy Development:

REPP conducts joint FEMA/NRC rulemaking and policy development activities as they relate to offsite planning and preparedness. The REPP Policy and Regulations Unit is responsible for developing and improving regulations, policy, and guidance that enhance planning, preparedness, response, and recovery for Federal, State, tribal, and local governments and the private sector with respect to the offsite consequences of commercial nuclear power plant emergencies. Major REPP policy and guidance activities in FY 2013 will center around PPD-8 and enhancing integrated public alert and warning systems.

#### Radiological Emergency Preparedness Training Curriculum:

REPP developed and continues to employ a robust professional development path to assist FEMA Headquarters and Regional staff and REPP partners in their emergency preparedness planning and training. This was accomplished by creating, managing, and maintaining a high-quality national level training program throughout the country. To support this training program, REPP developed a cadre of Federal employee instructors to deliver training courses to its stakeholders while reducing its dependence on contractors.

#### Federal Radiological Preparedness Coordinating Committee:

The FRPCC, some of whose functions are funded by REPP user fee collections, coordinates the activities of Federal agencies with responsibilities in the radiological emergency planning and preparedness process. The FRPCC serves as a radiological information clearinghouse between Federal departments and agencies. The FRPCC oversees several subcommittees, including (1) Federal Response, (2) Offsite Instrumentation, (3) Environment/Food/Health, (4) Training and Exercises, (5) Protective Action Guides, and (6) Public Information, among others. These subcommittees are chaired by the Federal agency with principal responsibility for the given mission area. The FRPCC is also responsible for updating the Nuclear/Radiological Incident Annex of the National Response Framework. A major FY 2013 activity will be continuing to work on developing a single Federal guidance document containing a unified message strategy and pre-scripted messages for use during nuclear power plant incidents. Incorporation of this guidance document into State, tribal, and local REPP plans will occur after incorporating feedback from stakeholders.

#### REPP- Homeland Security Exercise and Evaluation Program (HSEEP) Integration:

REPP will continue to assist State, tribal, and local governments in implementing HSEEP into their exercises and drill programs.

#### Other REPP Responsibilities:

REPP works on several other initiatives for programs that have common elements with REPP's primary mission. This includes supporting other FEMA, DHS, and Federal partners in (IND/RDD)

planning and exercises; integrating PPD-8, National Incident Management System and HSEEP guidelines; developing new guidance and policy to address the next generation of reactor technology (Small Modular Reactors, along with the NRC); updating risk communications; and incorporating new alert and notification technology into REPP regulations and policies.

### Radiological Emergency Preparedness Mission Statement

The Radiological Emergency Preparedness Program (REPP) assists State, local, and tribal governments in the development of offsite radiological emergency preparedness plans within the emergency planning zones of Nuclear Regulatory Commission (NRC) licensees of commercial nuclear power facilities. The REPP fund is financed from user fees assessed and collected from NRC licensees to cover budgeted costs for radiological emergency planning, preparedness, and response activities in the following year.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	14,085	15,571	15,650	79
11.5 Other personnel compensation	605	158	158	-
12.1 Benefits	4,481	5,356	5,356	-
<b>Total, Salaries &amp; Benefits</b>	<b>19,171</b>	<b>21,085</b>	<b>21,164</b>	<b>79</b>

Salaries and Benefits supports 170 full-time permanent positions in FY 2013. FY 2013 includes a 0.5% increase in Salaries and Benefits.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>23.1 GSA rent</b>	<b>\$1,438</b>	<b>\$1,405</b>	<b>\$1,393</b>	<b>-\$12</b>

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. FY 2013 includes a decrease of \$12,000 to reflect a decrease in actual rent costs.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	<b>\$196</b>	<b>\$10,001</b>	<b>\$3,830</b>	<b>-\$6,171</b>

Advisory and assistance services include services acquired by contract from non-Federal sources as well as from other units within the Federal Government. FY 2013 includes a decrease of \$6,377,000 to account for obligation of nonrecurring costs and efficiencies.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **Federal Emergency Management Agency National Pre-disaster Mitigation Fund**

#### **I. Appropriation Overview**

##### **A. Mission Statement:**

Section 203 (42 U.S.C. § 5133) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (P.L. 93-288) established a Federal program that provides “technical and financial assistance to State and local governments to assist in the implementation of pre-disaster hazard mitigation measures [e.g., property acquisition and elevation, minor localized flood mitigation measures, safe rooms, wildfire, seismic retrofit projects] that are cost-effective and designed to reduce injuries, loss of life, and damage and destruction of property...” The National Pre-disaster Mitigation (PDM) Fund was created under FEMA as the vehicle for disseminating these grants to State and local governments. Operating independently of the Disaster Relief Fund (DRF), which provides post-disaster mitigation funding, the PDM program offers a funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President.

The PDM program supports the Administration’s movement to expand and improve the coordination of Federal efforts to incentivize State and local governments to plan for and implement pre-disaster mitigation strategies. Consistent with disaster recovery best practices, the budget supports efforts that increase community resiliency to disasters and other vulnerabilities.

##### **B. Budget Activities:**

PDM supports the DHS goal to strengthen capacity at all levels of society to withstand threats and hazards. PDM accomplishes this by providing technical assistance to applicants, which assists in the development of their projects in meeting eligibility criteria for Federal funding to State, territorial, local, and tribal governments. PDM supports the development and enhancement of hazard mitigation projects that involve physical measures to avoid and/or reduce damage from natural disasters.<sup>1</sup>

PDM funding provides grants to State, territorial, local, and tribal governments to reduce the risks associated with disasters. The program’s resources support the development and enhancement of hazard mitigation plans, as well as the implementation of pre-disaster mitigation projects. In 2013, through its PDM program, FEMA will continue to administer prior year grant awards for the completion of established projects and work aggressively to process grants already under review and will use recovered and returned funds to issue new grants.

---

<sup>1</sup> Physical measures for the PDM program include property acquisition and elevation, minor localized flood control, safe-room construction, wildfire mitigation, seismic retrofit projects, dry floodproofing, retrofits of existing buildings and infrastructure, and soil stabilization.

**C. Budget Request Summary:**

FEMA proposes to eliminate funding for the PDM program in FY 2013. There is no impact from this reduction because of the duplication with other FEMA grant programs including the Hazard Mitigation Grant Program. Further, the program's unobligated balance of \$174.2 million (as of December 31, 2011) will enable the continued issuance, oversight, and closeout of grants until funding is depleted.

FEMA proposes to eliminate funding for the Pre-disaster Mitigation (PDM) program in FY 2013. This program will work to aggressively process grants already under review and will utilize recovered and returned funds to issue new grants.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The PDM program assisted State, territorial, local, and tribal governments in implementing cost-effective hazard mitigation activities that complemented a comprehensive mitigation program. This program provided funding resources for State, territorial, local, and tribal governments seeking to initiate or complete plans and projects that ensured a reduction in post-disaster natural hazard damages and immediate risk reduction to the population, to property, and for structures at risk from natural hazards, including critical facilities (e.g., water treatment plants, emergency operations centers, sewage treatment plants, and water pumping stations).

The PDM program supports efforts to raise risk awareness and reduce disaster losses before disasters strike. Grants are awarded to States, territories, tribal governments, and local communities for the purposes of hazard mitigation planning and hazard mitigation projects. Grants awarded for mitigation planning are limited in funding levels based on whether the application supported a new plan or

updates to an existing plan. Grants awarded to support mitigation projects must fall within one of the eligible activity categories.<sup>2</sup>

Grants for mitigation projects vary and included activities such as retrofitting structures to resist flood, wind, and earthquake damage; elevating structures above base flood levels; property acquisition and demolition or relocation for the creation of open space; and, minor flood reduction and drainage measures.

Communities that participate in the PDM program are able to identify, plan for, and mitigate repetitive-loss situations that negatively impact their residents or present a threat to life and property. Grant proposals are subject to a National Evaluation Process (NEP) to score and rank applications. The NEP is comprised of peer reviewers that consisted of representatives from FEMA, States, and tribal and local governments. Approved projects go through an extensive review process. In addition, all applications are reviewed by technical experts to verify cost-effectiveness and engineering feasibility. FEMA reviews projects for compliance with applicable Federal environmental planning and historic preservation requirements, including National Environmental Policy Act, National Historic Preservation Act, Endangered Species Act, and Executive Orders 11988, 11990, and 12898. The final approved projects eliminate the risk of flooding, reinforce critical infrastructure to protect against damage during seismic events, or mitigate repetitive damage to homes in a flood-prone area.

It is anticipated final grant closeout and oversight will be completed in FY 2015. PDM positions will be reduced through natural attrition and reassigned to other mitigation programs through a phased approach through FY 2015.

FEMA proposes to utilize congressionally directed spending funds from FYs 2008, 2009, and 2010 for new grant awards when either the applicant informs FEMA that it does not intend to use the earmark funding or when an application for the funding is not submitted to FEMA within two years of the date of the appropriated funding.

---

<sup>2</sup> Eligible activities for the PDM program include property acquisition and elevation, minor localized flood control, safe-room construction, wildfire mitigation, seismic retrofit projects, dry floodproofing, retrofits of existing buildings and infrastructure, soil stabilization, and hazard mitigation planning.

## IV. Program Justification Changes

**Department of Homeland Security  
Federal Emergency Management Agency  
National Pre-disaster Mitigation Fund  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Competitive Grant Funding  
PPA:  
Program Decrease: Positions 0, FTE 0, Dollars \$(35,507)

Funding Profile

	FY 2011 Actuals			FY 2012 Enacted			FY 2013 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							-	-	(35,507)
<b>Total Request</b>	-	-	-	-	-	-	-	-	<b>(35,507)-</b>

**Description of Item**

This represents an overall reduction of \$35,507 from FY 2012.

**Justification**

FEMA proposes to eliminate the PDM program in FY 2013. There is no impact from this reduction because of the duplication with other FEMA grant programs, including the Hazard Mitigation Grant Program. Further, the program’s unobligated balance of \$174.2 million (as of December 31, 2011) will enable the continued issuance, oversight, and closeout of grants until funding is depleted.

FEMA proposes to utilize congressionally directed spending funds from FYs 2008, 2009, and 2010 for new grant awards when either the applicant informs FEMA that it does not intend to use the earmark funding or when an application for the funding is not submitted to FEMA within two years of the date of the appropriated funding.

## V. Exhibits and Other Supporting Material

### A. Justification of Proposed Legislative Language

**Department of Homeland Security  
Federal Emergency Management Agency  
Justification of Proposed Changes in National Pre-disaster Mitigation Fund  
Appropriations Language**

*[For the Pre-disaster Mitigation Grant Program under section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. § 5133), \$35,500,000 to remain available until expended: Provided, That the total administrative costs associated with such grants shall not exceed \$3,000,000 of the total amount made available under this heading.]*

#### **Proposed New Language:**

FEMA is not requesting funding for PDM in 2013. Instead, FEMA requests that the following language be included in the General Provisions to make available previously earmarked funding for new grant awards, and allow prior year appropriations to be used for management and administration of the program as it sunsets:

*(a) Predisaster Hazard Mitigation - Section 203 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5133) is amended by --*

- (1) re-designating subparagraph (m) as “(o)”;*
- (2) re-designating subparagraph (n) as (p); and*
- (3) inserting the following new subparagraphs after subparagraph (l):*

*“(m) Notwithstanding any other applicable limitations in prior or future fiscal year appropriations, the Administrator may make grant awards at his discretion under this section with funding otherwise defined as ‘congressionally directed spending’ under this section in any prior fiscal year, if either:*

- (i) the intended applicant for such earmarked funding informs FEMA in writing that no application will be submitted to use the funding; or*
- (ii) no application for such earmarked funding is submitted to FEMA within two years of the date of the respective appropriation for such funds.*

*(n) Notwithstanding any other applicable limitations in prior or future fiscal year appropriations, the National Pre-disaster Mitigation Fund shall be made available to FEMA for necessary and reasonable costs to administer and/or close out Pre-disaster Mitigation grants.”*

### National Pre-disaster Mitigation Fund Mission Statement

Funding requested through this account is dedicated to grants for pre-disaster mitigation. The National Pre-disaster Mitigation (PDM) Fund was created under FEMA as the vehicle for disseminating these grants to State and local governments. Operating independently of the Disaster Relief Fund, which provides post-disaster mitigation funding, the PDM program offers an annual funding source for qualified mitigation activities that are not dependent upon a declaration of disaster activity by the President.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	1,363	1,363	796	(567)
11.5 Other personnel compensation	16	16	9	(7)

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	1,363	1,363	796	(567)
12.1 Benefits	568	568	330	(238)
<b>Total, Salaries &amp; Benefits</b>	<b>1,947</b>	<b>1,947</b>	<b>1,135</b>	<b>(812)</b>

Salaries and Benefits support seven full-time permanent positions. The decrease from FY 2012 is as a result of the program being phased out effective January 2013. FY 2013 includes an increase of 0.5% to Salaries and Benefits.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	<b>\$532</b>	<b>\$676</b>	<b>\$392</b>	<b>-\$284</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. FY 2013 level reflects decrease cost in travel fares and service fees as a result of program being phased out.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>23.1 GSA rent</b>	<b>\$127</b>	<b>\$124</b>	<b>\$123</b>	<b>-\$1</b>

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **Federal Emergency Management Agency Emergency Food and Shelter**

#### **I. Appropriation Overview**

##### **A. Mission Statement:**

###### **Mission Statement**

The Emergency Food and Shelter (EFS) program entrusted through the McKinney-Vento Homeless Assistance Act of 1987 (PL 100-77), provides grants to nonprofit and governmental organizations at the local level through the National Board to supplement and expand ongoing efforts to provide shelter, food, and supportive services for hungry and homeless people across the Nation.

##### **B. Budget Activities:**

EFS funds are used to supplement food, shelter, rent, mortgage, and utility assistance programs for people with non-disaster related emergencies.

The EFS program is administered via a national board of volunteer agencies chaired by FEMA. The National Board qualifies jurisdictions for annual EFS funding awards based on criteria involving current population, unemployment, and poverty levels. Grants are awarded to nonprofit community and government organizations that are chosen by local boards in the qualifying jurisdictions.

##### **C. Budget Request Summary:**

The FEMA FY 2013 request for the EFS program is 0 positions, 0 FTE, and \$100 million.

<b>2013 Total Request</b>	-	-	<b>100,000</b>
Total Change 2012 to 2013	-	-	(20,000)

FEMA requests \$100 million for this activity. This request will enable Emergency Food and Shelter (EFS) program to support grants to nonprofit and governmental organizations at the local level.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The EFS program provides grants to nonprofit and governmental organizations at the local level to supplement their programs for emergency food and shelter.

Funding for this program is distributed by the National Board, which consists of designees from six charitable organizations – American Red Cross, Catholic Charities USA, The Jewish Federations of North America, National Council of Churches of Christ in the USA, The Salvation Army, and United Way Worldwide. The National Board is chaired by FEMA.

Local jurisdictions (cities or counties) are eligible for EFS program support when they have the highest need for emergency food and shelter services as determined by unemployment and poverty rates. In FY 2011, the National Board selected jurisdictions to receive funding according to the following: (1) jurisdictions had to have a minimum number of 300 unemployed individuals and 2) jurisdictions had to meet or exceed either of two thresholds – an unemployment rate of 11.5 percent or a poverty rate of 14.4 percent.

Funding also may be provided to jurisdictions that do not meet the initial eligibility requirements through the State Set-Aside Committee process. The National Board allocates a portion of

appropriated funds to State Set-Aside Committees based upon the unemployment in those jurisdictions that did not qualify for direct funding from the National Board. The State Set-Aside Committee process allows States to address pockets of homelessness and poverty or address the immediate needs of a locality that might be going through a high economic impact event.

## IV. Program Justification Changes

**Department of Homeland Security  
Federal Emergency Management Agency  
Emergency Food and Shelter  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:**                    Management and Technology Efficiencies  
PPA:  
Program Decrease:                    Positions 0, FTE 0, Dollars \$(20,000)

Funding Profile

	FY 2011 Actuals			FY 2012 Enacted			FY 2013 Request

<b>Total Request</b>	-	-	<b>119,760</b>	-	-	<b>120,000</b>	-	-	<b>100,000</b>

**Description of Item**

FEMA requests to decrease the FY 2013 Emergency Food and Shelter (EFS) program by \$20 million from FY 2012.

**Justification**

The FY 2013 request for EFS reflects the continued acknowledgement of the vital contributions of EFS toward the distribution of needed funding to nonprofit and nongovernmental organizations providing services to the Nation’s hungry, homeless, and people in economic crisis. This request will continue to supplement significantly the delivery of an estimated 46.5 million meals, 3.1 million nights of lodging, and support for 74,706 rent/mortgage payments and 155,567 utility bill payments across the Nation while decreasing costs through management and efficiencies.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

**Department of Homeland Security  
Federal Emergency Management Agency  
Emergency Food and Shelter  
Appropriation Language**

*To carry out an emergency food and shelter program pursuant to Title III of the McKinney-Vento Homeless Assistance Act (42 U.S.C. 11331 et seq.), \$100,000,000, to remain available until expended: Provided, that total administrative costs shall not exceed 3.5 percent of the total amount available under this heading.(Department of Homeland Security Appropriations Act, 2012.)*

### Emergency Food and Shelter Mission Statement

The Emergency Food and Shelter (EFS) program entrusted through the McKinney-Vento Homeless Assistance Act of 1987 (PL 100-77), provides grants to nonprofit and governmental organizations at the local level through the National Board to supplement and expand ongoing efforts to provide shelter, food, and supportive services for hungry and homeless people across the Nation.

### Summary Justification and Explanation of Changes

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Emergency Management Agency Disaster Relief Fund**

### **I. Appropriation Overview**

#### **A. Mission Statement for Disaster Relief Fund:**

Pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act, the Disaster Relief Fund (DRF) provides a no-year base against which FEMA can direct, coordinate, manage, and fund eligible response and recovery efforts associated with domestic major disasters and emergencies that overwhelm State resources. Through the DRF, FEMA can fund authorized Federal disaster support activities as well as eligible State, territorial, tribal, and local actions, such as providing emergency protection and debris removal. The DRF also funds:

- The repair and rebuilding of qualifying disaster-damaged infrastructure
- Hazard mitigation initiatives
- Financial assistance to eligible disaster survivors
- Fire Management Assistance Grants for qualifying large urban wildfires

#### **B. Budget Activities:**

Major disasters and emergencies may be the result of disasters of all kinds and are declared by the President, typically in response to gubernatorial requests for assistance. States request Federal assistance to supplement their available resources and to certify that a given disaster is beyond their capacity or capability to respond. The DRF also supports fire management assistance activities for the mitigation, management, and control of fires on public and private lands.

FEMA coordinates three major disaster assistance programs:

- Federal Assistance to Individuals and Households
- Public Assistance
- Hazard Mitigation assistance

Non-declaration specific readiness and support activities also are funded under the DRF. These activities provide indirect support across FEMA (and to our Federal partners) and are managed separately as Disaster Readiness and Support activities.

#### **C. Budget Request Summary:**

FEMA requests 45 temporary full-time positions, 4,852 FTEs, and \$6,088,926,000 for the Disaster Relief Fund in FY 2013. This includes \$607,926,000 for base/non-major disaster activities and \$5,481,000,000 for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the

Balanced Budget and Emergency Deficit Control Act of 1985 (BBEDCA), as amended by the Budget Control Act of 2011 (BCA).

Coupled with an estimated prior year recovery figure and carryover or reserve funds, the DRF request is projected to support estimated requirements for all past declared catastrophic events (where expected Federal obligations exceed \$500 million) and the 10-year average obligation level for noncatastrophic disaster activity (where Federal obligations were under \$500 million).

## II. Summary of FY 2013 Budget Estimates by Program/Project/Activity (PPA)

Total Change 2012 to 2013	-	-	(987,074)

*Note: The 45 positions reflected above are FEMA's cadre of temporary full-time Federal Coordinating Officers (FCO). The bulk of the FTE reflected herein is made up of Disaster Assistance Employees (DAE) and Cadre of On-call Response Employees (CORE), primarily deployed for specific disasters.*

FEMA requests \$6,088,926,000 for the DRF in FY 2013, of which \$607,926,000 is for base/non-major disaster activities and \$5,481,000,000 is for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the BBEDCA, as amended by the BCA. Coupled with an estimated prior year recovery figure and carryover or reserve funds, the DRF request is projected to support estimated requirements for all past declared catastrophic events (where expected Federal obligations exceed \$500 million) and the 10-year average obligation level for noncatastrophic disaster activity (where Federal obligations were under \$500 million).

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The *Robert T. Stafford Disaster Relief and Emergency Assistance Act* (Stafford Act), 42 U.S.C. 5121-5207 (Public Law 93-288, as amended), authorizes the President to provide Federal assistance to supplement State and local governments' disaster response, recovery, readiness, and mitigation efforts. Under Section 504 of the Homeland Security Act, as amended, FEMA's Administrator has been delegated the responsibility for administering the Stafford Act's Federal assistance programs. The DRF provides funding for the following Stafford Act declarations or activities: (1) major disaster; (2) emergency; (3) fire management assistance; (4) pre-declaration surge; and (5) Disaster Readiness and Support (DRS).

By amending the BBEDCA, the BCA necessitated a new approach to accounting for disaster-related activity. Essentially, requests for DRF funding for FEMA’s Stafford Act programs and disaster support activities fall into two categories: disaster relief cap adjustment and base/non-major disasters. Funding requested under the disaster relief cap adjustment is for major disasters declared pursuant to the Stafford Act and designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the BBEDCA, as amended by the BCA. Funding requested under the base/non-major disasters category includes Emergencies, Pre-disaster Surge Support, Fire Management Assistance Grants and activities that are non-disaster specific, such as Disaster Readiness Support (DRS) activities (e.g., distribution centers, reservist training, etc.).

(Dollars in millions)	
<b>DRF Need in 2013</b>	6,089
Catastrophic	3,016
Noncatastrophic	3,773
Reserve	500
Estimated Recoveries	-1,200
<b>Breakdown per BCA</b>	6,089
Disaster Relief Cap Adjustment	5,481
Base/Non-Major Disasters	608

A hypothetical breakdown for these base/non-major disaster activities and how they build to the \$608 million request for this category appears below.

<b>DISASTER RELIEF FUND OTHER DISASTER ACTIVITIES</b>			
<b>PROGRAM DESCRIPTION</b>	<b>FY 2011 EOY Actual</b>	<b>FY 2012 Enacted</b>	<b>FY 2013 Request</b>
EM-EMERGENCY*	109,045,479	338,271,223	119,762,632
FM-FIRE MANAGEMENT	30,018,360	38,063,709	32,968,609
SU-SURGE	86,005,247	3,892,921	94,457,972
OTHER DISASTER SUPPORT ACTIVITIES	326,975,176	319,772,148	360,736,787
<b>TOTAL</b>	<b>552,044,262</b>	<b>700,000,000</b>	<b>607,926,000</b>
<i>Notes</i>			
<i>*FY 2012 - Payment of \$200M for Fire Emergency in CA</i>			

The funding level required for the catastrophic category (events greater than \$500 million) is based on FEMA spends plans for all past declared catastrophic events. The DRF 2013 request includes no funds for new catastrophic events that may occur in 2013. The noncatastrophic funding level is based on a revised approach that uses the 10-year average for noncatastrophic events. As opposed to the previous method that utilized the five-year average, this provides a more accurate projection of noncatastrophic

needs since it normalizes the effects of outlier years. The request assumes that new catastrophic events in 2013 will be funded with emergency supplemental funds as provided for in the BCA/BBEDCA.

The recoveries figure represents an estimate of the amount that FEMA will deobligate and recover from prior disasters. FEMA has aggressively recovered funds in recent years and will continue to do so in FY 2013. In FY 2011, FEMA undertook an aggressive effort to improve the efficiency of the disaster closeout process. This effort included issuing and enforcing standard closeout policies, establishing consistent closeout practices across all regions, establishing and tracking closeout metrics, and streamlining and simplifying the closeout process. This effort resulted in the closure of 124 disasters, well in excess of previous yearly closeout averages. The FY 2013 estimate for recoveries of \$1.2 billion is the same estimate as FY 2012.

The FY 2012 request included a \$500 million reserve. Given the need not to draw the fund down to unacceptable levels at year-end and in the most active portion of hurricane season, the DRF request for FY 2013 also includes a \$500 million reserve.

The amount provided via the BCA disaster relief cap adjustment may only be obligated on declared major disasters. In analyzing the last 10 years of obligations for non-major disasters, FEMA determined that base/non-major disasters comprise an average of nine percent of the gross DRF requirement. Therefore, the estimated requirement for base/non-major disasters is \$608 million, or nine percent of the gross DRF requirement (not including the reserve).

The Disaster Relief Fund provided critical resources to States, localities, and survivors by obligating \$7.503 billion in FY 2011. It enabled FEMA to lead response and recovery efforts for 98 major disaster declarations and 26 emergency declarations across 47 States. In addition, the DRF provided 112 fire management assistance grants for fires in 16 States. According to the National Oceanic and Atmospheric Administration, in 2011 the U.S. experienced the most billion dollar weather disasters on record. More than 1,000 people died from weather-related causes, most of them from tornadoes, and more than 8,000 people were injured.

Along with the outbreak of severe weather across the country in April 2011 that produced more than 600 tornadoes and caused more than 350 deaths, FEMA responded to the:

- Groundhog Day Blizzard
- Mississippi and Missouri River Flooding
- The six-day midwest/southeast tornado outbreak in May that included EF-5 tornadoes that rolled through Joplin, Missouri
- The seven-day midwest/southeast/plains outbreak of severe storms and tornadoes in June that featured four EF-3 tornadoes
- Texas Wildfires
- Hurricane Irene and Tropical Storm Lee

FEMA's pool of highly trained and qualified DAEs and COREs provided support needed to help survivors recover from these disasters.

## **DIRECT DISASTER ACTIVITIES**

Individual Assistance (IA), Public Assistance (PA), and the Hazard Mitigation Grant Program (HMGP) are FEMA's primary Direct Disaster programs. These programs are managed and administered by the Recovery and Mitigation Directorates within FEMA. These activities may fall under either the cap adjustment allowance or the base amount depending on whether they are in response to a major disaster or emergency declaration.

These programs constitute the majority of the resources provided by the Federal Government (through FEMA) to directly address the short-, medium-, and long-term impacts of a disaster on individuals and communities. Disaster assistance under the authorities of the Stafford Act can be provided to States (and further provided to local or tribal governments), the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

### **Individual Assistance**

DRF provides funding for the following IA Programs:

#### **Individual and Households Programs – 100 percent Federally funded**

- Temporary housing (rent and lodging expense): Funding is provided to rent alternate housing or a temporary housing unit when rental properties are not available.
- Repair: Funding is provided for homeowners to repair damage (to their primary residence) from the disaster that is not covered by insurance. A flood insurance purchase and maintenance requirement may be placed on the home if the home is in a Special Flood Hazard Area. Repair assistance is intended to repair the home to a safe, sanitary, and functional living condition.
- Replacement: Funds are made available to homeowners to assist with the replacement of a destroyed primary residence that is not covered by insurance. The goal is to help the homeowners with the cost of replacing their destroyed homes.
- Permanent Housing Construction: Funds are made available for the construction of a home, or FEMA will provide direct assistance with the construction. This type of assistance only occurs in insular areas or remote locations specified by FEMA, where no other type of housing assistance is possible, or where other temporary housing options are unavailable or infeasible. Construction shall follow current minimal local building codes and standards (where they exist), or minimal acceptable construction industry standards in the area. Construction will aim toward average quality, size, and capacity, taking into consideration any unique needs (such as disability requirements) of the occupant.

#### **Other Needs Assistance (ONA)**

ONA is available for necessary expenses and serious needs of survivors of the declared disaster. Assistance provided by the ONA program is cost-shared between FEMA (75 percent) and the State (25 percent).

Assistance is provided to individuals contingent on their ability or inability to secure a loan from the U.S. Small Business Administration (SBA). If SBA determines that an applicant cannot afford a loan, SBA automatically will refer the applicant to the ONA program for assistance.

ONA can be provided for disaster-related serious needs in five categories:

- **Repair or Replacement of Personal Property:**
  - Clothing
  - Household items (i.e., home furnishings, appliances)
  - Specialized tools or job-related protective clothing and equipment
  - Educational materials (i.e. books)
  - Cleaning supplies (i.e., wet/dry vacuum, air purifier, dehumidifier)
  
- **Transportation:** Repair or replacement of a vehicle that is deemed unusable due to disaster-related damage.
  
- **Medical and Dental Expenses:** Medical treatment or the purchase of medical equipment required due to physical injuries resulting from a disaster.
  
- **Funeral and Burial Expenses:** Funeral services, burial, or cremation and other funeral expenses related to a death caused by the disaster.
  
- **Other Items:** The State and FEMA can agree to pay for specific disaster-related costs that are not listed above. Some examples are generators, moving and storage expenses, and the cost of a National Flood Insurance Program Group Flood Insurance Certificate.

### **Crisis Counseling Assistance and Training Program**

The Crisis Counseling Program, 100 percent Federally funded, supports short-term interventions with individuals and groups experiencing psychological effects resulting from large-scale disasters. These interventions involve the counseling goals of assisting disaster survivors in understanding their current situation and reactions, mitigating additional stress, assisting survivors in reviewing their options, promoting the use or developments of coping strategies, providing emotional support, and encouraging linkages with other individuals and agencies that may help survivors recover to their pre-disaster level of functioning. Supplemental funding for crisis counseling is available to state mental health authorities through two grant mechanisms: (1) the Immediate Services Program; and (2) the Regular Services Program, which provide funds for up to nine months following a major disaster declaration.

### **Disaster Unemployment Assistance (DUA)**

The DUA program, 100 percent Federally funded, provides individuals who have become unemployed because of a disaster and unable to secure regular unemployment benefits with unemployment benefits and re-employment services.

## **Legal Services**

Legal services, 100 percent Federally funded, may be provided to low-income individuals unable to secure such services adequate to meet their needs as a consequence of a major disaster.

## **Disaster Case Management Program**

This program, 100 percent Federally funded, provides case management services, including financial assistance, to State or local government agencies or to qualified private organizations to provide such services to victims of major disasters to identify and address unmet needs.

## **Public Assistance**

The PA program offers assistance to State, local, and tribal governments after a declared major disaster or emergency for eligible disaster-related damage. In addition, certain private nonprofit organizations that operate facilities and provide services to the public typically provided by a government agency may receive public assistance. PA is a cost-shared (75 percent Federal, 25 percent non-Federal) grant program. However, States may request, and the President may grant, a higher Federal cost share in situations in which the disaster has had a significant economic impact on the State.

PA provides funding to grantees for the repair and restoration of damaged public and eligible private nonprofit facilities, for emergency measures taken to protect lives and property, and in support of disaster-related debris removal. When PA is authorized, such assistance may be provided under one or more of the following seven categories:

- Category A – Debris Removal
- Category B – Emergency Protective Measures
- Category C – Repair of Roads and Bridges
- Category D – Water Control Facilities
- Category E – Public Buildings
- Category F – Public Utilities
- Category G – Other Facilities

## **Hazard Mitigation Grant Program**

HMGP provides State, local, and tribal governments with cost-shared grants (75 percent Federal, 25 percent non-Federal) to reduce the risk of potential damage, hardship, loss, and suffering in an area affected by a major disaster. Ultimately, HMGP reduces future need for Federal disaster assistance by reducing the impact of and increasing the resistance to natural hazards.

HMGP funding is made available to States based on 15 percent of the total Federal funds spent in the PA and IA programs (minus administrative expenses) for each major disaster costing up to \$2 billion; 10 percent for disasters between \$2 billion and \$10 billion; and 7.5 percent for major disasters between \$10 billion and not more than \$35.33 billion.

HMGP projects vary and may include retrofitting structures to resist flooding, winds, and earthquakes; elevating structures above base flood levels; property acquisition and demolition or relocation for open space; and minor flood reduction and drainage measures.

HMGP grants are required to be cost-effective. In 2005, the Multi-hazard Mitigation Council, a part of the National Institute of Building Sciences, published a report that analyzed the overall impact of FEMA's Hazard Mitigation Programs. The findings show that money spent on reducing the potential damage of natural hazards is a sound investment and is cost-effective. On average, a dollar spent on hazard mitigation activities will save the Nation approximately four dollars in future payouts for damage caused by natural hazards.

### **Compacts of Free Association**

The DRF provides funding for disaster relief and reconstruction activities in the Federated States of Micronesia and the Republic of the Marshall Islands pursuant to the Compacts of Free Association. This funding is provided through a direct transfer of DRF funds to the United States Agency for International Development.

## **OTHER DISASTER ACTIVITIES**

### **Other Direct Disaster Programs**

- **Fire Management Assistance**

FEMA provides assistance for the mitigation, management, and control of any fire on public or private forest or grassland that threatens such destruction as would constitute a major disaster. Items eligible for funding under the Fire Management Assistance Grant Program include equipment, labor costs, emergency work, and temporary repair work directly related to firefighting activities associated with the declared fire.

### **Disaster Readiness and Support (DRS) Programs**

The DRS funding was established to bolster FEMA's general steady-state effectiveness and readiness. It enables FEMA to be in a more proactive and robust advance-readiness posture to respond to large-scale, complex, presidentially declared major disasters instead of waiting for disasters to occur and reacting with costly and inefficient response actions.

FEMA manages DRS costs throughout the year. These expenses are essential for: (1) timely disaster response; (2) responsive customer service; and (3) cost-effective program oversight and delivery.

DRS funds key activities and initiatives, such as:

- Strategic pre-positioning and management of disaster commodities
- Improved inventory of specialized assets
- Standby support to enable FEMA to increase response and recovery capacity as quickly as needed

DRS activities support FEMA's all-hazards mission. They include initiatives and resources formerly funded from the DRF's legacy disaster support activities and readiness contracts. Many of these costs are predictable on an annual basis and allow FEMA to support a cross-section of disasters utilizing an infrastructure of processing and distribution centers and information technology systems. In addition, the DRS includes certain costs to help FEMA pre-position for disasters, including the establishment of large commodity and transportation service contracts that can be activated in the event of a major disaster.

These efforts (including better communications, a more effective intake process, more efficient delivery systems for disaster commodities, and improved oversight of disaster aid through our technical assistance contractors) will continue to improve the quality of FEMA support to disaster survivors.

FEMA has increased transparency and budgetary discipline of the DRS through the implementation of detailed spending plans and program reviews. As a result, FEMA is better equipped to maintain its critical disaster support activities and infrastructure; and ensure the timely delivery of disaster assistance.

## ***Response Directorate***

FEMA's Response Directorate provides and coordinates the core Federal response capabilities needed to save lives, minimize suffering, and protect property in communities throughout the Nation overwhelmed by the impact of an incident, regardless of cause. The Response Directorate encompasses the following programs:

**Incident Workforce Management Office:** Develops, deploys, and supports a professional disaster workforce of personnel ready to support the national all-hazard response needs of FEMA headquarters and regional leadership and assists in the deployment of responders from FEMA's full-time workforce and the DHS-supported surge capacity force when required.

**The Deployment Unit:** Manages and administers the Automated Deployment Database personnel deployment system for the incident workforce and the surge capacity force throughout the entire spectrum of FEMA's preparedness, response, recovery, and mitigation missions.

**The Readiness Unit:** Manages and coordinates all aspects of cadre/surge readiness and provides oversight of the surge and volunteer workforce programs that ultimately will roster more than 40,000 persons at DHS.

**The FEMA Qualification System (FQS Unit):** Establishes the system for qualification and certification of the FEMA workforce through experience, training, and demonstrated performance; ensures qualified workforce based on performance standards; establishes minimum, consistent, and fair qualification requirements for all workforce positions regardless of employment status; and works to strengthen the training and qualification standards for all workforce positions by implementing improvements based on analysis.

**The Cadre Coordination Unit:** Responsible for the communication, coordination, and outreach of workforce procedures and program guidance to the national and regional cadre managers and liaisons on workforce deployment, readiness, and FQS.

**Training, Exercise & Doctrine Office:** FQS is a performance-based approach to workforce qualification and certification of incident management and incident support positions activated to support disasters. This approach seeks to improve FEMA's response and recovery services by identifying required competencies and tasks for disaster personnel and by fostering knowledge and skill development within those competencies to perform the tasks successfully. The FQS is guided by operational requirements and current doctrine and drives FEMA's training curriculum for disaster workers at all organizational levels.

The FQS was built upon and expands the former Disaster Response Workforce (DRW) credentialing initiative. The individual cadres utilized their existing DRW position task books as a foundation for their work on the FQS products, moving from a training focus to an Incident Command System-compliant, performance-based focus on more robust, measurable competencies and tasks that support increased functional ability across each cadre.

**National Evacuation Contracts:** Provides FEMA with the ability to plan, execute, and exercise multi-modal evacuation capability in the event of catastrophic disasters. Program activities address evacuation capabilities by motor coach, rail, air, and ambulance.

**Disaster Emergency Communications (DEC) Division:** Provides and leads integrated Federal communications support to emergency responders at all levels of government. It has a leading national role in the oversight and development of Regional Emergency Communications Coordination Working Groups. The Division develops and delivers the capability to provide tactical voice, data, and video communications services before, during, and immediately after an incident to support emergency managers at all levels of governments.

### ***Recovery Directorate***

The Recovery Directorate works to ensure that individuals and communities affected by disasters of all sizes are able to return to normal with minimal suffering and disruption of services. Program activities focus on improving efficiency and expediting delivery of disaster assistance to eligible individuals; to State, local, and tribal governments; and to eligible private nonprofit organizations. This is accomplished through a commitment to streamline procedures to improve program policy, to minimize error, and to modernize service delivery technology.

Annual costs for the following readiness contracts, staff, and activities are funded through the DRS (actual deployment or assistance costs incurred pursuant to declarations will continue to be funded from the specific declarations):

- Contract Support
  - Individual Assistance Technical Assistance (IA-TAC)
  - Public Assistance Technical Assistance (PA-TAC)
  - Housing Inspection Services
  - Mail Operations
  - Enterprise Application Development Integration and Sustainment
  - Corporate Lodging Consultants
  - Surge Staffing for Registration Intake
- National Processing Service Centers (NPSCs)
  - Readiness costs, including equipment, rent, and security, for FEMA's three NPSCs located in Maryland, Texas, and Virginia. The NPSC facilities provide FEMA call center and benefits processing capabilities to register and process disaster survivors' applications.
  - Developers to make continuous updates to the National Emergency Management Information System to ensure that processing complements the most up-to-date IA policies.
- Individual Assistance Readiness Support
  - Funding is utilized to support travel and equipment needed to ensure the delivery of IA programs under Emergency Support Function #6. This includes costs for all-hazard disaster planning with State, local, Regional, Federal, nongovernmental, and voluntary agency partners; recovery program evaluations; travel and salaries to support DAEs engaged in readiness planning, training, and delivery, as well as program closeout.

- Interagency Agreements (IAA)
  - Crisis Counseling Assistance and Training Program (CCATP). The Center for Mental Health Services of the U.S. Department of Health and Human Services provides critical technical support in the management of FEMA's CCATP. FEMA annually funds three permanent full-time positions, contract support, travel, equipment supplies, and administrative costs through an IAA. When the program is activated pursuant to a disaster declaration, assistance is charged to the declaration's costs under the DRF.
  - Disaster Unemployment Assistance. The Employment and Training Administration within the Department of Labor (DOL) administers the DUA Program on FEMA's behalf. As such, FEMA annually funds DOL through an interagency agreement to perform this function. When the program is activated pursuant to a disaster declaration, assistance is charged to the declaration's costs under the DRF.
  
- Maintain a Web-based Public Assistance Program
  - DRS funding is used to maintain a web-based capability (Emergency Management Mission Integrated Environment) for the PA Program that allows FEMA staff, PA applicants, and States to perform all PA grant management activities online and supports the use of state-of-the-art technology such as wireless handheld devices used by PA staff and contractors to perform inspections on damaged facilities. The inspection information is uploaded automatically into the Web-based system, eliminating a paper-based process, improving efficiency, and attaining cost savings.

### ***Logistics Management Directorate (LMD)***

The mission of the Logistics Management Directorate is to effectively plan, manage and sustain national logistics response and recovery operations, in support of domestic emergencies and special events – to serve as the National Logistics Coordinator. LMD is organized around four major initiatives:

- **Disaster Logistics Distribution Management Operations** manages the Agency's warehouse facilities and transportation systems used to receive, store, maintain, issue, distribute and track supplies, services, materiel, and equipment.
- **Logistics Supply Chain Management System (LSCMS)** supports FEMA's mission of responding to all hazards expediently and efficiently by managing the Nation's end-to-end supply chain of critical disaster assets and commodities. LSCMS manages the supply chain process including: initial request for assets and commodities, orders to FEMA and partners, transportation, inventory management at FEMA locations, shipment, and receipt by the States. LSCMS provides situational awareness and in-transit visibility through reporting and GIS mapping capabilities.
- **Disaster Logistics Operations** manages the Temporary Housing Unit (THU) Storage Sites Program supporting the Disaster Assistance Directorate's Direct Housing Program. The program is part of a lifecycle and performance-based business model, and supports THU sites with contracts for various support services.
- **Emergency Evacuation** provides management oversight for ensuring in-transit visibility of all assets deployed in support of evacuation requirements.

**Disaster Logistics Property Accountability, Oversight, and Coordination:** Provides industry standards (using American Society for Testing and Materials voluntary consensus standards), quality assurance, customer assistance and technical reviews of property accountability, inventory services, and oversight of disposal and donations of agency disaster-funded supplies and equipment.

***Office of the Federal Coordinating Officer***

Upon declaration of a major disaster or emergency, the FEMA Administrator appoints an FCO who is charged with initiating all actions necessary to assure that Federal assistance is provided in accordance with the declaration, applicable laws, regulations, and the FEMA-State agreement. When not deployed to a disaster, FCO cadre members require funding for equipment, travel, training, exercises and miscellaneous expenses, including office supplies.

***Mission Support Bureau (MSB)***

The MSB supports all facets of the Agency's mission by providing strategic leadership and assuring the timely, efficient, and effective delivery of administrative, property management, health and safety, human capital, Information Technology (IT), procurement, security services, and business function capabilities. This range of capabilities supports the entire enterprise of FEMA's mission activities that range from performing Urban Search and Rescue; taking in and managing requests for IA and PA grants; and approving and paying those grants; to managing flood insurance policies for the Nation's citizens.

***Office of Chief Financial Officer (OCFO)***

OCFO leads the effort to maximize the impact of financial resources and ensure accountability to support the mission of FEMA.

OCFO oversees planning and response activities of the financial management members of FEMA's emergency teams and management of the national Disaster Comptroller cadre. FEMA maintained a class of employees referred to as non-disaster specific (NDS) COREs to perform essential duties that cannot reasonably be attributed on a disaster-specific basis. These NDS COREs were hired as temporary full-time employees with appointments not to exceed 2 years. Based on the distribution of work among all of the programs/offices, 233 positions were converted to permanent full-time positions and for the most part were funded in the Management and Administration appropriation.

## IV. Program Justification Changes

**Department of Homeland Security  
Federal Emergency Management Agency  
Disaster Relief Fund  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Reduction in Readiness Support Contracts  
PPA:  
Program Decrease: Positions 0, FTE 0, Dollars \$(11,139)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	48,628
Program Decrease							-	-	(11,139)
<b>Total Request</b>	-	-	<b>41,986</b>	-	-	<b>48,628</b>	-	-	<b>37,489</b>

**Description**

The FY 2013 Budget for the Disaster Relief Fund (DRF) is approximately \$6.1 billion, including nearly \$608 million funded in FEMA’s base budget.

**Justification**

FEMA’s Disaster Readiness and Support (DRS) budget maintains the recurring set of readiness and support costs charged to the DRF. These include the costs of readiness contracts for Housing Inspection Services, PA-TAC, and IA-TAC that exceed \$30 million each year. FEMA has begun the effort to restructure, renegotiate, and recomplete these contracts to reduce the overall expense of these readiness activities. FEMA expects to save \$11.139 million in readiness costs in FY 2013 without compromising current services or readiness levels within FEMA.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

There are no anticipated impacts to FEMA’s current services or readiness levels.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

*For necessary expenses in carrying out the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.), \$6,088,926,000, to remain available until expended: Provided, That of the funds provided herein, \$5,481,000,000 shall be for major disasters declared pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5121 et seq.): Provided further, That the amount for major disasters in the previous proviso is designated by the Congress as being for disaster relief pursuant to section 251(b)(2)(D) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended. (Disaster Relief Appropriations Act, 2012.)*

## B. FY 2012 to FY 2013 Budget Change

### Disaster Relief Fund Mission Statement

Operating Activities includes the essential functions for all of FEMA's major mission organizations and directly supports FEMA's primary mission to reduce the loss of life and property and to protect the Nation from all hazards. Operating Activities leads and supports the Nation through a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	172,020	177,868	178,757	889
11.3 Other than full-time permanent	150,954	156,087	156,867	780
11.5 Other personnel compensation	94,603	97,820	98,309	489
12.1 Benefits	87,878	90,866	91,320	454
13.0 Unemployment Compensation	20,106	20,790	20,894	104
<b>Total, Salaries &amp; Benefits</b>	<b>525,561</b>	<b>543,431</b>	<b>546,147</b>	<b>2,716</b>

Salaries and Benefits include costs for 4,852 FTEs. FY 2013 reflects an increase of \$2,716,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	<b>\$183,907</b>	<b>\$169,359</b>	<b>\$160,891</b>	<b>-\$8,468</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. There is a decrease of \$8,468,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>22.0 Transportation of things</b>	<b>\$42,441</b>	<b>\$41,141</b>	<b>\$40,215</b>	<b>-\$926</b>

Transportation of things includes all costs of the care of such things while in process of being transported, and other services incident to the transportation of things. There is a decrease of \$926,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>23.1 GSA rent</b>	<b>\$33,845</b>	<b>\$53,121</b>	<b>\$52,952</b>	<b>-\$169</b>

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent-related services. There is a decrease of \$169,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>23.2 Other rent</b>	<b>\$36,958</b>	<b>\$4,562</b>	<b>\$4,731</b>	<b>\$169</b>

Other rent includes all payments to a non-Federal source for rental space, land, and structures. There is an increase of \$169,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>23.3 Communications, utilities, and misc. charges</b>	<b>\$49,211</b>	<b>\$47,703</b>	<b>\$46,630</b>	<b>-\$1,073</b>

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility service. There is a decrease of \$1,073,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
24.0 Printing	\$1,810	\$1,754	\$1,715	-\$39

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. There is a decrease of \$39,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$33,944	\$31,258	\$29,695	-\$1,563

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. There is a decrease of \$1,563,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$521,894	\$480,610	\$456,580	-\$24,030

Other services include report contracted services with non-Federal sources that are not otherwise classified under Object Class 25. There is a decrease of \$24,030,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$649,201	\$629,311	\$615,154	-\$14,157

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. There is a decrease of \$14,157,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.4 O&M of facilities	\$18,554	\$17,986	\$17,581	-\$405

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. There is a decrease of \$405,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	\$6,078	\$5,891	\$5,759	-\$132

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. There is a decrease of \$132,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	<b>\$66,200</b>	<b>\$64,172</b>	<b>\$62,728</b>	<b>-\$1,444</b>

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. There is a decrease of \$1,444,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	<b>\$140,435</b>	<b>\$136,132</b>	<b>\$133,070</b>	<b>-\$3,062</b>

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. There is a decrease of \$3,062,000 in the FY 2013 funding level as compared to FY 2012.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>41.0 Grants/Subsidies/Contributions</b>	<b>\$5,186,598</b>	<b>\$5,658,144</b>	<b>\$4,619,727</b>	<b>-\$1,038,417</b>

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. FY 2013 includes a decrease \$1,038,417,000 in reflecting declining activities related to Hurricanes Katrina, Rita, and Wilma.

## I. Changes in Full-time Employment

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **Federal Emergency Management Agency Flood Hazard Mapping and Risk Analysis**

#### **I. Appropriation Overview**

##### **A. Mission Statement for Salaries and Expenses:**

The Flood Hazard Mapping and Risk Analysis Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investments. Risk MAP is a strategy for how FEMA delivers information necessary for flood risk reduction and disaster-resilient, sustainable community development. This integrated flood risk management approach weaves flood hazard data developed in support of the National Flood Insurance Program (NFIP) into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and support community actions to reduce risk. Throughout the Risk MAP process, FEMA collaborates with communities to help them understand and take actions to manage their risks and build more resilient communities.

Flooding is the most frequent and costly natural hazard in the United States. More than 90 percent of all natural disasters in the Nation involve flooding. Changes in the climate and sea level rise in the coming decades will only increase the significance of the flood threat in this Nation. FEMA's Risk MAP program and the NFIP that it supports are essential to managing and reducing this risk. Risk MAP provides the intelligence that enables the National Flood Insurance Program and the communities implementing it to reduce the costs of flooding by supporting management and mitigation of flood risks.

FEMA manages several risk analysis programs assessing the impact of natural hazards that lead to effective strategies for reducing risk. Risk MAP is integrating and aligning the individual risk analysis programs into a more effective unified strategy. Risk MAP supports the DHS goal to strengthen capacity at all levels of society to withstand threats and hazards by improving community capacity to withstand disasters through mitigating known and anticipated hazards.

The overall goals in the FEMA Risk MAP Multi-Year Plan are:

- 1) Address gaps in flood hazard data to form a solid foundation for flood risk assessments, floodplain management, and actuarial soundness of the NFIP.
- 2) Ensure that a measurable increase of the public's awareness and understanding of risk management results in a measurable reduction of current and future vulnerability to flooding.
- 3) Lead and support States and local and tribal communities to effectively engage in risk-based mitigation planning resulting in sustainable actions that reduce or eliminate risks to life and property from natural hazards.
- 4) Provide an enhanced digital platform that improves management of limited Risk MAP resources, controls information produced by Risk MAP, and enhances communication and sharing of risk data and related products to all levels of government and the public.
- 5) Align Risk Analysis programs and develop synergies to enhance decision-making capabilities through effective risk communication and management.

## **B. Budget Activities:**

FEMA is charged with maintaining reliable flood hazard information to support NFIP, where the U.S. Government has an exposure of \$1.2 trillion. These NFIP mapping efforts simultaneously provide communities and citizens with the information they need to reduce the risk of loss of life and property from flooding. Funding for Risk MAP supports FEMA's efforts to address existing gaps in the flood hazard data inventory and address changes that continue to occur over time. The reliability of flood hazard analyses and maps erodes over time. Changes in the built environment, additional storm and precipitation data, and improvements in the engineering science all affect the currency of the risk analysis products. These changes can move in both directions: over the past seven years, as many structures have been taken out of designated Special Flood Hazard Areas (SFHA) as have been newly designated inside the SFHA. When a structure is taken out of the SFHA, the mandatory purchase requirement is removed and the price of continuing the insurance drops dramatically. While the mandatory purchase requirement may be removed, the risk for flooding is still serious and flood insurance remains the best option for protecting property against financial loss.

The primary mechanism through which Risk MAP increases local officials' awareness is through the interactions that occur during flood map updates. Awareness tends to decrease over time when years can pass between major flood events and flood map updates. Memories fade, local staff changes, and there is a natural tendency for people to minimize risks that they live with every day. The updating process ensures that the topic of flooding remains prevalent at the local level.

Through Risk MAP, FEMA is increasing its focus on community engagement activities as an integral part of flood risk study projects. FEMA is working with community officials to increase their ability to communicate about flood risk so they can educate the public they serve. The goal is to identify specific steps communities and individuals can take to mitigate their flood risk. As communication and interaction with communities in study areas increases, a corresponding increase in the flood risk awareness of community officials engaged in these studies will emerge.

## **C. Budget Request Summary:**

FEMA requests \$89.329 million in FY 2013. Funding will be used to analyze and produce flood hazard and flood risk data and map products, to communicate flood hazard risk, and for related technical services. With FY 2013 funding, FEMA will focus on reviewing and updating flood hazard data and maps to accurately reflect flood hazards for the areas with the highest flood risk and greatest update need. Flood hazard data and mapping efforts will support the goals identified in Risk MAP Multi-Year Plan and will specifically address gaps in flood hazard data to help form a solid foundation for flood risk assessments, floodplain management, and actuarial soundness of the NFIP. These funds also provide staffing, travel, operating expenses, contractual services, and grants supporting the development of flood hazard and flood risk information.

FEMA Risk MAP activities are funded from two primary sources of funds – the Flood Hazard Mapping and Risk Analysis Program appropriation and fees received from NFIP policy holders

through the National Flood Insurance Fund (NFIF) (Table 1). Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation. Without both sources of funding, Risk MAP would not be able to accomplish the goals laid out here or even maintain the flood hazard data to support NFIF. The core funding for the program, supporting all aspects of the program, comes from NFIF. The work accomplished through NFIF funding includes some map production, but primarily enables the program to: meet statutory and regulatory requirements for processing map change requests from communities and citizens; respond to stakeholder correspondence; distribute flood hazard data products; establish and maintain cost and schedule controls; track and monitor performance; and, support the development of State and local capabilities to participate in the management and delivery of Risk MAP through the Cooperating Technical Partners program and other core program functions. Funding from the NFIF supports some of the staffing, travel, and other administrative expenses for the Flood Hazard Mapping and Risk Analysis program.

**Table 1**

2013 Budget Activity	Flood Hazard Mapping and Risk Analysis	National Flood Insurance Fund	Total
Salaries & Expenses	\$8,874,000	\$9,385,000	<b>\$18,259,000</b>

Total Change 2012 to 2013	-	-	(8,383)

FEMA requests \$89.329 million in FY 2013 for this activity. The requested FY 2013 funding will allow FEMA to continue implementing a multi-year mapping effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs over time, as funding is available. Funding will also provide for salaries and benefits and for the continuation of activities as described in the Risk MAP Multi-Year Plan, including increased contract costs due to inflation.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Risk MAP Multi-Year Plan builds on the strong foundation of the Flood Map Modernization program. Risk MAP is an integrated flood risk management approach that weaves NFIP flood hazard data into watershed-based risk assessments that serve as the basis for local hazard mitigation plans and support community actions to reduce risk. Risk assessments systematically analyze the people and property in a community or watershed potentially impacted by flood hazards to quantify physical, social, and economic losses. Risk assessment help increase understanding of risk by quantifying potential losses and support development of strategies to reduce risk.

FEMA has defined three key measures aligned with the Risk MAP vision to measure performance across all of these goals. These measures track progress in addressing gaps in flood hazard data, increase in risk awareness of local officials, and action to reduce risk.

- Ensure 80 percent of the Nation's flood hazard data is current – the flood hazard data are new, have been updated, or are deemed still valid through Risk MAP review and update process during the initial implementation of Risk MAP.
- Increase the level of local official flood risk awareness in Risk MAP communities.
- Increase the percentage of population in watersheds where Risk MAP has begun.

FEMA's FY 2013 Risk MAP approach will support local risk assessment and planning activities while addressing the flood hazard data update needs, thus enabling our citizens to increase their awareness of flood risk and ensure good planning to mitigate against these risks. The two primary focus areas are (1) coastal flood studies and (2) significant riverine flood hazard data update needs.

A. Coastal Flood Studies: FEMA will continue the effort started in 2009 to update the Nation's coastal flood hazard studies. This investment will address the remaining coastal flood hazard data update needs, representing approximately 3,100 miles of open coast.

B. Significant Riverine Flood Hazard Update Needs: FEMA will dedicate funding to update riverine hazard engineering analyses. This also includes other non-coastal flood hazards like ponding and shallow flooding and updates related to the accreditation status of levees. This investment will maintain or slightly increase the existing level of flood hazard data update needs by initiating updates for 9,000 miles of inland flooding sources. Through Risk MAP, FEMA will update the flood hazard data by watershed where necessary so that FEMA's flood hazard data is in agreement with other Federal agencies' scientific data within the watershed.

Part of FEMA's Risk MAP strategy is to invest more in monitoring the validity of published flood hazard information. Keeping pace with changes in flood hazards is important and failing to do so could lead to unwise land use decisions and construction standards. Sound, reliable flood hazard information is a necessary component of ensuring the fiscal soundness of NFIP. The principal factors that drive the need for updated flood hazard analyses are:

- Physical changes: such as manmade influences which may include new bridges culverts, levees, and development in the floodplain
- Climate changes: such as recent flood disasters or additional stream gauge data
- Engineering methodology changes: such as improved computer models and better understanding of the physics of water flow

These changes produce additional flood hazard update needs each year. As a result, even though Risk MAP will initiate 9,000 miles of new riverine analysis in FY 2013, this does not result in a significant increase in flood hazard data available or in-work that meet new, valid, or updated engineering standards.

Risk MAP uses a watershed validation evaluation strategy to track the assessment process, document engineering gaps and their resolution, and aid in prioritization for flood map updates. In FY 2013, FEMA will continue its watershed validation evaluation strategy for reviewing flood hazard

engineering data and map update needs. The results of these evaluations and other flood hazard data update needs identified throughout the mapping lifecycle will be managed systematically and will allow FEMA to effectively quantify the inventory maintenance required.

A portion of FEMA's FY 2013 effort also will be focused on the identification of current flood hazards in and around the Nation's levee systems which are located in more than one-quarter of the counties for which FEMA is providing new digital flood hazard mapping. Where the Provisionally Accredited Levee status for levee systems is expiring or when the necessary data and documentation for levee systems are provided for accreditation, FEMA will update the flood hazard data to reflect these changes. Administrator Fugate has committed to Congress that we will modify our methodology for analyzing certain types of levees. A proposed approach for addressing Congressional and stakeholder concerns was published on December 15<sup>th</sup>, 2011. Public comments were accepted through January, 2012. After evaluating all comments received, FEMA will refine the approach. Depending on the outcome of this process, the costs to implement the solution may impact the commitments made here.

During the implementation of Risk MAP, sustainable partnerships will continue to be vital. FEMA will maintain its partnerships and seek out new collaborations to support the Risk MAP program. Resources in the form of "cash match" or new data as identified in FEMA's Bluebook are highly valued and are most beneficial for the program. When targeted at known flood hazard data update needs and included in the partnership agreement, FEMA will give its highest investment priority to capable partners who provide a 25-percent cash match. FEMA typically receives these partner contributions through existing successful partnerships within the Cooperating Technical Partners (CTP) Program. While contributions from multiple sources are valuable, FEMA will consider establishing a partnership under the CTP Program in flood map update prioritization and will support those partnerships that are mutually beneficial.

## IV. Program Justification Changes

**Department of Homeland Security  
Federal Emergency Management Agency  
Flood Map Modernization Fund  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:**                      Requirements Adjustment  
PPA:  
Program Decrease:                      Positions 0, FTE 0, Dollars \$(8,426)

Funding Profile

	FY 2011 Actuals			FY 2012 Enacted			FY 2013 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	
Program Increase							-	-	(8,426)
<b>Total Request</b>	-	-	-	-	-	-	-	-	<b>(8,426)</b>

**Description of Item**

The FY 2013 Budget request will provide for additional Risk MAP projects sufficient to increase the percentage of flood hazard data that meet new, valid, or updated engineering standards, maintain local officials' flood risk awareness, and encourage local actions to reduce risk.

**Justification**

Funding in FY 2013 will provide for the annualization of salaries and benefits, and support the continuation of activities as described in the Risk MAP Multi-Year Plan.

FEMA staff is critical to the effectiveness of the Risk MAP outreach mission as the primary, most credible, interface with local governments. As more Risk MAP projects reach the delivery phase in FY 2013 and beyond, the responsibility for FEMA staff to support outreach to communities and local officials will increase.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

### Flood Map Modernization Fund Mission Statement

The Flood Hazard Mapping and Risk Analysis Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investment. The requested funding will allow FEMA to continue implementing a multi-year effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs. With FY 2013 funding, FEMA will continue risk Mapping, Assessment, and Planning (Risk Map) following the strategy outlined in the Risk MAP Multi-Year Plan. The plan articulates a strategy for how FEMA delivers information necessary for flood risk reduction and sustainable community development. This integrated flood risk management approach weaves county-level flood hazard data developed in support of the National Flood Insurance Program (NFIP) into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. FEMA will focus the FY 2013 investment on addressing flood hazard data update needs for coastal and riverine flood hazard areas, and on expanding and improving utility and accessibility for the flood hazard and flood risk data.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	4,380	6,912	6,945	33
11.5 Other personnel compensation	125	48	48	-
12.1 Benefits	1,307	1,881	1,881	-
<b>Total, Salaries &amp; Benefits</b>	<b>5,812</b>	<b>8,841</b>	<b>8,874</b>	<b>33</b>

Salaries and Benefits support 85 full time permanent positions in FY 2013. FY 2013 includes a 0.5% increase for Salaries and Benefits.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>23.1 Rental payments to GSA</b>	<b>711</b>	<b>694</b>	<b>697</b>	<b>3</b>

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. FY 2013 includes an increase of \$3,000 for actual increase in rental costs.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	<b>39,147</b>	<b>35,975</b>	<b>25,668</b>	<b>(10,307)</b>

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. FY 2013 reflects a decrease in contracted services for map production and other services due to program reductions and efficiencies.

**K. DHS Balanced Workforce Strategy**

In order to establish a high performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking. The results of Tier 1 contract review are listed below.

Position Type	FY 2011 Actual		FY 2012 Base		FY 2012 Annualization		FY 2012 Follow-on		FY 2013 Increase		TOTAL FY2011 – FY2013 DHS Balanced Workforce Strategy	
	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE	Pos.	FTE
Program Analyst	0	0	28	24	0	0	0	0	0	0	28	24
<b>Total</b>	<b>0</b>	<b>0</b>	<b>28</b>	<b>24</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>28</b>	<b>24</b>

The Federal Emergency Management Agency requests \$2.7 million and 24 FTE for the FY 2013 DHS Balanced Workforce Strategy.

### **Annualization of FY 2012 Base DHS Balanced Workforce Strategy**

Initially, this effort was identified as part of Secretary Napolitano's Department-wide Efficiency Review, and was determined to be an effective balance of contractors to Federal employees throughout the Department, and converting contractor positions to Federal employees when feasible and appropriate. In FY 2012, FEMA will convert contractor positions related to its Flood Map Modernization (Risk Map) to full-time and permanent positions. \$2.7 million for salaries and benefits in support of these positions is included in the current services level for FY 2013.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

Federal Emergency Management Agency  
**National Flood Insurance Fund**

### **I. Appropriation Overview**

#### **A. Mission Statement for National Flood Insurance Fund:**

The National Flood Insurance Fund (NFIF), which was established by the National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.), is a premium revenue and fee-generated fund that supports the National Flood Insurance Program (NFIP). The Act, as amended, authorizes the Federal Government to provide flood insurance on a national basis to owners of properties located in vulnerable areas. The National Flood Insurance Reform Act of 1994 (P.L.103-325) made flood insurance mandatory for all federally backed mortgages of properties located in the special flood hazard areas (SFHA). Currently, the NFIP insures more than 5.5 million residential and commercial policyholders totaling approximately \$1.2 trillion in insurance coverage. By supporting flood hazard reduction grant programs and floodplain management efforts, the National Flood Insurance Program estimates that more than \$1.7 billion in flood-related losses are avoided annually.

The NFIP is not simply an insurance program. It works to reduce the cost of flood damage through identifying, analyzing, and reducing flood risk. FEMA applies insurance-industry concepts and methods to reduce the Nation's vulnerability to floods, America's most costly natural disasters, and provides consumer-oriented flood insurance to accelerate recovery from floods, to mitigate future losses, and to reduce personal and national costs of flood disasters by managing the National Flood Insurance Program (NFIP). FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers. By encouraging and supporting mitigation efforts, FEMA leads our Nation in reducing the impact of all disasters.

NFIP consists of three major functions that focus on reducing flood risk and the impact of flood disasters:

**Flood Hazard Mapping and Risk Analysis:** The first component of the business strategy requires reliable information about flood risk. The Risk Mapping, Assessment, and Planning (Risk MAP) Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investment. This is a multi-year mapping effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle, and address flood hazard data update needs over time, as funding is available. This integrated flood risk management approach weaves county-level flood hazard data developed in support of NFIP into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. Throughout the Risk MAP process, FEMA collaborates with communities to help them understand and take actions to manage their risks.

**Reducing Flood Risk:** The second component of the business strategy is to reduce the risk associated with flood events through floodplain management, as well as through flood-related grants and assistance

such as Flood Mitigation Assistance (FMA), Repetitive Flood Claims (RFC), and Severe Repetitive Loss (SRL).

FEMA promotes sound local floodplain management to reduce the risk to new or planned buildings and infrastructure, and funding in the form of flood-related grants for reducing existing community risk. The NFIP plays a critical role in encouraging communities to adopt and enforce floodplain management regulations and to implement broader floodplain management programs aimed at reducing risk to new or planned buildings and infrastructure. By law, FEMA can only provide flood insurance to those States or communities that adopt and vigorously enforce floodplain management regulations that meet or exceed minimum NFIP requirements. Communities incorporate NFIP requirements into their zoning codes, subdivision ordinances, and/or building codes, or they adopt special purpose floodplain management ordinances.

NFIP requirements include:

- Elevation of new and substantially improved residential structures above the base flood level.
- Elevation or dry floodproofing (made watertight) of new or substantially improved non-residential structures.
- Regulation of development in floodways, the central portion of a riverine floodplain needed to carry deeper and faster moving water, to ensure that there are no increases in upstream flood elevations.
- Additional requirements to protect buildings in coastal areas from the impacts of waves, high velocity, and storm surge.

These requirements are the most cost-effective way to reduce the flood risk to new buildings and infrastructure. Structures built to NFIP standards experience 80 percent less damage than structures not built to these standards, and have resulted in \$1.7 billion per year in reduced flood losses.

FEMA provides funding to reduce the risk of flood damage to existing buildings and infrastructure by providing flood-related grants to States, communities, and tribal nations. NFIP funds three programs specifically designed to reduce the fund's loss exposure. The FMA program provides funds on an annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under NFIP. The RFC program provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under NFIP that have had one or more flood claim payments. The SRL program provides funds on an annual basis to reduce the risk of flood damage to residential structures insured under NFIP that are qualified as severe repetitive loss structures.

**Insuring Flood Risk:** The third component of the business strategy is to insure against flood loss. NFIP provides a vehicle through which homeowners can take an active role in protecting their property against flood losses. Property owners who live in communities participating in NFIP can purchase affordable protection to insure against flood losses. Since 1969, NFIP has paid more than \$36 billion dollars in flood insurance claims that have helped hundreds of thousands of families and businesses recover from flood events. Most people who live or own businesses in NFIP-participating communities are eligible to purchase federally backed flood insurance. Even after a property has been

damaged by flood previously, owners and renters are still eligible to purchase flood insurance, provided that the community is participating in NFIP.

Residents who live in Special Flood Hazard Areas are required by law to purchase flood insurance if they have a mortgage from a federally regulated lender. They also must carry the insurance for the life of the mortgage. Residents with property outside high-risk areas can also purchase flood insurance and may be eligible for significant premium rate reductions. Flood Insurance Operations manages the insurance program by supporting various management activities, including underwriting, operations, and claims payments.

The following chart illustrates the steps that can be taken to reduce flood risk:

**B. Budget Activities:**

Funding for the National Flood Insurance Program is derived from offsetting collections two primary sources:

- Flood insurance premiums, which are used to pay claims and flood-related grants, and to provide funding to support the operating and administrative costs associated with maintaining the program. FEMA estimates mandatory premium collections of \$3.38 billion in FY 2013.
- Policy fee income, also paid by flood insurance policy holders, which supports floodplain management, flood mapping, insurance operations, and NFIP management. For FY 2013, FEMA projects fee collections of \$171 million, which reflects no change in funding from FY 2012.

The NFIP appropriation supports the following key program elements:

### **NFIP Management and Flood Insurance Operations**

**NFIP Management** – NFIP management reflects the overall management of the Flood Insurance Program. FEMA applies insurance concepts and methods to reduce the Nation's vulnerability to natural hazards and manages NFIP to provide consumer-oriented flood insurance to accelerate recovery from floods, to mitigate future losses, and to reduce personal and national costs of flood disasters. FEMA administers NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Further, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers.

**Flood Insurance Operations** - Flood Insurance Operations provides for all aspects of managing the insurance program including: the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and, oversight of insurance companies that write flood insurance policies and adjust claims.

### **Floodplain Management and Flood Mapping**

**Flood Hazard Mapping and Risk Analysis** - The Risk MAP Program is a multi-year mapping effort intended to meet the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs over a longer time horizon, as funding is available. This integrated flood risk management approach weaves county-level flood hazard data developed in support of NFIP into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. Throughout the Risk MAP process, FEMA collaborates with communities to help them understand and take actions to manage their risks.

**Floodplain Management** - NFIP plays a critical role in encouraging communities to adopt and enforce floodplain management regulations. Communities are informed and educated about the benefits of implementing broader floodplain management programs aimed at reducing risk to new or planned buildings and infrastructure. By law, FEMA can provide flood insurance only to those States or communities that adopt and vigorously enforce floodplain management regulations that meet or exceed minimum NFIP requirements. NFIP works with communities to incorporate these requirements into their zoning codes, subdivision ordinances, and/or building codes. In some cases, communities receive assistance with efforts to adopt special purpose floodplain management ordinances.

### **National Flood Insurance Fund (Mandatory)**

The National Flood Insurance Act of 1968 (42 U.S.C. § 4001 et seq.), as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued only in communities that participate in NFIP, and that enact and enforce appropriate floodplain management measures. Federally regulated funding institutions cannot provide loans for properties in nonparticipating communities with an identified flood hazard.

## **Flood-Related Grants**

NFIF supports flood hazard reduction efforts facilitated through its flood-related grants and assistance program: FMA, RFC, and SRL. These programs reduce the risk of flood damage to existing buildings and infrastructure by providing grants to States, communities, and tribal nations. FMA grants provide funds for activities that decrease or eliminate risk of flood damage to structures insured under NFIP. RFC grants fund activities that decrease the long-term risk of flood damage to structures with one or more claims through the NFIP. SRL grants fund activities that decrease the long-term risk of flood damage to residential structures insured under NFIP that have experienced losses from previous flood damage.

### **C. Budget Request Summary:**

FEMA requests budget authority from mandatory premium collections of \$3.38 billion and \$171 million from Federal Policy Fee income in FY 2013. The increase is due to additional revenue collections from estimated policies in force increases and flood policy rate increases. FEMA estimates that the policies in force net growth will be less than originally anticipated in a time of economic stress. Original estimates for FY 2012 and FY 2013 was one-percent net growth (generates approximately \$4 million in net fee revenue). The FY 2013 estimate has been revised downward to one-half of one-percent net growth (generates approximately \$2 million in net fee revenue). For FY 2013, FEMA projects fee collections of \$171.0 million, which reflects no change in funding from FY 2012. Premium collections will be used to pay NFIP claims in addition to operating expenses. These funds also will support the flood-related grants: FMA, RFC, and SRL programs. However, unobligated balances will be the primary source of funding for the Severe Repetitive Loss program in FYs 2012 and 2013.

Total Change 2012 to 2013	-	-	-

For FY 2013, FEMA requests \$149 million from Federal policy fee revenue to support salaries and operating costs for ongoing floodplain management and flood mapping efforts.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Floodplain Management:**

The Floodplain Management Branch oversees programs that are designed to reduce risk through land use and building code regulations. Floodplain management activities are authorized under the National Flood Insurance Act, as amended. Through these programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Structures built to NFIP standards experience 80 percent less damage than structures not built to these standards.

FEMA and States partner in the Community Assistance Program-State Support Services Element (CAP-SSSE) program to provide a means to ensure that communities participating in NFIP are achieving the flood loss reduction goals of the NFIP through a state grant mechanism. CAP-SSSE funds States to provide significant technical assistance to NFIP communities and to evaluate community performance in implementing NFIP floodplain management activities with the additional goal of building State and community floodplain management expertise and capability. The grant is a product-oriented program directly related to the flood loss reduction objectives of NFIP.

The \$1.7 billion losses-avoided number is based on a study that was conducted in 2000. The losses-avoided study estimated that minimum NFIP floodplain management standards resulted in approximately \$1 billion in annual flood losses avoided. Subsequent to 2000, FIMA has extrapolated

the \$1 billion losses avoided every year based on a yearly estimation of new construction starts. FIMA did not increase the number of new construction starts in FY 2013 based on the severe nationwide slowdown in new construction starts. In FY 2011, FIMA has funded a new losses-avoided study to validate/improve on the methodology. The study should be completed by the end of FY 2012.

NFIF supports the salaries and expenses of program management and implementation staff at FEMA's Headquarters and 10 regional offices that administer floodplain management programs. The responsibilities of these offices include reducing flood risk through floodplain management and flood hazard reduction efforts, providing technical assistance to communities participating in NFIP, and administration of the CAP-SSSE grant program. The salaries and expenses funding allows program staff: to deliver technical assistance to NFIP participating communities; to strengthen local flood loss reduction programs through onsite visits; and, to provide funding for the necessary supplies and equipment, including computer equipment and other needed resources, to meet the mission of the program.

#### **Flood Hazard Mapping and Risk Analysis:**

The Flood Hazard Mapping and Risk Analysis Program addresses flood hazard data update needs and preserves the successful Flood Map Modernization investment. The requested FY 2013 funding will allow FEMA to continue implementing a multi-year mapping effort that meets the FEMA statutory requirement to review the flood hazards maps on a five-year cycle and address flood hazard data update needs over a longer time horizon, as funding is available. With FY 2013 funding, FEMA will continue Risk MAP as outlined in the Risk MAP Multi-Year Plan. The plan articulates a strategy for how FEMA delivers information necessary for flood risk reduction and sustainable community development. This integrated flood risk management approach weaves county-level flood hazard data developed in support of the NFIP into watershed-based risk assessments that serve as the foundation for local Hazard Mitigation Plans and targeted risk communication activities. FEMA will focus the FY 2013 investment on addressing flood hazard data update needs for coastal and riverine flood hazard areas, and expanding and improving utility and accessibility of the flood hazard and flood risk data.

FEMA's Risk MAP activities are funded from two primary sources of funds – the Flood Hazard Mapping and Risk Analysis Fund and the NFIF. Both sources of funding are critical to the development and implementation of new flood maps in communities across the Nation. The NFIF funding is the core funding for the program and supports all aspects of the program. The Flood Hazard Mapping and Risk Analysis Program funding supports map production and technical services.

Risk MAP measures to track progress towards this outcome are:

- 80 percent of the Nation's flood hazards data is current – the flood hazard data are new, have been updated, or deemed still valid.
- Local officials are aware of risks from natural hazards.
- Communities take action to reduce risk.

The detailed production accomplishments for Risk MAP are described in the justification for the Flood Hazard Mapping and Risk Analysis Program appropriation.

**PPA: National Flood Insurance Fund - Mandatory**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actuals</b>	-	-	<b>1,351,627</b>
<b>2012 Enacted</b>	-	-	<b>3,043,000</b>
<b>2013 Current Services</b>	-	-	<b>3,043,000</b>
2013 Program Change	-	-	217,000
<b>2013 Total Request</b>	-	-	<b>3,260,000</b>
Total Change 2012 to 2013	-	-	217,000

FEMA requests \$3.26 billion in FY 2013 for this activity, a \$217,000 increase from the FY 2012 anticipated premium revenue. Funding will provide for the payment of flood claims and operating costs of the program including Write Your Own (WYO) expenses and commissions and interest expenses.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**NFIP Management** is the overall management and oversight of the NFIP operations including the selling and servicing of policies provided by the NFIP WYO partners. FEMA and its partners apply insurance industry concepts and methods to provide consumer-oriented flood insurance to accelerate recovery from floods. FEMA administers the NFIP so that insurance and floodplain management policies and operations are mutually reinforcing. Furthermore, FEMA works to increase the NFIP policy base so that more people are indemnified by insurance for future flood losses, facilitating their recovery, rebuilding communities, and reducing costs to taxpayers. Activities in this category include selling and servicing flood insurance policies, claims, and establishing appropriate premium rates.

**NFIP Operation Expenses** - FEMA provides for management and oversight of the insurance component of NFIP. This includes the development and oversight of insurance coverage policy and regulations; analysis and evaluation of insurance risks and claims data used to determine premium rates; and, oversight of insurance companies that write flood insurance policies and adjust claims. It also includes crosscutting activities such as the Community Rating System (CRS) program and NFIP operations in a post-disaster environment. Under the CRS, flood insurance premium rates are adjusted to reflect the reduced flood risk resulting from community activities that meet CRS goals, including reduction of flood losses, accurate insurance rating, and promotion of flood insurance awareness.

Participating communities are rated by Class from 1 to 10, with Class 1 communities receiving the greatest premium rate reductions. Nonparticipating communities are rated as Class 10. Credits can be applied toward a community's CRS classification for various activities under the following floodplain management headings: Public Information, Mapping Regulations, Flood Damage Reduction, and Flood Preparedness. To support post-disaster operations, resources are provided: 1) to equip the mitigation disaster workforce with standards, training, and job aides to consistently inform disaster applicants about the NFIP in a post-disaster environment; and, 2) to effectively integrate NFIP into disaster operations, national disaster policy analysis, and crosscutting program and administrative issues.

Flood Insurance Operations activities include:

- Actuarial management to analyze insurance risks, claims data, and financial models in order to evaluate and communicate all aspects of the financial solvency of the program and to set the appropriate premium rates.
- Operations management for more than 5.6 million NFIP flood policies with more than \$1.2 trillion of insurance in force, to include issuance, renewal, claims, and resolution of claims appeals.
- Underwriting management to set policy and develop regulations regarding insurance coverage eligibility and the classification of risks.
- Claims management to set policy and develop regulations regarding the adjustment and payment of claims.
- Management of the private insurance companies that write flood insurance policies and adjust claims for the NFIP, including conducting periodic operational reviews.
- Education, training, and technical assistance for private insurance company agents and adjustors.
- Management of the vendors that supply services to NFIP, such as the Bureau and Statistical Agent and the Direct Servicing Agent.
- Management of flood insurance marketing and public communications, including advertising, community outreach programs, and publicity.
- Partnering with stakeholders in the private sector and other government agencies, including lenders who require the purchase of flood insurance for certain loans.

2013 Program Change	-	-	60,000
<b>2013 Total Request</b>	<b>29</b>	<b>27</b>	<b>120,000</b>
Total Change 2012 to 2013	-	-	60,000

FEMA requests \$120 million in FY 2013 for this activity, a \$60 million increase from the FY 2012 anticipated premium revenue. Funding will provide for the payment of flood-related grants.

A component of the business strategy is to reduce the risk associated with flood events through floodplain management as well as through flood-related grants and assistance such as FMA, RFC, and SRL.

FEMA provides funding to reduce the risk of flood damage to existing buildings and infrastructure by providing flood-related grants to States, communities, and tribal nations. The FMA program provides funds on an annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under the NFIP. The RFC program provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under NFIP that have had one or more flood claim payments. The SRL program provides funds on an annual basis to reduce the risk of flood damage to residential structures insured under NFIP that are qualified as severe repetitive loss structures.

FEMA continues efforts to unify and align the FMA, RFC, and SRL programs wherever possible to improve efficiency and ease of use for our State and local partners. In recent years, program application periods were synchronized, program guidance was unified, and applications submitted to programs without available funding were considered for funding under programs with available funds. Legislation amending the National Flood Insurance Act that passed the House of Representatives would combine these three programs into a single program. If such authorization were signed into law, the new law would further improve FEMA's efficient delivery of flood-related grants to States and

local communities, thereby reducing future claims to NFIP. Without further action by the legislature, FEMA will continue to advance efforts to align these programs to the extent practicable.

At the end of FY 2011, FEMA had approximately \$33 million in SRL carryover funds that were not allocated to specific projects. The FY 2012 SRL appropriation was \$10 million dollars. FEMA received \$65 million in grant application requests, therefore all funds that are not allocated will be dedicated to current year projects.

In FY 2013, FEMA proposes \$120 million for the flood-related grants. Unlike prior fiscal years where each grant program was allocated a specific amount, in FY 2013 FEMA requests that the specific amount utilized in each program be determined by the Administrator in consideration of Agency policy and best interest of the NFIF.

In FY 2005, under FEMA's direction, the Multi-hazard Mitigation Council (MMC) conducted a study<sup>1</sup> to assess the cost-effectiveness of natural hazard mitigation at the program level. The study showed that on average, a dollar spent by FEMA on hazard mitigation provides the Nation about four dollars in future benefits. In addition, FEMA grants to mitigate the effects of floods, hurricanes, tornadoes, and earthquakes between 1993 and 2003 are expected to save more than 220 lives and prevent almost 4,700 injuries over approximately 50 years (MMC, 2005). However, the study was based on probabilistic hazard events rather than actual events. Programs considered in that report included the FMA program funded by NFIF, the Hazard Mitigation Grant Program funded by the Disaster Relief Fund, and Project Impact, which is no longer appropriated but was the precursor to the Pre-disaster Mitigation program.

## **CURRENT SERVICES PROGRAM DESCRIPTION:**

### **Flood-Related Grant Program – Severe Repetitive Loss**

The SRL Program is a mandatory program which provides funding to reduce or eliminate the long-term risk of flood damage to severe repetitive loss residential structures insured under NFIP. Section 1361A of the National Flood Insurance Act (42 U.S.C. § 4102a) defines an SRL property as a residential property that is covered under an NFIP flood insurance policy and (a) that has at least four NFIP claim payments (including building and contents) of more than \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) for which at least two separate claims payments (building payments only) have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building.

For both (a) and (b) above, at least two of the referenced claims must have occurred within any 10-year period, and must be greater than 10 days apart. There are more than 10,000 properties meeting the legislative definition of severe repetitive loss. The long-term goal of the SRL Mitigation Program is to reduce or eliminate claims under NFIP through project activities that will result in the greatest savings to NFIF in the shortest period of time. FEMA may contribute up to 75 percent in Federal funding for the amount approved under the grant award to implement approved activities. Any state or federally recognized Indian tribal government that has taken actions to reduce the number of repetitive loss properties, including severe repetitive loss properties, and that has a FEMA-approved State Mitigation

---

<sup>1</sup> Natural Hazard Mitigation Saves: An Independent Study to Assess the Future Savings from Mitigation Activities; Multi-hazard Mitigation Council of the National Institute of Building Sciences, 2005.

Plan that specifies how it has reduced and how it intends to reduce the number of such repetitive loss properties, is eligible to receive an increased Federal cost share of up to 90 percent Federal funding for SRL grants. Unlike the other flood mitigation grant programs, SRL focuses on the most severe repetitive loss residential structures.

#### **Flood-Related Grant Program - Repetitive Flood Claims**

The RFC grant program was established by the Flood Insurance Reform Act of 2004 (P.L. 108-264) as a mandatory program that provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under NFIP that have had one or more flood claim payments. The long-term goal of the RFC program is to reduce or eliminate claims under NFIP through mitigation activities that are in the best interest of the NFIP. RFC grants are awarded on a national basis without reference to State allocations, quotas, or other formula-based allocations of funds. Funding is restricted to a maximum of \$1 million for minor localized flood reduction projects. RFC grants are not limited to residential flood mitigation projects.

#### **Flood-Related Grant Program - Flood Mitigation Assistance**

The FMA grant program is a mandatory program which provides funding to States, federally recognized Indian tribal governments, and communities so that cost-effective measures can be taken to reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insured under NFIP.

The total amount of FMA grant funds provided during any five-year period will not exceed \$10 million to any State agency or \$3.3 million to any community. The total amount of FMA grant funds provided to any State, including all communities located in the State, will not exceed \$20 million during any five-year period. However, the Administrator may waive these limits for any five-year period when a major disaster or emergency is declared pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act as a result of flood conditions.

FMA is an allocation-based program, in which FEMA determines and distributes annual program allocations to all 56 States and territories. FMA allocations are based on a number of factors, which include number and dollar amount of NFIP-insured policies, as well as the number and dollar amount of repetitive loss properties per State or territory. During the 2010 FMA application period, FEMA assisted States and territories in developing applications for consideration and submittal. This resulted in more applications being submitted for consideration than the amount of funding available. The applications that were found eligible were in part funded using 2011 appropriated funds.

### Flood Mitigation and Flood Insurance Operations Mission Statement

Resources under this activity support the salaries and expenses of FTE managing the National Flood Insurance Program ( NFIP) and flood mitigation programs. In FY 2013, FEMA will continue to support the NFIP and to provide operational and administrative support for the Community Rating System and will enhance oversight of the program.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	8,151	8,794	8,846	52
11.3 Other than full-time permanent	191	191	191	-
11.5 Other personnel compensation	302	207	207	-
12.1 Benefits	2,277	4,758	4,758	-
<b>Total, Salaries &amp; Benefits</b>	<b>10,921</b>	<b>13,950</b>	<b>14,002</b>	<b>52</b>

Salaries and Benefits support 108 full-time permanent positions in FY 2013. FY 2013 includes a 0.5% increase for COLA.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
23.1 GSA rent	\$1,125	\$1,099	\$1,192	\$93

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. FY 2013 reflects the inflationary increases in lease costs.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
25.2 Other services	0	\$6,058	\$5,913	-\$145

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. An overall decrease of \$145,000 is due to efficiencies.

**Floodplain Management and Flood Mapping Mission Statement**

Through Floodplain Management programs, FEMA encourages communities and their citizens to take informed and effective mitigation actions before a flood in order to reduce the long-term risk to people and property. Through the delivery of mitigation programs, FEMA leads a national effort to: identify and improve the understanding of communities' hazards and their risks; develop and improve techniques and planning processes which mitigate those risks; provide an environment at the State and local levels that is conducive to applying those techniques and processes; provide financial and technical assistance to facilitate application of those techniques and processes; and support development of incentives and disincentives which make application of those techniques and processes a social, political, and/or economic priority.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	19,705	19,800	19,897	97

**National Flood Insurance Fund - Mandatory Mission Statement**

The National Flood Insurance Act of 1968, as amended, authorizes the Federal Government to provide flood insurance on a national basis. Flood insurance may be sold or continued in force only in communities that enact and enforce appropriate floodplain management measures. Communities must participate in the program within 1 year of the time they are identified as flood-prone in order to be eligible for flood insurance and some forms of Federal financial assistance for acquisition or construction purposes. In addition, Federally regulated funding institutions cannot provide loans to nonparticipating communities with an identified flood hazard. More than 20,000 communities in all States and territories participate in the NFIP. Structures built to NFIP criteria experience 80 percent less damage through reduced frequency and severity of losses. The flood mitigation program requirements are estimated to save in excess of \$1 billion per year in flood losses avoided. The NFIP limits the impact of disaster by encouraging property owners and others to manage their risk through flood insurance and other hazard insurance mechanisms.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>25.2 Other services</b>	\$498,567	\$3,369,764	\$1,628,539	-\$1,741,225

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. FY 2013 includes a decrease of \$1,741,225,000 for nonrecurring costs.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>42.0 Insurance Claims and Indemnity</b>	\$789,203	\$1,442,723	\$1,401,715	-\$41,008

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act.

**Flood-Related Grants Mission Statement**

A component of the NFIP business strategy is to reduce the risk associated with flood events through floodplain management as well as through flood-related grants and assistance such as Flood Mitigation Assistance (FMA), Repetitive Flood Claims (RFC), and Severe Repetitive Loss (SRL). FEMA provides funding to reduce the risk of flood damage to existing buildings and infrastructure by providing flood related grants to States, communities, and tribal nations. The FMA program provides funds on an annual basis so that measures can be taken to reduce or eliminate risk of flood damage to buildings insured under the NFIP. The RFC program provides funding to reduce or eliminate the long-term risk of flood damage to structures insured under the NFIP that have had one or more flood claim payments. The SRL program provides funds on an annual basis to reduce the risk of flood damage to residential structures insured under the NFIP that are qualified as severe repetitive loss structures.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	1,480	1,786	1,796	10
11.5 Other personnel compensation	23	26	26	-
12.1 Benefits	445	834	834	-
<b>Total, Salaries &amp; Benefits</b>	<b>1,948</b>	<b>2,646</b>	<b>2,656</b>	<b>10</b>

Salaries and Benefits support 29 full time permanent positions. FY 2013 includes an increase of 0.5% for COLA.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>23.1 GSA rent</b>	<b>\$248</b>	<b>\$240</b>	<b>\$238</b>	<b>-\$2</b>

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. FY 2013 includes a decrease of \$2,000 for realized savings in rent.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>25.2 Other services</b>	<b>\$14,263</b>	<b>\$41,197</b>	<b>\$12,190</b>	<b>-\$29,007</b>

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. FY 2013 includes a decrease of \$29,007,000 for nonrecurring costs and efficiencies.

<b>BUDGET REQUEST AND SUPPORTING INFORMATION</b>
--

**Federal Emergency Management Agency  
Disaster Assistance Direct Loan Program**

**I. Appropriation Overview**

**A. Mission Statement for Salaries and Expenses:**

The Disaster Assistance Direct Loan Program account provides loan authority and subsidy budget authority for disaster assistance direct loans.

**B. Budget Activities:**

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) authorizes two types of direct loans: (1) section 319 (State Share) loans to States for the non-Federal portion of cost-shared Stafford Act programs, and (2) section 417 (Community Disaster) loans to local governments that incurred substantial losses of tax and other revenues as a result of a major disaster and require financial assistance in order to perform governmental functions.

**C. Budget Request Summary:**

FEMA requests direct loan limitation of up to \$25 million.

## II. Summary of FY 2013 Budget Estimates by Program/Project/Activity (PPA)

FEMA requests \$25 million in loan authority for FY 2013.

## **CURRENT SERVICES PROGRAM DESCRIPTION:**

Under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), FEMA has authority to make two types of direct loans:

State Share Loans: Under section 319 of the Stafford Act, FEMA may lend or advance to a State or an eligible applicant the portion of assistance for which the applicant is responsible under cost-sharing provisions of the Stafford Act. To be deemed eligible for a loan, the governor of the affected State must demonstrate, where damage is overwhelming and severe, that the State is unable to assume immediately its financial responsibility to meet the cost-share because (1) the State is responding to concurrent, multiple disasters/emergencies or has incurred extraordinary costs as a result of a particular disaster or emergency; and (2) the damages caused by such disaster or disasters are so overwhelming and severe it is not possible for the State to assume immediately its financial responsibility. \$217 million in State Share loans has been approved, with the last loan issued in 1996. There are no outstanding State Share loans.

Community Disaster Loans (CDL): Under section 417 of the Stafford Act, loans may be authorized to local governments that have suffered a substantial loss of tax and other revenues as a result of a major disaster, and have demonstrated a need for financial assistance in order to perform their municipal operating functions. The loans, not to exceed 25 percent of the annual operating budget of that local government for the fiscal year in which the major disaster occurred, or 50 percent of the annual operating budget for the fiscal year in which the major disaster occurred if the loss of tax and other revenues is at least 75 percent of the annual operating budget for the fiscal year in which the major disaster occurs, are made at the current Department of Treasury rate for a term of five years and may not exceed \$5 million. All or part of such loans may be cancelled to the extent that revenues of the local government during the full three post-disaster fiscal years are insufficient to meet its operating budget as the result of the disaster. A local government is not eligible for further CDLs during any period in which the jurisdiction is in arrears with respect to required repayment of an existing loan. \$300 million in traditional CDLs has been approved, with the last loan issued in 2009. No CDLs were issued in FY 2011.

Special Community Disaster Loans (SCDL): The Community Disaster Loan Act of 2005 (P.L. 109-88) authorized FEMA to transfer \$750 million from the Disaster Relief Fund to provide up to \$1 billion in loan authority to assist communities impacted by Hurricanes Katrina and Rita. For these SCDLs, three elements were added to the traditional program under Section 417: (1) it removed the \$5 million limit on individual loans, (2) the loans were restricted “to assist local governments in providing essential services,” and 3) the loan cancellation provision of section 417(c)(1) of the Stafford Act was inapplicable.

The Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006 (P.L. 109-234) appropriated an additional \$279,800,000 to support \$371,733,000 in SCDLs. However, certain eligibility criteria were different from those in the 2005 Act: (1) the maximum loan amount was increased to 50 percent of the applicant’s operating budget the fiscal year of the disaster, (2) the loan analysis could only consider “tax revenue” loss and not “other

revenues” as allowed for in the 2005 Act, and (3) applicants were required to demonstrate actual loss in tax revenues of 25 percent or greater. The loan cancellation provision continued to be inapplicable.

The U.S. Troop Readiness, Veterans’ Care, Katrina Recovery, and Iraq Accountability Appropriations Act, 2007 (P.L. 110-28) removed the loan cancellation prohibitions contained in the 2005 and 2006 Acts. This statutory change now gives FEMA discretionary authority, limited by the language in section 417(c)(1) of the Stafford Act, to cancel SCDLs issued pursuant to either the 2005 or 2006 Acts.

From October 2005 to September 2006, FEMA approved 152 SCDLs totaling \$1,270,501,241 to 109 eligible applicants in Mississippi and Louisiana.

In accordance with the Federal Credit Reform Act of 1990, three accounts are used to record cash flow data for direct loans:

- Disaster Assistance Direct Loan Program Account. This is the budget account into which an appropriation is made to cover the subsidy costs of a direct loan, and from which such costs are disbursed into the financing account.
- Disaster Assistance Loan Liquidating Account. This budget account records all cash flows to and from FEMA for pre-1992 direct loans made under the State Share and CDL programs. There is no longer any activity in this account.

Disaster Assistance Direct Loan Financing Account. The loan financing account is a nonbudgetary account that records all cash flows to and from FEMA resulting from CDL and State Share direct loans obligated in 1992 and beyond. This account holds balances, receives the subsidy cost payment from the program account, and includes all other cash flows resulting from post-1991 direct loans. The funds in this account are a means of financing and are not included in the budget totals. Loans are obligated from this account, using the subsidy budget authority from the Disaster Assistance Direct Loan Program Account and borrowing authority from the Department of the Treasury.

## IV. Program Justification Changes

**Department of Homeland Security  
Federal Emergency Management Agency  
Disaster Assistance Direct Loan Program  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Elimination of the State Share Subsidy  
PPA: Direct Loan Subsidy  
Program Decrease: Positions 0, FTE 0, Dollars \$(295)

Funding Profile

	FY 2011 Actuals			FY 2012 Enacted			FY 2013 Request		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	295
Program Increase							-	-	(295)
<b>Total Request</b>	-	-	<b>294</b>	-	-	<b>295</b>	-	-	-

**Description of Item**

FEMA requests direct loan limitation of up to \$25 million.

**Justification**

Under 44 CFR 206.45, at the request of the Governor, FEMA is authorized to “lend or advance to a State, either for its own use or for the use of public or private nonprofit applicants for disaster assistance under the Stafford Act, the portion of assistance for which the State or other disaster assistance applicant is responsible under the cost-sharing provisions of the Stafford Act.”

**Impact on Performance (Relationship of Increase to Strategic Goals)**

There will be no impact on performance as FEMA has not provided a loan from this program since 1996.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

*Subject to section 502 of the Congressional Budget Act of 1974, gross obligations for the principal amount of direct loans shall not exceed \$25,000,000.*

## B. FY 2012 to FY 2013 Budget Change

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Emergency Management Agency U.S. Fire Administration**

### **I. Appropriation Overview**

#### **A. Mission Statement for U.S. Fire Administration:**

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness, and response.

#### **B. Budget Activities:**

The USFA coordinates with other Federal, State, and local emergency service agencies; the private sector; colleges and universities; and other DHS educational consortium participants in fostering a solid foundation for our citizens and stakeholders in prevention, preparedness, and response. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy (NFA); the National Emergency Training Center (NETC); Management, Operations, and Support Services (MOSS); and the National Fire Programs (NFP) Division.

#### **C. Budget Request Summary:**

FEMA requests \$42.520 million, 170 positions, and 159 FTE for FY 2013.

Total Change 2012 to 2013	-	11	(1,518)

FEMA requests \$42.520 million, 170 positions, and 159 FTE for FY 2013.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

- Increase \$738,000 for contractor to PFT conversions
- Increase \$60,000 for pay annualization
- Decrease \$119,000 by eliminating repair and upkeep services for wireless capabilities in student dormitories
- Decrease \$534,000 by reducing facility operations and support services contract
- Decrease \$30,000 of staff travel
- Decrease \$192,000 by reducing National Fire Incident Report System’s (NFIRS) technical support contract
- Decrease \$410,000 by reducing prevention activities, discontinue Safe Kids and Volunteer Fire & Rescue Initiatives
- Decrease \$125,000 by reducing wildfire initiatives, discontinue Wildland/Urban Interface-Fire Adapted Communities and reduce support to National Wildfire Coordinating Group
- Decrease \$50,000 by discontinuing support to Home Fire Sprinkler Coalition
- Decrease \$300,000 by eliminating 18 NFA course deliveries
- Decrease \$275,000 by reducing TRADE and State Fire Training Grant Programs and eliminate Harvard Program
- Decrease \$281,000 by reducing NFA course development efforts

USFA prepares the Nation’s first responders through ongoing and when necessary, expedited training, regarding how to evaluate and minimize community risk, improve protection to critical infrastructure, and be better prepared to react to all-hazard and terrorism emergencies. The USFA coordinates with other Federal, State, and local emergency service agencies; the private sector; colleges and universities; and other DHS educational consortium participants in fostering a solid foundation for our citizens and stakeholders in prevention, preparedness, and response. In fulfilling its mission, USFA utilizes the assets of the NFA, NETC Facilities and Support Services, and the National Fire Programs Division.

**National Fire Academy**

The NFA promotes the professional development of the fire and the emergency response community and its allied professionals. NFA supports State and local training organizations to fulfill their obligation to the career and volunteer fire and emergency services. NFA also develops, delivers, and manages educational and training programs having a national focus that are outside State and local training missions or that exceed State and local capabilities because of cost or audience. The programs are designed to support the DHS and FEMA goals to help State and local response agencies prevent, mitigate, prepare for, and respond to local, regional, and national emergencies.

**NETC Management, Operations, and Support Services Division**

The MOSS Division manages, operates, and maintains the NETC facilities and training resources in the most efficient and effective manner. MOSS provides administrative, operational, and emergency services in support of the program activities and special groups at NETC.

**National Fire Programs Division (NFP)**

The NFP Division manages USFA public education and information efforts. NFP operates the National Fire Data Center for the collection, analysis, publication, dissemination, and marketing of information related to the Nation’s fire problem and USFA programs. NFP also manages USFA research efforts in fire detection, prevention, and suppression; first responder health, safety and effectiveness; and special programs that enhance USFA and partner roles in all-hazard preparedness and response.

### United States Fire Administration Mission Statement

The mission of the United States Fire Administration (USFA) is to provide National leadership to foster a solid foundation for our fire and emergency services stakeholders in prevention, preparedness and response. USFA coordinates with other Federal, State, and local emergency service agencies, the private sector, colleges and universities, and other DHS educational consortium participants. In fulfilling its mission, USFA utilizes the assets of the National Fire Academy, the National Emergency Training Center, Management, Operations and Support Services, and the National Fire Programs Division.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	10,124	11,762	12,309	547
11.3 Other than full-time permanent	51	201	280	79
11.5 Other personnel compensation	102	120	127	7
12.1 Benefits	2,707	3,038	3,203	165
<b>Total, Salaries &amp; Benefits</b>	<b>12,984</b>	<b>15,121</b>	<b>15,919</b>	<b>798</b>

Salaries and Benefits include costs for 133 FTEs. FY 2013 increase of \$60 thousand reflects a payraise of .5% and the balance of funding for the 3 remaining contractor-converted FTE.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	\$256	\$505	\$475	-\$30

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The decrease is achieved by a reduction in staff program travel.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$5,534	\$6,864	\$5,897	-\$967

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The decrease supports the redistribution of funds to Salaries & Benefits for contract conversion to Federal employees and to offset the reduction in funding. The decrease is achieved through discontinuing several activities in the areas of course delivery, prevention, and data analysis.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$6,562	\$1,470	\$1,189	-\$281

Other services include report contract services with non-Federal sources that are not otherwise classified under Object Class 25. The decrease reflects a reduction in course development efforts.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.4 O&M of facilities	\$7,269	\$5,483	\$4,949	-\$534

Operation and maintenance of facilities includes all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The decrease supports the redistribution of funds to Salaries and Benefits for contract conversion to Federal employees and reductions for one-time costs.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.7 Operation and maintenance of equipment</b>	<b>\$2,661</b>	<b>\$6,652</b>	<b>\$6,533</b>	<b>-\$119</b>

Operation & maintenance of equipment

<b>Total Working Capital Fund</b>	<b>475</b>	<b>518</b>	<b>482</b>	<b>-36</b>

## **K. DHS Balanced Workforce Strategy**

In order to establish a high-performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience, and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment, the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2014 budget.

Position Type	FY 2011 Actual		FY 2012 Base		FY 2012 Annualization		FY 2012 Follow-on		FY 2013 Increase		TOTAL FY 2011 – FY 2013 DHS Balanced Workforce Strategy

### **FY 2013 DHS Balanced Workforce Strategy**

- The U.S. Fire Administration requests \$1,939,605 and 41 FTE for the FY 2013 DHS Balanced Workforce Strategy. This amount represents the annual cost to fund the FTE converted during FY 2011 – FY 2012. Of the total FY 2013 requirement, \$1,201,605 funds the 30 FTE annual cost requirement for the positions already filled during FY 2011 – 2012. In FY 2013, an additional \$738,000 will transfer from program resources to payroll to support the additional 11 FTE to be acquired during FY 2013 to complete the DHS Balanced Workforce Strategy.
- Additional analyses will be conducted for contract conversion consideration in FY 2013.

### **Annualization of FY 2012 Base DHS Balanced Workforce Strategy**

- In FY 2012, \$146,352 was redistributed from contract to salaries and benefits for the annualization of two FTE.

### **DHS Balanced Workforce Strategy Follow-On**

- The National Fire Academy (NFA) converted one contract in the amount of \$305,144 and two positions to Federal employees.
  - Implementation Timeline – The contract was converted August 1, 2011. There was no overlap of contractor to Federal employees.
  - All functions are performed by the converted positions.
- The NETC Management, Operations, and Support Services Division (MOSS) converted three phases of one contract in the amount of \$2,500,000 and 49 positions to Federal employees. The amount of funding required in FY 2012 is \$1,008,043 and \$1,668,625 in FY 2013.
  - Implementation Timeline – Phase I of the conversion was completed December 18, 2011. Phases II and III are expected to be completed in the spring of 2012. There was no overlap of contractor to Federal employees.
  - All functions are performed by the converted positions.
- The National Fire Programs Division (NFP) will convert one contract in the amount of \$199,775 and one position to a Federal employee. The amount of funding required in FY 2012 is \$47,210 and \$114,877 in FY 2013.

- Implementation Timeline – The conversion is scheduled for May 2012. No overlap of contractor to Federal employees is expected.
- All functions will be performed by the converted positions.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **U.S. Citizenship & Immigration Services Salaries and Expenses**

### **I. Appropriation Overview**

#### **A. Mission Statement for Salaries and Expenses:**

##### **Mission Statement**

The U.S. Citizenship and Immigration Services (USCIS) will secure America's promise as a nation of immigrants by granting immigration and citizenship benefits, providing accurate and useful information to our customers, promoting an awareness and understanding of citizenship, and ensuring the integrity of the immigration system.

USCIS has established six goals: (1) strengthen the security and integrity of the immigration system, (2) provide effective customer-oriented immigration benefits and information, (3) support immigrants' integration and participation in American civic culture, (4) promote flexible and sound immigration policies and programs, (5) strengthen the infrastructure supporting the USCIS mission, and (6) operate as a high-performance organization that promotes a highly talented workforce and a dynamic work culture.

USCIS is the component of the Department of Homeland Security (DHS) that facilitates legal immigration for people seeking to enter, reside, or work in the United States. USCIS possesses the authority to grant or deny immigration benefits -- approving close to 6 million immigration benefits each year. These immigration benefits range from work authorization documents to asylum and refugee applications, to petitions for immediate relatives to immigrate to the United States.

The Salaries and Expenses account encompasses all of the discretionary funding of USCIS. The most significant program that has been fully funded through this account is E-Verify. E-Verify is an automated system that allows U.S. employers to electronically verify names, dates of birth, and social security numbers, along with immigration information for non-citizens, against Federal databases to ensure the employment eligibility of both citizen and non-citizen new hires.

Starting in Fiscal Year (FY) 2010, funding was enacted to cover a portion of the cost of refugee and asylum operations, an allocated share of the International Operations Division, and the cost of processing Adjustment of Status (I-485) applications for refugees, which are exempt from fees by law. The purpose of the appropriation was to eliminate certain fee surcharges on applications for activities unrelated to the cost of providing services on those applications. These activities were previously funded within the Immigration Examinations Fee Account (IEFA). In FY 2011, USCIS received a \$24.95 million appropriation for this purpose. In addition, Congress approved a \$25 million reprogramming from the FY 2010 appropriation lapsed balance to support this

effort in FY 2011. For FY 2012 and FY 2013, all of the funding for these services is reflected in the IEFA.

**B. Budget Activities:**

The Salaries and Expenses appropriation currently funds activities related to the operation of E-Verify. The budget request includes additional funding for implementation of the Self Check initiative within E-Verify and the operation and enhancement of the Systematic Alien Verification for Entitlements Program. Funding is also requested to continue support of immigrant integration activities started in FY 2009 to facilitate immigrant integration by supporting immigrants on the path to naturalization and by promoting the rights, responsibilities, and importance of U.S. citizenship.

**C. Budget Request Summary:**

USCIS requests 613 positions, 598 full-time equivalent employees, and \$142.974 million for the FY 2013 Salaries and Expenses account. |

Total Change 2012 to 2013	31	24	9,500

U.S. Citizenship & Immigration Services (USCIS) requests \$111.924 million, 419 positions, and 404 full-time equivalent employees for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

E-Verify was established by the *Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA)* and is based on the Employment Eligibility Form (Form I-9). E-Verify is an Internet-based system that enables an employer to determine an employee’s eligibility to work in the United States by verifying information reported on an employee’s Form I-9 against Department of Homeland Security (DHS), Social Security Administration (SSA), and Department of State databases. At the end of 2011, more than 290,000 employers were enrolled in E-Verify. Approximately 17.4 million new hires were processed through E-Verify in Fiscal Year (FY) 2011, and the program continues to grow by approximately 1,000 new employers per week.

E-Verify launched the Self Check service in March of 2011, and gradually made it available to more individuals through a three phased approach, culminating in a nationwide expansion planned for early February of 2012. In addition, USCIS offered this service in Spanish in August of 2011. Future Self Check enhancements are planned for 2012 and 2013.

In FY 2012, Self Check will be enhanced to include Employee Service Pages (ESP) and related functionality. After completing a Self Check query, which checks against the same DHS and SSA databases as E-Verify queries, users can choose to establish an individual ESP with a unique user ID

and password. Through their ESP “accounts,” individuals can: 1) protect against the fraudulent use of their social security number (SSN) by individuals seeking employment with E-Verify employers by locking (“SelfLock”) their SSN, 2) if a record mismatch is identified, the individual, once the record has been corrected, can check the status of their work authorization online without having to run a second Self Check query, and 3) receive reminders of impending employment authorization document expiration. ESPs will require the development of an additional identity assurance step and two factor authentication, and can serve as a platform for providing additional employee-focused services in the future.

U.S. Citizenship & Immigration Services (USCIS) requests \$11.002 million, 6 positions, and 6 full-time equivalent employees for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Office of Citizenship promotes the rights, responsibilities, and importance of citizenship and provides integration tools and resources for immigrants, organizations, and other stakeholders. Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our Nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law. The Immigrant Integration program supports immigrant civic integration through the naturalization preparation process. The program funds competitive grants with the goal of expanding the availability of high-quality citizenship preparation programs for permanent residents in communities nationwide, to include citizenship instruction and naturalization application services. The Office of Citizenship:

- Provides educational products and resources that promote English-language learning and education on the rights and responsibilities of citizenship to prepare immigrants for naturalization;
- Supports community-based capacity to prepare immigrants for citizenship and civic integration through competitive grants and technical assistance;
- Improves access to information on citizenship education opportunities and resources; and

- Promotes citizenship-focused public education and awareness efforts designed to steer permanent residents, educators, and immigrant-serving organizations to the online USCIS Citizenship Resource Center, which has seen a 36-percent increase in visitors from May 2011 to October 2011. |

[U.S. Citizenship & Immigration Services (USCIS) requests \$20.048 million, 186 positions, and 186 full-time equivalent employees for this activity. The appropriated funding request is in addition to the collections from the Systematic Alien Verification for Entitlements (SAVE) Program query charges, which will continue to be deposited in the Immigration Examinations Fee Account and be used to support the SAVE Program. The collections from the query charges, which are estimated to be approximately \$6 million on an annual basis, are reflected in Schedule D of the budget justification for the Immigration Examinations Fee Account. ]

**CURRENT SERVICES PROGRAM DESCRIPTION:**

[The SAVE Program helps State, local, and Federal agencies determine a non-citizen's eligibility for public benefits by checking their immigration status against U.S. Department of Homeland Security immigration databases. As of January 2012, the SAVE Program has a total of 987 registered agencies. This includes 273 state agencies, 47 Departments of Motor Vehicles, 640 local agencies, and 27 Federal agencies. SAVE's customer base grew by 53 percent in FY 2011. During FY 2011, more than 12 million queries were run through SAVE. For FY 2012, through January 3, 2012, 2.8 million SAVE queries were run through the system. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles. Every state and the District of Columbia are represented in SAVE's customer base. ]

## IV. Program Justification Changes

**Department of Homeland Security  
Citizenship & Immigration Services  
Salaries and Expenses:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Self Check  
PPA: E-Verify  
Program Increase: Positions 31, FTE 16, Dollars \$8,598,000

### Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	-
Program Increase							31	16	8,598
<b>Total Request</b>	-	-	-	-	-	-	<b>31</b>	<b>16</b>	<b>8,598</b>

### Description of Item

U.S. Citizenship & Immigration Services (USCIS) requests 31 positions, 16 full-time equivalent employees, and \$8.598 million for this program enhancement.

### Justification

E-Verify Self Check is an online application that is available to millions of U.S. citizens and immigrants. The Self Check service enables workers to check their work authorization status prior to being hired by their employer and gives workers information on how to correct or update their records if any inconsistencies are found. Self Check strengthens the E-Verify system and helps improve the integrity of government records by empowering individuals with information about their work eligibility status. Self Check is currently available to U.S. workers over the age of 16 who maintain an address in one of 21 states (Arizona, California, Colorado, Idaho, Louisiana, Maine, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Jersey, New York, Ohio, South Carolina, Texas, Utah, Virginia, or Washington.) plus Washington, D.C. The Secretary of Homeland Security and the Director of USCIS have mandated a nationwide roll-out to users in all 50 states by March 2012. USCIS launched the Self Check service to a limited audience on March 21, 2011 and expanded to an additional 16 states on August 12, 2011. Self Check is also now available in Spanish with additional enhancements to follow. USCIS is requesting an increase of \$8.6 million for FY 2013 to sustain the increased operations of Self Check in FY 2013.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

Accelerated deployment of the Self Check initiative augments the security and integrity of our immigration system by giving employees the capability to verify their own employment eligibility outside of the hiring process. Employees can then proactively resolve record mismatches prior to having an employer run an E-Verify immigration employment eligibility check.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

*For necessary expenses for citizenship and immigration services, \$142,974,000, of which \$131,972,000 is for immigration verification programs, including \$111,924,000 for the E-Verify Program, as described in section 403(a) of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1324a note), to assist United States employers with maintaining a legal workforce and \$20,048,000 for the SAVE Program to assist Federal, State and local benefit agencies needing immigration verification services: Provided, That, notwithstanding any other provision of law, funds otherwise made available to United States Citizenship and Immigration Services may be used to acquire, operate, equip, and dispose of up to 5 vehicles, for replacement only, for areas where the Administrator of General Services does not provide vehicles for lease: Provided further, That the Director of United States Citizenship and Immigration Services may authorize employees who are assigned to those areas to use such vehicles to travel between the employees' residences and places of employment: Provided further, That none of the funds made available in this Act for grants for immigrant integration may be used to provide services to aliens who have not been lawfully admitted for permanent residence: Provided further, That nothing in this Act or any other provision of law shall be construed to limit the authority of United States Citizenship and Immigration Services to recover SAVE query costs from SAVE Program users. (Department of Homeland Security Appropriations Act, 2012.)*

**Immigrant Integration & Citizenship Mission Statement**

The Office of Citizenship promotes the rights and responsibilities of citizenship and provides integration tools and resources for immigrants, organizations, and other stakeholders. Our continued success as a nation of immigrants depends on the ability of lawful newcomers to permanently settle in communities and enjoy the rights and freedoms that define our Nation. Naturalization is a critical milestone for immigrants in achieving full participation, gaining a sense of belonging, and receiving equality under the law. American society must remain open and welcoming to immigrants and provide essential tools and support for them to gain a sense of belonging and ownership in the future of our country. This program supports these goals.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	543	-	545	545
11.5 Other personnel compensation	11	-	12	12
12.1 Benefits	180	-	182	182
<b>Total, Salaries &amp; Benefits</b>	<b>734</b>	<b>-</b>	<b>739</b>	<b>739</b>

Salaries and Benefits provides for cost associated with 6 full-time equivalent employees. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$739,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	\$17	0	\$25	\$25

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$ 25,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.3 Communications, utilities, and misc. charges	\$2	0	\$2	\$2

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$2,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$1,113	0	\$978	\$978

Advisory and assistance services include services acquired by contract from non-Federal sources (that is, the private sector, foreign governments, State and local governments, Tribes, etc.) as well as from other units within the Federal Government. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$978,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$3	0	\$3	\$3

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$3,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$116	0	\$50	\$50

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$50,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	\$6	0	\$5	\$5

Supplies and material are defined as commodities that are (a) ordinarily consumed or expended within 1 year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three listed criteria, at the option of the agency. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$5,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>41.0 Grants/Subsidies/Contributions</b>	\$9,000	0	\$9,200	\$9,200

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. For FY 2012, Immigrant Integration and Citizenship was funded through the Immigration Examinations Fee Account. The FY 2013 request reflects an increase of \$9.2 million.

**Real ID Act Implementation Mission Statement**

The REAL ID Act requires that a State must verify the information on source documents before it can issue a REAL ID-compliant driver's license or identification card to applicants. The funding provided through USCIS is aimed specifically at the development and deployment of enhanced network communications and data verification capabilities that will enable States to meet the verification requirements of the REAL ID Act and Final Rule. The integrity of the immigration system is facilitated if State efforts through REAL ID discourage the use of false immigration information to unlawfully obtain benefits.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **U.S. Citizenship & Immigration Services Immigration Examinations Fee Account**

#### **I. Appropriation Overview**

##### **A. Mission Statement for the Immigration Examinations Fee Account:**

The Immigration Examinations Fee Account (IEFA) is the primary funding source for the U.S. Citizenship and Immigration Services (USCIS) and comprised approximately 94 percent of the total funding available to USCIS in Fiscal Year (FY) 2011. Fees collected from the filing of immigration benefit applications are deposited into the IEFA and used to fund the cost of processing immigration benefit applications and associated support benefits and the cost of similar benefits provided to other immigrants where fees are waived.

##### **B. Budget Activities:**

###### Adjudication Services

Through a network of approximately 235 domestic and foreign offices, USCIS is responsible for the timely and quality processing of:

- ***Family-based petitions*** -- facilitating the process for close relatives of U.S. citizens and permanent residents to immigrate, gain permanent residency, work, etc.
- ***Employment-based petitions*** -- facilitating the process for current and prospective employees to immigrate or work in the United States temporarily
- ***Asylum and Refugee petitions*** -- adjudicating asylum applications and processing refugees
- ***Naturalization petitions*** -- processing applications of those who wish to become U.S. citizens

Secure identity cards and travel document booklets are personalized and provided to recipients of certain immigration benefits as evidence of immigration status and for use in proving eligibility to work and live in the United States and/or to re-enter the United States after travel abroad. Premium processing revenues collected into this account fund the Transformation Program, which is a multi-year effort to modernize USCIS business processes and supporting systems.

###### Information and Customer Services

Through multiple channels of available assistance, including the USCIS website, toll-free call centers (National Customer Service Call Centers), and face-to-face appointments, these services make it easier for customers to get the information they need, when they need it. On an annual basis, USCIS:

- Serves more than 11.8 million customers via the National Customer Service Call Centers
- Serves customers through information counters at local and international offices

### Administration

The Administration activity supports a variety of headquarters offices including the Office of the Director, Administration, Chief Financial Officer, Chief Counsel, Contracting, Communications, Legislative Affairs, Policy and Strategy, Equal Opportunity and Inclusion, Chief Human Capital Officer, and Security and Integrity.

### Systematic Alien Verification for Entitlements (SAVE)

SAVE assists Federal, State, and local benefit-granting agencies with determining eligibility for benefits by verifying immigration status. For FY 2013, \$20 million in funding for the SAVE Program is included in the Salaries and Expenses budget request. In addition, approximately \$6 million in SAVE query charges will continue to be collected and expended in IEFA.

### **C. Budget Request Summary:**

USCIS requests 11,501 positions, 9,917 full-time equivalent employees, and \$2.815 billion for FY 2013.

<b>2013 Total Requested Budget Authority</b>	<b>10,180</b>	<b>8,773</b>	<b>2,343,514</b>
Total Change 2012 to 2013	(6)	162	(79,837)

U.S. Citizenship and Immigrations Service (USCIS) requests 10,180 positions, 8,773 full-time equivalent employees, and \$2,344 billion to process millions of immigration benefit applications while maintaining backlog goals and ensuring the security and integrity of the immigration system.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Adjudication Services is composed of five USCIS directorates and many program offices: District Operations; Service Center Operations; Refugee, Asylum, and International Operations; Records Operations; and the Office of Transformation Coordination.

**District Operations**

**Field Operations**

Field Operations ensures the efficient adjudication of all applications and petitions for immigration benefits requiring face-to-face interviews, timely action on related ancillary applications and other assigned product lines, provision of direct customer service, immigration information, assurance of the integrity of the immigration system, and assistance to applicants, petitioners, and beneficiaries.

## **Fraud Detection and National Security (FDNS)**

FDNS detects and combats immigration benefit fraud, identifies threats to national security and public safety posed by those seeking immigration benefits, and serves as an effective conduit of information between USCIS and the law enforcement and intelligence communities.

## **Office of Information Technology**

The Office of Information Technology, a component within the Management Directorate, supports USCIS operations with technology services and solutions.

## **Service Center Operations (SCOPS)**

SCOPS is one of the key operational components of USCIS. Tasked with the adjudication of the largest volume of applications across the broadest and most diverse cross-section of immigration benefits, SCOPS is a strong and vital partner in the development of immigration policies and programs to ensure improved customer service while delivering the right benefit, to the right person, without delay. SCOPS continuously evaluates and modifies workflow processes in order to more effectively and efficiently administer immigration laws within the established cycle times, and is dedicated to ensuring the security of the United States through a vigilant workforce of officers who incorporate numerous security checks on a broad range of immigration benefit applications. Working closely with adjudications staff, law enforcement agencies, and other government agencies, the specialized teams within each service center conduct extensive research and vetting of individuals and organizations that may pose a threat to the national security of the United States.

## **Refugee, Asylum, and International Operations (RAIO)**

RAIO extends protection, citizenship, and other immigration benefits to eligible individuals as well as detecting fraud and protecting national security. RAIO is comprised of three operational divisions. The Refugee Affairs Division is a headquarters-based operation whose officers travel internationally to conduct refugee processing in accordance with U.S. law and international obligations. The Asylum Division has eight domestic offices which conduct adjudications of affirmative asylum applications and conduct credible fear screening for all persons placed in expedited removal who request asylum or express a fear of persecution or torture on return to their country of origin. The International Operations Division has three overseas district offices (Mexico City, Bangkok, Rome) and 28 field offices. With a broad footprint extending from U.S. embassies and consulates to additional refugee processing locations, RAIO is the face of USCIS abroad.

RAIO officers conduct refugee and asylum interviews in the United States and in dozens of overseas locations, they authorize parole for individuals in emergent and humanitarian circumstances, and conduct a full range of other immigration benefit adjudications. RAIO officers reunite separated refugee and asylee family members, unite prospective adoptive parents with children who are in need of a home, and travel to overseas military bases to naturalize men and women as U.S. citizens who serve in the U.S. military. RAIO administers the Cuban and Haitian Entrant Program, providing multi-million dollar grants to non-governmental organizations that provide orientations and resettlement services to Cuban and Haitian migrants paroled into the United States. In furtherance of USCIS' mission and United States interests,

RAIO liaises with United States and foreign government, international organizations, civil society, and private entities worldwide. RAIO is vigilant in safeguarding the integrity of USCIS' various programs by deterring and detecting fraud and threats to national security.

### **Records Operations**

Records Operations funds the management of U.S. immigration records, which includes both the Records Division and the National Records Center (NRC) located within USCIS's Enterprise Services Directorate. The Records Division is the caretaker of the country's immigration records, commonly known as alien files or "A-files," which document individuals' journeys from their original entries into the United States to naturalization. These records are the sole source of information used during the immigration adjudication process. NRC provides customers with timely access to information from the agency's A-files and subsidiary data systems. NRC operations include records, information liaison, case resolution, and Freedom of Information Act processing.

### **Office of Transformation Coordination (OTC) |**

USCIS is transforming from a paper-based filing system to a customer-focused electronic filing system. In November 2008, USCIS awarded a 5-year contract to a Solutions Architect to incrementally design, build, implement, and maintain the transformed business capabilities. As a result, USCIS expects to decommission more than 10 major USCIS legacy systems, including Claims 3 and Claims 4. To fundamentally transform its business practices, USCIS is conducting comprehensive organizational change management and stakeholder outreach efforts to keep stakeholders abreast of changes and provide feedback to OTC staff. With the new system, customers will be able to establish online Immigration Accounts that provide a single, electronic location where an applicant's information is stored. Each account holder will have the ability to update information or conduct activities that link back to the individual's account. An account will provide a comprehensive view of an applicant's history of interactions with USCIS and contain up-to-date information about case status. In addition, USCIS officers will access relevant case information to support and facilitate decision-making in one electronic location. This core capability of USCIS Transformation will enable officers to focus on decision-making rather than information-gathering and provide better case-specific resources. This will include access to case facts and evidence, and tools to process cases. In FY2013, USCIS will continue enhancing USCIS Electronic Immigration System (ELIS) by deploying additional functionality and benefit request types.

Total Change 2012 to 2013	-	-	120

[U.S. Citizenship & Immigration Services (USCIS) requests 269 positions, 234 full-time equivalent employees, and \$89.011 million to provide timely, consistent, and accurate information to our customers. ]

**CURRENT SERVICES PROGRAM DESCRIPTION:**

[The Customer Service Directorate (CSD) provides nationwide assistance to customers who contact the USCIS by telephone with questions about immigration services and benefits, and issues related to case processing. To meet the demand for telephone customer service, CSD designed and implemented a triage process whereby callers were able to access and obtain general information and case status through a network Interactive Voice Response (IVR) system. Callers whose inquiries require additional information can be transferred to receive live assistance.

The Contact Center Enterprise Office (CCEO) is the branch responsible for oversight of the National Customer Service Center (NCSC) 1-800 number for USCIS. This number provides the general public with prompt and accurate information to their telephonic inquiries regarding immigration laws and benefits. The NCSC 1-800 number averages nearly 1 million telephonic inquiries per month. When a customer calls the NCSC, the call goes directly to the IVR system, which is available in English and Spanish. If the customer cannot receive resolution to his or her inquiry through the IVR, the customer can request to speak to a live Customer Service Representative (CSR) at a Tier 1 call center. CCEO operates three call center locations providing first line support to our customers. These centers are located in Chantilly, Virginia, Barbourville, Kentucky, and Fort Worth, Texas. After speaking to a CSR, if the customer requires additional support or has a unique and complex scenario, the CSR will transfer the call to an Immigration Services Officer (ISO) at a Tier 2 Call Center. In this second line of

support, the NCSC utilizes USCIS employees who have an extensive immigration law background. Tier 2 ISO call centers are located in New York City and Los Angeles.

[U.S. Citizenship & Immigration Services (USCIS) requests 1,052 positions, 910 full-time equivalent employees, and \$382.334 million to strengthen key management processes, systems, and administrative support activities; and to facilitate mission success and enhance the timeliness, accountability, efficiency, and effectiveness of service delivery. ]

**CURRENT SERVICES PROGRAM DESCRIPTION:**

[The Administration Program is composed of offices that are included in the Management Directorate as well as other program offices. The Management Directorate manages resources to provide timely, effective, and efficient products and services in its business line; promoting accountability, transparency, and integrity through the evaluation of and application of management practices and controls within USCIS. Specifically, the following Management Directorate program offices include: Office of Administration; Office of the Chief Financial Officer; Office of Contracting; Office of Equal Opportunity and Inclusion; Office of Human Capital and Training; and the Office of Security and Integrity.

Outside of the offices of the Director, Deputy Director, and the Chief of Staff, core offices include the following:

**Office of Administration** plans, develops, implements, and evaluates agency-wide policies, procedures, and programs for Acquisition, Asset, and Facilities Management, for the operation of centrally managed, agency-wide support activities, and for the direct delivery of administrative support to Headquarters.

**Office of Chief Counsel (OCC)** consists of dedicated legal divisions advising and representing USCIS Operations both at Headquarters and in the field. Divisions include Adjudications Law, Refugee and Asylum Law, Commercial and Administrative Law, Ethics, Field Operations, Training, and Liaison. Each division is responsible for reviewing, interpreting, and providing legal advice and guidance to USCIS operational components and OCC field staff.

**Office of the Chief Financial Officer** coordinates the development and execution of the budget and biennial fee reviews; manages investment and performance measurement processes; conducts financial management consistent with law, regulation, standards, and best practices; and undertakes economic analysis supporting regulations development.

**Office of Communications** oversees and coordinates communication to both internal and external stakeholders to empower employees with the tools needed to perform their jobs, educate the public regarding USCIS benefits and services, and facilitate consistent messaging and imaging for USCIS.

**Office of Contracting** provides the management, oversight, and guidance for the Contracting program. The primary role of the office is to provide USCIS with the supplies/services necessary to accomplish the mission.

**Office of Legislative Affairs** maintains communication with Congress through its responses to constituent concerns, promotion of USCIS priorities, proactive outreach on issues of interest, and ongoing educational activities for Members of Congress and staff.

**Office of Equal Opportunity and Inclusion** ensures individuals are not denied opportunities in employment or program-services delivery because of their race, color, religion, sex, national origin, age, disability, sexual orientation, status as a parent, genetic information, or reprisal. |

**Office of Policy and Strategy** directs, prioritizes, and sets the agenda for agency-wide policy, strategy, and long-term planning activities, as well as for the conduct of research and analysis on immigration services issues.

**Office of Security and Integrity (OSI)** leads a multi-disciplined security and integrity program to protect and safeguard USCIS personnel, facilities, information, and assets. OSI manages the personnel and industrial security, administrative/special security, communications security, and physical security programs and oversees the security awareness training program. OSI also manages a comprehensive internal management review program of USCIS functions and protects the integrity of USCIS programs by investigating allegations of employee misconduct related to waste, fraud, abuse, or mismanagement.

[U.S. Citizenship & Immigration Services (USCIS) has requested \$20 million in appropriated funding for Systematic Alien Verification for Entitlements (SAVE) in FY 2013. The funding request is reflected in the Salaries and Expenses Account in the FY 2013 President’s Budget submission. The appropriated funding request is in addition to the collections from the SAVE query charges, which will continue to be deposited in the Immigration Examinations Fee Account and be used to support the SAVE Program. The collections from the query charges, which are estimated to be approximately \$6 million on an annual basis, are reflected in Schedule D. ]

**CURRENT SERVICES PROGRAM DESCRIPTION:**

[SAVE helps State, local, and Federal agencies determine a non-citizen’s eligibility for public benefits by checking their immigration status against U.S. Department of Homeland Security immigration databases. As of January 2012, the SAVE Program has a total of 987 registered agencies. This includes 273 State agencies, 47 Departments of Motor Vehicles, 640 local agencies, and 27 Federal agencies. SAVE’s customer base grew by 53 percent in FY 2011. During FY 2011, more than 12 million queries were run through SAVE. For FY 2012 through January 3, 2012, 2.8 million SAVE queries were run through the system. Large agency customers include the Social Security Administration, the U.S. Department of Housing and Urban Development, the U.S. Department of Education, and the California Department of Motor Vehicles. Every State and the District of Columbia are represented in SAVE’s customer base. ]

### District Operations Mission Statement

The funds from the Immigration Examinations Fee Account, District Operations Expenses, is the primary funding source and program supporting the USCIS mission.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	429,149	489,672	492,120	2,448
11.3 Other than full-time permanent	2,871	2,780	2,794	14
11.5 Other personnel compensation	208	-	-	-
11.6 Pay Diff (Sun/Night)	2,794	1,762	1,771	9
11.7 Military personnel/Awards	6,305	4,824	4,848	24
12.1 Benefits	127,981	146,030	146,760	730
<b>Total, Salaries &amp; Benefits</b>	<b>569,308</b>	<b>645,068</b>	<b>648,293</b>	<b>3,225</b>

Salaries and Benefits include cost for 5,484 full-time equivalent employees. The FY 2013 request reflects an increase of \$3.225 million for inflation.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.1 GSA rent	\$50,600	\$52,434	\$54,150	\$1,716

General Services Administration (GSA) rent includes all payments to GSA for rental of space and rent-related services. The FY 2013 request reflects an anticipated increase of \$1.716 million.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$315,371	\$381,401	\$374,685	-\$6,716

Advisory and assistance services include services acquired by contract from non-Federal sources (that is, the private sector, foreign governments, State and local governments, Tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request reflects an anticipated decrease of \$6.716 million.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
41.0 Grants/Subsidies/Contributions	0	\$5,000	0	-\$5,000

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. In FY 2013, funding for Immigrant Integration grants is being requested in the Salaries and Expenses account.

**Refugee, Asylum, and International Operations Mission Statement**

The Refugee, Asylum, and International Operations Directorate (RAIO) is responsible for overseeing, planning, and implementing policies and activities related to asylum and refugee issues as well as immigration services overseas. RAIO offices play a critical role in extending citizenship and immigration benefits to eligible individuals, exercising vigilance in matters involving fraud detection and national security, sustaining effective intergovernmental liaisons, and advancing USCIS strategic priorities in the international arena.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	40,708	63,789	64,108	319
11.3 Other than full-time permanent	691	1,368	1,375	7
11.5 Other personnel compensation	913	-	-	-
11.6 Pay Diff (Sun/Night)	518	190	191	-

**SAVE Mission Statement**

This program funds the operations of the Systematic Alien Verification for Entitlements (SAVE) Program. SAVE is an intergovernmental information-sharing program that verifies an individual's immigration status to help ensure that only those eligible receive Federal, State, or local public benefits.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	10,267	11,791	-	(11,791)
11.3 Other than full-time permanent	171	206	-	(206)
11.5 Other personnel compensation	146	40	-	(40)
11.7 Military personnel/Awards	-	98	-	(98)
12.1 Benefits	3,144	3,611	-	(3,611)
<b>Total, Salaries &amp; Benefits</b>	<b>13,728</b>	<b>15,746</b>	<b>-</b>	<b>(15,746)</b>

The FY 2013 request reflects a decrease of \$15.746 million for Salaries and Benefits. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	\$73	\$73	0	-\$73

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request reflects a decrease of \$73,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
22.0 Transportation of things	\$2	\$2	0	-\$2

Transportation of things includes all costs of the care of such things while in the process of being transported, and other services incident to the transportation of things. The FY 2013 request reflects a decrease of \$2,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.1 GSA rent	\$938	\$938	0	-\$938

General Services Administration (GSA) rent includes all payments to GSA for rental of space and rent-related services. The FY 2013 request reflects a decrease of \$938,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.3 Communications, utilities, and misc. charges	\$191	\$191	0	-\$191

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2013 request reflects a decrease of \$191,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
24.0 Printing	\$10	\$10	0	-\$10

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2013 request reflects a decrease of \$10,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$147	\$200	0	-\$200

Advisory and assistance services include services acquired by contract from non-Federal sources (that is, the private sector, foreign governments, State and local governments, Tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request reflects a decrease of \$200,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$66	\$80	0	-\$80

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2013 request reflects a decrease of \$80,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$1,511	\$1,800	0	-\$1,800

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 request reflects a decrease of \$1.8 million. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	0	\$10,841	0	-\$10,841

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2013 request reflects a decrease of \$10.841 million. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	\$20	\$20	0	-\$20

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within 1 year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three listed criteria, at the option of the agency. The FY 2013 request reflects a decrease of \$20,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	\$36	\$36	0	-\$36

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2013 request reflects a decrease of \$36,000. Funding for SAVE is being requested through the Salaries and Expenses Account.

## **K. DHS Balanced Workforce Strategy**

In order to establish a high performing workforce comprised of a strong internal core of federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with federal employees to better realize the full potential of our total workforce – both contracted and federal. A strong internal core of federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2014 budget.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **U.S. Citizenship & Immigration Services H-1B Nonimmigrant Petitioner Account**

#### **I. Appropriation Overview**

##### **A. Mission Statement for H-1B Nonimmigrant Petitioner Account:**

The *H-1B Visa Reform Act of 2004* requires employers who participate in the H-1B Program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base-processing fee of \$325 to file a Petition for a Nonimmigrant Worker (Form I-129). United States Citizenship and Immigration Service (USCIS) receives 5 percent of these funds, as well as the entire base-processing fee. However, this account only includes funding associated with the fee stipulated in the *H-1B Visa Reform Act of 2004* and does not include funding associated with the base-processing fee. These funds comprise less than 1 percent of the total USCIS budget.

The *FY 2010 Emergency Supplemental Appropriation for Border Security Act (P.L. 111-230)* increased certain H-1B and L-1 application fees. This law requires an additional filing fee of \$2,000 for H-1B petitions, and \$2,250 for certain L-1 petitions where the petitioner employs 50 or more individuals in the United States and more than 50 percent of its employees are in H-1B or L-1 nonimmigrant status. Revenue from fees above base levels (i.e., the \$500 or \$150 fees) is deposited into the General Fund of the Treasury, not the H-1B Nonimmigrant Petitioner or Fraud Prevention and Detection Accounts.

##### **B. Budget Activities:**

Funding from the H-1B Nonimmigrant Petitioner Account primarily supports the Service Center Operations Directorate. Fee revenues primarily fund contract activities (mail, filing, biometric, and data entry) and facility rent expenses related to the processing of immigration benefit applications at USCIS Service Centers.

The Service Center Operations Directorate manages four regionally based Service Centers, which receive, process, and adjudicate applications, petitions, and related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary.

##### **C. Budget Request Summary:**

USCIS requests \$12.55 million in Fiscal Year 2013 for the H-1B Nonimmigrant Petitioner Account. These funds will continue to support contract activities and facility rent expenses for the processing of immigration benefit applications.

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Citizenship & Immigration Services  
H-1B Nonimmigrant Petitioner Account  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: H-1B Nonimmigrant Petitioner Account**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>11,000</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>13,000</b>
2013 Adjustments-to-Base	-	-	(450)
<b>2013 Current Services</b>	-	-	<b>12,550</b>
<b>2013 Total Requested Budget Authority</b>	-	-	<b>12,550</b>
Total Change 2012 to 2013	-	-	(450)

U.S. Citizenship and Immigration Service (USCIS) requests \$12.55 million for contract activities and facility rent expenses that support the processing of immigration benefit applications. The fee associated with the requested amount is set by congressional statute providing USCIS with 5 percent of the fees collected for the H-1B visas (Nonimmigrant Petitioner), in addition to the base-processing fee to file a Petition for a Nonimmigrant Worker (Form I-129).

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The USCIS Service Center Operations Directorate receives, processes, and adjudicates applications, petitions, and related fees for immigration benefits not requiring face-to-face contact with the applicant, petitioner, or beneficiary, which includes:

- *Family-based petitions* -- facilitating the process for close relatives to immigrate, gain permanent residency, work, etc.
- *Employment-based petitions* -- facilitating the process for current and prospective employees to immigrate or stay in the United States temporarily.

USCIS annually processes millions of immigration benefit applications at its Service Centers. The \$12.55 million for contract activities and facility rent expenses is a portion of the total operations contract support and Service Center rent. The balance is covered by fees from the Immigration Examinations Fee Account.

### Service Center Operations Mission Statement

The funds from the H-1B Nonimmigrant Petitioner Account, comprising less than 1 percent of the total U.S. Citizenship and Immigration Service (USCIS) budget request, are specifically targeted to contracting activities and facility rent expenses related to processing immigration benefit applications. These funds are the result of the *H-1B Visa Reform Act of 2004*, which requires employers who participate in the H-1B Program to pay an additional \$1,500 (\$750 for those petitioners who employ less than 25 full-time equivalent employees), in addition to the base processing fee of \$325 to file a Petition for a Nonimmigrant Worker (Form I-129). USCIS receives 5 percent of these funds, as well as the entire base processing fee. However, this account only includes funding associated with the fee stipulated in the *H-1B Visa Reform Act of 2004* and does not include funding associated with the base-processing fee.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$11,000	\$11,000	\$10,550	-\$450

Advisory and assistance services include services acquired by contract from non-Federal sources (i.e., private sector, foreign governments, State and local governments, Tribes, etc.) as well as from other units within the Federal government. This funding supports the anticipated needs for FY 2013. The decrease of \$450,000 reflects anticipated changes in receipts from FY 2012 to FY 2013.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **U.S. Citizenship & Immigration Services Fraud Prevention and Detection Account**

## **I. Appropriation Overview**

### **A. Mission Statement for Fraud Prevention and Detection Account:**

#### **Mission Statement**

Funding in the Fraud Prevention and Detection Account is used for activities related to preventing and detecting fraud for all immigration benefit types. The *Immigration and Nationality Act*, as amended, requires petitioners to pay \$500 toward this purpose for a beneficiary's initial grant of H-1B or L nonimmigrant classification, as well as if they are changing a beneficiary's employer within these classifications; and to pay \$150 for H-2B benefits in addition to the base-processing fee for a Petition for a Nonimmigrant Worker (Form I-129). U.S. Citizenship and Immigration Service (USCIS) receives a one-third share of revenue derived from these fees.

The *FY 2010 Emergency Supplemental Appropriation for Border Security Act (P.L. 111-230)* increased certain H-1B and L-1 application fees. This law requires an additional filing fee of \$2,000 for H-1B petitions, and \$2,250 for certain L-1 petitions where the petitioner employs 50 or more individuals in the United States and more than 50 percent of its employees are in H-1B or L-1 nonimmigrant status. Revenue from fees above base levels (i.e., the \$500 or \$150 fees) is deposited into the General Fund of the Treasury, not the Fraud Prevention and Detection Account.

### **B. Budget Activities:**

The Fraud Detection and National Security Directorate (FDNS) at USCIS develops, coordinates, and leads national anti-fraud operations for USCIS and oversees and enhances policies and procedures pertaining to the performance of law enforcement (background) checks on applicants and petitioners. In addition, FDNS identifies threats to national security and public safety as well as serving as a conduit for intelligence-related information between USCIS and the law enforcement and intelligence community.

### **C. Budget Request Summary:**

USCIS requests 185 positions, 185 full-time equivalent employees, and \$35 million to fund USCIS requirements for Fiscal Year 2013.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

U.S. Citizenship and Immigration Service (USCIS) requests 185 positions, 185 full-time equivalent employees, and \$35 million for this activity in Fiscal Year (FY) 2013.

As part of a joint anti-fraud strategy and in partnership with Immigration and Customs Enforcement, Fraud Detection and National Security Directorate (FDNS) identifies vulnerabilities in the Nation’s immigration system and works to eliminate the potential for exploitation of those vulnerabilities and prosecute the violators.

Operationally, FDNS officers located in field offices, service centers, and the National Benefits Center perform most anti-fraud activities. These officers perform site inspections, deconfliction and vetting activities, and coordinate with law enforcement agencies. Field FDNS officers participate in Document Benefit Fraud Task Forces, Joint Terrorism Task Forces, and other Federal and local law enforcement initiatives. In FY 2011, FDNS officers received more than 14,000 fraud leads, which resulted in more than 13,000 administrative investigations.

In FY 2011, FDNS continued its Administrative Site Visit and Verification Program (ASVVP). The ASVVP serves as a vehicle to conduct pre- and post-adjudication site inspections on religious worker and H-1B temporary worker petitions. The ASVVP detects fraud in individual petitions and applications, and produces data that are useful in determining fraud risks and patterns. In FY 2011 FDNS performed a total of 17,307 ASVVP site visits.

In FY 2011, FDNS had four officers (of which three are funded through this account) in overseas offices in order to enhance overseas verification efforts. Guided by future fraud risk assessments, FDNS will work in cooperation with the Refugee, Asylum, and International Operations Directorate to build its overseas capacity to cover more high-volume posts.

A total of 531 Immigration Officers, Intelligence Research Specialists, and support personnel in field offices and service centers perform FDNS operations.

### Adjudication Services Mission Statement

The funds from the Fraud Prevention and Detection Account, comprising approximately 2 percent of the total U.S. Citizenship and Immigration Service (USCIS) budget request, primarily support the USCIS goal to ensure the security and integrity of the immigration system. These funds are specifically for activities related to preventing and detecting fraud for all immigration benefit types.

## Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	16,440	18,008	18,098	90
11.3 Other than full-time permanent	178	297	299	1
11.5 Other personnel compensation	1,242	1,761	1,770	9
12.1 Benefits	4,927	5,342	5,368	27
<b>Total, Salaries &amp; Benefits</b>	<b>22,787</b>	<b>25,408</b>	<b>25,535</b>	<b>127</b>

Salaries and Benefits include costs for 185 full time equivalent employees. This funding supports the anticipated resource needs for Fiscal Year (FY) 2013. The \$127,000 increase reflects the pay inflation.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	<b>\$1,108</b>	<b>\$1,381</b>	<b>\$948</b>	<b>-\$433</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. This funding supports the anticipated resource needs for FY 2013. The decrease of \$433,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>22.0 Transportation of things</b>	<b>\$96</b>	<b>\$359</b>	<b>\$247</b>	<b>-\$113</b>

Transportation of things include all costs of the care of such things while in the process of being transported, and other services incident to the transportation of things. This funding supports the anticipated resource needs for FY 2013. The decrease of \$113,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>23.3 Communications, utilities, and misc. charges</b>	<b>\$132</b>	<b>\$322</b>	<b>\$221</b>	<b>-\$101</b>

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services; postal services and rentals; and utility services. This funding supports the anticipated resource needs for FY 2013. The decrease of \$101,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	<b>\$6,583</b>	<b>\$7,305</b>	<b>\$4,331</b>	<b>-\$2,975</b>

Advisory and assistance services include services acquired by contract from non-Federal sources (i.e., private sector, foreign governments, State and local governments, Tribes, etc.) as well as from other units within the Federal government. This funding supports the anticipated resource needs for FY 2013. The decrease of \$2.975 million reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.2 Other services</b>	<b>\$737</b>	<b>\$819</b>	<b>\$562</b>	<b>-\$257</b>

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
--	-------------------------------	--	--	------------------------------

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. This funding supports the anticipated resource needs for FY 2013. The decrease of \$257,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.3 Purchases from Gov't accts.</b>	\$259	\$288	\$198	-\$90

Purchase from Government Accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. This funding supports the anticipated resource needs for FY 2013. The decrease of \$90,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.7 Operation and maintenance of equipment</b>	\$16	\$18	\$12	-\$6

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal government account. The decrease of \$6,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.8 Subsistence &amp; Support of persons</b>	\$514	\$572	\$392	-\$179

Subsistence and support of persons include costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. This funding supports the anticipated resource needs for FY 2013. The decrease of \$179,000 reflects the change in anticipated receipts from FY 2012 to FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	\$254	\$321	\$220	-\$101

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within 1 year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three listed criteria, at the option of the agency. The decrease of \$101,000 reflects the change in anticipated receipts from FY 2012 to FY 2013. This funding supports the anticipated resource needs for FY 2013.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	\$182	\$220	\$151	-\$69

Equipment includes all costs for the purchase of personal property of a durable nature or the initial installation of equipment when performed under contract. The decrease of \$69,000 reflects the change in anticipated receipts from FY 2012 to FY 2013. This funding supports the anticipated resource needs for FY 2013.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Law Enforcement Training Center Salaries and Expenses**

### **I. Appropriation Overview**

#### **A. Mission Statement for Salaries and expenses:**

We train those who protect our homeland.

#### **B. Budget Activities:**

The Federal Law Enforcement Training Center (FLETC) is the Nation's largest provider of law enforcement training. FLETC serves as an interagency law enforcement training organization for 90 Federal Partner Organizations (POs) and numerous State, local, tribal, campus, and international law enforcement agencies.

Most of the 90 Federal POs that train with FLETC attend one of its multi-agency basic programs, and then continue with their unique agency-specific follow-on programs at their own academies, most of which are co-located at one of FLETC's four domestic training sites. In addition to basic training, FLETC also offers a variety of advanced law enforcement training programs.

FLETC has embraced the philosophy that homeland protection is not the sole province of the Federal Government, and that the security of our Nation starts in rural counties, small towns, and municipalities and extends even to our law enforcement colleagues abroad. FLETC offers specialized training programs for State, local, tribal, campus and, through partnership with the Department of State, international law enforcement personnel. These programs are designed to meet critical training needs and to enhance networking and cooperation domestically and globally.

In furtherance of FLETC's mission, our reach is extended through the use of non-traditional training delivery techniques, including the use of online training distribution and the use of technology-based simulation. Additionally, FLETC exports training programs to various locations when a geographical concentration of personnel is identified and the programs being conducted do not require the use of certain specialized facilities.

Training law enforcement officers in a collaborative, multi-agency environment offers both fiscal and qualitative advantages. FLETC teams with its training partners to jointly prepare Federal law enforcement professionals to perform their duties in the safest possible manner, at the highest possible level of proficiency. It endeavors to accomplish this critical mission by delivering consistent, accredited instruction using a proven consolidated training model.

**C. Budget Request Summary:**

FLETC requests 1,130 positions, 1,103 FTEs and \$228,939,000. The adjustments-to-base are an increase of \$472,000 for pay inflation, a reduction to Basic Training of \$3,660,000, and efficiency offsets of \$6,830,000. There are no program changes.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

### Department of Homeland Security Federal Law Enforcement Training Center Salaries and Expenses:

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Federal Law Enforcement Training Center  
Salaries and Expenses:  
Management and Administration  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Management and Administration**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actuals</b>	-	-	-
<b>2012 Enacted</b>	-	-	-
2013 Adjustments-to-Base	230	224	29,261
<b>2013 Current Services</b>	<b>230</b>	<b>224</b>	<b>29,261</b>
<b>2013 Total Request</b>	<b>230</b>	<b>224</b>	<b>29,261</b>
Total Change 2012 to 2013	230	224	29,261

FLETC requests 230 positions, 224 FTEs, and \$29.261 million for this activity. This new Project Program Activity (PPA) is created by a transfer from the Law Enforcement Training PPA to break out management and administration functions. Included in this amount is:

- A transfer of \$29.716 million, 230 positions and 224 FTEs from the Law Enforcement Training PPA,
- An increase of \$0.098 million for pay inflation, and
- A decrease of (\$0.553) million for efficiency offsets for travel, overtime, purchasing savings, and PCS costs.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Management and Administration program includes the FLETC Director, Director’s Office, and immediate staff including the Office of Chief Counsel, Washington Office, Public Affairs Office, Equal Employment Opportunity Division, and Inspection and Compliance Division. Also included is the Chief Financial Officer Directorate, providing budget, finance, accounting, financial systems, financial statements, relocation, travel, and strategic planning functions.

The Management and Administration program also includes Asset Management functions, such as Procurement, Real and Personal Property Management, Environmental Compliance and Safety. It includes the Operation Support functions such as Human Capital and Critical Incident Stress Management to promote fairness, consistency, and efficiency in the utilization of staffing, scheduling, human capital and human resources.

Total Change 2012 to 2013	(230)	(224)	(39,278)

FLETC requests 893 positions, 872 FTEs and \$198.375 million for this activity. Adjustments-to-base include:

- A transfer of \$29.716 million, 230 positions and 224 FTEs to the Management and Administration PPA,
- An increase of \$0.371 million for pay inflation,
- A decrease of (\$3.660) million to basic training, and
- A decrease of (\$6.273) million for efficiency offsets for travel, overtime, purchasing savings, and PCS costs.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Law Enforcement Training:** FLETC’s services to its three major client groups underscore its homeland security support mission in promoting intergovernmental cooperation in law enforcement preparedness.

**Federal** – FLETC provides law enforcement training to 90 federal agencies having law enforcement responsibilities. FLETC prepares new and experienced law enforcement professionals to fulfill their responsibilities in a safe manner and at the highest level of proficiency. The average basic student spends 12 weeks training at FLETC, and receives a combination of classroom instruction and hands-on practical exercise training in all phases of law enforcement from firearms and high-speed vehicle operations to legal case instructions and defendant interview techniques. Students must apply their classroom knowledge during exercises that simulate typical situations encountered on the job. To add realism these exercises often involve contract role players who act as victims, witnesses or suspects. Each of the basic

programs provides core knowledge essential for new federal officers or agents to carry out their duties in a safe and efficient manner.

In addition to basic training, FLETC offers advanced and specialized training for career-long law enforcement preparation in subjects that are common to two or more of its Partner Organizations. Examples include Antiterrorism Port Security Boat Operations, Cyber Counterterrorism Investigator Training, Covert Electronics Surveillance, Critical Infrastructure Protection, Financial Forensics Techniques, Intelligence Analysts Training and Land Transportation Antiterrorism Training.

***State and local*** – The National Center for State and Local Law Enforcement Training trains personnel from State and local law enforcement agencies in advanced topics designed to develop specialized law enforcement skills. The participants benefit from Federal expertise, specialized training, and receive instruction specific to their needs. Additionally, the program offerings are in subjects not generally available from State and local police academies or colleges and universities.

***International*** – In the interest of combating global crime and protecting U.S. interests abroad, FLETC offers a range of training programs to foreign law enforcement agencies in coordination with the Department of State. Training focuses on the U.S. Government's Law and Democracy Program and the International Law Enforcement Academy programs in Europe, Asia, Africa, and other regions in the world. In cooperation with the Department of State, FLETC manages an International Law Enforcement Academy in Gaborone, Botswana, and serves as Deputy Director at the International Law Enforcement Academy in Bangkok, Thailand. Additionally, FLETC provides training and technical assistance at locations worldwide in collaboration with and support of the respective U.S. embassies.

**Department of Homeland Security

<b>2013 Total Request</b>	<b>7</b>	<b>7</b>	<b>1,303</b>
Total Change 2012 to 2013	-	-	(1)

FLETC requests 7 positions, 7 FTEs, and \$1.303 million for this activity. Adjustments-to-base include:

- An increase of \$0.003 million for pay inflation, and
- A decrease of (\$0.004) million for efficiency offset for travel, overtime, purchasing savings, and PCS costs.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Accreditation:** The Federal Law Enforcement Accreditation (FLETA) process sets the standards for Federal law enforcement training. The accreditation of a Federal Law Enforcement academy or program provides assurance to the citizens they serve that they have voluntarily submitted to a process of self-regulation; and, that they have successfully achieved compliance with a set of standards that have been collectively established by their peers within their professional community that demonstrate their adherence to quality, effectiveness and integrity. To accomplish this goal, trainers in the same discipline, working through a professional accrediting body, assist each other in evaluating and improving their professionalism. The focus of the effort is to accredit Federal academies; entry-level and advanced or specialized training programs; instructor training; and, other programs that affect multiple Federal, State and local law enforcement officers.

## V. Exhibits and Other Supporting Material

### A. Justification of Proposed Legislative Language

For necessary expenses of the Federal Law Enforcement Training Center, including materials and support costs of Federal law enforcement basic training; the purchase of not to exceed 117 vehicles for police-type use and hire of passenger motor vehicles; expenses for student athletic and related activities; the conduct of and participation in firearms matches and presentation of awards; public awareness and enhancement of community support of law enforcement training; room and board for student interns; a flat monthly reimbursement to employees authorized to use personal mobile phones for official duties; and services as authorized by section 3109 of title 5, United States Code; [\$238,957,000]**\$228,939,000**; of which up to [\$48,978,000]**\$44,758,000** shall remain available until September 30, [2013]**2014**, for materials and support costs of Federal law enforcement basic training; of which \$300,000 shall remain available until expended to be distributed to Federal law enforcement agencies for expenses incurred participating in training accreditation; and of which not to exceed \$10,200 shall be for official reception and representation expenses: *Provided*, That the Center is authorized to obligate funds in anticipation of reimbursements from agencies receiving training sponsored by the Center, except that total obligations at the end of the fiscal year shall not exceed total budgetary resources available at the end of the fiscal year: *Provided further*, That section 1202(a) of Public Law 107-206 (42 U.S.C. 3771 note), as amended by Public Law [111-83 (123 Stat. 2166)] 112-74, is further amended by striking “December 31, [2012]**2014**” and inserting “December 31, [2014]**2015**”: *Provided further*, That the Director of the Federal Law Enforcement Training Center shall schedule basic or advanced law enforcement training, or both, at all four training facilities under the control of the Federal Law Enforcement Training Center to ensure that such training facilities are operated at the highest capacity throughout the fiscal year: *Provided further*, That the Federal Law Enforcement Training Accreditation Board, including representatives from the Federal law enforcement community and non-Federal accreditation experts involved in law enforcement training, shall lead the Federal law enforcement training accreditation process to continue the implementation of measuring and assessing the quality and effectiveness of Federal law enforcement training programs, facilities, and instructors.

(Department of Homeland Security Appropriations Act, 2012).

### Accreditation Mission Statement

To enhance the quality of Federal law enforcement by establishing and maintaining a body of standards for Federal law enforcement training; to administer an accreditation process based on those standards; and to ensure compliance with the process in order to maintain public confidence in Federal law enforcement.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	650	647	649	2
11.7 Military personnel/Awards	11	11	8	(3)
12.1 Benefits	190	189	190	1

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	650	647	649	2
<b>Total, Salaries &amp; Benefits</b>	<b>851</b>	<b>847</b>	<b>847</b>	<b>-</b>

Salaries and Benefits includes costs for 7 FTEs. The FY 2013 Request includes an increase of \$3,000 for pay inflation and a decrease of \$3,000 for efficiency offsets.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	<b>\$436</b>	<b>\$581</b>	<b>\$326</b>	<b>-\$255</b>

Travel includes all costs of transportation of persons, subsistence of travelers, and incidental travel expenses in accordance with Federal travel regulations. FY 2013 Request includes a decrease of \$1,000 for efficiency offsets and a carryover adjustment of \$254,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>24.0 Printing</b>	<b>\$4</b>	<b>\$5</b>	<b>\$3</b>	<b>-\$2</b>

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. FY 2013 Request includes a carryover adjustment of \$2,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	<b>\$60</b>	<b>\$80</b>	<b>\$45</b>	<b>-\$35</b>

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. FY 2013 Request includes a carryover adjustment of \$35,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>25.2 Other services</b>	<b>\$25</b>	<b>\$33</b>	<b>\$19</b>	<b>-\$14</b>

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. FY 2013 Request includes a carryover adjustment of \$14,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	<b>\$83</b>	<b>\$111</b>	<b>\$63</b>	<b>-\$48</b>

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. FY 2013 Request includes a carryover adjustment of \$48,000.

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2013 Request includes a transfer of \$816,000 to the Management and Administration PPA, a reduction to basic training of \$732,000, a decrease of \$114,000 for efficiency offsets and a carryover adjustment of \$4,798,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$5,901	\$7,293	\$6,829	-\$464

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 Request includes a transfer of \$77,000 to the Management and Administration PPA and a decrease of \$387,000 for efficiency offsets.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
25.4 O&M of facilities	\$32,561	\$40,299	\$30,175	-\$10,124

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2013 Request includes a transfer of \$29,000 to the Management and Administration PPA, a reduction to basic training of \$1,281,000, a decrease of \$418,000 for efficiency offsets and a carryover adjustment of \$8,396,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
25.6 Medical care	\$3,231	\$3,998	\$2,563	-\$1,435

Medical care includes payments to contracts for medical services, but excludes contracts with individuals who are reportable under OPM regulations as federal employees or payments to compensate casual workers and patient help. The FY 2013 Request includes a transfer of \$11,000 to the Management and Administration PPA, a reduction to basic training of \$183,000, a decrease of \$42,000 for efficiency offsets and a carryover adjustment of \$1,199,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	\$9,851	\$12,174	\$11,547	-\$627

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
--	--------------------	--------------------	--------------------	------------------------------

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2013 Request includes a transfer of \$136,000 to the Management and Administration PPA, a reduction to basic training of \$37,000, a decrease of \$214,000 for efficiency offsets and a carryover adjustment of \$240,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
25.8 Subsistence & Support of persons	\$893	\$1,104	\$811	-\$293

Subsistence & Support of Persons includes costs for contractual services with the public or another Federal government account for the board, lodging, and care of persons, including prisoners. The FY 2013 Request includes a transfer of \$4,000 to the Management and Administration PPA, a reduction to basic training of \$37,000, a decrease of \$12,000 for efficiency offsets and a carryover adjustment of \$240,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
26.0 Supplies and materials	\$9,292	\$11,402	\$4,468	-\$6,934

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2013 Request includes a transfer of \$704,000 to the Management and Administration PPA, a reduction to basic training of \$841,000, a decrease of \$112,000 for efficiency offsets and a carryover adjustment of \$5,277,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
31.0 Equipment	\$19,901	\$24,544	\$22,534	-\$2,010

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. FY 2013 Request includes a transfer of \$641,000 to the Management and Administration PPA, a decrease of \$1,129,000 for efficiency offsets and a carryover adjustment of \$240,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
42.0 Insurance Claims and Indemnity	\$15	\$16	0	-\$16

Insurance claims and indemnities includes all benefit payments from the social insurance and Federal retirement trust funds and payments for losses and claims including those under the Equal Access to Justice Act. The FY 2013 Request includes a transfer of \$16,000 to the Management and Administration PPA.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Federal Law Enforcement Training Center Acquisition, Construction, Improvements & Related Expenses**

### **I. Appropriation Overview**

#### **A. Mission Statement for Acquisition, Construction, Improvements & Related Expenses:**

We train those who protect our homeland.

#### **B. Budget Activities:**

The Federal Law Enforcement Training Center (FLETC) is the Nation's largest provider of law enforcement training. FLETC serves as an interagency law enforcement training organization for 90 Federal Partner Organizations (POs) and numerous State, local, tribal, campus, and international law enforcement agencies.

Most of the 90 Federal POs that train with FLETC attend one of its multi-agency basic programs, and then continue with their unique agency-specific follow-on programs at their own academies, most of which are co-located at one of FLETC's four domestic training sites. In addition to basic training, FLETC also offers a variety of advanced law enforcement training programs.

FLETC has embraced the philosophy that homeland protection is not the sole province of the Federal Government, and that the security of our Nation starts in rural counties, small towns, and municipalities and extends even to our law enforcement colleagues abroad. FLETC offers specialized training programs for State, local, tribal, campus and, in coordination with the Department of State, international law enforcement personnel. These programs are designed to meet critical training needs and to enhance networking and cooperation domestically and globally.

In furtherance of FLETC's mission, our reach is extended through the use of non-traditional training delivery techniques, including the use of online training distribution and the use of technology-based simulation. Additionally, FLETC exports training programs to various locations when a geographical concentration of personnel is identified and the programs being conducted do not require the use of certain specialized facilities.

Training law enforcement officers in a collaborative, multi-agency environment offers both fiscal and qualitative advantages. FLETC teams with its training partners to jointly prepare Federal law enforcement professionals to perform their duties in the safest possible manner, at the highest possible level of proficiency. It endeavors to accomplish this critical mission by delivering consistent, accredited instruction using a proven consolidated training model.

#### **C. Budget Request Summary:**

The Federal Law Enforcement Training Center requests \$29,385,000.

### III. Current Services Program Description by PPA

**Department of Homeland Security**  
**Federal Law Enforcement Training Center**  
**Acquisition, Construction, Improvements & Related Expenses:**  
**Program Performance Justification**  
 (Dollars in Thousands)

**PPA: Acquisition, Construction, Improvements & Related Expenses:**

	<u>Perm. Pos</u>	<u>FTE</u>	<u>Amount</u>
<b>2011 Actuals</b>	-	-	<b>62,411</b>
<b>2012 Enacted</b>	-	-	<b>32,456</b>
2013 Adjustments-to-Base	-	-	(3,071)
<b>2013 Current Services</b>	-	-	<b>29,385</b>
<b>2013 Total Request</b>	-	-	<b>29,385</b>
Total Change 2012 to 2013	-	-	(3,071)

FLETC requests \$29.385 million for this activity; a decrease of \$3.071 million below the 2012 enacted level. To accomplish this reduction, FLETC will defer renovation/construction of the Auditorium at the FLETC-Artesia site.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Acquisition, Construction, Improvement & Related Expenses:** This account provides for the acquisition and related costs for the expansion and maintenance of FLETC, to include funding for the Facilities Master Plan, Minor Construction and Maintenance, Environmental Compliance, and Communications Systems. The Master Plan provides the long range blueprint for expansion of facilities to meet the training requirements of 90 Partner Organizations. Minor Construction and Maintenance provides alterations and maintenance funding for approximately 300 buildings. Environmental Compliance funding is to ensure compliance with the Environmental Protection Agency and State environmental laws and regulations. Communications Systems funding is to maintain and repair or replace the fiber optics telecommunications cable system.

#### **IV. Program Justification Changes**

**N/A**

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

For acquisition of necessary additional real property and facilities, construction, and ongoing maintenance, facility improvements, and related expenses of the Federal Law Enforcement Training Center, [\$32,456,000] **\$29,385,000**, to remain available until September 30, [2016]**2017**: *Provided*, That the Center is authorized to accept reimbursement to this appropriation from government agencies requesting the construction of special use facilities.

(Department of Homeland Security Appropriations Act, 2012).

### Acquisition, Construction, Improvements & Related Expenses: Mission Statement

We train those who protect our homeland.

### Summary Justification and Explanation of Changes

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
<b>Total, Salaries &amp; Benefits</b>	-	-	-	-

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
23.1 GSA rent	\$256	\$265	\$270	\$5

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2013 request includes a carryover adjustment of \$5,000.

	FY 2011 Actuals	FY 2012 Enacted	FY 2013 Request	FY 2012 to FY 2013 Change
32.0 Land & structures	\$58,146	\$42,044	\$25,186	-\$16,858

Land and structures includes the costs for land and interests in land, buildings and other structures, roads, additions to buildings, nonstructural (or resource) improvements such as fences and landscaping, and fixed equipment additions and replacements when acquired under contract or by capital lease. The FY 2013 request includes a decrease of \$3,071,000 for deferred maintenance and a carryover adjustment of \$13,787,000.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Science & Technology Management and Administration**

### **I. Appropriation Overview**

#### **A. Mission Statement for Salaries and Expenses:**

Fund the effective and efficient management and leadership of the S&T Directorate activities to deliver advanced technology solutions to DHS components and first responders.

#### **B. Budget Activities:**

The Management and Administration (M&A) appropriation provides for salaries and benefits related to 361 FTE at the S&T Directorate headquarters. These 361 FTE provide executive direction to the S&T Directorate for program management, program execution oversight, program analysis, policy analysis, planning, financial management, guidance formulation, and operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds business operations and the S&T Directorate's share of the DHS Working Capital Fund. The Business Operations functions include paying for rent, office supplies, utilities, and other operational functions associated with the S&T Directorate's Washington, DC headquarters. This account pays for the training and travel associated with senior management of the S&T Directorate and contractor staff who support the execution of headquarters functions including financial management, facility planning, maintenance, and other administrative functions. M&A also funds the administration of the S&T Directorate's regulatory and treaty compliance activities, headquarters shared services agreements, and the financial and programmatic databases. The M&A appropriation does not fund contractor support or travel associated with the direct execution of Research, Development, Test, and Evaluation (RDT&E) programs across the S&T Directorate.

#### **C. Budget Request Summary:**

The S&T Directorate requests 361 FTE and \$138.008 million for M&A in FY 2013. The total adjustments-to-base of \$3.008 million include an increase of \$3.343 million for the Working Capital Fund and an increase of \$0.228 million for a 0.005% Federal pay raise. It also includes a decrease of \$0.100 million in travel expenses and \$0.463 million in contracts to reflect the Department's management efficiencies initiative.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

Total Change 2012 to 2013	-	-	3,008

The S&T Directorate requests \$138.008 million for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The M&A appropriation funds salaries and benefits related to 361 FTE at the S&T Directorate headquarters. The 361 FTE provide executive direction to the S&T Directorate for policy analysis, planning, financial management, and guidance formulation. These FTE also conduct program management, execution, oversight, analysis, as well as operations and maintenance support for all S&T Directorate programs.

The M&A appropriation funds all of the corporate-level functions in the S&T Directorate that allow the technical divisions to manage the Research, Development, Test, and Evaluation (RDT&E) programs. Those functions include the Finance and Budget Division, including the Chief Financial Officer; the Administration and Support Division, which manage the facilities, personnel and the information technology infrastructure; the Operations Analysis Division, which provides science-based risk analyses; and the Corporate Communications Division, which coordinates internal and external information dissemination. The DHS Working Capital Fund (WCF) provides those shared services that the components rely on to execute their missions, such as contracting officers and the DHS-wide information technology infrastructure.

The request reflects a decrease of \$0.100 million in travel expenses and \$0.463 million in contract efficiencies to reflect the Department’s management efficiencies initiative.

This budget request supports the overhead and administration of the four Research, Development, Acquisition and Operations PPAs, each of which has an important role in implementing RDT&E activities. These PPAs are: Acquisition and Operations Support; Research, Development and Innovation; Laboratory Facilities; and University Programs.

### **Acquisition and Operations Support**

Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in DHS to help ensure that technologies, CONOPS, and procedures meet operational requirements; technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program's life; oversight of the test and evaluation of DHS major acquisition programs; standards to support the Homeland Security mission, and administration of the SAFETY Act program.

The five main areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

### **Laboratory Facilities**

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL "the coordination and utilization of the Department of Energy (DOE) national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department." In addition to oversight of the S&T Directorate's laboratory operations, ONL coordinates homeland security-related activities and laboratory-directed research conducted within the DOE's national laboratories.

ONL's internal customers are the S&T Directorate's executing divisions and the Test and Evaluation and Standards division. The primary external Federal customers are: U.S. Department of Agriculture (USDA); Transportation Security Administration (TSA); and the Federal Bureau of Investigation (FBI). ONL executes two programs: Construction and Lab Operations.

### **Research, Development, and Innovation (RD&I)**

Provides state-of-the-art technology and solutions to meet the needs of the operational components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. These RDT&E programs support the needs of the operational components of the Department and the first responder community and address crosscutting areas such as standards and interoperability. The six thrust areas of research and development include: APEX Research and Development; Border Security; Chemical Biological, and Explosive Defense; Counter Terrorist; Cyber Security; and Disaster Resilience.

## **University Programs**

Supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS and developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new scientific workforce of homeland security experts. The primary customers for University Programs are the DHS S&T Directorate's divisions, the DHS component agencies, and Federal, State, and local government agencies.

## **Finance and Budget Division**

The Finance and Budget Division provides the S&T Directorate with high-quality, efficient, and cost-effective financial management services through four branches. The Budget Office develops long-term plans for resource allocation, execution plans, Congressional Justifications, and management of financial resources within the S&T Directorate. The Performance Branch develops and implements internal and external performance metrics for S&T Directorate programs, as well as risk assessment methodologies to help inform programming decisions. The Acquisition Branch develops the S&T Directorate's acquisition strategy, and manages the travel and purchase card programs. The Financial Operations Branch is dedicated to sound fiscal stewardship of the S&T Directorate's appropriations and reimbursable funding; timely and accurate budget execution, financial management and financial reporting. The Internal Controls Branch monitors programs and activities to provide assurance about the adequacy of internal controls within the S&T Directorate.

## **Administration and Support Division**

The Administration and Support Division provides critical infrastructure support to the S&T Directorate and is composed of seven components: Facilities, Human Capital Office (HCO), Office of the Chief Information Officer (OCIO), Office of the Chief Administrative Officer (CAO), Office of Administration and Audits, Central Security Office (CSO), and Readiness and Operational Coordination (ROC). In compliance with Presidential Directives, Federal Regulations and Department guidance, the Administration and Support Division provides support and continuous process improvement through problem identification and solution, sound policy and procedure development, and high-quality service.

## **Operations Analysis Division**

The Operations Analysis Division provides the S&T Directorate with a wide range of scientific and technical tools to inform planning and management activities. The division provides information to decision-makers and program managers resulting from research, studies, operational analyses, risk analyses, analytic and computational models, simulations, war-games, and experimentation events that it oversees. The division uses these technical and analytical support activities to establish baseline operational capabilities and goals, integrate policy and program planning, and inform management decisions and the development of strategic objectives. The Operations Analysis Division oversees the activities of the Homeland Security Studies and Analysis Institute (HSSAI), Homeland Security Systems Engineering and Development Institute (HSSEDI) and other S&T Directorate-sponsored

Federally Funded Research and Development Centers (FFRDCs), and the Homeland Security Science and Technology Advisory Committee (HSSTAC).

### **Corporate Communications Division**

The Corporate Communications Division communicates the objectives and status of homeland security technology programs, disseminates information regarding opportunities for private-sector entities (corporate and academic), and ensures that the media understands and accurately represents DHS technologies and programs. The Corporate Communications Division holds conferences and manages the S&T Directorate's presence at other information-sharing events to improve contact among technology developers, vendors, and acquisition personnel. They also promote the participation of colleges, universities, private research institutes, and companies (and consortia thereof) in the research process by disseminating information regarding research conducted or sponsored by the Department, and provide public-communication support to the S&T Directorate-sponsored Federally Funded Research and Development Centers.

### **Working Capital Fund**

Funds provided within the M&A appropriation are also used to acquire services through the DHS WCF, which includes: IT services, human resources, procurement operations, and financial systems. The WCF also provides consolidated subscriptions, government-wide mandated services, and DHS crosscutting activities.

#### **IV. Program Justification Changes**

**N/A**

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

*For salaries and expenses of the Office of the Under Secretary for Science and Technology, and for management and administration of programs and activities as authorized by title III of the Homeland Security Act of 2002 (6 U.S.C. 181 et seq.), \$138,008,000: Provided, That not to exceed \$10,000 shall be for official reception and representation expenses.*

#### **Explanation of Changes:**

No substantive changes included.

### Salaries and Expenses Mission Statement

The Management and Administration (M&A) appropriation provides for salaries and expenses related to 361 full time equivalent (FTE) personnel in Washington, D.C. This appropriation also provides for the operation of the S&T Directorate Washington, D.C. headquarters including business operations, contributions to the DHS Working Capital Fund, and other administrative costs associated with the management of the S&T Directorate and its resources.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	36,936	43,370	43,552	182
11.3 Other than full-time permanent	3,540	3,540	3,540	-
11.5 Other personnel compensation	1,508	1,508	1,508	-
12.1 Benefits	10,566	12,358	12,404	46
<b>Total, Salaries &amp; Benefits</b>	<b>52,550</b>	<b>60,776</b>	<b>61,004</b>	<b>228</b>

Includes an increase of \$228,000 for a 0.005% federal pay raise.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	\$435	\$723	\$623	-\$100

Includes a \$100,000 reduction due to travel efficiencies.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$39,483	\$27,027	\$26,564	-\$463

Includes a decrease of \$463,000 for a reduction in contractor support contracts.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$39,831	\$40,447	\$43,790	\$3,343

Includes an increase of \$3,343,000 for Working Capital Fund activities.

## K. DHS Balanced Workforce Strategy

In order to establish a high performing workforce comprised of a strong internal core of Federal employees supported by the expertise of private contractors, the Department created the DHS Balanced Workforce Strategy. DHS is committed to establishing the appropriate mix of in-house and contract skills, experience and other resources necessary to balance the total DHS workforce. Pursuant to section 736 of Division D of the Omnibus Appropriations Act, 2009, P.L. 111-8, the Department is required to issue guidelines to DHS component agencies to facilitate consistent and sound application of this statutory requirement.

Through the DHS Balanced Workforce Strategy, the Department will ensure that only Federal employees perform work that is inherently governmental or otherwise needs to be reserved to the public sector to maintain control of and sustain agency operations, and obtains contract services when it is appropriate and cost-effective. After a workforce planning assessment the Department will realign contractor and/or Federal positions as necessary to achieve a balanced workforce. Assessing the workforce also allows managers to understand how contract employees are deployed throughout their organization and integrated with Federal employees to better realize the full potential of our total workforce – both contracted and Federal. A strong internal core of Federal employees will build in-house capacity and institutional knowledge that is essential for effective government performance.

Along with the statutory requirement to issue guidance to DHS components, Section 736 requires the Department to review all existing contracts in order to identify any functions currently being performed that should be reserved for Federal employees. As the Department has a large magnitude of contracts, all contracts have prioritized based on risk into Tiered ranking. The results of Tier 1 contract review are listed below. The results of the lower-priority contracts will post-date this budget submission and will be included in the FY 2014 budget.

THE SCIENCE AND TECHNOLOGY DIRECTORATE requests \$0.0 million and 0 FTP and 0 FTE for the FY 2013 DHS Balanced Workforce Strategy.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Science and Technology Research, Development, Acquisitions, and Operations**

### **I. Appropriation Overview**

#### **A. Mission Statement for Research, Development, Acquisitions, and Operations:**

The Science and Technology (S&T) Directorate's mission is to improve homeland security by working with partners to provide state-of-the-art solutions and/or technology that helps them achieve their missions. S&T partners and customers include the operating Components of the Department, other government agencies, State, local, tribal, and territorial emergency responders and officials.

The S&T Directorate ensures that DHS and the homeland security community have the science, technical information and capabilities they need to effectively and efficiently prevent, protect against, respond to, and recover from all-hazards and homeland security threats. The S&T Directorate develops state-of-the-art solutions to protect the Nation's people and critical infrastructure from chemical, biological, explosive, and cyber attacks.

The S&T Directorate accomplishes its mission through partner-focused and output-oriented research, development, testing and evaluation (RDT&E) programs that balance risk, cost, impact, and time to delivery. In a given year, the S&T Directorate funds approximately 153 projects annually. These RDT&E programs support the needs of the operational Components of the Department and the first responder community and address crosscutting areas such as standards and interoperability.

#### **B. Budget Activities:**

The Directorate has four RDT&E Program, Project, and Activities (PPA), each of which has an important role in implementing research and development activities. These four PPAs are: Acquisition and Operations Support; Research, Development, and Innovation; Laboratory Facilities; and University Programs. Research, Development, and Innovation has six major thrust areas.

##### Acquisition and Operations Support

Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. Acquisition and Operations Support has five major program areas: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

##### Laboratory Facilities

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two programs: Construction and Lab Operations.

##### Research, Development, and Innovation (RD&I)

Provides state-of-the-art technology and/or solutions to meet the needs of the operational Components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX Research and Development; Border Security; Chemical, Biological, and Explosive Defense (CBE); Counter Terrorist; Cyber Security; and Disaster Resilience.

#### University Programs

Supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The three program areas of University Programs include: Centers of Excellence, Education, and Minority Serving Institutions.

#### **C. Budget Request Summary:**

The S&T Directorate requests 130 positions, 130 FTE, and \$693,464,000 for Research, Development, Acquisitions, and Operations in FY 2013, an increase of \$160,464,000 from FY 2012 Enacted. The FY 2013 request reflects an increase in Maritime Border Security, Land Border Security, Chemical Attack Resiliency, Natural Disaster Resiliency, Information Sharing, and Counter Terrorist R&D and a \$0.071 million increase for a 0.005% Federal pay increase within Laboratory Facilities.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Science & Technology  
Research, Development, Acquisitions, and Operations  
Acquisition and Operations Support  
Program Performance Justification**

(Dollars in Thousands)

**PPA: Acquisition and Operations Support**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>55,622</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>54,154</b>
<b>2013 Current Services</b>	-	-	<b>54,154</b>
2013 Program Change	-	-	(6,170)
<b>2013 Total Requested Budget Authority</b>	-	-	<b>47,984</b>
Total Change 2012 to 2013	-	-	(6,170)

The Science and Technology (S&T) Directorate requests \$47.984 million for Acquisition and Operations Support in FY 2013, which includes a \$6.170 million program decrease from FY 2012.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Acquisition and Operations Support (AOS) PPA** – FY 2012: \$54.154 million. FY 2013 request: \$47.984 million. Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in the Department of Homeland Security (DHS) to help ensure that technologies, concept of operations (CONOPS), and procedures meet operational requirements, technology analysis and technology review of analysis of alternatives at the beginning and throughout an acquisition program’s life; oversight of the test and evaluation of DHS major acquisition programs; standards to support the Homeland Security mission, and administration of the SAFETY Act program.

Acquisition and Operations Support major program areas are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

**Operations Research and Analysis** – Provides science based analytic capability and capacity to DHS to better understand threats, the implications of major decisions, evaluates alternatives, improves DHS mission operations and the use of technology across the HSE, and improves the Department's risk management capabilities.

*Complex Event Modeling, Simulation, and Analysis (CEMSA) Project* – This project will offer significant improvements in modeling, simulation and analysis in wide variety of homeland security areas including better situational awareness to incident commanders, crowd evacuation at high impact events, DNA modeling for relationship identification and multimodal biometric identification. This will improve the timeliness, quality, and usability of information to aid in decision making during an event or situation. This project plans to build on the working prototype and work toward Initial Operating Capability for risk analysts with an increased number of models using live data.

**Development Partner(s):** IP, Homeland Infrastructure Threat and Risk Analysis Center (HITRAC)

**End-user(s):** White House, DHS, and other senior Federal decision makers and policy advisors and the governors of the States impacted by a specific disaster

*Future Capabilities Research and Development Project* – This project will improve forensic technology for the Department of Energy (DOE), National Intelligence Community (NIC), Science and Technology Intelligence Community STIC Members, Interagency Partners, and S&T Partners in support of national and homeland security through biometric surveillance and detection. The project supports research collaboration with external agencies and international partners.

**Development Partner(s):** University of Houston, University of Iowa

**End User(s):** Intelligence Community (IC)

*Homeland Security Studies and Analysis Institute (HSSAI)* – HSSAI is a Federally Funded Research & Development Center (FFRDC) that ensures the highest levels of objectivity and technical excellence by bringing together the expertise and outlook of government, industry, and academia to solve complex technical problems that no other organization can accomplish. HSSAI supports DHS Components by providing specialized technical expertise in a spectrum of mission critical capacities, to include independent program analyses and evaluation, targeted trade-off studies of mission-level goals and strategies; analyzing operations and operational requirements; assessing DHS organizations and their governance; and evaluating performance metrics to effectively meet the future challenges facing the nation. HSSAI plans to focus on analyses that will help improve the operational effectiveness of the HSE in an austere budget environment. This will include efforts to develop methodologies and processes to help the Components better identify their capability and programmatic requirements and integrate their common needs across the department, as well as continue to develop meaningful performance metrics across all homeland security operations and initiatives. HSSAI also plans to apply its technical analyses capabilities in key mission areas such as infrastructure resilience, cyber security, explosives, chemical and biological defense, and first responders.

**Development Partner(s):** HSSAI and multiple DHS Components

**End User(s):** Components and offices across DHS and the Homeland Security Enterprise (HSE)

*Identification and Assessments Project* – This project will improve the intelligence community's impact of global science and technology by providing the ability to identify global emerging and/or potentially disruptive technologies that will have a significant impact on homeland security. The project anticipates and defines potential threats emerging from new scientific and technological advances, and evaluates terrorists' innovative or novel use of existing technologies.

**Development Partner(s):** JASONS, Institute on Science for Global Policy (ISGP), Global Futures Forum

**End User(s):** Intelligence Community (IC)

*Intelligence, Surveillance, and Reconnaissance (ISR) Project* – This project will provide a new capability to Customs and Border Protection (CBP), Department of Defense (DOD), Federal Aviation

Administration (FAA), National Oceanic and Atmospheric Administration (NOAA), and the Transportation Security Administration (TSA), using surveillance radar systems to monitor the national airspace to detect, track, and interdict airborne threats in or entering our borders. This project supports research activities to improve the collection and dissemination of information using satellites, radars, sensors, and unmanned platforms in support of DHS Components and Northern Command.

**Development Partner(s):** CBP, DOD

**End User(s):** Intelligence Community (IC)

*Knowledge Management and Tech Foraging Project* – This program will enhance and grow the Directorate’s ability to identify and evaluate existing or developing technologies, services, and emerging trends. The goal of technology foraging is to expedite S&T’s speed of execution, maximize partnership opportunities, and assemble resources in order to positively impact the development of current or future homeland security solutions. This program plans to expand S&T’s technology foraging capabilities to provide “speed of execution” solutions across the Homeland Security Enterprise.

**Development Partner(s):** To Be Determined

**End User(s):** Homeland Security Enterprise

**Safety Act** – This program provides legal liability protections to manufacturers who develop and deploy qualified anti-terrorism technologies - equipped to save lives in the event of a terrorist attack. In accordance with the Support Anti-Terrorism by Fostering Effective Technologies (SAFETY) Act of 2002, this program removes barriers to industry investments that ensure potential manufacturers or sellers of effective anti-terrorism technologies can develop, deploy, and commercialize these technologies. Office of Safety Act Implementation (OSAI) plans to provide a means, via the SAFETY Act Program website, for the private sector and other program stakeholders to submit recommendations and comments for improving the SAFETY Act application review process, including suggestions for incentivizing the private sector to make additional investments in anti-terrorism technologies. OSAI also plans to include targeted outreach efforts for providers of anti-terrorism technologies that will support DHS programs, contracts, and initiatives, especially those relating to cyber security, transportation security and infrastructure protection. Additionally, OSAI plans to increase coordination with DHS Components, Federally Funded Research and Development Centers (FFRDCs), and National Labs to identify innovative technologies that would have SAFETY Act applicability.

There are three key areas of focus for OSAI: operations, outreach, and coordination.

*Operations* – OSAI evaluates the efficacy of candidate technologies based on criteria set forth in the Final Rule, considers the applicant’s current insurance situation, and advises DHS whether to issue SAFETY Act protections to the company.

*Outreach* – OSAI promotes homeland security technologies by raising public awareness about the benefits of liability protections available under the SAFETY Act, thereby expanding the creation, proliferation, and use of anti-terrorism technologies.

*Coordination* – OSAI coordinates the SAFETY Act application review process across DHS and with other Federal agencies to support these partners in their missions and to minimize the burden on applicants for SAFETY Act protection.

**Development Partner(s):** (1) Applicants for SAFETY Act coverage, who are those who sell or otherwise provide anti-terrorism technologies and services. In FY 2011, approximately 65% of those filing applications were from smaller business entities (annual revenues under \$50 million). (2) Government program and procurement officials who seek SAFETY Act coverage (via a Procurement Pre-Qualification Request or a Block Designation Request) for anti-terrorism technologies or services

procured (by contract) or developed (by program), as a means to incentivize private sector participation in the procurement or program.

**End User(s):** Generally, venue or facility owners and operators, whether private sector or government, including their security contractors. Protected facilities include critical infrastructure, transportation networks and structures (e.g., bridges and tunnels), commercial facilities, and entertainment and sporting venues nationwide.

**Standards** – Identifies standards needs and funds initial standards development to ensure technologies applied across the Homeland Security Enterprise (HSE) meet minimum operational needs and do so in a safe, effective, and actionable manner.

*Biological Countermeasures Standards Project* – This project supports an effective, coordinated response to bioterror incidents, supporting public safety with national operational guidance for local hazmat and law enforcement, emergency response officials, and on-scene coordinators. Working with other DHS Components and Federal agencies, this project has developed both validated technical methods and training curricula that encourage capability building at the jurisdiction level. This project will develop an integrated response to suspected biological incidents, fostering a coordinated response from first responder through law-enforcement, forensics, to eventual attribution. Through this project S&T is complying with the national strategy for chemical, biological, and explosive (CBE) standards released by the White House in May 2011. This project plans to complete draft performance specification standards for biological detection technologies according to capability (i.e., screening tools, autonomous monitors, portable and laboratory based PCR assays) and develop proficiency testing protocols in concert with users.

**Development Partner(s):** S&T Chemical/Biological Division, FEMA, National Institute of Standards and Technology (NIST), Centers for Disease Control and Prevention (CDC), Federal Bureau of Investigation (FBI), Environmental Protection Agency (EPA)

**End User(s):** National Guard Bureau, Public Health, First Responders

*Biometrics Equipment Standards Project* – This project develops standards that enable the exchange of biometric and forensic information between and among law enforcement, intelligence, defense, and homeland security agencies. These standards support the interoperability of major biometric recognition and forensic databases and systems at the Departments of Defense, Homeland Security and Justice; linking biometric data to passports, visa, and border-crossing records. This program develops standards that provide the most cost effective way to integrate and coordinate biometric information collection and dissemination in support of the homeland security enterprise. This project plans to initiate projects in biometric client technologies, latent fingerprint analysis, biometric quality, and biometric human factors and usability. This project also plans to complete standard performance specifications for multimodal biometric sensors.

**Development Partner(s):** S&T Human Factors Division, United States Visitor and Immigrant Status Indicator Technology (US VISIT), CBP, TSA, FBI

**End User(s):** TSA, CBP, FBI, Law Enforcement

*Cargo Security Technology Standards Project* – This project facilitates the flow of legitimate trade while advancing cargo and supply chain security. This project enhances the security of cargo in transit protecting people, goods, infrastructure, equipment, and transportation against security threats. This program develops the Standards that provide a cost effective way to make an impact with commercially available technologies to improve the security and tracking of cargo in transit.

**Development Partner(s):** S&T Borders and Maritime Division, CPB, NIST

**End User(s):** Port Authorities, private sector shippers & distributors, CBP

*Chemical Countermeasures Standards Project* – This project supports cost effective deployment of chemical countermeasure technologies at the Federal, State, and local level. Using cooperative efforts in both test method development and testing of hazardous agents, technologies developed by other agencies can transition effectively to homeland security applications. The current suite of ASTM International standards will provide manufactures, responders, and facility operators with performance specifications, testing criteria, and application guidance. Development of these standards is critical for informed procurement decisions across the entire homeland security enterprise. This project plans to implement a conformity assessment program for handheld and stationary chemical detectors. This project also plans to develop standards for the next class of chemical detectors.

**Development Partner(s):** S&T Chemical/Biological Division, DHS Office of Health Affairs (OHA), TSA, Department of Health and Human Services (HHS), CDC, EPA, Transit Agencies, InterAgency Board (IAB)

**End User(s):** Transit Agencies, First Responders

*Credentialing Standards Project* – This project increases the security and reliability of sharing first responder personnel credential information through the development of standards that provide the secure and private sharing of first responder information. This project ensures the proper access control, policy enforcement mechanisms, and trusted infrastructure needed when accessing emergency management resources for preparedness, response, and recovery.

**Development Partner(s):** S&T Human Factors Division, US VISIT, DHS Chief Information Office (CIO)

**End User(s):** CBP, TSA, Port Authorities, Law Enforcement

*Explosives Countermeasures Standards Project* – This project enables technologies that keep explosives out of transportation systems, Federal buildings, and critical infrastructure. Trace detection standards optimize screening through the development of calibration procedures and test materials for use by DHS Components and partners. Standards optimize both the screening protocols and detection technology effectiveness. This project plans to develop standard test materials and protocols for next generation deployed trace explosives detection equipment, including new and emerging explosive threats.

**Development Partner(s):** S&T Transportation Security Lab (TSL), S&T Explosives Division, TSA, NIST

**End User(s):** TSA, FPS, CBD

*Geospatial Information Systems (GIS) Interoperability Standards Project* – This project develops standards to address a number of homeland security requirements. The standards develop the necessary performance metrics for the emergency responder community to accurately evaluate personnel location during an emergency, as well as to ensure the firefighters' personal protection equipment is providing the essential protection needed in extreme environments.

**Development Partner(s):** DHS CIO, FEMA, NIST, IAB

**End User(s):** First Responders

*Human Systems Engineering Project* – This project will improve DHS Component Agency Acquisition personnel capability in designing and developing products in terms of human performance requirements by providing them with a standard process for applying Human Systems Integration (HSI) in the acquisition process per Management Directive 102 and the Systems Engineering Life Cycle (SELC). The project develops and defines requirements for systems, technologies, methods, and measures to influence and evaluate the design of human interfaces for new and existing technologies.

This project plans to demonstrate HSI analysis, design, T&E, and risk management processes on three additional DHS/S&T Directorate programs/projects.

**Development Partner(s):** NIST, National Institute for Occupational Safety and Health (NIOSH), OHA, USCG, ICE, CBP, DHS Domestic Nuclear Detection Office (DNDO)

**End User(s):** DHS Acquisition Community, Nationwide EMS Service Providers.

*Human Systems Research Project* – This project will improve Transition Partners’ capability to incorporate human performance requirements into technology and deployed systems by developing ways to maximize human performance across DHS end-user tasks and activities. The project maximizes the understanding of human performance to increase overall system efficiency and effectiveness. This project plans to complete research and develop recommendations for acquisition of advanced imaging displays; transition the final Human Performance Research Roadmap for aviation security operations to TSA; investigate human performance issues for DHS end users in the areas of Aviation Security and the First Responder.

**Development Partner(s):** TSA, DOD, National Aeronautics and Space Administration (NASA), Federal Aviation Administration (FAA)

**End User(s):** TSA Screeners, X-Ray Image Analysts, First Responders

*Infrastructure and Community Resiliency Standards Project (Formerly Personal Protective Equipment Standards project and Incident Management Training and Process Standards Project)* – This project safeguards the Nation’s responder community by ensuring a coordinated response to emergencies by developing standardized response plans and training for responders, localities, and communities. This suite of standards also develops performance-based design methodologies for buildings and infrastructures subjected to a variety of hazards and defined performance specifications, test methods to determine performance specifications, and guidance related to Federal, State, and local response to emergencies. This project plans to finalize standards for fire and arson resistance as well as complete regional resiliency planning standards, including radiological response planning standards.

**Development Partner(s):** National Institute of Building Sciences (NIBS)

**End User(s):** First Responders

*Mobile Platforms Project* – This project supports urban search and rescue and explosives countermeasures through standards for response robots. This suite of standards and test methods quantify the key capabilities of the robots, ensuring performance and responder safety. These test methods address responder-defined requirements for robot mobility, manipulation, sensors, communication, mapping, human-robot interfaces, logistics, and safety. This project provides uniform test methods to evaluate critical performance parameters in support of ongoing robot procurement actions. To date this project has advanced the state-of-the-art of response robot technologies worldwide. This project plans to expand test methods development to support bomb disposal robot platforms.

**Development Partner(s):** Department of Justice (DoJ), NIST, FEMA, S&T Explosives Division, Domestic and Military Explosive Ordnance Disposal (EOD)

**End User(s):** DOD, First responders

*Radio Frequency Identification (RFID) Project* – This project enhances the security and reliability of communications for RFID systems used to identify people and assets in homeland security applications by developing performance standards and guidance documents ensure the effectiveness of the wireless devices used by first responders. The standards and guidance documents will improve the performance, vulnerability, interference, and interoperability issues that occur with the wireless

devices in environments with electromagnetic or wireless interferences from other medical, commercial, and military equipment.

**Development Partner(s):** NIST, CBP, Department of State

**End User(s):** Port Authorities, First responders

*Sensor Network & Alert Systems Project* – This project improves the ability of first responders to access and receive information on chemical, biological, radiological, and nuclear (CBRN) sensor technologies interfaced with other instruments used to respond to developing events and incidents. This project standardizes device interfaces, facilitates seamless integration, and provides the necessary interoperability of CBRN devices with other equipment to first responders. This improves efficiencies in the deployment of new and existing CBRN sensor technologies and the integration of CBRN sensor reporting capability by developing a suite of sensor standards that describes a set of open, common, network-independent communication interfaces.

**Development Partner(s):** S&T Chemical/Biological Division, Infrastructure and Disaster Management Division, and First Responders Group; Open Geospatial Consortium; DoD, NIST; sensor manufacturers and developers

**End User(s):** S&T Chemical/Biological Division, FEMA, First responders

*Standards Infrastructure Project* – This project supports the development and use of standards that meet Departmental mission needs and enables our customers to procure and acquire reliable, interoperable, and effective technologies and processes. This project promotes and maintains relationships with standards-development organizations to ensure communication with and commitment to partnerships, as well as ongoing infrastructure such as databases and working groups.

**Development Partner(s):** American National Standards Institute (ANSI), American Society for Testing and Materials (ASTM), National Fire Protection Association (NFPA), Institute of Electrical and Electronics Engineers (IEEE), International Committee for Information Technology Standards (INCITS), IAB

**End User(s):** DHS Components using standards

*X-ray Screening Equipment Standards Project* – This project supports the standards that increase the performance reliability and ensure the radiation safety of next generation of X-ray scanners for personnel, baggage, and cargo screening applications and allows for the development of critical screening technologies in airports and other transportation modalities. The project develops standards that measure image quality, sensitivity, and contrast of imaging systems, to increase the ability to detect concealed explosives and other weapons under clothing. Additionally, these standards ensure safety of the general public and equipment operators. This project plans to complete international X-ray standards development on whole-body imaging technical performance and air cargo inspection.

**Development Partner(s):** S&T TSL, S&T Explosives Division, TSA, CBP, NIST

**End User(s):** TSA, CBP, Federal Protective Services, USSS

**Testing and Evaluation (T&E)** - Establishes policies and procedures and coordinates T&E resources to verify attainment of technical performance specifications and evaluate operational effectiveness/suitability prior to system deployment. T&E works to ensure DHS integrates a uniform and centrally managed departmental test and evaluation process into the systems engineering and acquisition lifecycle. The infrastructure area will assess, integrate, and coordinate DHS and non-DHS test assets to ensure adequate test capabilities are available to support DHS programs and projects.

*First Responder Technologies (SAVER) Project* – This project maintains an operational T&E program for First Responder Technologies to enable State and local agencies to purchase equipment that has

been rigorously tested against appropriate standards and certified for use. Based on First Responder needs, decision-makers will be able to better select, procure, use, and maintain commercially available responder equipment for their specific missions. This project plans to conduct objective assessments and validations on commercial equipment and systems from the prioritized product categories.

**Development Partner(s):** Space and Naval Warfare Systems Command (SPAWAR)

**End User(s):** First Responders

*Oversight T&E Activities for Special DHS Projects* – This project works directly with over 85+ DHS acquisition programs to assist in the development and execution of a robust T&E program that will lead to the evaluation of the program’s effectiveness and suitability. This project provides T&E oversight of all existing and emerging Level I and non-delegated acquisition programs. This project plans to continue providing T&E oversight of all existing and emerging Level I and non-delegated acquisition programs.

**Development Partner(s):** DHS Acquisition Programs (Program Managers, and Operational Test Agents)

**End User(s):** DHS Acquisition Programs and DHS Operators

*T&E Infrastructure Development Project* – This project provides DHS with a searchable database tool to identify existing testing infrastructure available for DHS use, such as facilities, equipment, and analytical capabilities, by creating an inventory of current T&E Infrastructure resources. The inventoried list provides the T&E community, program managers, and other potential users with details of available T&E facilities, resources, and capabilities, and will assist DHS T&E to identify infrastructure needs and eliminate excess. This project plans to maintain the DHS inventory and integrate Department of Defense (DOD) infrastructure and capabilities available for DHS use.

**Development Partner(s):** T&E Infrastructure Working Group (USCG, CBP, DNDO, ICE & DOD)

**End User(s):** DHS Program and Test Managers, DOD

*T&E Policy Analysis and Development Project* – This project develops T&E policies and procedures that define T&E activities required of all DHS Components throughout the system acquisition process to verify the attainment of technical performance specifications and evaluate operational effectiveness/suitability prior to system deployment. This project continually maintains and revises the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework as well as lessons learned and comments from the Department. This project plans to continue to maintain and revise the T&E Directive, Guidebook, and training courses to reflect the current acquisition framework.

**Development Partner(s):** DHS Acquisition Programs (Program Managers and Operational Test Agents)

**End User(s):** DHS T&E and Acquisition Professionals

**Technology Transition Support** - Facilitates the transition and transfer of S&T Directorate solutions to customers. Activities involve integrating technology development efforts across S&T Directorate to develop the most cost effective and timely solutions and processes to meet customer requirements, including First Responders.

*Acquisitions Support and Operations Analysis* – Assists DHS Components in developing and institutionalizing up front systems analyses and developing robust operational requirements and analyses of alternatives for acquisition programs. It allows the S&T Directorate, in partnership with Components, to develop a framework and methodology for understanding the range of technology insertion points throughout the continuum of DHS missions and analyzes the relative return on

investment of technology applications to detecting, classifying, preempting, or mitigating threats at these different junctures as well as develop analyses of alternatives to ensure investments are made appropriately. This effort will allow in-depth analyses of multiple programs both on-going and proposed to develop systematic approaches, robust operational requirements and analyses of alternatives to ensure adequate programmatic planning and adherence to DHS Management Directive (MD-102), as well as appropriately planning to align with necessary operational test and evaluation milestones. This upfront effort will result in realistic and achievable programmatic goals that incorporate the best technical solutions and necessary testing to minimize risk and maximize performance.

**Development Partners:** DHS Components

**End Users:** DHS Acquisition Programs

*International Cooperative Programs* – International Cooperative Programs ensures access to the best global security technologies and leads and manages a worldwide, geographically dispersed organization in executing joint S&T programs of international scope and impact by leveraging the research and development capabilities of the international community. This program facilitates international cooperation between and among government agencies, the private sector, academic institutions, and non-profit entities to conduct research and to develop, test, and evaluate equipment, capabilities, technologies, and services that address the DHS mission. This program plans to maintain funded international research projects and the scientist and engineer exchange program and also plans to review arguments for and, if warranted, make recommendations for establishing one or more additional bilateral agreements.

**Development Partner(s):** U.S. Government agencies, international governments, and domestic and foreign partners from the private sector, academic institutions, and non-profit entities.

**End User(s):** U.S. Homeland Security Enterprise and international stakeholders in the civil/public safety and security community

*Interagency Programs (IAO)* – This program addresses high-priority homeland security needs through cooperative science, technology, research, development, testing, evaluation endeavors with other Federal agencies and leverages the capabilities and investments of external organizations. This program supports regional collaboration, assistance, and partnering efforts that provide perspective and project contributing partnerships. This program plans to conduct Regional Homeland Security Interagency Symposia or Table Top Exercises/Discussions to further strengthen DHS regional collaborative efforts and to collect customer/partner and private sector input on technology gaps and to communicate achievements; expand collaborative relationships and outreach with DHS regional components, customers/partners, private sector, as well as Federal executive departments and agencies to leverage RDT&E efforts and capabilities. Explore options for establishing an interagency exchange program; and expand DHS S&T HSARPA project success by supporting regional collaboration, assistance, and partnering efforts that provide perspective and contributing partnerships. Additionally, IAO plans to support planning for the DHS S&T co-sponsorship of a technology and concept important to the DHS and HSE through DOD's Joint Concept Technology Development program and will continue to promote and sponsor participation in DOD concept development and technology discovery experimentation.

**Development Partner(s):** Department of Defense, Naval Post Graduate School (NPS), US Air Force Academy, US Northern Command, Intel Corporation, IBM Watson Center, National Protection and Programs Directorate (NPPD), National Security Agency (NSA), Central Intelligence Agency (CIA), Department of Energy

**End User(s):** Federal Government Departments and Agencies, State and Local Government, First Responders, Private Sector, Academia

*Program Transition* – Establishes and implements a technology development program to focus near-term S&T work on the transitioning projects and capabilities needed by DHS operational Components, directorates and their external customers. This includes partnering with In-Q-Tel, the not-for-profit venture capital firm that invests in high-tech companies for the CIA, on projects for homeland security in high tech, cutting edge technologies such as DNA analysis, standoff explosives trace detection, cyber security, and secure covert surveillance. This program plans to administer a requirements-driven, delivery-oriented effort that draws upon technologies that can be developed, matured, and delivered to DHS acquisition programs, commercialized, or validated as a standard within a three year period.

**End User(s):** Homeland Security Enterprise

**PPA: Laboratory Facilities**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	<b>130</b>	<b>130</b>	<b>156,753</b>
<b>2012 Enacted Budget Authority</b>	<b>130</b>	<b>130</b>	<b>176,500</b>
2013 Adjustments-to-Base	-	-	(49,068)
<b>2013 Current Services</b>	<b>130</b>	<b>130</b>	<b>127,432</b>
<b>2013 Total Requested Budget Authority</b>	<b>130</b>	<b>130</b>	<b>127,432</b>
Total Change 2012 to 2013	-	-	(49,068)

The Science and Technology (S&T) Directorate requests \$127.432 million for this activity in FY 2013. This includes an increase of \$.071 million for a 0.005% pay raise and an increase to Plum Island Animal Disease Center (PIADC) Operations and Maintenance activities in the amount of \$0.861 million. Also included is a non recur of \$50.000 million for NBAF. Current services supports continued operation of other DHS S&T Directorate facilities, as well as planned infrastructure upgrades.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Laboratory Facilities PPA** – FY 2012: \$176.500 million. FY 2013 request: \$127.383 million. The Office of National Laboratories (ONL) manages the Laboratory Facilities programs. ONL provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland.

The *Homeland Security Act of 2002* assigns ONL “the coordination and utilization of the Department of Energy (DOE) national laboratories and other sites under Section 309 in a manner to create a networked laboratory system for the purpose of supporting the missions of the Homeland Security Department”. In addition to oversight of the S&T Directorate’s laboratory operations, ONL coordinates homeland security-related activities and laboratory-directed research conducted within the DOE’s national laboratories.

ONL’s internal customers are the S&T Directorate’s executing divisions and components within DHS such as the Transportation Security Administration (TSA). The primary external Federal customers

are the United States Department of Agriculture (USDA) and the Federal Bureau of Investigation (FBI). ONL executes two programs: Construction and Lab Operations.

**Construction** – Oversees the planning, budgeting, and management of laboratory infrastructure construction and upgrade projects. Construction projects provide and maintain research and development (R&D) capabilities to support the missions of the S&T Directorate, the Department, and other government agencies that have interrelated homeland security missions. The investments include the construction of future laboratories, where a current capability does not exist, and upgrades to extend the life and capabilities of present laboratory facilities.

*Infrastructure Upgrades Project* – Ensures that S&T Directorate laboratories do not reach a point where dilapidated infrastructure or the lack of sufficient infrastructure prohibits conducting needed research and development. Capital upgrades are not routine operations and maintenance or expected upkeep but include new construction, renovation, remodeling, rebuilding, and outfitting space to allow scientists to pursue new capabilities based on customer requirements; and major overhauls of systems (electrical, water/sewage system) to ensure operability, safety, and security. This effort prevents an unmanageable and unaffordable situation where multiple key facilities require upgrades simultaneously.

In FY 2012, ONL will complete construction of the explosive bunker storage. In addition, a business case will be conducted to further evaluate the requirements and infrastructure investment needed to meet the mission needs. Also in FY 2012, ONL plans to upgrade facilities at the Transportation Security Lab (TSL) as part of the TSL Infrastructure Investment Program. In FY 2013, ONL plans to make critical upgrades at Plum Island Animal Disease Center (PIADC) facilities which could include the harbor, chiller plant, security, and information technology systems.

**Lab Operations** – Manages the operations and maintenance of the DHS laboratories and infrastructure.

*Chemical Security Analysis Center (CSAC) Facility Operations* – Develops and informs risk assessments related to national chemical defense. CSAC is located at the DOD Edgewood Chemical Biological Center (ECBC) in Aberdeen, MD. CSAC directly supports the S&T Directorate's Chemical and Biological Division, DHS Components such as the NPPD, and operates in cooperation with the FBI and DOD. CSAC also provides science and technology-based quality assured information of the chemical threat to support the unified national effort to secure the Nation. The DOD Sample Receipt Facility (SRF) at ECBC houses CSAC, providing the capability to integrate knowledge across the full chemical threat spectrum. Operation costs for this facility include rent, security, utilities, and information technology infrastructure.

*National Urban Security Technology Laboratory (NUSTL) Operations* - Provides testing and evaluation expertise to the S&T Directorate and other DHS components such as DNDO. NUSTL also is the DHS liaison for the deployment of experimental technologies in the New York City metropolitan area and provides technical support to the regional First Responder community. NUSTL is a government-owned, government-operated laboratory located in the Borough of Manhattan in New York City. In FY 2011, ONL conducted the remaining environmental cleanup to return excess space to GSA and move NUSTL to smaller facilities. The move will reduce rent and operational costs. The laboratory will transition in to the new offices by the end of the second quarter of FY 2012. GSA requirements for final cleanup include, the final disposal of contaminated materials and removal of fume hoods, large exhaust ducting, furnaces, and other equipment that are legacy from DOE activities. Operations costs include rent, security, and utilities.

*National Biodefense Analysis and Countermeasures Center (NBACC) Operations* – NBACC is located at Fort Detrick, MD and is part of the National Interagency Biodefense Campus that includes Health and Human Services (HHS), DOD, and USDA and provides the capability to characterize current and future biological threats, assess their impacts, and inform the development of countermeasures and vaccines. NBACC also conducts bioforensic analysis of evidence from biocrimes and terrorism to support law enforcement’s efforts to attribute crimes to the perpetrators. The unique missions of threat characterization and bioforensics enhance the Nation’s overall biodefense capabilities. NBACC closely collaborates with the FBI and other law enforcement agencies. Discussions are ongoing with DOD for potential use of NBACC in cooperative biodefense Medical Countermeasure Test & Evaluation. Such an arrangement would offer significant advantages to both Federal Agencies and allow NBACC to utilize existing capacity to perform work needed by DOD. The S&T Directorate operates NBACC as a Federally Funded Research and Development Center (FFRDC). The FFRDC plans, manages, and executes the NBACC research programs and operates the facility. Major operations costs include NBACC management through the FFRDC, security, equipment/furnishings, utilities and site services, fees, and insurance.

*National Bio and Agro-Defense Facility (NBAF)* – NBAF is envisioned as a state-of-the-art biocontainment facility for the study of foreign animal, emerging and zoonotic (transmitted from animals to humans) diseases that threaten the U.S. animal agriculture and public health. For the past 50 years, the Plum Island Animal Disease Center (PIADC) has served our nation as the primary facility to conduct this research. However, PIADC is nearing the end of its life-cycle and S&T needs to ensure the continued development of timely countermeasures in the event of an outbreak. NBAF, as envisioned, will address this need and will serve as a replacement for the PIADC facility. Strategically, NBAF will have new and expanded capabilities including Biosafety Level (BSL) 4 containment for the study of high-consequence diseases affecting large livestock.

Specifically, NBAF will meet its mission by:

- Providing enhanced research capabilities to diagnose foreign animal, emerging and zoonotic diseases in large livestock
- Providing expanded vaccine and countermeasure development capabilities for large livestock
- Replacing and expanding research currently done at the Plum Island Animal Disease Center (PIADC) in New York, and continuing the partnership between the Department and the U.S. Department of Agriculture (ARS) and (APHIS)

The following diseases would be studied at NBAF which would require BSL-3 and BSL-4 laboratory capabilities:

- Nipah Virus
- Hendra Virus
- African Swine Fever
- Rift Valley Fever
- Japanese Encephalitis Virus
- Foot and Mouth Disease
- Classical Swine Fever
- Contagious Bovine Pleuropneumonia

Since 2009, S&T has been planning for and completing the final designs of the NBAF. To ensure that NBAF is the most effective method to protect our Nation’s agriculture infrastructure and public health,

DHS, beginning in FY 2012, will convene an expert and stakeholder taskforce, in conjunction with the interagency, to conduct a comprehensive assessment of whether and for what purpose a BSL 4 facility should be stood up. This taskforce will consider current threats from terrorism, foreign animals and the global migration of zoonotic diseases to U.S. agriculture. This assessment will also review the cost, safety, and any alternatives to the current plan that would reduce costs and ensure safety within the overall funding constraints established by the Budget Control Act.

*Plum Island Animal Disease Center (PIADC) Operations* – PIADC is located on Plum Island, off the eastern end of Long Island, New York and conducts research on contagious animal diseases (e.g., foot-and-mouth) identified in other countries. PIADC’s mission is to develop strategies and vaccines to protect the Nation’s animal industries and exports from foreign animal diseases accidentally or deliberately introduced into the United States. DHS and USDA jointly perform the R&D work at PIADC. Both organizations have a research presence, including laboratory employees, but DHS is responsible for the operations and maintenance of the facility. The combined work of both agencies supports the S&T Directorate’s agro-terrorism countermeasures programs. Research at the facility occurs in BSL-2, BSL-3, and BSL-3Ag laboratory spaces. The laboratory is a self-sustaining operation, with its own power plant, fuel storage, fire protection, waste disposal, and security systems. The S&T Directorate also provides the only ferry transport to and from the island and is responsible for operating and maintaining the ferries, docks, and harbor. The S&T Directorate provides the day-to-day operational support, including the operations work force. Major operation costs include security, an Operations & Maintenance contract, utilities, and fuel.

*Salaries and Benefits* – Funds salaries and benefits for non-Headquarters, Federal employees located at the S&T Directorate’s field laboratories. These employees operate and execute programs at the DHS S&T Directorate Laboratories in support of S&T Directorate divisions and DHS Components.

*Transportation Security Laboratory (TSL) Operations* – TSL is located at the Federal Aviation Agency (FAA) William J. Hughes Technical Center in Atlantic City, N.J. TSL performs research, development, and validation of solutions to detect and mitigate the threat of explosives. TSL is an RDT&E laboratory that develops promising technologies to the point of operational test and evaluation. TSL supports the S&T Directorate’s Explosives Division and TSA. The real property and facilities belong to FAA. Major operations costs include rent, buildings maintenance, utilities, security, and information technology.

**Department of Homeland Security

Research, Development, Acquisitions, and Operations  
Research Development and Innovation  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Research Development and Innovation**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>500,389</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>265,783</b>
<b>2013 Current Services</b>	-	-	<b>265,783</b>
2013 Program Change	-	-	212,265
<b>2013 Total Requested Budget Authority</b>	-	-	<b>478,048</b>
Total Change 2012 to 2013	-	-	212,265

The Science and Technology (S&T) Directorate requests \$478.048 million for Research, Development and Innovation in FY 2013, which includes a \$212.265 million program increase from FY 2012 funding levels to fund vital homeland security related R&D projects. In 2013, S&T will collaborate more closely with DHS’ operating component to speed the delivery of new technologies to the field.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**Research, Development, and Innovation (RD&I) PPA** - Provides state-of-the-art technology and/or solutions to meet the needs of the operational Components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX Research and Development; Border Security; Chemical, Biological, and Explosive Defense; Counter Terrorist; Cyber Security; and Disaster Resilience.

**Apex Research & Development Thrust** – FY 2012: \$14.000 million. FY 2013 request: \$15.000 million. Consists of cross-cutting, multi-disciplinary efforts requested by DHS Components. Apex projects are high priority, high-value, and short turn-around in nature.

*Science & Technology Operational Research and Enhancement Program (STORE)* – Partners with the United States Secret Service (USSS) to better integrate technology with human networks protecting government leaders and designated personnel traveling across the country. STORE has two primary goals: (1) Implement new and existing technologies that are lightweight, efficient, modular, and portable to more effectively maintain control of cleared areas while extending protective capabilities

beyond the physical boundaries. STORE will integrate these technologies, including communication and various detection systems, to optimally work together to support human processes; (2) Help USSS establish a sustainable plan to rigorously analyze and measure their effective use of technology, consider emerging threats, and make technology refresh decisions to guide future acquisitions. This project plans to transition STORE technology prototypes and knowledge products including acquisition and engineering processes, procedures, findings, and best practices.

**Development Partner(s):** USSS. Additionally, leveraging existing development work being done by Department of Defense (DOD), Intelligence Community, and Department of Energy (DoE).

**End User(s):** USSS (Office of Protective Operations, Offices of Investigations, Office of Technical Development and Mission Support, Office of Human Resources and Training, Office of Administration)

**Border Security Research & Development Thrust** – FY 2012: \$15.734 million. FY 2013 request: \$31.652 million. DHS is responsible for securing the borders, territorial waters, ports, terminals, waterways, and air, land, and sea transportation systems of the United States. The S&T Directorate invests in the research and development of border security technology to: prevent the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband; manage the risk posed by people and goods in transit; and disrupt and dismantle transnational criminal organizations.

**Land Border Security Program** – Develops and transitions technical capabilities that strengthen U.S. land border security by safeguarding lawful trade and travel; and disrupting and dismantling transnational criminal and terrorist organizations.

**Air Based Technologies Project** – This project will provide dominant airborne sensor capabilities for the Customs and Border Protection (CBP) Office of Air and Marine (OAM), the US Coast Guard (USCG) Office of Aviation Forces (CG-711), and the external First Responder Community by providing and enhancing end-to-end sensor solutions for airborne detection, identification, and classification of illicit activity, including low-observable air and water craft. The project meets the Component's needs by identifying and quantifying current capability gaps and sensor requirements, by conducting flight test and evaluation (T&E) in real operational environments, and by developing the associated Concept of Operations (CONOPs). For sensors that will or may be deployed on unmanned aircraft systems (UAS), this program will use previously-developed (in collaboration with FAA and DOD) modeling and simulation tools to ensure the relevant UAS platforms have access to the National Airspace System (NAS). This project plans to establish SUAS preliminary operational requirements document (PORD) and CONOPS, and continue wide-area surveillance and small UAS flight test and evaluation programs for DHS operational Components and for the external First Responder user communities.

**Development Partner(s):** Massachusetts Institute of Technology/Lincoln Lab (MIT/LL)

**End User(s):** Customs and Border Patrol (CBP) Office of Air and Marine (OAM), US Coast Guard (USCG) Office of Aviation Forces (CG-711), First Responder Community

**Border and Maritime Systems Basic Research Project** – Researches technical borders and maritime capabilities that enhance homeland security without impeding the flow of commerce or travel and address current gaps in border and maritime systems, including studying and analyzing emerging threats.

**Development Partner(s):** Stevens Institute, National Renewable Energy Lab, University of Arkansas

**End User(s):** CBP and USGC

*Complex Systems Analysis Basic Research Project* – Generates the fundamental knowledge and conceptual development to prototype new concepts, supporting methods, and tools necessary to advance understanding and inform capability development to effectively address complex system problems. The project studies the role of advanced modeling and simulation in assessing effectiveness in streamlining and enhancing DHS-SBI (Secure Border Initiative) decision making in a complex environment.

**Development Partner(s):** Old Dominion University

**End User(s):** CBP

*Ground-Based Technologies Project* – This project will improve CBP’s ability to detect illegal incursions along US terrestrial borders by developing advanced sensors and surveillance systems. The project performs research, development, tests, and evaluation of algorithms and sensors such as radars, imagers, Unattended Ground Sensors (UGS), and tripwires for detecting, tracking, and classifying slow moving targets in difficult terrain and all weather. This project’s goal is to improve overall border security and agent safety by improving agent surveillance capabilities through increased sensor detections and lower false alarm rates. Assessment results will provide the CBP Office of Technology Innovation and Acquisition (OTIA) with performance information on state-of-the-art sensors to assist in requirements development and acquisition planning. Beginning in FY 2013, the Northern Border Test Bed project will become a subset of this project, which provides the infrastructure in the CBP Swanton Sector to field test and evaluate Ground-Based Technology sensors and surveillance systems in an operational, in situ, northern border environment. The testbed reduces acquisition risk for CBP while enabling agent training and tactics development. This project plans to provide a final report on the advanced prototype camera poles, while continuing to test, evaluate and demonstrate advanced sensor technologies.

**Development Partner(s):** Naval Research Laboratory (NRL); Massachusetts Institute of Technology/Lincoln Laboratories (MIT/LL); Advanced Technology Systems Corp (ATSC);

**End User(s):** CBP

*Northern Border Test Bed Project* – The test bed provides the infrastructure to evaluate sensor and surveillance technologies (from the Ground Based Technology project) in an operational environment, specifically CBP Swanton Sector. Maximizing the use of existing infrastructure, the project reduces risk for full-scale development, informs product acquisition efforts, assesses the utility to local field operations, and informs development/modification of Concept of Operations as necessary. The test bed enables agent training and tactics development, as well as testing of developmental hardware in the operational environment such as detection sensors, multi-sensor integration, and wireless connectivity. Project subsumed by the Ground Based Technology Project beginning in FY 2012.

**Development Partner(s):** CBP

**End User(s):** CBP

*Sense and Avoid Systems (S&A) for Unmanned Aerial Systems (UAS) Project* – This project provides CBP and USCG with improved land and maritime domain awareness, as well as wide area surveillance by facilitating the deployment of unmanned aircraft. The project will develop a mid-air collision sense-and-avoid capability to allow unmanned aircraft to operate in civil airspace and demonstrate using a combination of models and flight tests. It also establishes a test bed for evaluating sense-and-avoid systems in realistic, user-relevant settings. This project plans to draft a roadmap for Small Unmanned Aircraft Systems (SUAS) access to the national airspace system, including safety case for Federal Aviation Administration (FAA), as well as test and evaluate SUAS in operational environments, and develop knowledge and information data bases to enable first responder safety cases for national airspace access.

**Development Partner(s):** Massachusetts Institute of Technology/Lincoln Lab (MIT/LL)

**End User(s):** CBP, FAA, DOD

*Small Dark Aircraft Project* – This project will enhance CBP capabilities to consistently detect and track small aircraft (helicopters, ultra-light and fixed wing) at or before crossing the border to enable successful interdiction of illicit cargo. The approach taken is: (a) assess current U.S. detection capabilities, (b) determining capability gaps that can be addressed by technical means, and (c) identifying/integrating/developing relevant technologies. This project plans to demonstrate emerging technologies that could support detection, discrimination, and tracking of low observable small dark aircraft. This project also plans to set up a pilot program and demonstrate advanced detection capability at a northern border location.

**Development Partner(s):** CBP, US Air Force, Stevens Institute of Technology, MITRE

**End User(s):** CBP Air and Marine, CBP Border Patrol

*Tunnel Activity Monitoring Project* – Public infrastructure storm drains and sewers are being used as conduits for smuggling and illegal entries. This project will design, fabricate, test, install, and operationally evaluate a system that will provide persistent surveillance of human activities in public tunnels. The technology focus is miniaturized, long-life sensors and software to self-adjust to urban background noise, robust relayed communications, and command center displays that pinpoint detections on a city map. This project plans to complete installation of a southern border pilot. This will be followed by a one year operational assessment by CBP.

**Development Partner(s):** MIT/LL

**End User(s):** CBP

*Tunnel Detection Project* – This project will develop technology to enable CBP and ICE to reliably detect tunnels to prevent contraband and illegal immigrant smuggling using clandestine tunnels by using modeling and simulation techniques to predict the effectiveness of the most promising tunnel detection technologies. The project will first develop data sets that accurately represent the geological/geophysical characteristics of the US-Mexican border where tunneling is most probable. The project will then develop physical interaction models for the most promising sensor technologies to generate performance predictions using the geological/geophysical data. The performance predictions will inform CBP of which tunnel detection technology or a combination thereof works best in specific locations along the border, in order to assist CBP's acquisition planning. This project plans to develop geological/geophysical data sets of areas along the US-Mexican border where the probability of tunneling is highest, develop physical interaction models of the most promising sensor technologies, and exercise the physical sensor models to generate performance predictions. This project also plans to develop sensor database and models to inform CBP Field Ops which sensor types work in the most probable locations, provide CBP Acquisition scientific-based data regarding what sensors have the best overall performance and their geographic extent of use and confidence level, and enable targeted research to improve sensor development.

**Development Partner(s):** Homeland Security Systems Engineering and Development Institute (HS SEDI)/MITRE, U.S. Army Corps of Engineers Engineering Research and Development Center (USACE ERDC), U.S. Geological Survey (USGS)/Kansas University, Defense Threat Reduction Agency (DTRA)/Raytheon-UTD

**End User(s):** CBP, ICE

*Maritime Border Security Program* – Develops and transitions technical capabilities that enhance U.S. maritime border security by safeguarding lawful trade and travel and disrupting and dismantling transnational criminal and terrorist organizations.

*Advanced Fusion Technologies Project* – This project enhances CBP and USCG abilities to quickly detect, localize, and track maritime threats by developing capabilities to fuse information from multiple data sources, including law enforcement and commercial databases. The project addresses United States Coast Guard and CBP capability gaps and provides better situational awareness for effective decision-making in complex and dynamic environments.

**Development Partner(s):** Space and Naval Warfare Systems Center Pacific (SSC Pacific)

**End User(s):** CBP, USCG

*Port and Coastal Surveillance Improvement Project* – This project will bridge gaps in USCG's maritime situational awareness, security effectiveness, and safety by providing a persistent and pervasive maritime surveillance capability that identifies small vessels at a sufficient range (for law enforcement response) in the port/harbor/coastal environment. The project develops, tests, and demonstrates technologies to detect, track, and identify large and small vessels in port and coastal regions. It will integrate existing and new vessel track sources/data to develop a maritime unclassified common operating picture (COP). This project plans to upgrade existing sensors and networks to enable additional new vessel track data sources, and network them into Coastal Surveillance Systems and complete the operational demonstration/pilot of the Small Vessel Tracking System (SVTS) and transition the system to operating Components.

**Development Partner(s):** Naval Research Lab, Naval Surface Warfare Center/Crane, Naval Undersea Warfare Center/Newport, Massachusetts Institute of Technology/ Lincoln Lab, Stanford Research Institute, National Center for Secure and Resilient Maritime Commerce

**End User(s):** USCG, CBP

*Port Security Test Bed Project* – This project enhances data integration and sharing between DHS operating Components. The project validates requirements and evaluates technologies for advanced sensors, data sharing and data control for seaports.

**Development Partner(s):** Space and Naval Warfare Systems Center Pacific (SSC Pacific)

**End User(s):** USCG Interagency Operations Centers (IOC), CBP Air Maritime Operations Center (AMOC), CBP Office of Technology Innovation and Acquisition, and CBP Office of Field Operations / Ports

*Small Boat Harbor Surveillance (SBHS) Project* – This project will improve USCG's and CBP's ability to monitor small boat activity that cannot be done now. The project will enhance port security, situational awareness and enable effective, timely law-enforcement response by tracking small boats, detecting anomalous behavior, and providing actionable information to law enforcement. The project conducts market research of commercial off-the-shelf/government off-the-shelf (COTS/GOTS) technologies, tests and evaluates prototypes, and demonstrates technologies to track small boats in harbors and port environments. This project will articulate and validate unmet SBHS needs then identify, prototype and test affordable platforms and sensors that address those needs. This project was combined with the Port and Coastal Surveillance Improvement Project in FY 2012.

**Development Partner(s):** Naval Research Lab, Naval Surface Warfare Center/Crane

**End User(s):** USCG, CBP

*Small Dark Vessels Project* – This project will develop capabilities to detect, identify, track, and interdict small dark vessels (primarily submersibles) by identifying, integrating, and tailoring sensors across the electromagnetic and acoustic spectrum. The project includes near-term development and long-term basic research of technologies that attack specific target vulnerabilities in order to administer

the most effective countermeasures. This project plans to demonstrate emerging technologies that support detection, identification, tracking, and interdiction of low observable maritime vessels.

**Development Partner(s):** Multiple DOD and Intelligence Community

**End User(s):** CBP, USCG, ICE, Joint Interagency Task Force South (JIATF-S), Maritime Intelligence Fusion Center, Pacific (MIFPAC)

*Wide Area Surveillance (WAS) Project* – This project will provide Federal, State, and local agencies high-resolution, real-time forensic surveillance of threats posed by individuals, objects, or vehicles in densely populated infrastructure settings by establishing a system that provides a 360-degree field-of-view with real time capabilities using novel sensors and systems. The project will develop a persistent WAS capability, provide advanced video analytics capabilities to enhance operational use, and integrate information associated with the detection, tracking, and classification of vessel traffic offshore. This project was combined with the Port and Coastal Surveillance Improvement Project in FY 2012.

**Development Partner(s):** Naval Research Lab, Naval Surface Warfare Center/Crane

**End User(s):** USCG, CBP

*Cargo Security Program* – Develops technologies to ensure the integrity of cargo shipments (including sea, air, and land conveyance) and enhances the end-to-end security of the supply chain, from the manufacturer of goods to final delivery. This work will reduce the risk of terrorists manipulating cargo as it conveys across various transit modes in the international supply chain.

*CanScan Project* – This project seeks to enhance detection of contraband items (e.g., drugs, currency, firearms) or human trafficking in shipping containers and trucks by deploying imagery, identification, and radiography technologies in a mobile platform. The project develops a next-generation, non-intrusive radiography system in a revolutionary coupling with neutron material discrimination and resolution technologies to scan containerized cargo and reduce false alarms and secondary inspections. The project has been cancelled and will conclude with the Preliminary Design Review (PDR).

**Development Partner(s):** Space and Naval Warfare Systems Center Pacific (SSC Pacific)

**End User(s):** CBP and DHS Policy

*Composite Container Project* – This project will enhance end-to-end global cargo security by developing a secure shipping container with embedded security sensors to detect tampering and intrusions from the point-of-consolidation to the point-of-deconsolidation in the maritime supply chain. The project tests and evaluates hybrid composite materials against International Standards Organization (ISO) structural requirements to build a next generation container using alternative light-weight composite materials. It also develops and evaluates the sensors and communications devices which will be embedded within the container walls, doors, ceiling, and floor.

**Development Partner(s):** Maine Secure Composites (MSC) and Georgia Tech Research Institute (GTRI) are the performers for this project

**End User(s):** CBP, DHS Policy (with respect to Standards)

*Maritime Supply Chain Secure Transit Demonstration Project* – This project will demonstrate the technological capability and practical feasibility of securing maritime cargo while in transit. This demonstration will integrate previously developed security appliances including Container Security Device (CSD), Marine Asset Tag Tracking System (MATTS), Network Access Device (NAD), and Data Consolidation Point (DCP) functionality into a cohesive system. The project will also allow DHS S&T and CBP to determine the efficacy of such an integrated system, better understand the different requirements and concept of operations to support cargo security on diverse marine supply routes, as

well as validate the open standards selected and/or developed for the system components. This project plans to: initiate a demonstration in conjunction with transoceanic trading partner(s).

**Development Partner(s):** CBP Office of Technology Innovation and Acquisition (OTIA)/Office of Field Operations (OFO), DHS Policy

**End User(s):** CBP OFO, Maritime Shippers, DHS Policy

*Safe Container (SAFECON) Project* – This project enhances CBP’s ability to detect weapons of mass destruction, explosives, contraband, and humans in maritime shipping containers by leveraging high reliability, high-throughput sampling and detection technologies. The Container Security Test Bed (CSTB) has been developed and is available to industry and government for testing, experimentation, and evaluation of detection technology in a realistic environment.

**Development Partner(s):** MIT Lincoln Laboratory, Pacific Northwest National Laboratory (PNNL), Volpe National Transportation System Center, Research International Inc., L3 Services Inc, ICX Technologies, Jet Propulsion laboratory (JPL)

**End User(s):** CBP Office of Field Operations (OFO)

*Supply Chain Secure Transit Corridors Technology Demonstration Project* – This project will provide CBP with security visibility of cargo conveyances entering the U.S. by evaluating an Electronic Chain of Custody (ECoC) security system on four supply chain routes from Canada and Mexico. The ECoC system will detect unauthorized door openings and other anomalies as well as provide encrypted in-transit tracking throughout the international supply chain. The goal of the project is to help CBP determine the ECoC’s efficiency, concept of operations for different supply routes, as well as provide an immediate interim operational capability. Furthermore, the project will provide CBP with performance standards to create an infrastructure that enables secure transit corridors for Customs-Trade Partnership Against Terrorism (C-TPAT) Tier III members. This project plans to transition the standards and provide a leave-behind capability.

**Development Partner(s):** SPAWAR Systems Center Pacific (SSC Pacific), and Sandia National Labs

**End User(s):** CBP Office of Field Operations (OFO)

**Chemical Biological, and Explosive Defense Research & Development Thrust** – FY 2012:

\$126.555 million. FY 2013 request: \$197.688 million. S&T Directorate invests in research & development to support threat awareness, prevention, and protective strategies, coordinated surveillance and detection, response and recovery initiatives to address chemical, biological, and explosive threats. Efforts include: prevention of terrorism; prevention of the unauthorized use of Weapons of Mass Destruction (WMD) within the U.S.; reduction of vulnerability of critical infrastructure from terrorist attacks and other hazards; prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband; and, coordination with local and regional partners to identify hazards, assess vulnerabilities, and develop strategies to manage the risks associated with man-made hazards.

*Bioagent Detection Program* – Conducts research, develops, and/or identifies tools to enable rapid detection and provide advanced warning of attacks or releases of biological threat agents against the population and agriculture of the United States. Defines the intended use and application, develops the requirements, and executes the technology developmental efforts to support early detection and warning of potential bioagent threats to humans and animals.

*Agricultural Screening Tools Project* – This project will improve the ability of U.S. Government agencies such as United States Department of Agriculture (USDA) and Federal Drug Administration (FDA) to screen for and detect high priority foreign animal diseases that threaten the U.S. agricultural

critical infrastructure by developing and standardizing protocols and tools. It focuses on the development of standardized technologies; to include immunoassay-based approaches and real-time polymerase chain reaction (PCR) to identify animals infected with high priority foreign animal diseases. This project plans to develop and deploy screening tools to the National Animal Health Laboratory Network (NAHLN) for the detection of foreign animal diseases including foot-and-mouth disease, classical swine fever, and rift valley fever.

**Development Partner(s):** United States Department of Agriculture (USDA)

**End User(s):** Department of Homeland Security Customs and Border Patrol (DHS CBP), USDA, Animal/Agricultural Producers

*Bioassays Project* – This project will improve the Nation’s ability to screen and monitor for multiple pathogens in the event of a bio-attack. This project develops rapid detection assays to recognize biological threat agents and toxins in support of the National Bio-Monitoring Architecture (NBMA), Public Health Surveillance through the Public Health Actionable Assay initiative, and the Integrated Consortium of Laboratory Networks (ICLN) event detection, characterization, and mitigation. S&T is also developing bio-informatics resources, reference strain repository, antibody repository, and standards. These resources and activities will evaluate and support use of Public Health Actionable Assays (PHAA) validated by Centers for Disease Control (CDC) Laboratory Response Network (LRN) for initiating public health response based on environmental sensing. It will also promote interoperability and unified operational concepts for US government-deployed systems through the establishment of Federal Standards for Assay Performance and Equivalency. Finally, the bioassays project will evaluate novel approaches to recognize and identify emerging threats. As part of this project, the bioinformatics effort continually assesses the evolution of our knowledge of the genetics of environmental organisms to determine whether existing assays require reformulation to maintain their intended selectivity. This project plans to fully transition the testing of first responder tools in partnership with the Office of Health Affairs (OHA). This project also plans to expand definition of key antigenic signatures and develop new reagents and assays to detect emerging, enhanced, and advanced biological threat agents.

**Development Partner(s):** Department of Defense (DOD)

**End User(s):** DHS Office of Health Affairs (DHS OHA); DOD, Department of Health and Human Services (DHHS), United States Postal Service (USPS), Department of Justice (DOJ)

*Detect-to-Protect Triggers and Confirmers Project* – This project seeks to provide prompt detection and warning protect high value facilities, transportation systems, and their occupants from an indoor bio-aerosol threat release and minimize the extent of contamination by initiating immediate low-regret actions to contain the spread of the aerosol. The goal is to develop commercialized low-cost, bio-aerosol detection and identification systems that respond within minutes of release of the bioaerosol, acting as a reliable ‘bio smoke alarm.’

**Development Partner(s):** DOD

**End User(s):** DHS OHA, Transportation Security Administration (TSA), facility owners/operators

*Multi-Application Multiplex Technology Platform Project* – This project will develop and provide a rapidly deployable, quantitative, easy-to-use, highly multiplexed nucleic acid detection system with high specificity and sensitivity for both U.S. government and commercial sector use. The system will be ideal for distributed identification of existing and emerging infectious disease pathogens and bioterrorism/biowarfare agents. This project will improve the ability of Government agencies to test for traditional agents, enhanced agents, emerging agents, and advanced agents in the event of a bio-attack or disease outbreak, and provide the ability to perform up to 100 tests or detect 100 targets simultaneously within a single sample using a user-friendly multiplex technology where assay

cartridges may be changed, based upon facility or agency-specific needs. This project plans to transition the technology to commercialization for acquisition.

**Development Partner(s):** Funded solely by DHS.

**End User(s):** DHS Customs and Border Protection (CBP); CDC, US Department of Agriculture (USDA), DOD, Environmental Protection Agency (EPA), Food and Drug Administration (FDA)

*Next-Gen Biological Detection Project* – This project conducts research and develops a suite of technologies to accurately detect the presence of traditional biothreat agents, provide characterization of pathogens for their virulence, provide a rough quantification of the amount of that agent, and preserve the viability of samples for further analysis. The project will also explore cheaper or reusable reagents that will significantly reduce the operational cost of detection while providing highly reliable and timely results, and improve system reliability and maintainability to reduce the total life-cycle costs. This project plans to initiate system design against documented requirements.

**Development Partner(s):** CDC

**End User(s):** OHA

*Rapid Biodetection Project* – This project will establish and/or improve capabilities to rapidly and accurately screen and identify exposed or contagious persons, to include those clinically symptomatic or prior to exhibiting symptoms of disease. This project will establish capabilities for early detection of exposure to viral and/or bacterial pathogens, providing robust assessments that can trigger rapid deployment of appropriate therapeutics, such as antivirals or antibiotics, which can dramatically reduce the extent, duration and spread of disease in exposed populations. This project plans to initiate testing, evaluation and validation of peptide array and lateral flow diagnostics as well as initiate process toward FDA approval for the transition of the devices for use in clinical assessments. This project also plans to develop fieldable peptide array and lateral flow devices to quickly assess if individuals have been potentially exposed to biological threat agents and to determine a course of action for treatment.

**Development Partner(s):** Department of Defense

**End User(s):** CDC Laboratory Response Network, Hospitals, Private Physician Offices and Clinics, First Responder Community

*Viable Bioparticle Capture Project* – This project will improve the ability of the public health service community to confirm a biological attack and its extent and duration. The project improves the collection of biological agents by preserving the sample for multiple days allowing additional verification or characterization on the sample. The final system is intended to augment the DHS BioWatch program by: 1) allowing characterization of the viability (i.e., whether capable of causing infection or not) of an agent used in an attack; 2) supporting rapid antimicrobial susceptibility testing; 3) supporting orthogonal testing (using other assay chemistries for additional verification or characterization) as needed; 4) enabling more definitive post-event characterization of bioterrorist events; and 5) providing critical information about persistence, decay and re-aerosolization of an agent in the days after an attack. This project will transition initial production systems to OHA.

**Development Partner(s):** Funded solely by DHS

**End User(s):** Office of Health Affairs (OHA)

*Bioagent Threat Assessment Program* – This program addresses biological and agricultural knowledge gaps and develops defensive strategies to counter potential threats. It also supports a full spectrum of knowledge products (e.g. reports/studies) to better inform policy makers on the attributes, risks, and consequences associated with the intentional release of a biological or agricultural (livestock) agent.

*Agrodefense Basic Research Project* – This project will address basic, critical scientific knowledge gaps in host protective immune mechanisms for foreign animal and zoonotic diseases by leveraging and accelerating research projects currently being executed by FAD disease experts.

**Development Partner(s):** USDA

**End User(s):** USDA

*Biodefense Knowledge Center (BKC)* – This project provides expertise and information about biological sciences and biothreats to DHS Components and multiple Federal agencies. Products include tailored assessments, in-depth analyses of biodefense issues and biotechnologies, and a knowledge management system to enable rapid and secure customer access to biodefense knowledge and information. Example assessment products include Material Threat Assessments (MTAs, in-depth studies of estimates of human exposures to high-consequence agents in specific scenarios), periodic awareness bulletins, and focused reference resources (such as Biothreat Agent Fact Books). Example uses of knowledge management system include work with the Federal Bureau of Investigation (FBI) to develop large scale scanning and reporting of advanced life sciences traffic in threat streams, and with Customs and Border Protection to enable improved targeting of potentially dangerous cargo. This project plans to publish a classified third edition of the Biothreat Agent Fact Book, finish delivery of select next generation Material Threat Assessments for issuance of updated Material Threat Determinations, and update the Biodefense Knowledge Management System to include additional data sources.

**Development Partner(s):** DHS CBP

**End User(s):** DHS Office of Intelligence and Analysis (I&A), CBP, OHA, Office of Policy; Central Intelligence Agency (CIA), National Ground Intelligence Center (NGIC), Defense Intelligence Agency (DIA), National Counterproliferation Center (NCPC), Federal Bureau of Investigations (FBI), DOD, USDA, CDC, Department of Health and Human Services (DHHS), EPA, Office of Science and Technology Policy (OSTP), Australian government

*Biodefense Net Assessments Project* – This project will identify gaps or vulnerabilities in the Nation’s biodefense strategy. As required in HSPD-10 and Project BioShield legislation, the project conducts assessments of the Nation’s overall biodefense strategy every four years to provide “...recommendations for re-balancing and refining investments among the pillars of our overall biodefense policy”.

**Development Partner(s):** Funded exclusively by DHS

**End User(s):** National Security Staff and multiple executive branch agencies

*Biological Threat Characterization Project (BTC)* – This project improves the estimation of the impacts of a bioterrorism attack on the U.S. through experimental research and analysis to understand the critical physical, chemical, and physiological parameters associated with potential bioterrorism agents. BTC includes laboratory experiments performed to reduce the uncertainty in areas such as agent production and dissemination, environmental stability, and pathogenesis. The information gained from these experiments directly feeds into knowledge products such as the DHS biological terrorism risk assessments. This project plans to continue to support laboratory experiments to also address non-traditional threat agents as well as uncertainty gaps identified as top priority by the Biodefense Knowledge Center and the interagency community.

**Development Partner(s):** Funded exclusively by DHS

**End User(s):** DHHS, DOD, Department of Justice (DOJ), DHS Components and members of the Intelligence Community.

*Bioterrorism Risk Assessment (BTRA) Project* – This project informs decision-making of Senior government leadership through the development and execution of a comprehensive, probabilistic risk assessment that integrates the judgments of the intelligence and law enforcement communities (threat) with input from the scientific, medical, and public health communities to estimate the probability of an attack occurring and the consequences of an attack should it occur. As a strategic level assessment, the BTRA is designed and has been used to: 1) aid in identifying and prioritizing credible, high impact threats, 2) aid in identifying and prioritizing vulnerabilities and knowledge gaps, and 3) provide a systematic, science-based, common framework for analysis. The computational analysis provided by the BTRA helps inform investments for National strategic biodefense planning, while identifying key knowledge gaps and defining critical vulnerabilities. This helps guide investments in capabilities in the face of limited resources. This project plans to refine, update, and validate the BTRA model and adaptive adversary models to reflect current capabilities and the current threat environment in preparation for the January delivery of the 2014 BTRA.

**Development Partner(s):** Funded exclusively by DHS

**End User(s):** National Security Staff (NSS), DHHS, National Institutes of Health (NIH), CDC, FDA; DHS National Protection and Programs Directorate (NPPD), OHA, TSA, DHS Office of Intelligence & Analysis (I&A), DOD, USDA, EPA

*Foreign Animal Disease (FAD) Modeling Project* – This project will improve the ability of Federal, State and local government agencies to prepare for and respond to FAD outbreaks. The project supports the development and use of infectious disease models and analysis tools to explore control strategies and response options for FAD outbreaks at multiple scales. This project plans to address the conceptual design and potential implementation strategies for next-generation capabilities, and demonstrate initial operating capabilities for selected functionality.

**Development Partner(s):** NIH, National Science Foundation (NSF), USDA

**End User(s):** DOD National Center for Medical Intelligence (NCMI), USDA

*Integrated CBRN Terrorism Risk Assessment (ITRA)* – This project will improve senior government leadership decision making by guiding the prioritization of medical countermeasure development, and allocation of other scarce resources through comparison of the risks associated with chemical, biological, radiological, and nuclear terrorism. The ITRA can be used to guide Federal agencies decisions on resource allocation across CBRN terrorism prevention, preparedness and response planning. The ITRA represents a consolidation and integration of the S&T Directorate's standalone risk assessments (Chemical Terrorism Risk Assessment (CTRA), Biological Terrorism Risk Assessment (BTRA), and Radiological/Nuclear Terrorism Risk Assessment (RNTRA)). This project plans to continue developing risk mitigation studies for intra- and inter-agency stakeholders, as well as, initiate coordination with intelligence community and technical subject matter experts to inform the development of the 2014 ITRA.

**Development Partner(s):** RNTRA is a shared effort between DHS S&T Chemical/Biological Division and DHS DNDO

**End User(s):** DHHS, DHS NPPD, DHS OHA, TSA, DHS I&A, DOD, USDA, Office of the Director of National Intelligence; Federal Emergency Management Agency (FEMA), FBI, CDC

*Joint Agro Defense Office (JADO)* – This project strengthens inter-agency collaboration in strategic research and development to enhance the nation's ability to effectively respond to and quickly recover from a foreign animal disease outbreak. The National Science and Technology Council (NSTC) Foreign Animal Disease Threat (FADT) subcommittee facilitates the overall interagency coordination to better leverage and integrate interagency R&D efforts, including programs on veterinary

countermeasures, basic research, FAD modeling, and depopulation, disposal and decontamination (3D).

**Development Partner(s):** Funded by DHS solely

**End User(s):** DHS (OHA, Office of National Laboratories (ONL)), USDA, EPA, DOD, HHS, National Science Foundation (NSF), Department of Interior (DOI), Department of State (DOS)

*System Studies Project* – This project improves coordination of DHS-led biodefense efforts by conducting system studies to help identify critical gaps, perform cost-benefit tradeoffs of different options for addressing those gaps, and inform guidance and CONOPS.

**Development Partner(s):** Funded exclusively by DHS

**End User(s):** TSA

*Chemical Detection Program* – Researches, develops, and/or identifies tools to enable interception, detection, and warning of attacks or large releases of chemical threat agents against the population of the United States. Defines use concepts, requirements, and procedures for improved techniques for early detection and warning of potential chemical threats and enables modeling of the expanse of such chemical disasters.

*Autonomous Rapid Facility Chemical Agent Monitor (ARFCAM) and Lightweight Autonomous Chemical Agent System (LACIS) Project* – This project will improve protection of facility occupants through its ability to detect a wide range of toxic chemical agents with increased reliability as well as improve the capability of responders to conduct rapid and reliable assessment of the scene of a chemical incident. The project developed a low-cost, fully autonomous, chemical monitor that will “detect-to-warn” the presence of up to 17 Chemical Warfare Agents (CWAs) and high-priority Toxic Industrial Chemicals (TICs) simultaneously within a single device. In addition to improving the capabilities and safety of responders, it will enable enhanced detection capabilities at borders, portals and other nodes of people, and cargo flow.

**Development Partner(s):** DOD

**End User(s):** Federal Protective Service (FPS), Port Authority of New York/New Jersey, Washington Metro Area Transit Authority (WMATA), USSS, TSA

*Cell-All Ubiquitous Chem Detect Project* – This project will improve chemical detectors’ integration, size, cost, power, maintenance, durability, and response characteristics by integrating miniaturized chemical agent detectors into personal devices, such as cellular telephones. Together, individual miniaturized sensing devices can create a widely distributed network for detection, classification, and notification of a chemical release, potentially detecting chemical components of some biological agents.

**Development Partner(s):** Qualcomm, NASA Ames Research Center, Synkera Technologies Inc, NC4, Los Angeles Fire Department, Los Angeles Police Department, Chicago Fire Department, EPA, CalEPA, and the FEMA Center for Domestic Preparedness.

**End User(s):** First Responders, Emergency Operations Centers, Cell Phone Users, Cell-phone Manufacturers and Carriers

*Secondary Screening for Chem Bio Materials (formerly known as Non-Intrusive Container Monitor) Project* – This technology will improve the interception and confiscation of illicit materials by a variety of customs, law enforcement, and responder personnel. The project develops both a screening architecture and investigates technologies that will enable determination of the contents of suspicious packages passing through security portals or containers in cargo rapidly and efficiently. This project

focuses on enhancing security at portals within and at the perimeter of key elements of our national infrastructure.

**Development Partner(s):** Funded solely by DHS

**End User(s):** CBP, TSA

***Chemical Threat Assessment Program*** – Researches and identifies current and potential chemical threats to understand the risk posed to the United States by their illicit use. This program encompasses risk-based, chemical threat agent characterization programs, domestic defense strategic planning, and analytical technologies, strategies, and procedures.

***Chemical Infrastructure Risk Assessment (CIRA) Project*** – This project will improve the ability to assess risk presented by attacks on the chemical industry by developing tools to identify and quantify various infrastructure gaps, vulnerabilities, potential key hazardous chemicals, and associated processes. This project maintains an operational reach-back capability supporting the development of Office of Infrastructure Protection (OIP) chemical security regulations (Chemical Facility Antiterrorism Standards (CFATS)).

**Development Partner(s):** Funded solely by DHS

**End User(s):** DHS Office of Infrastructure Protection (OIP)

***Chemical Security Analysis Center (CSAC) Project*** – The CSAC serves as the Nation’s first centralized repository of chemical threat information (hazard and characterization data) for analysis of the Nation’s vulnerabilities to chemical agent attacks. This project conducts key analytical assessments, such as material threat assessments (MTAs) for DHHS, hazard assessments, and the Chemical Terrorism Risk Assessment (CTRA) for NPPD, OHA, TSA, and I&A. It provides 24/7 expert reach-back capabilities and rapid support in domestic emergencies related to chemical threat materials. The project plans to deliver hazard assessments on selected chemicals of interest and use the 2012 CTRA results to conduct selected sensitivity studies and tailored assessments.

**Development Partner(s):** DOD (portions related to emerging chemical threats)

**End User(s):** DHS National Operations Center (NOC), OIP, I&A, OHA, TSA), EPA, FBI

***Increase Safety of Hazardous Chemicals Project*** – This project addresses the requirements of IP and Congress to develop a coherent technical approach to inherently safer technology (IST) and the broader concept of safer design strategies as applied to improving safety and security associated with toxic chemical threat materials. This effort will improve DHS NPPD/OIP’s understanding and solutions identified will be incorporated into the overall chemical industry sector security efforts that include, in part, the Chemical Facility Antiterrorism Standards.

**Development Partner(s):** Funded solely by DHS

**End User(s):** DHS OIP, TSA

***Large-Scale Toxic Chemical Transport Release Modeling Project*** – This project improved strategic planning toward improved response to the risk posed by transport of large containers of hazardous chemicals. Studies combined fully instrumented laboratory and field testing to characterize the physical and chemical phenomena occurring during a large scale (greater than 1 ton) release of dense and buoyant toxic gases. The results of this effort have improved TSA’s and IP’s understanding of the consequences of large-volume, hazardous-chemical releases in transport (e.g., rail cars or tanker trucks).

**Development Partner(s):** DHS TSA

**End User(s):** DHS (TSA, IP), DOD, industry, transportation sectors

**Explosives Detection Program** – Researches, develops, and/or identifies tools to detect and locate explosives intended to be used as terrorist weapons and strengthen aviation security by bolstering the international aviation security system, processes and technologies, and by encouraging partnerships with industry. Defines concepts, requirements, and procedures for improved techniques for early detection and warning of potential explosive threats, including explosive threats to the Nation’s transportation systems and large public gatherings.

*Advanced Surveillance Systems Project* – This project will reduce workforce requirements for government and private infrastructure owners/operators, specifically for dams; national monuments and icons; and transportation, nuclear, chemical, government, and commercial facilities, by replacing operator-dependent monitoring of large numbers of cameras with systems incorporating advanced algorithms to provide high-fidelity anomaly and change detection. The project will design and adapt systems to interpret information from multiple surveillance modes (such as closed-circuit television cameras, infrared cameras, intrusion detection alarms, and acoustic sensors) and provide actionable information to infrastructure operators.

**Development Partner(s):** Office of Infrastructure Protection (OIP), and various infrastructure owners/operators, dams, national monuments and icons, transportation, nuclear, chemical, government and commercial facilities

**End-user(s):** Various infrastructure owners/operators, dams, national monuments and icons, transportation, nuclear, chemical, government and commercial facilities

*Air Cargo Project* – This project will improve the ability of air carriers and certified cargo screening facilities to screen medium- and high-density pallets and sealed containers. The project will focus on developing the tools to screen all air cargo before it is placed on passenger aircraft and will deliver screener tools to Transportation Security Administration (TSA) for approval and release to air carriers and Certified Cargo Screening Facilities. The project will qualify new air cargo screening systems through TSA for placement on the Qualified Technology List (QTL) for direct procurement by the private sector. This project plans to develop a coded aperture microfabricated mass spectrometer prototype and deliver palletized cargo screening systems and mass spectrometer explosives trace detectors with a prototype non-contact sampling capability for air cargo.

**Development Partner(s):** Duke University, Massachusetts Institute of Technology (MIT) Lincoln Labs, Aberdeen Testing Center, U.S. Naval Research Laboratory (NRL)/Nova

**End User(s):** TSA

*Algorithm and Analysis of Raw Images Project* – This project will improve the performance of X-ray-based Computed Tomography (CT) and Advanced Imaging Technology (AIT) detection technologies in both checked baggage and check point applications. The project will develop advanced algorithm basic research concepts for improved explosive detection and identify areas for improved image analysis such as establishing and validating image standardization and stimulating research in segmentation and iterative reconstruction from CT and Advanced Imaging Technology (AIT) data. This project plans to evaluate advanced image processing methods for AIT in an operational testbed.

**Development Partner(s):** Northeastern University

**End User(s):** TSA, Federal Protective Service (FPS), United States Secret Service (USSS)

*Automated Carry-On Detection Project* – This project will improve automated capabilities to detect explosives and concealed weapons in carry-on baggage at aviation checkpoints. This project also will introduce new standalone or adjunct imaging technologies, such as computer tomography (CT), to continue the improvement of detection performance and the detection of novel explosives.

**Development Partner(s):** Laurence Livermore National Laboratory (LLNL), Joint IED Defeat Office (JIEDDO) /ICx Technologies Nomadics  
**End User(s):** TSA

*Automatic Threat Recognition Project* – This project will improve TSA’s ability to detect threats, lower false alarm rates and reduce privacy concerns. The project will develop and evaluate automated target recognition (ATR) algorithms for Advanced Imaging Technology (AIT) systems in a test bed with the goal of automatic and reliable detection of threats on passengers, reducing the need for human interpretation.

**Development Partner(s):** Pacific Northwest National Laboratory (PNNL), JIEDDO/ICx Nomadics, SRA International (SRA)  
**End User(s):** TSA

*Canine Explosives Detection Project* – This project improves canine ability to detect explosives by improving canine training tools and techniques. The project will study the canine olfactory system and the genetic markers that can predict high-performance explosive-detection canines and canine physiological limitations and strengths. This project plans to continue operational assessment testing for TSA and FPS, deliver and test an additional set of HME canine training aids, and identify pertinent DNA markers leading to early prediction of successful detector dogs. This project is also conducting a five-year genetic and behavior study to determine early indicators of high performing detection dogs.

**Development Partner(s):** Auburn University, University of Pennsylvania, Johns Hopkins University (JHU)/ Applied Physics Laboratory (APL)  
**End User(s):** TSA, FPS, First Responders

*Checked Baggage Project* – This project substantially improves the performance of TSA checked baggage screening by developing technologies that will drive commercial development of next-generation explosives detection systems (EDS) and explosives trace detectors (ETDs). Development efforts are focused on increasing HME detection capabilities, reducing false alarm rates, and reducing operating and life cycle costs. This project plans to deliver a prototype advanced EDS for laboratory assessment and evaluate the use of additional discriminating signatures in advanced ETDs for checked baggage alarm resolution operations and improved HME detection.

**Development Partner(s):** LLNL, L-3 Communications (L3), Quantum Magnetics  
**End User(s):** TSA

*Detection Technology and Material Science Project* – This project improves detection of explosives threats and reduces the effects of an explosive detonation, including the attenuation of the explosive shock wave and containment of blast fragmentation (shrapnel). This project develops new components for X-ray security screening equipment with the potential for increasing performance and reducing operation costs.

**Development Partner(s):** Northeastern University, University of Rhode Island, Technical Support Working Group (TSWG), NEXESS  
**End User(s):** TSA

*Explosives Trace Detection Project* – This project improves trace sampling and detection technologies by developing advanced explosive trace detection (ETD) capabilities. This project develops mass spectrometry based ETDs with swab and non-contact trace sampling capabilities for use in aviation checkpoint, checked baggage, and air cargo security screening operations.

**Development Partner(s):** ICx Nomadics, Syagen, AASKI Technologies, Naval Research Laboratory (NRL), Purdue University

**End User(s):** TSA

*Eye Safe Trace Detection Project* – This project will provide building security and checkpoint security with a stand-off ability to detect trace explosives on people and personal items. This project will use the benefits of optical spectroscopy (chemical identification, high sensitivity) to detect chemicals related to explosives while screening out cluttered spectra, issues with false alarms, and background noise. This project plans to develop a widely-tunable infrared source for integration into standoff trace technologies to reduce sensor weight, size, and add flexibility for multiple threats. It also plans to initiate the development of eye-safe spectroscopic technologies for standoff detection of explosive residues.

**Development Partner(s):** To Be Determined

**End User(s):** FPS, USSS, CBP, TSA

*Integrated Passenger Screening Systems* – This project will allow passengers to keep their shoes on throughout the security screening process at aviation checkpoints by developing and testing integrated shoe screening devices (SSD) and advanced imaging technology (AIT) systems. The initial shoe screening systems developed will be stand alone systems used to verify acceptable system performance. Integrated passenger screening systems developed under this project will integrate shoe screening systems with Advanced Imaging Technology (AIT) in order to reduce the overall technology footprint at aviation checkpoint. This project plans to deliver prototype stand alone shoe screener systems for operational assessment.

**Development Partner(s):** To Be Determined

**End User(s):** TSA, FPS

*MagViz (SENSIT NMRI) Rapid Liquid Component Detector Project* – The goal of MagViz is to enable the TSA to detect liquids in baggage without contact at the same rate as current X-ray machines with minimal impact on passenger throughput. This project uses ultra-low field Magnetic Resonance Imaging (MRI) technology to screen baggage for liquid explosives.

**Development Partner(s):** Los Alamos National Laboratory (LANL)

**End User(s):** TSA

*Mass Transit Project* – This project will improve operators ability to detect explosive threats for maritime and surface mass transit, including buses, commuter rail (i.e. subways or metros), light rail (i.e. trolleys and streetcars), long-distance rail (i.e. Amtrak), and heavy rail. The project develops and demonstrates technology to enable a resilient transit system that leverages public awareness, technology, and layered-security processes, while maintaining efficient flow of passengers. This project plans to demonstrate intelligent video systems to detect leave behind threats in an operational environment under rush hour conditions. This project also plans to demonstrate prototype standoff trace explosive detection and person-borne imaging systems for application in mass transit rail and maritime.

**Development Partner(s):** Johns Hopkins University Applied Physics Laboratory, MIT Lincoln Labs, Volpe

**End User(s):** TSA

*Next Generation Passenger Check Point Project* – This project improves TSA's screening process of passengers and carry-ons for explosives and other threats at aviation checkpoints by developing the next-generation airport security checkpoint system for risk-based screening of passengers and carried baggage. This project investigates next generation passenger checkpoint system architecture concepts and develops advanced systems (including Advanced Technology (AT) X-ray, Advanced Imaging

Technology (AIT), Explosives Trace Detection (ETD), shoe screener, and bottled liquid screening systems). This project plans to demonstrate the ICP passive screening integration prototype, and qualify one or more portable detectors for AIT anomaly resolution.

**Development Partner(s):** PNNL, AASKI Technologies, Syagen, Quantum Magnetics, Duke University, Stanford University

**End User(s):** TSA

*PB Threat Imaging Sensor Development Project* – This project improves FPS's and TSA'S standoff detection of explosives devices worn or carried by a person as they approach a venue entrance. This project plans to develop configurable millimeter wave terahertz (mmW/THz) sensors with Automatic Target Recognition (ATR). Viability of detectors will be established before sensor development begins. ATR development will start when sensors have matured sufficiently to provide representative imagery.

**Development Partner(s):** To Be Determined

**End User(s):** FPS, USSS

*Person-Borne Improvised Explosive Devices (PBIED) Detection Project* – This project improves Federal, State, and local law enforcement officials' detection of an explosive device worn or carried by an individual at standoff distances including structured crowds approaching a checkpoint and unstructured crowds such as those in a mass transit setting or public venue where no checkpoint is present. This project investigates technologies capable of detecting all types of explosive threats, including homemade, commercial, and military explosives.

**Development Partner(s):** SAIC, University of Arizona, National Institute of Standards and Technology (NIST), MITRE

**End User(s):** USSS, FPS

*Portable Detection Project* – This project improves the Department's and first responders' explosives detection performance in a handheld form. The project will develop non-contact portable explosives detectors employing sensitive and selective trace and/or bulk sensors for a number of potential applications, including secondary screening of passengers (in lieu of pat downs) after Advanced Imaging Technology (AIT) anomaly detection. This project plans to develop and evaluate handheld trace, bulk and imaging screening systems for screening of personnel, baggage, and cargo.

**Development Partner(s):** To Be Determined

**End User(s):** TSA, USSS, FPS

*Predictive Screening Project* – This project will improve TSA's and CBP's ability into identify suspicious behaviors that precede Person-Borne Improvised Explosive Device (IED) attacks through the development and transition of automated, real-time alerts to the presence of these threat behaviors. This project plans to transition an empirically derived list of behavioral indicators of Person-Borne IED attacks.

**Development Partner(s):** Transportation Security Administration (TSA), Customs and Border Protection (CBP)

**End User(s):** TSA, CBP

*Safe Bulk Detection Project* – This project addresses the need in surface transportation to effectively and safely detect bulk explosives or bulk explosive chemicals concealed or carried in a bag without the operational limitations of an aviation-style checkpoint. The project develops methods for detecting bulk explosives carried by people and leave-behinds at a standoff distance. This project plans to initiate the assessment of signature enhancement methods for standoff detection of imaging anomalies

and related signatures. It also plans to initiate development of standoff imaging systems using sparse array technology.

**Development Partner(s):** To Be Determined

**End User(s):** TSA, FPS, USSS

*Underwater Surveillance – Basic Research Project* – The project will assess bubble jetting resulting from underwater explosions and its impact on vertical structures (such as dam spillway gates and navigation locks) to determine appropriate standoff distances for submerged targets. The lack of fundamental knowledge of underwater blast effects currently limits researchers' ability to define parameters for effective underwater surveillance. This research will be used to accurately define surveillance areas, and will have the added benefit of informing effective design of blast mitigation measures for underwater targets.

**Development Partner(s):** United States Army Corps of Engineers (USACE) Engineering Research and Development Center (ERDC), Naval Surface Warfare Centers (NSWCs) Indian Head and Carderock, Dynaflo, Inc.

**End-user(s):** Dam and Transportation Sector owners and operators, United States (U.S.) Coast Guard (USCG), United States Navy, port owners and the Nuclear and Chemical Sectors will benefit from the data generated

*Underwater Surveillance – Dams and Tunnels Project* – This project will increase the ability to prevent waterside attacks on dams, tunnels, and other critical underwater and waterside infrastructure operating in harsh environments for extended periods. The project provides advanced, automated, affordable, underwater monitoring and surveillance technologies to detect underwater threats against dams and tunnels. Since dams and tunnels are particularly vulnerable to a water-borne attack, detecting suspicious activity is critical to asset protection.

**Development Partner(s):** The project lead is United States Army Corps of Engineers (USACE) Engineering Research and Development Center (ERDC), with research being conducted at the NSWC Indian Head and Carderock, and Dynaflo, Inc. Dam and Transportation Sector owners and operators, USCG, U.S. Navy, port owners and members of the Nuclear and Chemical Sectors will benefit from the data generated

**End-user(s):** Dam and Transportation Sector owners and operators, USCG, US Navy, port owners and members of the Nuclear and Chemical Sectors will benefit from the data generated

*Vehicle-Borne Improvised Explosive Devices (VBIED) Detection Project* – This project improves Federal, State, and local law enforcement's detection of improvised explosive devices within a vehicle. This project will develop and test technologies to detect or image improvised explosive devices (IEDs) within a vehicle. The project also develops technologies to sample and detect explosive residues and components non-intrusively, and fuse multiple technologies to provide automation for VBIED detection. This has the potential to speed screening and enable security screeners to concentrate on high-risk vehicles.

**Development Partner(s):** Applied Research Associates (ARA), Science Applications International Corporation (SAIC)

**End User(s):** FPS, CBP, USSS, TSA

*Explosives Threat Assessment Program* – Researches and identifies current and potential explosive threats to understand the risk posed to the United States, strengthen aviation security by bolstering the international aviation security system, improve security processes and technologies, and encourage partnerships with industry. Encompasses risk-based, threat characterization, attribution, strategic

planning, prediction of magnitude of explosive disasters, and analytical technologies, strategies, and procedures.

*Actionable Indicators and Countermeasures Project* – This project will improve the Intelligence and Law Enforcement communities' ability to identify indicators that individuals and groups are moving toward extremist violence. It will also support policymakers in assessing the impacts of policies and programs developed to counter violent extremism. The project generates knowledge products and develops foundation for applied tools (integrated multiple indicators). This project plans to analyze the characteristics of U.S. counties that have and have not experienced violent extremism and re-compete project activities discontinued due to lack of funding and re-start data collection efforts.

**Development Partner(s):** UK Home Office

**End User(s):** Office of the Counterterrorism Coordinator, Office of Intelligence and Analysis (I&A), State and local Law Enforcement, Office of Policy, Office of Civil Rights and Civil Liberties, U.S. Citizenship and Immigration Services (USCIS)

*Aircraft Vulnerability Project* – This project improves TSA's existing explosives detection standards for aircraft. The project will assess the vulnerability of narrow- and wide-body aircraft passenger cabins and cargo holds to explosives threats. These vulnerability assessments analyze blast/damage effects of explosives and determine the minimum threat mass of improvised explosive required to cause catastrophic damage to various aircraft types. The assessments also identify the recommended detection limits for explosives screening systems in aviation security. This project plans to leverage the M&S work on the narrow body aircraft to wide body aircraft such as Boeing 787 Dreamliner and Airbus 380. Results of this effort are expected to provide a refinement to the existing explosives detection standards by which TSA screens checked/carry-on luggage as well as cargo.

**Development Partner(s):** Aberdeen Testing Center, International Composite Technologies

**End User(s):** TSA

*Blast/Projectile – Unified Blast Analysis Tool Project* – This project will allow building owners to accurately predict damage and develop structural retrofits, blast mitigation methods, and an operational plan by characterizing the explosive air blast in an urban environment. Understanding urban blast effects will facilitate development of blast prediction models, which will aid first responders and emergency managers in response and evaluation planning. The project develops a high-quality database of blast overpressure measurements to refine numerical models to accurately predict the complicated reflection, diffraction, and diffusion of blast waves in these scenarios.

**Development Partner(s):** Lawrence Livermore National Laboratory (LLNL) and the US Army Corps of Engineers Engineering Research and Development Center (USACE-ERDC)

**End-user(s):** DHS Office of Infrastructure Protection (OIP), the Transportation Security Administration, owners or operators of infrastructure (mass transit, highways, dams, government and commercial facilities, etc.), State and local emergency management personnel, first responders

*Homemade Explosives Characterization Project* – This project improves the Department's ability to detect and identify homemade explosives (HMEs) threats across a range of venues. The project will determine the explosives properties of HME threats such as impact, friction, and electrostatic-discharge sensitivities. The project also provides a better understanding of the detection signatures of HME threats to improve detection capabilities and evaluates the potential damage and impact of HME being used in terrorist attacks and aids in determining the requirements for technologies to counter this threat. This project plans to determine bulk and trace detection signatures of HMEs listed under the TSA HME threat list in support of the Checked Baggage, Checkpoint, and Air Cargo programs.

**Development Partner(s):** LLNL, Sandia National Laboratory (SNL), and LANL

**End User(s):** TSA, FPS, USSS

*Risk Prediction Project* – This project will improve Customs and Border Protection (CBP's) and Transportation and Security Administration (TSA's) ability to identify potential improvised explosive device (IED) targets and staging areas that precede IED smugglings at the U.S. border. The project couples the CBP Automated Targeting Systems (ATS) with existing geo-behavioral pattern discovery algorithms and identified vulnerabilities. This project plans to transition real-time software to identify anomaly detection subsystem to further increase the accuracy of CBP's Automated Targeting System for Passengers (ATS-P).

**Development Partner(s):** CBP, TSA

**End User(s):** CBP, TSA

**Counter Terrorist Research & Development Thrust** – FY 2012: \$1.600 million. FY 2013 request: \$25.493 million. The S&T Directorate invests in the research and development of efforts to counter terrorism. Efforts include: prevention of terrorist attacks, and, prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband.

*Hostile Behavior Predict and Detect Program* – Leverages social and behavioral science research, data, and theory to understand the determinants and timing of group conversions to terrorism and the intent to engage in violence. Knowledge from this program informs analytical, operational, and policy concerns related to terrorists and terrorist activities. Also, develops and builds the capability to non-invasively detect suspicious behavior that indicates the intent to cause harm.

*Centralized Hostile Intent Detection Project* – This project improves TSA's capability to identify threats to aviation security by empirically comparing direct- versus video-based observation and decentralized versus centralized observation techniques for identifying high-risk behavior. The project will conduct analysis to assess effectiveness and efficiency measures for each technique. This project plans to deliver a report on the experimental design and effectiveness and efficiency measures as well as deliver operational test bed to support remote, centralized observation techniques for identifying high-risk behavior.

**Development Partner(s):** TSA and CBP

**End User(s):** TSA and CBP

*Community Perceptions of Technology (CPT) Panel Project* – This project improved the development, deployment, and public acceptance of technology by understanding public concerns of civil liberties and privacy issues in lieu of integrating national security measures. The project conducted focus groups and workshops to improve the understanding of public opinion regarding DHS technologies and processes. Insights were useful in addressing community perceptions of emerging homeland security technologies in order to avoid or mitigate barriers to implementation caused by public concerns.

**Development Partner(s):** HSSAI

**End User(s):** TSA, S&T Program Managers

*Cross-Cultural Validation of SPOT (Screening Passengers by Observation Techniques) Behaviors Project* – This project improved TSA's throughput of passengers at air, land, and maritime ports by detecting behavioral indicators of hostile intent at a distance. The project conducted analysis and verification of SPOT operational and base rate data that complemented the automated prototype work and supported development of an enhanced capability by integrating validated behavioral indicators into the screening concept of operations through each Component's existing training programs.

**Development Partner(s):** TSA

**End User(s):** TSA

*Future Attribute Screening Technologies Mobile Module (FAST M2) Project* – This project improved Transition Partners’ screening throughputs at special events, airports, and other secure areas by rapidly, reliably, and remotely detecting behavioral indicators of hostile intent. The project developed a prototype screening facility containing a suite of real-time, non-invasive sensor technologies to detect behavior indicative of the intent or desire to cause harm. An established and independent peer review was also utilized to ensure objectivity and thoroughness was met in addressing all aspects of the program.

**Development Partner(s):** Department of Defense (DOD), Intelligence Community

**End User(s):** TSA, CBP, United States Secret Service (USSS), private sector (infrastructure owners, major league sports franchises, theater/event venue owners, metropolitan transportation authorities)

*Hostile Intent Detection-Automated Prototype Project* – This project improved Transition Partners’ ability to identify-and screen for unknown, potential terrorist threats prior to traveler entry into the U.S.; it improved accuracy by 75 percent, allowing for improved throughput of travelers crossing the U.S. border. The project developed real-time, non-invasive, and culturally independent, hostile intent detection prototype video extraction algorithms. The project provided an automated capability to reduce false alarms in identifying and screening processes.

**Development Partner(s):** TSA, DOD

**End User(s):** TSA

*Passive Methods for Precision Behavioral Screening Project* – The project will improve Transition Partners’ screening and throughput, reduce economic screening impacts and improve classification accuracy by transforming the screening process from active to more dynamic and passive detection. The project differentiates malintent through the inclusion of passive stimuli by building on the Future Attribute Screening Technology (FAST) program so that the screening process does not require direct interaction between the operator and the subject. This project plans to initiate contract actions; e.g., development of source selection plan; white paper review, convening of Source Selection Evaluation Board for proposal review; brief to Source Selection Authority; contract award and funding in order to reestablish the contractual vehicle to fund the Research and Development Team; complete analysis of the research protocol; update Passive Methods for Precision Behavioral Screening literature review; re-convene Passive Methods for Precision Behavioral Screening subject matter expert working group and/or advisory panel; conduct Real-Time Decision Application (RTDA) advisory panel in order to improve RTDA performance; and conduct at least one applied research protocol in order to demonstrate the sensors in a controlled environment.

**Development Partner(s):** DOD, Intelligence Community

**End User(s):** TSA, CBP, USSS, private sector (infrastructure owners, major league sports franchises, theater/event venue owners, metropolitan transportation authorities)

*Violent Intent Modeling and Simulation (VIMS) Project* – This project improved Transition Partners’ ability to understand threatening organizations by developing a systemic analytical framework and user interface. By anticipating changes in a group’s violent activity, the project focused on determining whether a radical group is likely to engage in violence and what ideological, organizational and contextual correlates may contribute to the emergence of violence as a tactic or strategy. The project developed models and data retrieval systems that allowed analysts to understand how behavioral, social and organizational factors may contribute to and predict the emergence of violence.

**Development Partner(s):** DHS Office of Intelligence and Analysis (I&A), Department of Energy (DOE).

**End User(s):** Federal, State, and local intelligence analysts

*Wide Area Surveillance Project* – This project will enhance the continuous surveillance of the Nation’s highest priority infrastructure by developing a novel wide area surveillance system that provides high resolution 360 degree coverage with real-time and forensic capabilities. The system will overcome limitations of existing surveillance technology, leveraging significant research investments by the Department of Defense to enhance image resolution beyond what is commercially available. The project also integrates sensors into a system that must process large amounts of data, operate a seamless camera-to-camera handoff for enhanced images, and have capability of advanced image recognition. This project plans to install and demonstrate the second-generation system at Logan International Airport. This project also plans to transition the second-generation camera system to commercialization and conduct a demonstration of an IR system prototype.

**Development Partner(s):** U.S. Secret Service, TSA, New York Police Department (NYPD), and the Massachusetts Port Authority (Massport)/Boston Logan International Airport

**End-user(s):** U.S. Secret Service, law enforcement, airports, infrastructure owners and operators

*Identity Management Program* – Researches and develops biometrics-based technologies, procedures, CONOPS, and information to identify known terrorists and criminals and prevent their movement into and out of the U.S. through effective, interoperable multi-biometrics in diverse areas, including border crossings, ports-of-entry, and visa application sites.

*Biometric Detector Project* – This project improved Transition Partners’ screening checkpoint throughput by developing faster, less invasive fingerprint scanner technologies capable of collecting three dimensional fingerprint scanner data. The project collected high quality fingerprint data at screening checkpoints using prototype scanners as well as conventional fingerprint methods to evaluate improvements in performance.

**Development Partner(s):** National Institutes of Health (NIST), DOD

**End User(s):** CBP, USCIS

*Cooperative Biometrics Project* – This project will improve Transition Partners’ customer throughput by collecting two or more biometrics in less than 10 seconds at a 95 percent acquisition rate. The project is working with the biometrics industry to develop more robust iris recognition and improved facial image acquisition and matching technologies for integration with DHS biometric screening processes. This project plans to conduct iris and face recognition operational evaluations in multiple DHS environments to assess improvements in operational effectiveness and cost savings; accelerate the publication an International Iris Image Quality standard, commercialize standards-based biometric quality algorithms; initiate challenge problems and encourage multi-disciplinary approaches to mitigate technology challenges that pose risks to successful deployment.

**Development Partner(s):** NIST, DOD, DOJ

**End User(s):** CBP, ICE, FPS

*Mobile Biometrics System Project* – The project will improve U.S. border security and officer safety by providing Federal, State and local Transition Partners the capability to screen individuals at remote locations around the U.S. borders. The objective of this project is to prevent and deter foreign and domestic threats from physically entering or residing in the U.S. under the auspices of a falsely claimed identity. The project develops technologies for mobile biometrics screening at remote sites along our U.S. borders, including our territorial waters at sea, and other areas not near a processing

station. The project develops a multi-modal mobile biometric device that is capable of 10-print, face and iris image collection, and includes card reader, storage, image quality assessment and wireless transmission capabilities. This project plans to deliver the four finger slap module for testing; pilot test the four finger slap module; integrate the four finger slap module into a multi-modal biometric mobile device (finger, face, iris, card read); pilot test the multi-modal mobile device with Federal, State, and local partners; create an approved product list of mobile devices that meet standards and mobile best practices to support informed acquisition decisions by the entire USG.

**Development Partner(s):** United States Coast Guard (USCG), DOD, and Department of Justice (DOJ), and DOE.

**End User(s):** USCG, CBP, Immigration and Customs Enforcement (ICE), DOD, United States Visitor and Immigrant Status Indicator Technology (US-VISIT), and other Federal, State, and local law enforcement and first responder agencies, including Sheriffs' Offices, Police Departments, and domestic security-related Task Forces

*Non-Cooperative Biometrics Project* – This project will improve Transition Partners' ability to identify and prevent potential threats from entering the U.S. and facilitate the movement of legitimate travelers. The project will deploy facial recognition systems in its first phase and multi-modal systems in subsequent phases. This project plans to test state-of-the-art facial recognition systems, first in a test bed environment and then in an operational setting.

**Development Partner(s):** CBP

**End User(s):** USSS, CBP, TSA

*Rapid DNA Project* – This project will improve the security and integrity of the immigration system by providing USCIS with a rapid and low-cost method to verify family relationships. The project is developing a Rapid-DNA system to verify family relationships in asylum, refugee, and overseas adoption cases. The project could also conduct DNA watch list checks where appropriate and consistent with privacy, civil rights, and DHS policy. This project plans to deliver a Rapid DNA extended kinship analysis system, expanding the relationships that can be verified to grandparents and siblings. This project also plans to conduct performance assessment and field tests of the extended kinship analysis capability.

**Development Partner(s):** DOD, In-Q-Tel, NIST, DOJ, DHS Small Business Innovative Research (SBIR) Program

**End User(s):** USCIS, CBP Laboratory Services

**Cyber Security Thrust/Program** – FY 2012: \$45.808 million. FY 2013 request: \$64.477 million. Conducts and supports research, development, testing, evaluation, and transition for advanced cyber security and information assurance technologies to secure the Nation's current and future cyber and critical infrastructures in response to the President's *National Strategy to Secure Cyberspace* and *Comprehensive National Cybersecurity Initiative (CNCI)*. These solutions include user identity and data privacy technologies, end system security, research infrastructure, law enforcement forensic capabilities, secure protocols, software assurance, and cybersecurity education.

*Cyber Economic Incentives (CNCI) Project* – This project will increase the cyber security community's understanding of the role economics plays in cyber security by identifying incentives to engage in socially responsible behavior and deter those who participate in criminal and malicious behavior. The project invests in research on the role of economics in identifying and realigning cyber economic incentives through the creation of a science-based understanding of markets, decision making, and motivators. This project plans to develop scientific frameworks to incentivize vendors to improve the

economic viability of assured software development methods, and study disincentives to online criminal behavior.

**Development Partner(s):** DHS components, other Federal agencies, State and local entities, private sector

**End User(s):** DHS components, other Federal agencies, State and local entities, private sector

*Cyber Security Assessment and Evaluation Project* – This project will increase overall system security and transition of cyber security solutions into commercial products by addressing component and system vulnerabilities throughout the development lifecycle, from design to operational evaluation, and by facilitating the dialogue between researchers and technology entrepreneurs and large companies. The project conducts technical assessment and risk analysis that focuses on implementation and deployment of cyber security technologies into the operational environment. These are needed to ensure that the new technologies have been assessed for and address any vulnerability and are secure prior to transition. This project plans to continue red-teaming assessments of high priority project areas to include experimental research testbeds and technology developed in the Homeland Open Security Technology (HOST) project to identify vulnerabilities and identify potential fixes to technology developers, ensuring that platforms for conducting and sharing open source cyber security research are ultimately secure.

**Development Partner(s):** Government and industry Chief Information Offices and Chief Information Security Offices, Critical Infrastructure owners/operators

**End User(s):** Government and industry CIOs and CISOs, Critical Infrastructure owners/operators

*Cyber Security Competitions Project* – This project improves the quality of the future cyber security workforce by funding and supporting a variety of cyber security competitions for high school and college students that give them access to cutting-edge technologies and exercises. The project helps to fulfill the challenge in Priority III of the National Strategy to Secure Cyberspace to “foster adequate training and education programs to support the Nation’s cyber security needs.” The National Collegiate Cyber Defense Competition (NCCDC) is an event in which teams of undergraduate and graduate students from universities across the country compete in a business-oriented, defensive information assurance competition. The US Cyber Challenge (USCC) targets young Americans with the skills to fill the ranks of cyber security practitioners and researchers. These programs will provide opportunities to develop their skills, give them access to advanced education and exercises. This project plans to continue to provide funding support for both the NCCDC and the USCC and develop an assessment framework for a national-level collegiate cyber competition.

**Development Partner(s):** DHS Components, DHS Enterprise, Private Sector (funding partners for competitions)

**End User(s):** DHS Components, DHS Enterprise

*Cyber Security Experiments and Pilots Project* – This project enhances DHS operational component understanding of cutting edge cyber security capabilities and improves the likelihood of transition by ensuring that CSD developed technologies are tested and evaluated in an operational environment. The project experiments address cyber security requirements from DHS customers in support of operational missions in critical infrastructure protection. This project plans to continue outreach to DHS components to gather requirements for possible experimental deployments and analyze the Cyber Security portfolio to identify which technologies are mature enough for pilot deployments.

**Development Partner(s):** N/A

**End User(s):** DHS Components, Federal agencies

*Cyber Security Forensics Project* – This project will reduce the amount of time law enforcement officers need to solve difficult cases by developing comprehensive solutions to digital forensics problems. The project develops new cyber forensic analysis tools and investigative techniques for law enforcement officers and forensic examiners to address the full range of cyber related crimes. This project plans to provide tutorials on software vulnerability assessment and secure programming techniques and develop tools to analyze gaming systems increasingly used for criminal activity. This project also plans to deliver final reports on testing and validation of various cyber forensic tools through the Cyber Forensic Tool Testing (CFTT) program.

**Development Partner(s):** CBP, USSS, ICE, TSA, FBI, State and local law enforcement

**End User(s):** Federal, State and local Law Enforcement agencies (i.e. Secret Service forensic examiners)

*Data Privacy Technologies Project* – This project will increase valuable information sharing across the government and private sector by developing technologies to protect and minimize confidential personal information. The project develops technologies and policies that will better allow organizations to protect, share, and control confidential personal information. The project provides the tools necessary to protect the use of private information. This project plans to deliver a prototype policy-based engine for use in State fusion centers and work with the fusion centers enabling secure information sharing environments by providing automated tools for complying with privacy policies. This project also plans to develop knowledge products and tools to prevent privacy related data breaches for agencies, States, and other private organizations.

**Development Partner(s):** DHS Privacy Office, ICE, TSA, US Citizenship and Immigration Services (USCIS), United States Visitor and Immigrant Status Indicator Technology (US-VISIT), S&T Privacy Office, State and Locals (e.g., Fusion Centers)

**End User(s):** DHS Privacy Office, ICE, TSA, USCIS, US-VISIT, S&T Privacy Office, State and Locals (e.g., Fusion Centers)

*Enterprise Level Security Metrics and Usability Project* – This project will improve the decision-making process for system and network owners and operators in both the Homeland Security Enterprise and the private sector by developing security metrics and supporting tools and techniques that will be useful as decision aids. The project addresses evaluating security at the system level, providing tools that facilitate decision-making and accountability through collection, analysis, and reporting of relevant performance data. This project plans to develop tools to determine the security of system composition, and study the feasibility of applying new metrics to existing security processes.

**Development Partner(s):** Homeland Security Enterprise CIOs, CISOs, Critical Infrastructure owners/operators

**End User(s):** Homeland Security Enterprise CIOs, CISOs, Critical Infrastructure owners/operators

*Experimental Research Testbed Project* – This project improves attack mitigation and confinement strategies and the quality of new cyber security technologies by providing a secure environment to run large-scale, repeatable tests and experiments, which evaluate the defense mechanisms against attacks on the infrastructure. The project worked with the National Science Foundation (NSF) to create the Defense Technology Experimental Research (DETER) cyber security testbed. The testbed facilitates scientific experimentation and validation against established baselines of attack behavior and supports innovative approaches that involve breaking the network infrastructure. Existing testing facilities cannot handle experiments on a large enough scale to represent today's operational networks or the portion of the Internet that might be involved in a security attack. This project plans to continue providing updated open source releases of software developed under the project to the HOST project repository and upgrade testbed hardware for "cloud" like virtualization and dramatically expanded

experiments. This project also plans to evaluate at least five promising solutions for effectiveness in one of the following domain areas: worm defense, routing security, distributed denial of service defense, malware detection, and domain name system security.

**Development Partner(s):** NSF, Pacific Northwest National Laboratory (PNNL)

**End User(s):** Over 2400 users from 15 labs and institutions, 50 companies, 112 colleges and universities

*Homeland Open Security Technology Project* – This project will improve Federal, State, and local government’s access to and use of open source security solutions by increasing the awareness of available open source solutions and ensuring that both currently available and developed open source solutions meet the specific needs of government customers. This project will improve the security of popular open source software currently used in government, foster the development of communities focused on open source security tools, provide a collaborative environment for exchanging and discovering security related research products, and work to ease the certification hurdles related to the adoption of open source software in government. This project plans to sponsor the certification of commonly used security modules and aid the development of open source security technology in gap areas identified by the community; deliver a portal and repository for security research of open source products; develop a resource for open source acquisition and accreditation in the government; and continue to update the inventory of open source software being used across the government.

**Development Partner(s):** S&T CIO, ICE, US-CERT (Computer Emergency Readiness Team), National Protection and Programs Directorate (NPPD), DoD, Dept. of State, Government Integrators, Academia

**End User(s):** S&T CIO, ICE, US-CERT, NPPD, DoD, Dept. of State, Government Integrators, Academia

*Identity Management Project* – This project will enhance the security of information sharing environments and protection of users by improving authentication for persons, hardware devices, and software applications across all levels of government. The project evaluates and develops proof-of-concept solutions, conducts pilot experiments of identity and access control architectures and technologies, as well as data privacy protection technologies, for the homeland security enterprise. This project addresses the inadequate amount of security, trust, usability, policies, and procedures that currently exist in order to secure interactions among stakeholders who wish to ensure their identity is properly protected and managed. This project plans to use the Identity Management Testbed to provide research and tool validation for the Identity, Credentialing, and Access Management (ICAM) Sub-Committee and address requirements from State and local customers for attribute exchange interoperability, mobile and broadband access controls, and smart credential usages.

**Development Partner(s):** Identity, Credentialing, and Access Management (ICAM) Sub-Committee (GSA), NIST, FEMA, State and Local, Public/Private Sectors, DoD, NSA, Defense Information Systems Agency (DISA)

**End User(s):** Federal, State and local, Public/Private sectors

*Internet Measurement and Attack Modeling Project* – This project improves the protection and defense of critical Internet infrastructure by identifying critical Internet resources that are subject to attack. The project incorporates an understanding of geographic and topological mapping of internet hosts and routers and develops modeling and analysis capabilities that predict the effects of cyber attacks on commercial and Federal Government infrastructures. These internet maps enhance internet monitoring and modeling capabilities to identify threats and predict the cascading impacts of various damage scenarios. This project plans to deliver tools to US-CERT providing better capabilities in visualization as well as identification of cyber attacks.

**Development Partner(s):** Australian Government, US-CERT and other Government network operators, internet service providers

**End User(s):** Critical Infrastructure owners and operators, US-CERT, Network operators

*Leap Ahead Technologies (CNCI) Project* – This project will improve cyber security capabilities across the Homeland Security Enterprise by orders-of-magnitude by focusing on cross-cutting, high-risk/high-payoff solutions to critical cybersecurity problems. The project invests in leap-ahead research and development, targeting revolutionary techniques and capabilities that can be deployed over the next decade with the potential to redefine the state of cyber security in response to the CNCI. This project plans to accelerate the transition of new technology for insider threats into commercial cyber security products and services. This project also plans to explore and develop technologies that will improve the survivability and resiliency of cyber systems while experiencing attacks, failures, and other accidents.

**Development Partner(s):** Office of the Director National Intelligence (ODNI), National Security Agency (NSA), Intelligence Advanced Research Projects Activity (IARPA), National Science Foundation (NSF), Department of Energy (DoE), NIST

**End User(s):** ODNI, NSA, IARPA, NSF, DoE, NIST

*Moving Target Defense (CNCI) Project* – This project will improve the security of critical information technology systems by developing tools and techniques which decrease the predictability in a system's defenses, thus ultimately making attacks more difficult. The project enables the creation, analysis, evaluation, and deployment of mechanisms and strategies where one or more system attributes are automatically changed in a way that make the system attack surface area appear unpredictable to attackers while simultaneously ensuring that systems remain dependable to their users and maintainable by their owner. This project plans to develop and prototype component-level techniques, including: abstractions and methods that will enable scientific reasoning regarding Moving Target Defense (MTD) mechanisms and their effectiveness, develop a control mechanism that can abstract the complexity of MTD systems and enable sound, resilient system management. This project also plans to enable the adaptation of MTD mechanisms as the understanding of system behavior matures and our threat evolves.

**Development Partner(s):** DHS Components, other Federal agencies, State and Local entities, private sector, ODNI, DoD

**End User(s):** DHS components, other Federal agencies, State and Local entities, private sector, ODNI, DoD

*Process Control Systems (PCS) Security Project* – This project improves the security of critical infrastructure Process Control Systems, used to monitor sensitive functions from oil and gas pipelines to the power grid, by partnering with private industry and establishing a model in which government agencies can work with each other and private industry to develop appropriate cyber security technologies to meet critical needs. The PCS Security project is broken into two parts: (1) LOGIIC (Linking the Oil and Gas Industry to Improve Cybersecurity), which brings together major oil and gas competitors under a mutual goal to identify and address industry wide security issues as they relate to PCS and (2) TCIP-G (Trustworthy Cyber Infrastructure for the Power Grid) which brings DHS and the Department of Energy together to develop technologies that the private industry has identified as critical for the future of the power grid. This project plans to release best practices and recommendation reports on securing PCS in the Oil and Gas Sector and transition technologies to industry to improve cyber security in the power grid. Technologies include vulnerability assessment and model checking, forensic assessment for large-scale smart grid networks, and non-intrusive load monitoring.

**Development Partner(s):** Department of Energy (contribute \$2.5 million per fiscal year to TCIP-G effort); Five major oil and gas companies (contribute \$500,000 to each LOGIIC project), Industrial Control Systems Joint Working Group (ICSJWG)

**End User(s):** Primarily Electric and Oil & Gas Sectors (potentially Water, Chemical and Transportation Sectors), DHS NPPD Control System Security Program, Critical Infrastructure owners/operators

*Research Data Repository Project* – This project improves the quality of cyber security research and develops solutions by providing the only freely-available, legally collected repository of large-scale datasets containing real network and system traffic. The project created and maintains the repository for use by the cyber security research community to accelerate design, production, and evaluation of next-generation cyber security solutions, including commercial products. This project plans to pursue international agreements in order to promote the exchange of ideas and information among a broader group of the research community. This project also plans to create a Disclosure Control Reference Guide that will provide researchers, evaluators, network data providers, and policymakers the details about the use of current disclosure control technologies on network data, as well as potential directions for new disclosure control technique development.

**Development Partner(s):** N/A

**End User(s):** Researches including: 66 Academia, 39 Commercial, 15 Government Research Labs, 7 non-profits

*Security in Cloud-Based Systems (sCBS)* – This project will increase government efficiencies and security using cloud-based systems by establishing a secure cloud infrastructure. Security in cloud-based systems requires elements of every aspect of cyber security including: secure protocols to protect data flow to, within and out of the cloud; and data integrity, user privacy constraints, forensics analysis to preserve digital evidence, and measurement systems to identify any possible unauthorized activity existing within a cloud-based environment. The approach will be to collaborate with the government organizations responsible for cloud-based architectures, such as National Institute of Standards and Technology (NIST), Federal Chief Information Officer (CIO) Council, and General Services Administration (GSA), to create a resilient, secure cloud-based environment for the Federal Government and private sector. This project plans to identify and develop technologies for initializing and maintaining secure cloud infrastructure, develop technologies for forensics analysis for law enforcement of cloud based systems and data, and outline requirements and identify potential pilot opportunities for integrated secure cloud implementations including authentication, data integrity, trusted applications and user privacy.

**Development Partner(s):** DHS S&T CIO

**End User(s):** DHS S&T CIO

*Secure Protocols Project* – This project improves the security of the Internet’s infrastructure by contributing to fundamentally improving the core functions of the Internet through deployment and adoption of security standards key to the Internet’s communications pathways and protecting user’s online interactions. The project is working with the larger Internet community to develop and deploy standards and tools and that enhance the security of the Internet’s Domain Name System (DNS) and routing infrastructure. This project combines two efforts: Domain Name System Security (DNSSEC) and Secure Protocols for the Routing Infrastructure (SPRI). This project plans to conduct prototype implementations of the Border Gateway Protocol Security (BGPSEC) and demonstrate DNSSEC validation in an enterprise as well as in two additional Internet Service Providers.

**Development Partner(s):** Standards and governance bodies – Internet Engineering Task Force (IETF), North American Network Operators’ Group (NANOG), Internet Corporation for Assigned Names and Numbers (ICANN), National Telecommunications and Information Administration (NTIA)  
**End User(s):** All network-connected entities including all USG agencies, all Critical Infrastructure-Key Resources, the public

*Software Assurance Marketplace (SWAMP) Project* – This project will improve the fidelity of identification of vulnerabilities in software and increase the output of more secure software by providing the infrastructure to test and evaluate software against a multitude of software analysis tools. The project will develop an environment that can be used by open source and commercial software product developers to test the security functionality of their software using source code analysis techniques to discover and eliminate vulnerabilities from large open source codebases. This project plans to deliver and initial operating capability of SWAMP.

**Development Partner(s):** DHS National Cyber Security Division (NCSD)

**End User(s):** Homeland Security Enterprise software users, maintainers, developers

*Software Quality Assurance Project* – This project will improve the ability to detect security vulnerabilities in the software used by our Nation’s critical infrastructure (energy, transportation, telecommunications, banking and finance, and others) and networks by developing enhanced tools and techniques for analyzing the underlying software. The project addresses the presence of internal flaws and vulnerabilities in software and deals with the root of the problem by improving software security. This project plans to continue to produce tools for identifying, analyzing, and rectifying latent vulnerabilities in software; and transition technology to commercial products; deliver Version I of the Tool Output Integration Framework (TOIF); and expand capabilities to include run-time and executable analysis of software. This project also plans to expand capabilities to include run-time and executable analysis of software and provide tools for SWAMP.

**Development Partner(s):** DHS NCSD

**End User(s):** Homeland Security Enterprise software users, maintainers, developers

*Tailored Trustworthy Spaces (CNCI) Project* – This project will improve the ability for critical infrastructure sectors to share information and conduct transactions by establishing “trusted” secure, private and customizable cyber sub-spaces where the functional and technical provisions of the “trusted space” adapts to dynamic requirements. The project provides flexible, adaptive, distributed trust environments that can support functional and policy requirements arising from a wide spectrum of activities in the face of an evolving range of cyber threats. This project supports the CNCI goal of transforming the cyber-infrastructure to be resistant to attack so that critical national interests are protected from catastrophic damage and our society can confidently adopt new technological advances. This project plans to provide the capability to adjust the assurance level on specific security attributes separately and establish trust between systems based on verifiable information including both hardware and software solutions.

**Development Partner(s):** DHS components, other Federal agencies, State and local entities, private sector

**End User(s):** DHS components, other Federal agencies, State and local entities, private sector

*Transition to Practice (TTP) (CNCI) Project* – This project will improve the transition path and likelihood of implementation of Federally funded cybersecurity research into operational use by carrying out proven strategies for successful transition and commercialization. This project partners with the Federal agencies that fund research in cybersecurity and identifies cyber security projects that can be transitioned into operational use or commercialized. This project will initiate experimental

deployment activities from testing to full operational use. This builds on the S&T Directorate's process of funding projects through the full Research and Development (R&D) lifecycle: research, development, testing, evaluation, and transition. This project plans to use events such as the DHS S&T Directorate sponsored IT Security Entrepreneur Forum, the National Lab Technology Demonstrations, and the DoD/DHS Joint Venture Catalyst Initiative to demonstrate technologies to both industry and the government. This project also plans to transition at least two cybersecurity technologies into the operational environments of the Homeland Security Enterprise.

**Development Partner(s):** Homeland Security Enterprise

**End User(s):** Homeland Security Enterprise

**Disaster Resilience Research & Development Thrust** – FY 2012: \$61.486 million. FY 2013 request: \$143.738 million. Efforts include reduction of vulnerability of critical infrastructure, key leadership, and events to terrorist attacks and other hazards; with State, local, tribal and territorial governments, secure their information systems; working with local and regional partners to identify hazards, assess vulnerabilities, and develop strategies to manage risks associated with all hazards; increasing the state of preparedness of State, local, regional, tribal, and territorial partners, as well as nongovernmental organizations, the private sector, and the general public; advancing and improving disaster emergency and interoperable communications capabilities; and, improving the capabilities of DHS to lead in emergency management.

**Bioagent Attack Resiliency Program** – Provides advanced planning, develops Concept of Operations (CONOPS), develops, and provides capabilities to support forensics, laboratory response, personnel protection, and decontamination, and utilize exercises and training for responding to and recovering from a biological disaster. This program includes actions to limit the spread of disease among animal species to protect the United States economy.

**Adaptive Facility Protection (Bio)** - This project will improve the ability of facility operators to protect buildings by the development of a rapid biodetection architecture for infrastructure and the assessment of technology for use in facilities to effect prompt warning and response. This project contains two initiatives. The first initiative develops Adaptive Chemical/Biological (CB) Facility Protection guidance. This initiative will develop descriptions and documentation of recommended elements for a complete architecture to incorporate biological and chemical detection systems with both active and passive facility response systems. The second initiative is a Rapid Biodetector Assessment. This initiative will test two rapid biological detection systems developed by DHS S&T in the Detect to Protect project to the Federal Standards for Assay Performance and Equivalency (FSAPE) or Public Safety Actionable Assays (PSAA) standards. These sensors have been developed for rapid, automated detection of a biological release within minutes in high population movement transportation facilities and other critical indoor facilities. This project plans to produce a guidance document for buildings and facilities that benefit most from CB detection systems coupled to the active and passive building control systems, incorporating linkage of alarms to local response units and facility access control, in order to minimize human exposures and reduce contamination spread. This project also plans to test the Detect to Protect rapid biological detection systems against the FSAPE or PSAA standards in an independent test facility.

**Development Partner(s):** Funded solely by DHS

**End User(s):** Office of Health Affairs (OHA), Transportation Security Administration (TSA), DHS Federal Protective Service (FPS), United States Secret Service (USSS)

**Bioforensics Research and Development (R&D) Project** – This project provides investigators, such as the FBI, CBP and USSS, with techniques to identify source material collected from a bio-crime in

order to pursue legal prosecution against the party responsible. This is accomplished through the development of advanced forensic capabilities to determine the source and production method of biological threat agents (BTAs) collected from crime scenes. The Bioforensics R&D project leads national research efforts in microbial forensics. Specifically, the project develops protocols for characterization and identification of BTAs, and utilizes a robust sample management, molecular signatures, and physical/chemical analysis research program. This project plans to fully implement the Microbial Forensics Encyclopedia database at NBFAC and initiate an effort to build a national sequence database for use in whole genome comparison forensics analysis. Additionally, this project plans to transition an improved vacuum sampling technology, currently under development, to the Federal Bureau of Investigation (FBI) and other first responders for validation.

**Development Partner(s):** Funded solely by DHS

**End User(s):** FBI, DHS NBFAC, DHS USSS, CBP, Department of Defense (DOD), Defense Threat Reduction Agency (DTRA)

*Chem-Bio Event Characterization Project* – This project will improve the capability of the response community to rapidly determine the extent of chemical or biological contamination in an urban area following an event. This project addresses one of the high priority needs expressed by the emergency management, environmental, and public health communities. The effort will address the requirement for rapid environmental assessment methods integrated with health surveillance data to properly inform risk-based decisions regarding needed actions to respond to and mitigate the event. The outcome of the project is envisioned to be a system of tools and methods for emergency responders in public health, environmental cleanup, and emergency management at the Federal, State, and local levels to utilize in execution of their emergency response duties. This project plans to technology solutions including the feasibility of modifying commercial off-the-shelf (COTS) or military-fielded equipment for this purpose, and develop methods for rapid environmental assessments.

**Development Partner(s):** Funded solely by DHS

**End User(s):** Federal Emergency Management Agency (FEMA), Environmental Protection Agency (EPA), Centers for Disease Control and Prevention (CDC), State and Local responders

*Decontamination, Disposal and Depopulation Project (3D)* – This project will improve Federal, State, and local animal health officials emergency response CONOPS to control the spread of foreign animal diseases (FAD) and mitigate the impact on the livestock industry. This project will develop, in coordination with United States Department of Agriculture (USDA) and Environmental Protection Agency (EPA), new and/or enhanced animal health emergency response tools, technologies and associated CONOPS. The project is designed to increase capacity and to ensure that decontamination, disposal, and depopulation activities are performed rapidly, humanely, and in an environmentally protective manner. This project plans to finalize the feasibility of the system for large-scale, on-farm depopulation of swine and complete the testing and evaluation of the mobile gasifier animal depopulation technologies.

**Development Partner(s):** USDA, EPA

**End User(s):** USDA, Food and Drug Administration (FDA), EPA, Industry producers, first responders, State and local governments

*FAD Vaccine and Diagnostics Project* – This project will strengthen the defense of the U.S. agricultural infrastructure by developing new and next generation countermeasures (vaccines and diagnostics) to protect the livestock industry against Foot and Mouth Disease (FMD) and other high consequence Foreign Animal Diseases (FADs). This project directly addresses Homeland Security Presidential Directive HSPD-5 and HSPD-9 by ensuring that USDA and other first responders in the animal agriculture community have the tools needed to safely and effectively respond to and recover

from foreign animal and zoonotic disease outbreaks. New and next generation countermeasures are developed and transitioned directly to USDA or through veterinary biologic industry partners for commercialization and access by USDA. This project plans to coordinate with animal health industry partners on regulatory development programs for vaccine candidates for Rift Valley Fever, Classical Swine Fever, and Henipavirus. This project also plans to complete development regulatory requirement (master seeds) for additional FMDV serotypes/subtypes molecular vaccine candidates.

**Development Partner(s):** USDA, DOD, Multiple Veterinary Biologics and Biotech companies

**End User(s):** USDA

*National BioForensics Operations (NBFAC) Project* – This project ensures the provision of unimpeachable technical data for use by law enforcement authorities in the investigation and prosecution of crimes involving biological agents. The National Bioforensics Analysis Center (NBFAC) is the Nation’s lead facility for technical analysis of samples from biocrime and bioterror investigations. As an operational facility, NBFAC provides Federal law enforcement agencies with centrally coordinated and validated capabilities for sample handling, sample processing, and bioforensic analyses of evidentiary material derived from biocrime and bioterror investigations or from the actual use of biological agent. NBFAC also validates protocols for the identification and characterization of the biological, chemical and physical ‘fingerprints’ that those samples may contain; rigorous chain-of-custody and quality-control procedures to ensure the integrity of the sample and its analysis; and maintains 24/7 continuous hub-and-spoke laboratories to provide casework support and additional specialized capabilities. This project plans to develop capability for the identification and characterization of rare variants and quasi species.

**Development Partner(s):** FBI

**End User(s):** FBI, USSS

*NBAF Agro-Defense Research and Assessment Project* – This project develops countermeasures against high priority diseases that threaten US livestock. Funds will be used to augment and complement current and ongoing research by accelerating programs focused on African Swine Fever and Classical Swine Fever at Kansas State University. This effort will also identify and prioritize future research at the BioSecurity Research Institute and other facilities by identifying emerging animal diseases and agents with potential for terrorist use; develop and execute the certification steps necessary for studying such high priority diseases and agents in the US; and develop public outreach plans to ensure all stakeholders understand the value of the proposed research and the safeguards in place to ensure such research will be done safely in U.S. facilities.

**Development Partner(s):** Kansas State University

**End User(s):** U.S. agriculture sector

*Operational Tools for Response and Restoration Project* – This project will improve response and restoration after an attack of a biological threat agent by providing validated interagency sampling plans and improved statistical sampling designed to support characterization and decontamination planning. This project develops a suite of state-of-the-science indoor-outdoor predictive tools to characterize the extent and degree of contamination, incorporating the best-available deposition, degradation, and surface viability data.

**Development Partner(s):** Department of Defense Threat Reduction Agency (DTRA), Idaho National Laboratory (INL), Sandia National Laboratory (SNL), US EPA

**End User(s):** EPA

*Systems Approaches for Restoration Project* – This project improves the restoration of wide urban areas following chemical, biological, or radiological release through the development of guidance for

technologies to be used, procedures to enhance communications among impacted government and private entities, and prioritization of infrastructures to be addressed during the restoration process.

**Development Partner(s):** DOD, Denver Urban Area Security Initiative

**End User(s):** DHS OHA, FEMA, EPA, DOD, Denver Urban Areas Security Initiative (UASI), State and local government, tribal nations, and industry

*Underground Transport Restoration Project* – This project will improve the capability for transit systems to rapidly recover from a chemical or biological event, addressing a high priority need expressed by TSA and Transit systems. The projects will identify potential solutions to the requirements for rapid characterization, clean-up, and clearance of the chemical or biological contamination in the physical structures (tunnels, stations) and rolling stock (railcars, buses). The outcome of the project will be a system of tools and methods for transit systems in partnership with public health, environmental cleanup, and emergency management at the Federal, State, and local levels to perform emergency response and recovery. This project plans to determine requirements, assess potential technology solutions including the feasibility of modifying COTS, develop methods for rapid recovery and functionality of transit systems, and develop protocols for rapidly determining the extent of contamination and risk base clearance goals.

**Development Partner(s):** Funded solely by DHS

**End User(s):** TSA, EPA, CDC, OHA, FEMA

*Chemical Attack Resiliency Program* – Provides advanced planning, develops Concept of Operations (CONOPS), develops and provides capabilities in forensics, laboratory response, personnel protection, and decontamination, and utilizes exercises and training for responding to and recovering from a chemical disaster.

*Adaptive Facility Protection (Chem)* – This project will improve the ability to protect buildings and facilities from a chemical spill accident or a deliberate attack. This project will closely examine large scale toxic chemical release in transport. This extension of the Model-Large-Scale (MLS)/Jack Rabbit project initially conducted in limited scale in FY 2010 will yield an immediate benefit to understanding and mitigating the risk of a large-scale toxic chemical release from a railcar. This effort will involve the planning and design of expanded field release testing to 10-ton release trials, allowing for direct experimentation with the threat chemical and at the amounts involved in a catastrophic release event. The test campaign directly evaluates the impact to an urban environment, utilizing a strategically designed mock urban setting as a test bed. Primary objectives will be to experimentally determine modeling parameters and inputs for large scale releases, determine the exposure effects on urban infrastructure, electronics, vehicles, and emergency equipment, directly assess mitigation measures, and experimentally define building and structure infiltration behavior of the toxic chemical. Experimentally determined indoor concentration profiles will be a critically important deliverable, allowing for unprecedented improvements in consequence assessment. Additionally, these dispersion modeling studies will provide key data sets for improving modeling methodologies. This project plans to produce reports targeted to Transportation Security Agency detailing impacts to urban areas of large-volume toxic chemical releases, characterization of release characteristics for further modeling, guidance on infiltration of toxic gases into buildings and shelter-in-place principles, and gas dispersion characteristics for use in future modeling studies.

**Development Partners:** DHS

**End Users:** Building and facility owners such as GSA and other government agencies

*Chemical Forensic Project (Chem FP)* – This project will improve the ability of the FBI, DHS, and other law enforcement components to conduct investigations of chemical terrorist and criminal acts by

associating evidence with people, places, and other events, as well as potential attribution to their original source. The project develops and maintains a robust and enduring national capability for the collection, preservation, and processing of chemical threat agents (CTAs) and associated evidence to provide comprehensive and timely forensic analysis and attribution. This project plans to develop and transition additional collection and preservation methods, as well as design workshops and moot courts to identify and evaluate law enforcement and judicial admissibility issues as well as challenge the scientific underpinnings of chemical forensics methods.

**Development Partner(s):** Funded exclusively by DHS

**End User(s):** FBI

*Integrated Consortium of Laboratory Networks (ICLN) Project* – This project will improve coordination of laboratory response to incidents by promoting common standards of performance across laboratory response assets of multiple Federal agencies. This project provides optimized national laboratory preparedness consisting of a national homeland security infrastructure with a coordinated and operational system of laboratory networks that provide timely, high-quality, interpretable results for early detection and effective consequence management of acts of terrorism and other events requiring an integrated laboratory response. This project plans to complete a refined laboratory response gap assessment model.

**Development Partner(s):** Funded solely by DHS

**End User(s):** DHS OHA, DHHS, USDA, EPA, DOD, FBI

*Integrated Detection/Decontamination Demonstration Project* - This project reduces the overall time for recovery of critical infrastructure from contamination by emerging chemical agents. The project demonstrates newly evolving tools for detecting the release, mapping contamination, and monitoring the decontamination process for facility clearance.

**Development Partner(s):** DOD

**End User(s):** EPA, CDC, DOD

*Explosives and Radiological Nuclear Attack Resiliency Program* – Provides advanced planning, develops CONOPS, develops materials and funds exercises and training for responding to and recovering from a disaster employing explosive, or a radiological, or nuclear device, or explosives.

*Blast Analysis of Complex Structures Project* – This project provides computational tools and methods for blast engineers to calculate blast loads in dense urban environments to estimate damage to buildings resulting from Improvised Explosive Device (IED). The Federal Emergency Management Agency (FEMA), commercial and government facilities, State and local governments, code officials, associations of engineers, and architects can use the tools to quickly calculate structural responses to a range of explosives and their effects on structures so that mitigation techniques may be applied and analyzed. This project plans to produce a version of the fast-running airblast tool that is applicable to any urban environment.

**Development Partner(s):** OIP, NYPD Counterterrorism Office, the CITY of New York Emergency Management, FEMA, commercial and government facilities, State and local governments, code officials, associations of engineers and architects

**End-user(s):** first responders, Federal, State and local governments, code officials, associations of engineers and architects

*Blast/Projectile – Protective Measures and Design Tools Project* – The project develops and tests technologies, assesses vulnerabilities, identifies mitigation schemes, and investigates materials to protect transit infrastructure such as bridges, tunnels, and mass transit. This project will expand

existing protective measures by making them less expensive, easier to apply, and more effective, and will develop entirely new materials and design concepts for additional classes of infrastructure. Protective measures may include mechanisms to reduce blast effects, rapid mitigation and restoration technologies, and other defensive measures. The project works closely with several mass transit agencies, including the Port Authority of New York and New Jersey, Bay Area Rapid Transit (San Francisco, California), and the Massachusetts Bay Transportation Authority to protect critical components of subway systems from terrorist threats. In close coordination with the Transportation Security Administration (TSA) and transit systems, the project is developing new technologies to address key vulnerabilities in tunnels and stations. This project plans to conduct analyses and develop mitigation schemes for two critical mass transit assets and provide design guidance for protection of bridges and mass transit structures.

**Development Partner(s):** TSA, and several mass transit agencies, including the Port Authority of New York and New Jersey, Bay Area Rapid Transit (San Francisco, California), and the Massachusetts Bay Transportation Authority

**End-user(s):** Transportation Agencies

*Radiological Nuclear Response and Recovery Project* – This project will improve the Nation’s ability to respond to and recover from the effects of a nuclear/radiological attack. The program builds off of work being completed by DNDO, FEMA, DOD, and other interagency partners and addresses technology and research in such areas as public warnings, alerts and communications, reestablishment of critical infrastructure, remediation of impact areas, and community and responder health and safety. This project plans to coordinate efforts to develop a technology and research road map identifying and prioritizing gap areas, conduct basic and applied research into identified gaps, identify existing potential technology solution, and test and evaluate existing solutions. S&T will build on research and development on going in the national labs and with our international partners to prioritize transition to use technologies in conjunction with ongoing work with DNDO’s program, Secure the Cities and other such programs.

**Development Partner(s):** DNDO, FEMA, DOD

**End-user(s):** First Responders

*Render Safe/Diagnostics Project* – This project increases standoff capabilities, reduces collateral damage and provides more precise improvised explosive device (IED) disruption and disablement capabilities and techniques for bomb squads.

**Development Partner(s):** Remote Sensing Laboratory and Tactical Electronics

**End User(s):** First responders and Bomb Squads

*First Responder Capability Program* – Develop technologies, information, procedures, and CONOPS to aid first responders, emergency managers, and incident commanders as they respond to hazardous situations. Assist the emergency response communities to establish requirements. Tests technologies and assesses them for usability to help make the technologies available across all First Responder communities.

*Advanced Incident Management Enterprise System (AIMES) Project* – This project will improve emergency responders’ ability to share information between disparate software application systems by integrating all elements of the incident management enterprise to provide a secure, scalable, interoperable, and unified situational awareness to the emergency management and first responder community. The project builds upon the Unified Incident Command and Decision Support (UICDS) architecture by providing an integrated, interoperable, and unified common operating picture with total visibility into incident information, resources, environment, logistics supply chain, response, and

recovery plans, methods, tactics, and policies. A focus of this project is areas where there is a mix of critical commercial, sporting, convention and government facilities in close proximity to each other such that a disaster event in one facility could trigger large scale evacuations in surrounding facilities. This project also plans to enlist more privately and publicly developed software applications and create a consortium of users to advance its use and to inform its evolution. Additionally, this project plans to begin the transition of research responsibilities for future AIMES improvements from S&T to the university and private sector members of the consortium.

**Development Partner(s):** Pacific Northwest National Laboratories (PNNL), National Institute for Hometown Security, U.S. Army Research, Development and Engineering Command, universities

**End-user(s):** Federal, State, local, tribal, private industry, non-profit organizations, DOD

*First Responder Technologies Project* – This project increases the availability and reliability of technology solutions for first responders by developing and designing technologies to address capability gaps identified by Federal, State, local, and tribal first responders. This project conducts operational field assessments of technologies, and makes technology available to all first responder communities through commercialization. The project plans to continue working with local, tribal, State, and Federal first responders through the First Responder Resource Group, the Homeland Security Studies and Analysis Institute, and the InterAgency Board for Equipment Standardization and Interoperability to identify capability gaps and requirements and develop innovative solutions to meet those needs.

**Development Partner(s):** Synkera Technologies, Inc; L1 Identity Solutions; National Institute for Occupational Safety and Health (NIOSH); TRADOC; Homeland Security Studies and Analysis Institute; and the InterAgency Board for Equipment Standardization and Interoperability

**End User(s):** USCG, USSS, ICE, CBP, US-VISIT and law enforcement, fire, EMS, and other emergency response agencies nationwide

*Geospatial Location Accountability and Navigation System for Emergency Responders (GLANSER) Project* – This project will improve accuracy and signal penetration inside enclosed areas (i.e., collapsed buildings, subterranean facilities, or underground), enhance situational awareness. This project will also enable incident commanders to rapidly and effectively redeploy and save at-risk responders during an incident, by developing a three-dimensional (3D)-locator prototype sub-components to track first responders within an accuracy of less than three meters. The project develops an advanced first responder system that will enable incident commanders and decision makers to visually track responders and provide incident commanders the ability to accurately locate and track personnel. This project plans to develop and publish a product transition plan while finalizing the system components and concept of operations (CONOPS) to meet the relevant National Fire Protection Association (NFPA) standards, as well as develop a training manual to support over 100 first responders at a location.

**Development Partner(s):** FEMA, State and local emergency managers and first responders, DOD

**End-user(s):** State and local emergency managers and first responders

*Physiological Health Assessment Sensor for Emergency Responders (PHASER) Project* – This project allows incident commanders to monitor physiological status of personnel and save at-risk responders during an incident by developing a baseline for the overall physical health of the responder. In addition, this project renders an alarm notification metrics for on-scene responders on the verge of experiencing a heart attack or other life-threatening conditions. The project develops an integrated sensor package that monitors a responder's vital signs such as cardiac rhythm, heart rate, blood pressure, body temperature, and oxygen saturation, which could indicate Pre-Ventricular Contractions

(PVCs) or cardiac arrhythmias, and will warn both the wearer and command staff of life-threatening physiological conditions during an incident.

**Development Partner(s):** FEMA, State and local emergency managers and first responders, DOD

**End-user(s):** State and local emergency managers and first responders

*Technology Clearinghouse Project* – This project increases first responders’ ability to collaborate and share best practices to enhance homeland security through certified and accredited web-based central resource systems (i.e., FirstResponder.gov and First Responder Communities of Practice). This project also provides technology developers with requirements and operational information that assist in developing useful tools and provides users with information to develop or deploy technologies. The project plans to continue to grow membership and communities on First Responder Communities of Practice, operate and maintain First Responder Communities of Practice and FirstResponder.gov, and provide outreach to the first responder community and Federal agencies.

**Development Partner(s):** Teracore; Booz Allen Hamilton

**End User(s):** Local, State, Federal, territorial, tribal, governments, private sector and industry partners

*TechSolutions Project* – This project increases the speed of prototyping and transitioning emergent high priority technologies to the first responder community by capturing, reviewing, verifying, and developing technology needs identified by first responders. TechSolutions validates capability gaps and first responder priorities by working with a panel of first responder subject matter experts to include the InterAgency Board for Equipment Standardization and Interoperability. The project plans to address new first responder capability gaps identified through the TechSolutions website, the First Responder Resource Group, and outreach efforts at conferences and other relevant first responder venues as well as transition technology to the end users.

**Development Partner(s):** Center for Commercialization of Advanced Technologies; Homeland Security Advanced Research Project Agency; National Urban Security Technology Laboratory (NUSTL); Advanced EMS Designs; Applied Research Associates, Inc.

**End User(s):** DHS Office for Bombing Prevention; the National Bomb Squad Commanders Advisory Board; municipal bomb squad commanders; and law enforcement, fire, EMS, and other emergency response agencies nationwide

*Information Sharing, Analysis, and Interoperability Program* – Creates an integrated information sharing architecture and links that architecture to interagency efforts to prevent terrorism while protecting privacy, civil rights and civil liberties; Researches, analyzes, and develops technologies to strengthen interoperable communications and improve effective information sharing at all levels of government.

*Biometric Data Base Interoperability Project* - This project will enable CBP, ICE, USCG, USSS, and USCIS to cost-effectively and operationally effectively match, analyze, and exchange biometric and actionable identity based information within DHS and with other Federal agencies such as DOD and FBI. Currently, Federal agencies have varying resources and capabilities to: 1) match biometric data, 2) rapidly develop context-specific intelligence, and 3) distribute actionable information to relevant stakeholders. This project plans to design and pilot more efficient federated architectures and analytical capabilities that allow each agency to support the demanding high-volume of transactions and short response times required of its mission partners. The intent is to support the operational needs of mission partners without overwhelming organizations that have limited capabilities and resources. This project plans to develop a baseline assessment of existing DHS matching, analysis, and sharing operations and identify capability gaps within DHS and between DHS and its mission partners.

**Development Partner(s):** TBD

**End User(s):** ICE, CBP

*Collaboration Project* – This project will improve technical expertise in the areas of data analytics and visualization by establishing valuable scientific and technical collaborations with partners outside the DHS research community. The project enables the Science and Technology Directorate to take advantage of research activities underway in other government and industry laboratories and in universities in the U.S. and abroad.

**Development Partner(s):** FEMA, ICE and State and local emergency responders

**End-user(s):** State and local emergency responders

*Common Operating Picture (COP) Data Fusion Technologies Project* – This project will improve public safety practitioners' incident planning and response by using evacuation planning tools that will efficiently model evacuation scenarios using transportation network and population data with visual analytics. The project develops capabilities to integrate, analyze, and visualize multiple information sources to address public safety practitioner requirements within Homeland Security Enterprise standards. This project plans to transition RtePM to an operational support organization, enhance resilience with additional functionality and engineering design elements to facilitate, reuse, and transition, as well as transition the symbology service to the DHS Geospatial Information Infrastructure. This project also plans to perform requirements and capabilities analysis and development of additional components of the Emergency Management Decision Support Toolkit, an interoperable suite of tools and services to assist in decision making during emergencies. The priorities include real time acquisition and display of road and shelter conditions, tracking of vehicles and assets, enhanced damage assessment, mass location and movement tracking, response coordination via 3G Networks, and crowd sourcing for incident management.

**Development Partner(s):** FEMA, USACE, DHS Geospatial Management Office (GMO), State and local law enforcement agencies, State and local emergency management agencies

**End-user(s):** FEMA, State and local emergency management organizations

*Converged Interoperable Communications Project* – This project improves the ability for first responders to effectively and efficiently coordinate and communicate preparations for response and recovery efforts through the development of an integrated communication system. This project also identifies practitioner requirements, enables effective coordination across organizational and jurisdictional boundaries, and develops tools to address first responders' needs. The project plans to develop improved, networking technology that will allow emergency responders to share information and wireless broadband networks, as well as evaluate existing technologies. These networks may be shared between local jurisdictions to create a regional network or with commercial entities through a public-private partnership. The project also plans to focus on identifying capability caps and gathering requirements for interoperable communications and information sharing in coordination with organizations such as the National Public Safety Telecommunications Council and the InterAgency Board for Equipment Standardization and Interoperability.

**Development Partner(s):** National Public Safety Telecommunications Council; the InterAgency Board for Equipment Standardization and Interoperability; Federal Emergency Management Agency (FEMA); USCG; National Protection and Programs Directorate (NPPD); Department of Defense (DOD); Department of Justice (DOJ); private sector

**End User(s):** Law enforcement, fire, EMS, and other emergency response agencies nationwide

*Discrete-Element Computing, Privacy, and Forensics Project* – This project will improve real-time evacuation planning and response capabilities for buildings, events, cities, and regions by operating in real-time via dynamic, streaming data such as unstructured text, database records, imagery, video and

audio, and include networked sensor surveillance data. This project will develop specialized high-performance computing technologies and techniques for managing, processing, and analyzing multiple data types, modes, and structures from diverse sources and locations. This project plans to integrate with the *Visual Analytics, Precision Information Environments (VAPIE) Project*.

**Development Partner(s):** FEMA, CBP, ICE, Port of Seattle, and Washington State and local users

**End-user(s):** Northwest USA consortium of Federal Emergency Management Agency, CBP, ICE, Port of Seattle, and various Washington State and local users

*Emergency Data Exchange Language (EDXL) Project* – This project provides a suite of standardized emergency-messaging formats for first responders to collaborate and share life-saving resources. This project improves the speed and quality of coordinated response activities in real time by sending messages to first responders' through tablets, computers, and phones with EDXL-compliant software. This project facilitates the research, development, testing, and evaluation of practitioner-driven, information-sharing standards and encourages their implementation into software, systems, and devices. The project plans to submit the Tracking of Emergency Clients (TEC) standard to the Organization for the Advancement of Structured Information Standards (OASIS) for approval. The project also plans to work with the OASIS, Practitioner Groups and Steering Committees, DHS, and HHS to determine the appropriate integration of the Tracking for Emergency Patient (TEP) and TEC standards into existing legacy systems, and assist in the development, testing and publication of the standards in new products. TEP and TEC enable the tracking and updating an emergency patient's location, condition, and care, as well as notification of family members.

**Development Partner(s):** OASIS; National Incident Management; the National Information Exchange Model; Evolution Technologies; and SRA International.

**End User(s):** Law enforcement, fire, EMS, and other emergency response agencies nationwide

*Integrated Data Processing and Analysis Project* – This project will improve intelligence analysts' ability to share situational awareness and "connect the dots" of information that is legally collected by DHS to protect the Nation through analysis and sharing of data. The project develops scalable technologies for the integrated analysis of free text, database records, audio, video, imagery, transactional data, geographical data, and sensor information. This project plans to deliver information sharing capabilities for law enforcement, to include: multi-jurisdictional alerts; enhanced data access from field agents through mobile devices; and scars, marks, and tattoos identification. Additionally, this project plans to deliver the capability for law enforcement to share tribal vehicle and driver information, warrants, and license plate information. This project also plans to pilot device agnostic applications for mobile devices and develop detailed plans for portal technology implementations as well as deliver an automated capability to match suspicious activity, police, and intelligence reports against known Critical Infrastructure-Key Resources (CI-KR) vulnerabilities.

**Development Partner(s):** Automated Regional Justice Information Center (ARJIS), International Justice and Public Safety Network ((Nlets)

**End-user(s):** ICE Homeland Security Investigation (HSI), law enforcement

*Internet Protocol (IP) Communications Test and Evaluation Project* – This project provides our Nation's first responders with the capability to deploy the most appropriate and affordable communications equipment to meet their mission-critical needs. The project's two focus areas: Voice Over Internet Protocol (VoIP) and Video Quality in Public Safety (VQiPS), support the long term goal of enhancing public safety interoperability by encouraging industry to build equipment to meet the needs of the emergency responders. The project plans to develop additional VoIP implementation profiles and publish a compendium of requirements for VoIP.

**Development Partner(s):** Office of Emergency Communications (OEC); Transportation Security Administration; Public Safety Communications Research Program; National Public Safety Telecommunications Council; SRA International

**End User(s):** Law enforcement, fire, EMS, and other emergency response agencies nationwide; equipment manufacturers

*Law Enforcement Data Fusion Project* – This project enhanced the Federal Air Marshal Service (FAMS) ability to detect, forecast, disrupt terrorist attacks, and criminal activity by developing geospatial predictive analytics tools. In addition, this project aids law enforcement in combating terrorism, criminal gang activity, and conventional violent criminal activity before an event occurs. The project will also analyze the location of historically documented incidents and the features of the environment that influence or constrain events to forecast the locations of future events.

**Development Partner(s):** Federal Air Marshal Service (FAMS)

**End-user(s):** FAMS, law enforcement

*Multi-Band Radio (MBR) Project* – Supports the testing and evaluation of MBR technologies manufactured by multiple vendors through demonstrations and pilots nationwide. These efforts will focus on testing the radio's operation across multiple systems - analog, conventional, digital, and current Project 25 adjusted - and multiple public safety agencies, including: local, tribal, State, and Federal (e.g., Department of Defense (DOD), Department of Justice (DOJ), and DHS).

**Development Partner(s):** Thales Communications, Inc. Harris Corporation

**End User(s):** Multiple agencies that cross Federal Operational Missions including; DHS Directorates (CBP, ICE, FEMA, FPS, USCG), Departments of the Interior; Justice, Defense, local law enforcement, fire, EMS, critical infrastructure protection entities, and other emergency response agencies across the Nation

*Overhead Imagery Data Project* – This project will increase decision-makers' situational awareness and extent of disasters through development of a phenomena-based selection of sensor systems and optimization of tasking satellite and airborne assets to deliver critical information to incident commanders for every phase of the disaster. The project uses advanced geographic information science (GIScience) techniques to support the application of remote sensing, image processing, geographic information systems, digital cartography, and spatial modeling for disaster management and hazards research. This project plans to deliver the architecture and develop methods for incorporation into the concept of operations (CONOPS) and standard operating procedures of FEMA, as well as State and local response agencies. This project also plans to conduct testing of an advanced remote sensing system that contains capability for real-time, day/night imaging with distribution of image data to first responders via a mobile application.

**Development Partner(s):** FEMA, Urban Search and Rescue (USAR), emergency response agencies in California, Mississippi, North Carolina, and South Carolina, Civil Air Patrol, and the Los Angeles County Fire Department

**End-user(s):** FEMA, USAR, emergency response agencies in California, Mississippi, North Carolina, and South Carolina, Civil Air Patrol, and the Los Angeles County Fire Department

*Suspicious Activity Reporting (SAR) Project* – This project will increase the investigators' analytic capabilities to search, find, explore, link and understand relationships within Suspicious Activity Reporting (SAR), and other law enforcement structured or unstructured data by developing an open-source analytical toolkit (iConnex). The project uses a flexible and adaptive framework to empower analysts, investigators, and watch standers to detect and understand complex relationships within their law enforcement or terrorism-related data. This project plans to deploy the analytical tool for the DHS

Office of Inspector General (OIG), which has the responsibility to investigate FEMA disaster relief fraud. Following mission specific capability enhancements, iConnex, will transition to the DHS OIG as an aid to financial fraud recovery.

**Development Partner(s):** Federal Air Marshal Service (FAMS), Office of Inspector General (OIG)

**End-user(s):** FAMS, OIG, law enforcement agencies

*Tagging, Tracking, and Locating Project* – This project will reduce the risks of firefighters when responding to emergencies by developing a personal alert and tracking system to alert dispatchers of a firefighter’s status and location with 10 meter accuracy. The project develops technologies to provide tagging, tracking, and locating devices for the first responder community. This project will detect status information such as temperature, the presence of an electric field, and the detection of impact. The firefighter location information is then received by the dispatcher in a form that can be visually displayed using online maps. This project also supports the law enforcement investigative community by providing research which will improve the forensics capability of Federal, State, Local, Tribal and Territorial entities.

**Development Partner(s):** California Department of Forestry and Fire Protection (CALFIRE), United States Forest Service, National Operation Center, FEMA, State and local emergency operation centers, urban search and rescue (USAR) operations, Department of Energy, Ames Laboratory

**End-user(s):** California Department of Forestry and Fire Protection (CALFIRE), United States Forest Service, National Operation Center, FEMA, State/local emergency operation centers, Urban Search and Rescue (USAR) operations, Immigration and Customs Enforcement Forensics Document Laboratory (ICE FDL)

*Virtual USA (vUSA)* – This project helps to save lives and protect property by sharing information and providing relevant, reliable, real-time information during day-to-day and catastrophic incidents at all levels of government. Virtual USA integrates existing frameworks and investments of the emergency response community to improve situational awareness and decision making by providing real-time access to operational information, such as weather conditions; traffic; the location and operational status of critical infrastructure; fuel supplies; availability of emergency shelters and medical facilities; and other critical information. vUSA plans to update methodologies for jurisdictions to create their own information sharing platform and inform their information sharing initiatives. vUSA also plans to be demonstrated as part of FEMA’s National Level Exercise.

**Development Partner(s):** FEMA, NPPD, Office of Intelligence and Analysis, and other DHS operational Components; SRA International; Teracore, Booz Allen Hamilton; Pacific Northwest National Laboratory

**End User(s):** States in the Southeast (11 States), Pacific Northwest (four States), and the Central U.S. Earthquake Consortium (eight States); and law enforcement, fire, EMS, and other emergency response agencies and emergency operations centers nationwide

*Visual Analytics, Precision Information Environments (VAPIE) Project* – This project will enable diverse, diffuse, and dynamic data to be visualized in a user friendly form for the Northwest USA local, tribal, State, and Federal first responder, law enforcement, public safety, and public health communities. The data will be shared, analyzed, and understood in real time by developing advanced visualization-based techniques and technologies. This project focuses on developing informed decision-making capabilities for larger and longer-term disasters, which can have complex or even cascading consequences on multiple infrastructures, facilities, and communities. This project plans to expand the capabilities and create information environments tailored to specific users and applications, which combine real data from Virtual USA, Unified Incident Command Decision Support (UICDS), and Next generation Incident Command System (NICS) with models and simulations, and enable real-

time prediction and testing of potential emergency responses. This project also plans to integrate with the *Discrete-Element Computing, Privacy, and Forensics Project*.

**Development Partner(s):** FEMA, USCG, CBP, ICE; six local and State law enforcement and public safety agencies, as well as port commissioners; and representatives of four commercial companies

**End-user(s):** Northwest USA local, tribal, State, and Federal first responder, law enforcement, public safety, and public health communities

*Wireless Broadband Technology Project* – This project is a joint initiative between Customs and Border Protection (CBP) and S&T to investigate and assess technologies to meet CBP’s complete tactical communications need for mission-critical voice, data, and video on a single, highly reliable, converged network. This project enables emergency response agencies’ ability to determine and articulate their requirements for wireless broadband technologies by providing response agencies with the capability to assess new technologies that they can use to determine optimal interoperable communication devices and networks to procure and deploy. The project plans to develop operational guidelines for use of broadband data in mission-critical activities.

**Development Partner(s):** CBP, OEC, FEMA, and industry

**End User(s):** CBP, Emergency Medical Services (EMS), law enforcement, fire, and other emergency response agencies nationwide

*Natural Disaster Resiliency Program* – Develops and provides advanced planning, CONOPS, disaster management tools, and training aids for responding to and recovering from a large-scale natural disaster. This includes providing assistance to the private sector to “design-in” greater resilience for critical infrastructure and providing DHS with more robust tools for disaster response, disaster logistics, individual and public assistance programs, and national continuity programs.

*Community Resilience Project* - This project will develop and evaluate a program focused on training local leaders on effective risk communication practices related to homeland-security threats. The training program will reflect the current scientific understanding of effective communication of threats and risk related to preparedness, warnings of imminent threats, and post-event recovery and mitigation. Training curricula will be evaluated and refined based on pilots in communities, delivering a suite of training materials that can be used in multiple settings to support the communication efforts of local public officials. This project will depart from current training programs in its focus on training local leadership to fully identify and assess the community in which it operates. Community engagement will be an important component to this training as local leaders learn to adopt this process as a part of an effective risk communication strategy.

**Development Partners (s):** Federal Emergency Management Agency (FEMA)

**End User(s):** FEMA HQ, FEMA Regions

*Enhancing Public Response and Community Resilience Project* – This project improved transition partners’ ability to prepare, respond to, and recover from all hazards by developing an evidence-based database populated by data collected by 2-1-1 call centers. Using data generated during hurricanes Katrina and Rita, the project sought to capture and communicate lessons learned to enhance preparedness and response resources based on the specific needs of the locality.

**Development Partner(s):** FEMA

**End-user(s):** FEMA

*Federal Emergency Management Agency (FEMA) Project* – This project improved FEMA’s understanding of how to manage programs through organizing and creating a lifecycle acquisition

project for Disaster Management Support Environment (DMSE) and Situational Awareness Viewer for Emergency Response (SAVER2).

**Development Partner(s):** Local 211 Call Centers, the United Way

**End-user(s):** FEMA HQ, FEMA Regions, First Responders, State Emergency Management Offices

*Incident Logistics and Resource Tracking System Project* – The project allows FEMA to manage critical resources effectively and enhance real-time coordination and situational awareness. The project allows for timely procurement and disbursement of public and private material inventories, locations of resources, and supplies to respond to an emergency through a capability that is scalable and interoperable with Federal, State, and local systems (legacy and future). In addition, this project will provide a comprehensive and transparent disaster logistics enterprise across all disaster response, including public and private partners. Past incidents, such as Hurricane Katrina, highlighted the need for an integrated logistics capability to provide relief supplies to victims in a timely manner. This project plans to integrate information and data sharing tools with FEMA SAVER2 Response Management System.

**Development Partner(s):** FEMA

**End-user(s):** Federal, State, local, and tribal emergency management and first responder organizations, National Guard and Department of Defense (NORTHCOM)

*The National Critical Infrastructure Protection R&D Plan* – This project will optimize the coordination of Federal R&D investments of National Critical Infrastructure Protection by collaborating with Federal agencies and researchers to create the National Critical Infrastructure Protection R&D Plan. The primary customer for this project is the Executive Office of the President. The Office of Management and Budget (OMB), Office of Science and Technology Policy (OSTP), National Science and Technology Council (NSTC), National Infrastructure Protection Plan (NIPP) related agencies, Infrastructure Subcommittee (ISC) member agencies, researchers, and industry providers and implementers, contribute to the development of the National Critical Infrastructure Protection R&D Plan (NCIP R&D Plan) and are users benefiting from the plan development and distribution. This project provides a national R&D agenda for the protection and resilience of national critical infrastructure. S&T will prepare an annual update to the NCIP R&D Plan, as required by HSPD-7.

**Development Partner(s):** Executive Office of the President, OMB, Office of Science and Technology Policy (OSTP), National Science and Technology Council (NSTC), National Infrastructure Protection Plan (NIPP) related agencies, Infrastructure Subcommittee (ISC) member agencies, researchers, and industry providers

**End-user(s):** EOP, OMB, OSTP, NSTC, NIPP-related agencies, ISC member agencies, the research community and industry providers and implementers

*Quantitative Psychosocial Impacts Index (QPSI) Project* – This project will improve DHS risk assessments and prioritizing of its preparedness, response, and recovery activities by developing an index of the direct and indirect public health, social, and political impacts of disasters. The project identifies candidate measures for inclusion in the index; analyzes the reliability, sensitivity, and validity of identified candidate measures; derives a concise summary index; and tests the index's utility in the context of multiple past disasters. This project plans to release a solicitation and make award to performer(s) for recommendations of indicators to be included in the QPSI.

**Development Partner(s):** NPPD

**End User(s):** NPPD Office of Risk Management and Analysis, FEMA, and State and local governments

*Rapid Mitigation and Recovery Project – Basic Research* – This project will allow Critical Infrastructure-Key Resources (CIKR) owners to plan responses and mitigate damages by studying the consequences of destruction to soil/water/concrete junctions in large dams built with both concrete and embankment sections. The project concentrates on longer-term needs and investigates failure mechanisms, damage limitations, and solutions for rapid restoration of service for critical infrastructure.

**Development Partner(s):** United States Army Corps of Engineers (USACE) Engineering Research and Development Center (ERDC) and the Lawrence Livermore National Laboratory (LLNL)

**End-user(s):** IP, Dam Sector, USACE, US Bureau of Reclamation (USBR)

*Recovery Transformer Project* – This project will reduce recovery time from grid-related emergency or blackouts caused by natural disasters or deliberate attacks by creating a modular, more easily transportable electrical extra high voltage (EHV) power transformer. The prototype transformer will reduce the size and weight by 20%; and enable quick delivery, installation, and assembly, with the ability to energize in days, as compared to several weeks or months for traditional transformers. This project plans to monitor the performance of the transformer and begin the transition to industry.

**Development Partner(s):** OIP, DOE, energy sector

**End-user(s):** Energy sector utilities / transmission owners & operators

*Resilient Electric Grid* – This project will protect electric-power critical infrastructure (such as the Manhattan Financial District) from the cascading effects of a power surge on electrical grids due to natural disasters and deliberate attacks. Through the development of the first-of-its-kind, inherently fault current limiting, high temperature superconducting (IFCL-HTS) cable, power substations can be interconnected, enabling the sharing of power and assets and adding resiliency to the existing grid. This project plans to complete site construction and equipment procurement and begin installation of the IFCL-HTS cable and auxiliary equipment.

**Development Partner(s):** Energy sector, American Superconductor Corporation (AMSC), Consolidated Edison, Southwire, Altran Solutions, DH Industries

**End-user(s):** Consolidated Edison, electric sector utilities

*Resilient Tunnel Project* – This project is developing an inflatable tunnel plug to reduce the vulnerability of transportation tunnels to flooding, resulting from a terrorist attack or natural disaster. Past assessments revealed that terrorists using IEDs could exploit certain weaknesses to cause catastrophic tunnel failure. The tunnel plug will mitigate these vulnerabilities in mass transit systems. DHS S&T is collaborating with major transit agencies, including the Port Authority of New York and New Jersey and the Washington Metropolitan Area Transit Authority, to drive technical and operational requirements for the plug and subsystem designs. This project plans to demonstrate a tunnel plug system, to include the plug, container, and inflation mechanism and work with transit agencies to transition the technology.

**Development Partner(s):** Customers and stakeholders include TSA and several major U.S. mass transit agencies. Project team members are the Pacific Northwest National Laboratory (PNNL), West Virginia University, and ILC Dover

**End-user(s):** Mass Transit Agencies

*Social Media Disaster Resilience* – This project will improve collection of dynamic real-time incident information by using social media from on-site bystanders communicating the extent of damage, the evolution of the event, and the needs of the community. Social media communication from the community, coupled with the current capability of the responders, could lead to more accurate, real-time situational awareness that will help DHS in decision-making and resource allocation. This project

plans to create a mobile app for the dominant smart phone platforms (iPhone, Android) for alert delivery and enable tag-based retrieval of text, images, video and audio from social media updates near location of weather alerts. This project also plans to develop a real-time alert update to create enhanced situation representation, including audio to text conversion, natural language understanding of citizen calls, and querying targeted sensors (e.g., surveillance cameras, traffic sensors) for recent updates based on their location and capabilities.

**Development Partner(s):** FEMA, State and local emergency management, response agencies

**End-user(s):** Emergency management, First responders, infrastructure owners and operators

*Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT) Project* – This project will improve the verification and validation of emergency response tactics, plans and procedures prior, during, and after an incident by delivering a framework to FEMA, State and local emergency responders, DOD for integrating existing incident related modeling and simulation tools in real-time scenarios for operations and training exercises. SUMMIT will develop accurate and reliable estimates of hazards from a wide range of natural and terrorist events; analyze and use route mapping to effectively manage transportation assets during mass evacuations or the post-event flow of emergency supplies; and conduct analyses to provide better understanding of possible impacts from natural disasters and terrorist events. The project leverages results of the Training, Exercise and Lessons Learned (TELL) project and will follow three tracks: model development, integration framework, and support for conducting planning exercises. This project plans to complete pilot demonstrations on remaining scenarios, including NLE13. This project also plans to complete final transition to FEMA National Training, Education, and Exercises (NTEE)/National Education Division (NED).

**Development Partner(s):** FEMA, State/local Emergency Responders, DOD

**End-user(s):** State and local emergency responders, first responders, emergency preparedness exercise community (including incident and emergency managers)

*Natural Disaster Detection Program* – Researches, develops, and/or identifies tools to detect and evaluate the magnitude of natural disasters to provide early warning. Defines concepts, requirements, and procedures for improved techniques for early detection and warning of natural disasters threats and the prediction of magnitude of these disasters.

*Seismic Activity Detection Data Collection, Analysis, Alert, and Warning Project* – This project will improve alert notifications and warnings of potential earthquake events to emergency response agencies at local, State, and Federal levels by an integrated warning system based on ground and remote sensing measurements. The project develops the data sources and analytical techniques to support design and development of a model that will result in earlier prediction and detection of seismic activity than is currently available from ground-based seismic monitoring systems. The project also integrates the modeling predictive capabilities with emergency management alert and warning systems, planning capabilities, and training and exercise programs. This project plans to develop an R&D strategy in forecasting, alerting, and warning, initiating the efforts that will have the greatest near-term impact in improving national readiness. This project also plans to evaluate the architecture of developed techniques and models with the customers for incorporation into an optional framework.

**Development Partner(s):** California Emergency Management Agency (Cal-EMA), Los Angeles County, the city of San Francisco, Riverside County, Monterey County, and the City of Monterey, FEMA, United States Geological Survey (USGS), NASA

**End-user(s):** California Emergency Management Agency (Cal-EMA), Los Angeles County, the city of San Francisco, Riverside County, Monterey County, and the City of Monterey, FEMA, USGS, NASA

*Wild Fire Detection and Prediction Project* – This project will improve detection of catastrophic fires for its customers (Cal Fire, U.S. Forest Service, FEMA) by delivering improved analytical products from satellite imaging that guide strategic and tactical decisions. The project develops new analytical capabilities for existing remote sensing satellites and airborne platforms currently used and brings additional satellite platforms and airborne sensor systems into use. The project also determines fuel conditions for potential fires, provides early detection of wildfires in remote locations, and predicts the expected magnitude of wildfires to prevent wild land-urban interface fire disasters. This project plans to prototype improved tools and techniques for early detection of wild fires in remote locations, and develop advanced techniques for assessing the post fire conditions related to debris flow hazards and disasters.

**Development Partner(s):** Cal Fire, US Forest Service, FEMA

**End-user(s):** Cal Fire, US Forest Service, FEMA

**PPA: University Programs**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>51,803</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>36,563</b>
<b>2013 Current Services</b>	-	-	<b>36,563</b>
2013 Program Change	-	-	3,437
<b>2013 Total Requested Budget Authority</b>	-	-	<b>40,000</b>
Total Change 2012 to 2013	-	-	3,437

The Science and Technology (S&T) Directorate requests \$40.000 million for University Programs, which includes a program change of \$3.437 million to support the Centers of Excellence (COE) program.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

**University Programs (UP) PPA** – FY 2012: \$36.563 million. FY 2013 request: \$40.000 million. The Office of University Programs (OUP) supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The program brings together scientists, mathematicians, and engineers from many academic disciplines and institutions. These researchers are investigating research questions important to DHS as well as developing new technologies and approaches to solve complex and challenging homeland security problems. The program focuses on building homeland security expertise in the academic community, creating strategic partnerships among universities and public agencies, and developing a new science and engineering workforce dedicated to homeland security. The primary customers for the Office of University Programs are the DHS S&T Directorate’s divisions, the DHS Component agencies, and Federal, State, and local government agencies.

Investments in university basic research and support for students in relevant fields are critical to preserving the United States' strategic/economic security and supporting the following Quadrennial Homeland Security Report (QHSR) Mission Areas:

- Preventing Terrorism and Enhancing Security
- Securing and Managing Our Borders
- Safeguarding and Securing Cyberspace
- Ensuring Resilience to Disasters
- Strengthening and Maturing DHS

The Office of University Programs carries out activities in three program areas: 1) the DHS S&T Directorate University Centers of Excellence (COEs), 2) the DHS S&T Directorate's Educational Programs, and 3) S&T Directorate's Minority Serving Institutions program.

**Centers of Excellence** – The current COEs engage approximately 200 colleges and universities to conduct multidisciplinary research in priority DHS mission areas. The COEs align to the mission areas of the S&T Directorate's Homeland Security Advanced Research Projects Agency. COEs improve understanding of the causes, elements, and consequences of a range of threats from terrorists and natural disasters. They also support countermeasure, mitigation, prevention, and resilience approaches based on both technologies and human behavior.

The COEs work with the S&T Directorate, the DHS Component agencies, and State, local, and tribal first responders. COE research complements existing DHS research and development programs including those of Federal laboratories and Federally funded research and development centers (FFRDCs). They take advantage of other relevant Federal agency-sponsored research and provide outcomes useful to Federal, State, and local government, private sector, and international partners. The selection process for the COEs is highly competitive, rigorously peer-reviewed, and merit-based. In 2013, the COEs will continue to focus on Engage-to-Excel (E2E) initiatives, which were launched in FY 2011 by OUP in partnership with the COEs. Each COE will have one or two flagship E2E projects. The E2E concept mirrors S&T's strategic portfolio approach with fewer and larger projects that have substantial customer engagement from as early in the research process as possible. The E2E projects will make up about 50% of each COE's research budget and will require agreements among OUP, the COEs, and DHS Components or other end users. These projects will increase the likelihood of successful transition and focus resources efficiently in an increasingly constrained budget environment. They will also increase opportunities for students and faculty to work directly with end users to solve big and complex long-term problems.

The COEs are funded through research cooperative agreements, grants and contracts, depending on the nature of the projects. The COEs are building expertise and reach-back capabilities in multi-disciplinary fields of study important to homeland security.

Research will be focused on:

1. Areas identified as priorities in the Quadrennial Homeland Security Review,
2. Research that is clearly within DHS's purview and closely related to DHS missions
3. Research that is not being done elsewhere
4. Research that can make a difference in operations or intelligence gathering.

The current Centers of Excellence include:

- Center for Advancing Microbial Risk Assessment (CAMRA), led by Michigan State University, established jointly with the U.S. Environmental Protection Agency (EPA) ([www.camra.msu.edu](http://www.camra.msu.edu));
- National Center for Border Security and Immigration (NCBSI), co-led by the University of Arizona at Tucson and the University of Texas at El Paso (<http://www.borders.arizona.edu/> <http://osi.utep.edu/NCBSI/index.html>);
- Center of Excellence for Command, Control, and Interoperability (CCI), co-led by Rutgers and Purdue Universities, (<http://ccicada.rutgers.edu/>, <http://www.purdue.edu/discoverypark/vaccine/>);
- The Center for Awareness and Location of Explosives-Related Threats (ALERT), (formerly Center of Excellence for Explosives Detection, Mitigation, and Response), co-led by Northeastern University and the University of Rhode Island (<http://www.northeastern.edu/alert/>, <http://energetics.chm.uri.edu/?q=node/6>);
- National Center for Food Protection and Defense (NCFPD), led by the University of Minnesota ([www.ncfpd.umn.edu](http://www.ncfpd.umn.edu));
- The Center of Excellence for Maritime, Island and Remote and Extreme Environment Security (MIREES), co-led by the University of Hawaii and Stevens Institute of Technology (<http://www.cimes.hawaii.edu/>, <http://www.stevens.edu/csr/>);
- National Center for Zoonotic and Animal Disease Defense, (formerly National Center for Foreign Animal and Zoonotic Disease Defense (FAZD)), co-located at Texas A&M University and Kansas State University (<http://fazd.tamu.edu/> <http://sites.google.com/site/ceezad/home/>);
- The National Consortium for the Study of Terrorism and Responses to Terrorism (START), led by the University of Maryland ([www.start.umd.edu](http://www.start.umd.edu));
- National Center for Risk and Economic Analysis of Terrorism Events (CREATE) led by the University of Southern California (<http://create.usc.edu/>);
- Coastal Hazards Center of Excellence (formerly the Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management (NDCIEM)), co-led by the University of North Carolina at Chapel Hill and Jackson State University (<http://hazardscenter.unc.edu/diem/>, <http://www.jsums.edu/cset/or/centers/centndciem.htm>);
- National Center of Excellence for the Study of Preparedness and Catastrophic Event Response (PACER), led by Johns Hopkins University ([www.pacercenter.org](http://www.pacercenter.org)); and
- National Transportation Security Center of Excellence, co-led by the University of Connecticut, Texas Southern University, and Tougaloo College, with Long Island University, University of Arkansas, Rutgers University, and San Jose State University as partners (<http://www.cti.uconn.edu/>, <http://transportation.tsu.edu/NTSCE/home.htm>, <http://www.tougaloo.edu/hsi/index.htm>, <http://www2.southampton.liu.edu/homeland/index.html>).

The following section describes specific activities conducted by the COEs managed by the Office of University Programs.

*The National Center for Border Security and Immigration (NCBSI)* – This Center’s work will improve the capabilities of Customs and Border Protection (CBP), Immigration and Customs Enforcement (ICE), U.S. Citizenship and Immigration Services (CIS), the U.S. Coast Guard, and State and local agencies to detect people and goods moving across U.S. borders (legally or illegally), using a fully integrated, system-of-systems approach. NCBSI provides fundamental research in support of DHS’S

goals of strengthening border security, immigration enforcement, and immigration services. This center plans to continue conducting research and providing educational programs focused on border security and immigration.

**Development Partner(s):** S&T Directorate technical divisions, CBP Office of Field Operations, CBP Office of Border Patrol, CIS, DHS Policy Office of Immigration Statistics

**End User(s):** CBP Office of Field Operations, CBP Office of Border Patrol, S&T Directorate, USCIS, DHS Policy Office of Immigration Statistics

*Center of Excellence for Command, Control, and Interoperability (CCI)* – This Center’s work will improve the capabilities of the Federal Emergency Management Agency (FEMA), CBP, ICE, U.S. Coast Guard, U.S. Secret Service (USSS), Office of Intelligence and Analysis (OI&A), other DHS Components, the Port Authority of New York and New Jersey, New Jersey Department of Homeland Security, and many State and local law enforcement agencies to detect early signs of threats, mitigate against catastrophic events, and perform post-event analysis for remediation. CCI develops new methods, algorithms, and technologies that enable Federal, State, and local homeland security agencies to efficiently manage, analyze, visualize, and understand vast amounts of diverse and distributed data. This center plans to complete trade-off analyses of security measures with economic and risk factors for the greater Port Authority of New York and New Jersey economic region (with CREATE, see below). This center also plans to implement multiple visual analytics tools into local and State homeland security operations in the Midwest, northwest, and northeast. Additionally, this center plans to develop and test a comprehensive capability for determining the cascading effects of a complex incident, such as a natural disaster or terrorist attack, on interconnected critical infrastructures, as well as predicting their extent and progression.

**Development Partner(s):** S&T Directorate technical divisions, National Visualization and Analytics Center (NVAC), Pacific Northwest National Laboratory, German Ministry of Research and Education, CREATE, FAZD

**End User(s):** U.S. Coast Guard, TSA, CBP, Port Authorities of New and New Jersey, Los Angeles, and Seattle-Tacoma, Indiana State Public Safety Authority, New York Police Department, OI&A, City and County of Indianapolis, IN.

*The Center for Awareness and Localization of Explosives-Related Threats (ALERT) (formerly Center of Excellence for Explosives Detection, Mitigation, and Response)* – This Center supports the National Protection and Programs Directorate (NPPD) Office of Infrastructure Protection (OIP) and Office for Bombing Prevention (OBP), DHS Policy Directorate, TSA, ICE, State homeland security agencies, and State and local police bomb squads by providing research and training to prepare for, prevent, mitigate, respond to, and recover from terrorist attacks involving explosives. ALERT provides basic explosives-related research to advance the technical tools and information that the S&T Directorate’s customers will need in the future. This center plans to expand research in the areas of advanced software concepts for image reconstruction, video analytics, and sensor fusion in next generation screening systems, and increase its focus on transitioning results to Federal, State, and local agencies, and private sector vendors.

**Development Partner(s):** S&T Explosives Division, TSA

**End User(s):** TSA, NPPD-OBP, State homeland security agencies

*The National Center for Food Protection & Disease (NCFPD)* – This Center’s work will improve the ability of the S&T Directorate, NPPD-OIP, Office of Health Affairs Food, Agriculture, Veterinary

Defense (OHA-FAVD), U.S. Department of Agriculture (USDA), Food and Drug Administration (FDA), Centers for Disease Control (CDC), Environmental Protection Agency (EPA), State and local agencies, and the food and agriculture private sector to respond to catastrophic food system events by minimizing or eliminating food/agriculture system vulnerabilities. NCFPD conducts research and education aimed at reducing the potential for contamination at any point along the food supply chain and mitigating the potentially catastrophic public health and economic effects of such attacks. This center plans to develop models that rapidly identify sources of contamination, food distribution points, and possible outbreak locations; and demonstrate interventions and responses using novel communication systems from food distribution, food consumption, and epidemiologic studies. This center also plans to identify actions and determine how to implement programs that mitigate risks in the freight transportation components of international food supply chains, with the intent of enabling significant improvement in food supply chain security, preparedness, and resiliency.

**Development Partner(s):** S&T Infrastructure and Disaster Management Division, OHA, and OIP, USDA-FSIS, USDA-CSREES, USDA-APHIS, FDA-ORA, FDA-CFSAN, DOE National Laboratories, U.N. Food and Agricultural Organization (FAO), private industry

**End User(s):** S&T Infrastructure and Disaster Management Division, OHA, and OIP, USDA-FSIS, USDA-CSREES, FDA-ORA, FDA-CFSAN, USDA-APHIS, U.S. Department of Transportation, the National Science Foundation, FAO, private industry

*National Center for Zoonotic & Animal Disease Defense (ZADD) (formerly The National Center for Foreign Animal and Zoonotic Disease Defense (FAZD))* – This Center will improve the ability of the S&T Chemical and Biological Countermeasures Division (S&T-CBD), OHA, NPPD, Plum Island Animal Disease Center (PIADC), National Biodefense Analysis and Countermeasures Center (NBACC), U.S. Department of Agriculture (USDA), Centers for Disease Control (CDC), State and local government and agricultural industry to protect the nation’s agriculture and public health sectors against high-consequence foreign, emerging, and/or zoonotic animal disease threats in the United States. ZADD is developing a scientific basis for detecting and preventing emerging and zoonotic diseases, which assists in the Department’s responsibility to develop countermeasures and effective control strategies. This center plans to develop and deliver reagents and screening assays for priority foreign animal and zoonotic diseases to DHS and USDA in support of agricultural screening tools.

**Development Partner(s):** S&T Directorate technical divisions, NPPD OIP, OHA, FEMA, NBACC, USDA (APHIS/ARS), CDC, State emergency response agencies, food and agriculture private sector

**End User(s):** S&T Directorate technical divisions, NPPD Office of Infrastructure Protection, OHA, FEMA, NBACC, USDA (APHIS/ARS), CDC, State emergency response agencies, food and agriculture private sector

*Center of Excellence for Maritime, Island & Remote, and Extreme Environmental Security (MIREES)* – This Center will enhance NPPD, OHA, OIP, FEMA, U.S. Coast Guard, and State homeland security agencies’ ability to respond to catastrophic events, particularly for U.S. ports, coasts, islands and extreme environments, by developing a more secure and efficient marine transportation system (MTS). MIREES conducts integrated policy, legal, scientific, and engineering studies to detect and monitor ships, people and goods moving through the United States’ maritime domain. This center plans to continue research and provide educational activities related to maritime domain awareness.

**Development Partner(s):** S&T Directorate technical divisions, U.S. Coast Guard, United States Air Force, OHA, NOAA

**End User(s):** NPPD, OHA, S&T Directorate, U.S. Coast Guard, United States Air Force; OHA, NOAA, State homeland security agencies

*The National Consortium for the Study of Terrorism and Responses to Terrorism (START)* – This Center will provide DHS Components, other Federal, State, and local agencies, private security agencies, and academia with data-driven research and capability strategies to disrupt terrorist networks, reduce the incidence of terrorism, and enhance the preparedness of American society. The Center uses advanced behavioral and social science theories, methods, and data to better understand the origins, dynamics, and impacts of terrorism and counterterrorism strategies.

In FY 2011, the project was re-competed. The University of Maryland won the competition and will continue the Center as START in FY 2012. This center plans to transform the relationship between academic researchers and the public sector to provide decision makers, policy experts, and emergency responders with precise, timely, and targeted information on terrorist behavior and its impact.

**Development Partner(s):** S&T Directorate technical divisions, Domestic Nuclear Detection Office (DNDO), NPPD, OHA, OI&A, DHS Office of Policy, FEMA, and the DHS Office of Civil Rights and Civil Liberties; Department of Defense (DOD); Federal Bureau of Investigation (FBI); DHHS Office of Assistant Secretary for Preparedness and Response; National Counterterrorism Center; Department of State Office of Counterterrorism; State and local law enforcement agencies; intelligence community organizations

**End User(s):** DNDO, NPPD, OHA, OI&A, DHS Office of Policy, FEMA, and the DHS Office of Civil Rights and Civil Liberties, DOD, FBI, DHHS Office of Assistant Secretary for Preparedness and Response, National Counterterrorism Center, Department of State Office of Counterterrorism; State and local law enforcement agencies, intelligence community organizations

*Coastal Hazards Center of Excellence (CHC) (formerly Center of Excellence for Natural Disasters, Coastal Infrastructure, and Emergency Management (NDCIEM))* – This Center will provide FEMA, U.S. Coast Guard, NOAA, U.S. Army Corps of Engineers (USACE), State, and local emergency managers, and infrastructure managers with improved coastal hazards planning, response, and recovery capabilities such as providing more accurate storm surge estimates within minutes instead of hours. CHC conducts basic and transformational research in coastal hazards modeling, coastal engineering, disaster response, and resiliency planning; and develops expertise in related disciplines through education. This center plans to create a comprehensive modeling suite that improves prediction of storm surge runoff and flooding.

**Development Partner(s):** S&T Infrastructure and Disaster Management Division, FEMA, U.S. Coast Guard, USACE, Engineer Research and Development Center, Joint Airborne Lidar Bathymetry Technical Center of Expertise, Northrup Grumman Center for High Performance Computing, National Weather Service Severe Storms Laboratory, State and local emergency managers, infrastructure managers

**End User(s):** FEMA, U.S. Coast Guard, National Oceanic and Atmospheric Administration (NOAA), USACE, State, local emergency managers, infrastructure managers

*National Center for Risk & Economic Analysis of Terrorism Events (CREATE)* – This Center will improve the ability of DHS components and other Federal, State, and local agencies, private sector security/operators, and academia to predict and counter terrorist attacks. CREATE uses advanced models and tools to evaluate the risks, costs and consequences of terrorism, and identify economically efficient investments in countermeasures to improve security and resilience. This center plans to

complete the integration of risk and economic analysis models including intelligence analysis, red teaming, experimental games, and advanced decision theory components.

**Development Partner(s):** S&T Directorate technical divisions, TSA, U.S. Coast Guard, Port Authority of Los Angeles and Long Beach, Port Authorities of NY and NJ, Los Angeles County Metropolitan Authority, FBI, World Bank

**End User(s):** TSA, U.S. Coast Guard, Port Authorities of Los Angeles and Long Beach, Port Authorities of NY and NJ, Los Angeles County Metropolitan Authority

*National Center for the Study of Preparedness and Catastrophic Event Response (PACER)* – This Center will improve OHA, FEMA, NPPD-OIP and hospitals, health departments, and emergency responders' ability to predict local surges in casualties based on DHS planning scenarios and translating the surge capacity into a functional tool. The tool will allow users to estimate surge capacity for a given hazard in a given medical facility. This project addresses the requirement for a COE in emergency diagnostic and medical services to mitigate hazards, enhance preparedness, ensure effective emergency response, decrease loss of life, and facilitate rapid recovery by emergency personnel. PACER will complete all of its projects in FY 2012. PACER is a fully funded COE.

**Development Partner(s):** S&T Directorate, OHA, FEMA, DHS Office of Civil Rights and Civil Liberties, DHHS, public/private healthcare institutions, Applied Physics Laboratory, CDC, American Indian Higher Education Consortium, American Medical Association, National Congress of American Law Enforcement Association

**End User(s):** S&T Directorate, OHA, DHS Policy Office, DHS Office of Civil Rights and Civil Liberties, State homeland security agencies, DHHS, public/private healthcare institutions, FEMA, CDC

*National Transportation Security Center of Excellence (NTSCOE)* – This Center will improve the ability to secure the Nation's surface transportation infrastructure by developing and transitioning new technologies, tools, and methodologies to TSA to defend and increase resiliency. NTSCOE addresses the technology and research needs associated with securing the Nation's surface transportation infrastructure and protecting the people who use it.

**Development Partner(s):** TSA, Transportation Sector Network Management (TSA-TSNM), Mass Transit & Passenger Rail (MT&PR), TSA-TSNM Freight Rail (FR), U.S. Coast Guard, FEMA, USACE, New York Metropolitan Transportation Authority (NYMTA), Maryland Transit Administration, Metropolitan Atlanta Rapid Transit Authority

**End User(s):** State and local transit agencies (e.g. MARTA, WMATA), AMTRAK, freight rail companies, State departments of transportation, State highway organizations, State emergency organizations, U.S. Coast Guard, United States Army Corp of Engineers (USACE)

## **Education**

*Scholarship, Fellowships, Internships and Institutional Development* – This project will improve and sustain the homeland security science and technology workforce by investing in high-performing science and engineering students or professionals in the United States to assure and develop a critical mass of dedicated Homeland Security science, technology, engineering and mathematics (STEM) professionals. The DHS Scholars program competitively awards scholarships to individual science, mathematics, and engineering undergraduate and graduate students. In FY 2012, funding for the DHS Scholars Program will be in hiatus, pending a programmatic review. The S&T Directorate's Career

Development Grants (CDG) program provides competitive awards to support undergraduate and graduate students attending institutions, including the COEs, which have made a commitment to develop HS-STEM curricula and fields of study. DHS requires scholarship students to serve one 10-week summer internship and one year in an approved HS-STEM venue. Student and scholar researchers perform work at more than 28 DHS-affiliated venues including the S&T Directorate, National Laboratories, and DHS Components. With the DHS-STEM Summer Internship Program, DHS also competitively awards individual summer internships to eligible students attending accredited universities throughout the United States. Supported student participants have the opportunity to attend the annual S&T Career Pathways Student Meeting and receive information on DHS operations and careers. This project plans to continue with modifications to focus fellowship funds on high priority DHS science and engineering needs.

**Development Partner(s):** DHS Office of Academic Engagement, DHS Office of Chief Human Capital Officer (OCHO), Federal Post-Secondary STEM Community, 42 CDG institutional award recipients

**End User(s):** DHS, Homeland Security Enterprise Workforce

*Minority Serving Institutions (MSIs)* – Programs in this area will improve the capabilities of MSIs to conduct research, education, and training in areas critical to homeland security by developing a new generation of scientists capable of advancing homeland security goals, and by increasing the diversity and representation of the future homeland security science and engineering workforce. The (Scientific Leadership Awards (SLA) program provides three to five years of institutional support for students and early career faculty. The Summer Research Team (SRT) program provides support for a 10-week collaborative research experience between recipient MSIs and one of the COEs.

**Development Partner(s):** DHS Office of Academic Engagement, DHS OCHO, Federal Post-Secondary STEM Community, 50 Scientific Leadership Awards (SLA) institutional award recipients, DHS COEs

**End User(s):** DHS, Homeland Security Enterprise Workforce

## IV. Program Justification Changes

**Department of Homeland Security  
Science & Technology  
Research, Development, Acquisitions, and Operations  
Justification of Program Changes  
(Dollars in Thousands)**

**Program Increase 1:** Research, Development and Innovation  
PPA: Research Development and Innovation  
Program Increase: Positions 0, FTE 0, Dollars \$212,265

### Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	265,783
Program Increase							-	-	212,265
<b>Total Request</b>	-	-	<b>500,389</b>	-	-	<b>265,783</b>	-	-	<b>478,048</b>

### Description of Item

The FY 2013 funding increase for Research, Development and Innovation is commensurate with the FY 2011 funding level and will allow S&T to resume R&D work in areas such as: Maritime Border Security, Land Border Security, Chemical Attack Resiliency, Natural Disaster Resiliency, Information Sharing, and Counter Terrorist R&D. Programs increased were carefully chosen to ensure S&T robustly funds high priority initiatives.

### Justification

Research, Development and Innovation (RD&I) provides state-of-the-art technology and/or solutions to meet the needs of the operational components of the Department and the first responder community. The research and development work consists of customer-focused and impact-oriented Research, Development, Testing and Evaluation programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX Research and Development; Border Security; Chemical, Biological, and Explosive Defense; Counter Terrorist; Cyber Security; and Disaster Resilience.

**APEX Research & Development Thrust** – Consists of crosscutting, multi-disciplinary efforts requested by DHS Components. Apex projects are high priority, high-value, and short turn-around in nature. The Apex Thrust increases by \$1.0 million in FY 2013.

**Border Security Research & Development Thrust** - The Science & Technology (S&T) Directorate invests in the research and development of border security technology to: prevent the illicit movement

and illegal entry or exit of people, weapons, dangerous goods, and contraband; manage the risk posed by people and goods in transit; and disrupt and dismantle transnational criminal organizations. The Border Security Thrust area increases by \$15.9 million in FY 2013. This is a result of increases in the following projects:

- *Air Based Technologies Project* – This project will provide dominant airborne sensor capabilities for the Customs and Border Protection (CBP) Office of Air and Marine (OAM), the US Coast Guard (USCG) Office of Aviation Forces (CG-711), and the external First Responder Community by providing and enhancing end-to-end sensor solutions for airborne detection, identification, and classification of illicit activity, including low-observable air and water craft.
- *Port and Coastal Surveillance Improvement Project* – This project will bridge gaps in USCG's maritime situational awareness, security effectiveness, and safety by providing a persistent and pervasive maritime surveillance capability that identifies small vessels at a sufficient range (for law enforcement response) in the port/harbor/coastal environment.
- *Small Dark Aircraft Project* – This project will enhance CBP capabilities to consistently detect and track small aircraft (helicopters, ultra-light and fixed wing) at or before crossing the border to enable successful interdiction of illicit cargo.
- *Small Dark Vessels Project* – This project will develop capabilities to detect, identify, track, and interdict small dark vessels (primarily submersibles) by identifying, integrating, and tailoring sensors across the electromagnetic and acoustic spectrum.
- *Tunnel Activity Monitoring Project* – This will improve CBP's ability to detect smuggling and illegal entries that use public infrastructure storm drains and sewers as conduits for smuggling and illegal entries.
- *Tunnel Detection Project* – This project will develop technology to enable CBP and ICE to reliably identify tunnels to prevent contraband and illegal immigrant smuggling using clandestine tunnels by using modeling and simulation techniques to predict the effectiveness of the most promising tunnel detection technologies.

**Chemical, Biological, and Explosive Defense Research & Development Thrust** - S&T invests in research & development to support Threat Awareness, Prevention, and Protective strategies, coordinated surveillance and detection, response and recovery initiatives, and protective countermeasures to address chemical, biological, and explosive (CBE) threats. Efforts include: prevention of terrorism; prevention of the unauthorized use of CBE materials within the U.S.; reduction of vulnerability of critical infrastructure from terrorist attacks and other hazards; prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband; and, coordination with local and regional partners to identify hazards, assess vulnerabilities. Funds requested for the Chemical, Biological and Explosive Defense Research & Development Thrust area increase by \$71.1 million in FY 2013. This is a result of increases in the following projects:

- *Agricultural Screening Tools Project* – This project will improve the ability of U.S. Government agencies such as USDA and FDA to screen for and detect high priority foreign animal diseases that threaten the U.S. agricultural critical infrastructure by developing and standardizing protocols and tools.
- *Air Cargo Project* – This project will improve the ability of air carriers and certified cargo screening facilities to screen medium- and high-density pallets and sealed containers.

- *Algorithm and Analysis of Raw Images Project* – This project will improve the performance of X-ray-based Computed Tomography (CT) and Advanced Imaging Technology (AIT) detection technologies in both checked baggage and check point applications.
- *Bioassays Project* – This project will improve the Nation’s ability to screen and monitor for multiple pathogens in the event of a bio-attack.
- *Biodefense Knowledge Center (BKC)* – This project provides expertise and information about biological sciences and bio-threats to DHS components and multiple Federal agencies.
- *Biological Threat Characterization Project (BTC)* – This project improves the estimation of the impacts of a bioterrorism attack on the U.S. through experimental research and analysis to understand the critical physical, chemical, and physiological parameters associated with potential bioterrorism agents.
- *Checked Baggage Project* – This project substantially improves the performance of TSA checked baggage screening by developing technologies that will drive commercial development of next-generation explosives detection systems (EDS) and explosives trace detectors (ETDs).
- *Eye Safe Trace Detection Project* – This project will provide building security and checkpoint security with a stand-off ability to detect trace explosives on people and personal items.
- *Homemade Explosives Characterization Project* – This project improves the Department’s ability to detect and identify homemade explosives (HMEs) threats across a range of venues.
- *Integrated Passenger Screening Systems* – This project will allow passengers to keep their shoes on throughout the security screening process at aviation checkpoints by developing and testing integrated shoe screening devices (SSD) and AIT systems.
- *MagViz (SENSIT NMRI) Rapid Liquid Component Detector Project* – The goal of this project is to enable the TSA to detect liquids in baggage without contact at the same rate as current X-ray machines with minimal impact on passenger throughput.
- *Mass Transit Project* – This project will improve operators’ ability to detect explosive threats for maritime and surface mass transit, including buses, commuter rail (i.e. subways or metros), light rail (i.e. trolleys and streetcars), long-distance rail (i.e. Amtrak), and heavy rail.
- *Next-Gen Biological Detection Project* – This project conducts research and develops a suite of technologies to accurately detect the presence of traditional bio-threat agents, provide characterization of pathogens for their virulence, provide a rough quantification of the amount of that agent, and preserve the viability of samples for further analysis.
- *Next Generation Passenger Check Point Project* – This project improves TSA’s screening process of passengers and carry-on luggage for explosives and other threats at aviation checkpoints by developing the next-generation airport security checkpoint system for risk-based screening of passengers and carried baggage.
- *Person Born Threat Imaging Sensor Development Project* – This project improves the Federal Protective Service’s and TSA’s standoff detection of explosives devices worn or carried by a person as they approach a venue entrance.
- *Portable Detection Project* – This project improves the Department’s and first responders’ explosives detection performance in a handheld form.
- *Rapid Biodetection Project*– This project will establish and/or improve capabilities to rapidly and accurately screen and identify exposed or contagious persons, to include those clinically symptomatic or prior to exhibiting symptoms of disease.

- *Risk Prediction Project* – This project will improve CBP’s and TSA’s ability to identify potential improvised explosive device (IED) targets and staging areas that precede IED smugglings at the U.S. border.
- *Safe Bulk Detection Project* – This project addresses the need in surface transportation to effectively and safely detect bulk explosives or bulk explosive chemicals concealed or carried in a bag without the operational limitations of an aviation-style checkpoint.

**Counter Terrorism Research & Development Thrust** - S&T invests in the research and development of efforts to counter terrorism. Efforts include prevention of terrorist attacks and, prevention of the illicit movement and illegal entry or exit of people, weapons, dangerous goods, and contraband. Funds requested for the Counter Terrorist Research and Development Thrust increase by \$23.3 million in FY 2013. This is a result of increases in the following projects:

- *Cooperative Biometrics Project* – This project will improve Transition Partners’ customer throughput by collecting two or more biometrics in less than ten seconds at a 95 percent acquisition rate.
- *Mobile Biometrics System Project* – The project will improve U.S. border security and officer safety by providing Federal, State and local Transition Partners the capability to screen individuals at remote locations around the U.S. borders.
- *Non-Cooperative Biometrics Project* – This project will improve Transition Partners’ ability to identify and prevent potential threats from entering the U.S. and facilitate the movement of legitimate travelers.
- *Passive Methods for Precision Behavioral Screening Project* – The project will improve Transition Partners’ screening and throughput, reduce economic screening impacts and improve classification accuracy by transforming the screening process from active to more dynamic and passive detection.
- *Rapid DNA Project* – This project will improve the security and integrity of the immigration system by providing USCIS with a rapid and low-cost method to verify family relationships.
- *Wide Area Surveillance* – This project will enhance the continuous surveillance of the Nation’s highest priority infrastructure by developing a novel wide area surveillance system that provides high resolution 360 degree coverage with real-time and forensic capabilities.

**Cyber Security Thrust/Program** – Conducts and supports research, development, testing, evaluation, and transition for advanced cyber security and information assurance technologies to secure the Nation’s current and future cyber and critical infrastructures in response to the President’s *National Strategy to Secure Cyberspace* and *Comprehensive National Cybersecurity Initiative (CNCI)*. These solutions include user identity and data privacy technologies, end system security, research infrastructure, law enforcement forensic capabilities, secure protocols, software assurance, and cyber security education. The Cyber Security Thrust area increases by \$18.7 million in FY 2013. This is a result of increases in the following projects:

- *Data Privacy Technologies Project* – This project will increase valuable information sharing across the government and private sector by developing technologies to protect and minimize confidential personal information.
- *Enterprise Level Security Metrics and Usability Project* – This project will improve the decision-making process for system and network owners and operators in both the Homeland Security

Enterprise and the private sector by developing security metrics and supporting tools and techniques that will be useful as decision aids.

- *Experimental Research Testbed Project* – This project improves attack mitigation and confinement strategies and the quality of new cyber security technologies by providing a secure environment to run large-scale, repeatable tests and experiments, which evaluate the defense mechanisms against attacks on the infrastructure.
- *Homeland Open Security Technology Project* – This project will improve Federal, State, and local government’s access to and use of open source security solutions by increasing the awareness of available open source solutions and ensuring that both currently available and developed open source solutions meet the specific needs of government customers.
- *Leap Ahead Technologies Project* – This project will improve cyber security capabilities across the Homeland Security Enterprise by orders-of-magnitude by focusing on cross-cutting, high-risk/high-payoff solutions to critical cybersecurity problems.
- *Security in Cloud-Based Systems (sCBS)* – This project will increase government efficiency and security using cloud-based systems by establishing a secure cloud infrastructure.
- *Software Assurance Marketplace (SWAMP) Project* – This project will improve the fidelity of identification of vulnerabilities in software and increase the output of more secure software by providing the infrastructure to test and evaluate software against a multitude of software analysis tools.
- *Transition to Practice (TTP) Project* – This project will improve the transition path and likelihood of implementation of federally-funded cybersecurity research into operational use by carrying out proven strategies for successful transition and commercialization.

**Disaster Resilience Research & Development Thrust** - The programs and projects in the area reduce vulnerability of critical infrastructure, key leadership, and events to terrorist attacks and other hazards. Work in the area will help State, local, tribal and territorial governments secure their information systems and to identify hazards, assess vulnerabilities, and develop strategies to manage risks associated with all hazards. The work will also increase the state of preparedness of State, local, regional, tribal, and territorial partners, as well as nongovernmental organizations, the private sector, and the general public by advancing and improving disaster emergency’ interoperable communications capabilities and, improving the capabilities of DHS to lead in emergency management. The Disaster Resilience Thrust area increases by \$82.2 million in FY 2013. This is a result of increases in the following projects:

- *Advanced Incident Management Enterprise System (AIMES) Project* – This project will improve emergency responders’ ability to share information between disparate software application systems by integrating all elements of the incident management enterprise to provide a secure, scalable, interoperable, and unified situational awareness to the emergency management and first responder community.
- *Bioforensics Research and Development (R&D) Project* – This project provides investigators with techniques to identify source material collected from a bio-crime in order to pursue legal prosecution against the party responsible.
- *Chem-Bio Event Characterization Project* – This project will improve the capability of the response community to rapidly determine the extent of chemical or biological contamination in an urban area following an event.

- *Converged Interoperable Communications Project* – This project improves the ability for first responders to effectively and efficiently coordinate and communicate preparations for response and recovery efforts through the development of an integrated communication system.
- *Decontamination, Disposal and Depopulation Project (3D)* – This project will improve Federal, State and local animal health officials’ emergency response concept of operations to control the spread of foreign animal diseases (FAD) and mitigate the impact on the livestock industry.
- *Emergency Data Exchange Language (EDXL) Project* – This project provides a suite of standardized emergency-messaging formats for first responders to collaborate and share life-saving resources.
- *FAD Vaccine and Diagnostics Project* – This project will strengthen the defense of the U.S. agricultural infrastructure by developing new and next generation countermeasures (vaccines and diagnostics) to protect the livestock industry against Foot and Mouth Disease and other high consequence Foreign Animal Diseases (FADs).
- *First Responder Technologies* – This project increases the availability and reliability of technology solutions for first responders by developing and designing technologies to address capability gaps identified by Federal, State, local, and tribal first responders.
- *Geospatial Location Accountability and Navigation System for Emergency Responders (GLANSER) Project* – This project will improve accuracy and signal penetration inside enclosed areas (i.e., collapsed buildings, subterranean facilities, or underground), enhance situational awareness of situation commanders.
- *Incident Logistics and Resource Tracking System Project* – The project allows FEMA to manage critical resources effectively and enhance real-time coordination and situational awareness.
- *Internet Protocol (IP) Communications Test and Evaluation Project* – This project provides our Nation’s first responders with the capability to deploy the most appropriate and affordable communications equipment to meet their mission-critical needs.
- *NBAF Agro-Defense Research and Assessment Project* – This project will help protect the agriculture infrastructure and public health by augmenting and complementing current and ongoing research at Plum Island Animal Disease Center by accelerating research programs focused on African Swine Fever and Classical Swine Fever.
- *Overhead Imagery Data Project* – This project will increase decision-makers’ situational awareness regarding the extent of disasters through development of a phenomena-based selection of sensor systems and optimization of tasking satellite and airborne assets to deliver critical information to incident commanders for every phase of the disaster.
- *Resilient Electric Grid* – This project will protect electric-power critical infrastructure from the cascading effects of a power surge on electrical grids due to natural disasters and deliberate attacks.
- *Seismic Activity Detection Data Collection, Analysis, Alert, and Warning Project* – This project will improve alert notifications and warnings of potential earthquake events to emergency response agencies at local, State, and Federal levels by an integrated warning system based on ground and remote sensing measurements.
- *Social Media Disaster Resilience* – This project will improve collection of dynamic real-time incident information by using social media from on-site bystanders communicating the extent of damage, the evolution of the event, and the needs of the community.
- *Standard Unified Modeling Mapping Integrated Toolkit (SUMMIT) Project* – This project will improve the verification and validation of emergency response tactics, plans and procedures prior, during, and after an incident by delivering a framework to FEMA, State and local emergency

responders, and DoD for integrating existing incident related modeling and simulation tools in real-time scenarios for operations and training exercises.

- *TechSolutions Project* – This project increases the speed of prototyping and transitioning emergent high priority technologies to the first responder community by capturing, reviewing, verifying, and developing technology needs identified by first responders.
- *Underground Transport Restoration Project* – This project will improve the capability for transit systems to rapidly recover from a chemical or biological event, addressing a high priority need expressed by TSA and transit systems.
- *Virtual USA (vUSA)* – This project helps to save lives and protect property by sharing information and providing relevant, reliable, real-time information during day-to-day and catastrophic incidents at all levels of government.
- *Wireless Broadband Technology Project* – This project is a joint initiative between CBP and S&T to investigate and assess technologies to meet CBP’s complete tactical communications need for mission-critical voice, data, and video on a single, highly reliable, converged network.

### **Impact on Performance (Relationship of Increase to Strategic Goals)**

The increase in FY 2013 funding will improve homeland security through state-of-the-art solutions and technology by discovering, developing, and demonstrating high-payoff and game changing technologies.

**Department of Homeland Security  
Science & Technology  
Research, Development, Acquisitions, and Operations  
Justification of Program Changes  
(Dollars in Thousands)**

**Program Increase 2:** University Programs  
 PPA: University Programs  
 Program Increase: Positions 0, FTE 0, Dollars \$3,437

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	36,563
Program Increase							-	-	3,437
<b>Total Request</b>	-	-	<b>51,803</b>	-	-	<b>36,563</b>	-	-	<b>40,000</b>

**Description of Item**

The FY 2013 amount increases overall funding to the Centers of Excellence program area within University Programs by \$3.437 million.

**Justification**

University Programs build scientific leadership and core competencies in multi-disciplinary areas by investing in three areas: a coordinated, university-based system of Centers of Excellence (COEs); Educational Programs; and Minority Serving Institutions. Integration of these three program areas ensures that DHS gets the maximum return on its investment in university research and education. The FY 2013 increase ensures the COEs receive needed core funding to advance research in important homeland security areas.

University Programs supports basic research and the education of promising students in Homeland Security-related Science, Technology, Engineering, and Mathematics (HS-STEM) fields to maximize the Department's return on investment in university-based research and education to achieve the goals set by Congress as efficiently as possible. Because the program supports research, education, and technology development in HS-STEM fields, it is building the Nation's intellectual capital in these areas. University Programs is one of the only Federal entities assuming this role with respect to domestic security-related studies. In 2007, Congress enacted legislation (America COMPETES Act) to increase investment in long-term basic research and increase support for students in relevant fields as critical to preserving the U.S.'s strategic and economic security.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

The increases in FY 2013 funding will further University Programs' ability to focus on building homeland security expertise in the academic community by creating strategic partnerships among universities and public agencies, and continue the development of a scientific workforce of homeland security experts in support of DHS's missions.

**Department of Homeland Security  
Science & Technology  
Research, Development, Acquisitions, and Operations  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Acquisition and Operations Support  
PPA: Acquisition and Operations Support  
Program Decrease: Positions 0, FTE 0, Dollars \$(6,170)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	54,154
Program Decrease							-	-	(6,170)
<b>Total Request</b>	-	-	<b>55,622</b>	-	-	<b>54,154</b>	-	-	<b>47,984</b>

**Description of Item**

The FY 2013 funding request is a \$6.170 million decrease for Acquisition and Operations Support (AOS) Standards. The decrease will impact the following areas: Cargo Security, Credentialing, Geospatial Information Systems (GIS), and Sensor Network and Alert Systems. These areas were selected for curtailment to focus on higher priority initiatives, and were carefully chosen to ensure that AOS will still provide DHS programs its expert assistance on the transition, acquisition, and deployment of technologies.

**Justification**

Acquisition and Operations Support provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. This includes providing technological assessment of major acquisition programs in the Department of Homeland Security (DHS) to help ensure that technologies, concepts of operations (CONOPS), and procedures meet operational requirements; oversight of the test and evaluation of DHS major acquisition programs; standards to support the Homeland Security mission and the SAFETY Act program.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

In order to focus on higher priority items, the decrease in FY 2013 funding will impact Acquisition and Operations Support's ability to establish additional direct relationships between researchers and customers across the homeland security enterprise and expand future funding mechanisms for its programs.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

For necessary expenses for science and technology research, including advanced research projects; development; test and evaluation; acquisition; and operations; \$693,464,000; of which \$566,032,000 to remain available until September 30, 2015; and of which \$127,432,000 to remain available until September 30, 2017, is solely for the operation and construction of Laboratory Facilities

#### Explanation of Changes:

No substantive changes included

### Laboratory Facilities Mission Statement

Manages the Laboratory Facilities programs. The Office of National Laboratories (ONL) provides the Nation with a coordinated, enduring core of productive science, technology and engineering laboratories, organizations and institutions, which can provide the knowledge and technology required to secure our homeland. ONL executes two programs: Construction and Lab Operations.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	13,512	13,512	13,583	71
11.3 Other than full-time permanent	273	-	-	-
11.5 Other personnel compensation	837	-	-	-
11.7 Military personnel/Awards	-	1,561	1,561	-
12.1 Benefits	3,886	3,850	3,850	-
<b>Total, Salaries &amp; Benefits</b>	<b>18,508</b>	<b>18,923</b>	<b>18,994</b>	<b>71</b>

Salaries and Benefits includes costs for FTEs located at DHS S&T-operated laboratories. This includes an increase of \$71,000 for pay raises.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.1 GSA rent	\$4,426	\$1,250	\$1,289	\$39

GSA Rent provides funding for rental space provided by General Services Administration (GSA) to the National Urban Security and Technology Laboratory (NUSTL), formerly Environmental Measurements Laboratory (EML) facilities. This includes an increase of \$39,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.3 Communications, utilities, and misc. charges	\$10,468	\$12,804	\$13,201	\$397

Communications, Utilities, and Misc Charges provides funds for communications, utilities, and related charges at laboratories managed by ONL. Includes an increase of \$397,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$74,651	\$10,977	\$10,428	-\$549

Advisory and assistance provides funds for Intergovernmental Personnel Act and consultants in management and professional support services and engineering and technical services. Such personnel support both operations and construction activities. Includes a decrease of \$549,000 for contract efficiency.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$512	\$345	\$356	\$11

Other Services provide funds for mission essential training and tuition. Includes an increase of \$11,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accts.	\$3,542	\$4,611	\$4,754	\$143

Purchase from Government Accounts provides costs for administrative support, contracting administration support, and rent for interim non-GSA facilities. Includes an increase of \$143,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.4 O&M of facilities	\$26,575	\$72,152	\$62,467	-\$9,685

Operation and maintenance of facilities provides normal daily operations of PIADC, NUSTL, TSL, and NBACC. The costs include maintenance and repair of building and land. Unobligated carryover funds are included in FY 2012 and accounts for the \$9,685,000 decrease in FY 2013. Includes an increase of \$861,000 for PIADC.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.5 R&D of contracts	\$9,002	\$7,269	\$7,494	\$225

Research and Development includes costs for contracts for basic and applied research and development. Includes an increase of \$225,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.7 Operation and maintenance of equipment	\$711	\$616	\$635	\$19

Operation and maintenance of equipment provides normal daily operations and maintenance of PIADC, NUSTL, TSL, and NBACC equipment. Includes a decrease of \$19,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
26.0 Supplies and materials	\$2,820	\$5,163	\$5,323	\$160

Supplies and materials provides daily office supplies, fuel for PIADC, and gasoline. Includes an increase of \$160,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
31.0 Equipment	\$3,890	\$1,800	\$1,856	\$56

Equipment provides costs for personal property, and information technology hardware/software, and includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. Includes a decrease of \$56,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
32.0 Land & structures	\$880	\$50,000	0	-\$50,000

Land and Structures provides costs for construction and capital improvement activities. The FY 2013 request reflects a non-recur decrease of \$50,000,000 due to NBAF reassessment.

**University Programs Mission Statement**

Supports critical homeland security-related research and education at U.S. colleges and universities to address high-priority DHS-related issues and to enhance homeland security capabilities over the long term. The three thrust areas of University Programs include: Centers of Excellence, Education, and Minority Serving Institutions.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>41.0 Grants/Subsidies/Contributions</b>	<b>\$41,954</b>	<b>\$37,093</b>	<b>\$37,208</b>	<b>\$115</b>

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. This includes funding provided to Centers of Excellence (COEs), homeland security related science, technology, engineering and mathematics (HS-STEM) Career Development Grants, and Minority Serving Institutions (MSI) Leadership Grants. The program increase of \$115,000 includes COEs, Education Programs and MSIs.

**Research Development and Innovation Mission Statement**

Provides state-of-the-art technology and/or solutions to meet the needs of the operational components of the Department and the first responder community. Includes customer-focused and output-oriented RDT&E programs that balance risk, cost, impact, and time to delivery. The six thrust areas of RD&I include: APEX Research and Development; Border Security; Chemical, Biological, Radiological, Nuclear, and Explosive Defense (CBRNE); Counter Terrorist; Cyber Security; and Disaster Resilience.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	\$67,119	\$26,094	\$24,789	-\$1,305

Advisory and assistance provide funds for Intergovernmental Personnel Act (IPA) and consultants in management and professional support services and engineering and technical services. Includes a decrease of \$1,305,000 which will be realigned to Research and Development.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.5 R&D of contracts	\$405,553	\$264,055	\$445,554	\$181,499

Research and Development includes costs for contracts for basic and applied research and development. An increase of \$181,499,000 is included to rapidly develop next gen bio-detector, to begin work in nuclear incident response and recovery, and maintain cyber security priorities. The program increase also includes R&D activities in Land and Maritime Border Security, Bioagent Detection and Threat Assessment, Explosives Detection and Threat Assessment, Disaster Resiliency, including First Responder Capability, and Hostile Behavior and Identity Management.

**Acquisition and Operations Support Mission Statement**

Provides expert assistance to entities across the Homeland Security Enterprise (HSE) to ensure that the transition, acquisition, and deployment of technologies, information, and procedures improve the efficiency and effectiveness of the operational capabilities across the HSE mission. The five thrust areas of Acquisition and Operations Support are: Operations Research and Analysis; Safety Act; Standards; Technology Transition Support; and Testing and Evaluation.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.5 R&amp;D of contracts</b>	<b>\$34,412</b>	<b>\$54,680</b>	<b>\$44,948</b>	<b>-\$9,732</b>

Research and Development includes costs for contracts for basic and applied research and development. Includes an overall decrease of \$9,732 in the areas of Operations Research and Analysis, Standards and SAFETY Act.

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **Domestic Nuclear Detection Office Management and Administration**

## **I. Appropriation Overview**

### **A. Mission Statement for Management and Administration:**

The Department of Homeland Security (DHS) Domestic Nuclear Detection Office (DNDO) is the lead agency “responsible for coordinating Federal efforts to detect and protect against the unauthorized importation, possession, storage, transportation, development, or use of a nuclear explosive device, fissile material, or radiological material in the United States, and to protect against attack using such devices or materials against the people, territory, or interests of the United States<sup>1</sup>. Essential to this authority, DNDO “shall serve as the primary entity of the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect, prevent, deter and report on attempts to move, control or use, the radiological and nuclear (rad/nuc) material<sup>2</sup>” as prescribed in the Security and Accountability For Every Port Act of 2006 (SAFE Port Act, P.L. 109-347). Additionally, DNDO is authorized to “enhance and coordinate the nuclear detection efforts of Federal, State, local, and tribal governments and the private sector to ensure a managed, coordinated response.”

DHS has integrated Departmental nuclear detection program technology development, test, evaluation, operational support activities, research and development, and nuclear forensics activities into DNDO, pursuant to the SAFE Port Act. DNDO is dedicated to the development and enhancement of the Global Nuclear Detection Architecture (GNDA); acquisition and deployment support for the domestic detection systems for DHS Components and in some instances, State and local agencies; coordination of effective sharing of nuclear detection-related information; establishment of procedures and training for end users of nuclear detection equipment; and national-level integration, development, and advancement of an enduring national nuclear forensics capability.

The Management and Administration (M&A) appropriation provides for the support to accomplish the DNDO mission. M&A includes all costs related to Federal personnel, including detailees from other organizations, supplies and materials, and information technology (IT) equipment and support. DNDO also contributes M&A funds to the DHS Working Capital Fund (WCF) for facilities, other infrastructure and security costs, human resource support, acquisition support, IT services, training and travel costs. Most of DNDO’s contributions to the DHS WCF are included within the M&A request.

### **B. Budget Activities:**

Management and Administration: The DNDO Fiscal Year (FY) 2013 request provides for 130 full-time positions (FTP) and full-time equivalents (FTE) of which approximately 17 are detailees. As a jointly-staffed office with personnel from across the Federal government, DNDO provides reimbursement to parent organizations for detailed staff.

---

<sup>1</sup> 6 U.S.C. § 592

<sup>2</sup> Ibid.

As DNDO has matured as an organization, the Business and Finance Office has improved its ability to provide internal controls guidance, fiscal accountability, and transparency. DNDO's internal controls process is designed to provide assurance regarding the accountability, reliability, and transparency of financial reporting by complying with laws and regulations pertaining to financial reporting and establishing controls that safeguard assets from waste, loss, unauthorized use, or misappropriation. In accordance with Office of Management and Budget (OMB) Circular A-123, DNDO leadership is conducting the tests necessary to meet the essential responsibility of ensuring that *"federal programs operate and federal resources are used efficiently to achieve desired objectives."*

**C. Budget Request Summary:**

The Domestic Nuclear Detection Office requests \$39.692 million and 130 FTE within M&A for FY 2013.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The M&A appropriation funds the administration of DNDO and provides for the execution of salaries, benefits, and expenses related to 130 FTE. Additionally, funds are provided to the DHS WCF which provides such services as rent, the services of acquisition support from the Office of Procurement Operations, and IT infrastructure support.

The FY 2013 M&A budget request incorporates reductions to IT expenses, and other efficiencies. DNDO continues to operate in a non-integrated environment for financial and procurement management, and has made great strides to improve the transparency in all aspects of financial management operations from formulation through execution.

DNDO expects to achieve efficiencies totaling \$0.836 million in the cost of IT Services. The DHS CIO has initiated a multi-year campaign to drive down costs for IT Services that provide desktop and network services. Locally, DNDO has been able to reduce the total cost for wireless services by instituting a process whereas blackberry and wireless card users are provided a monthly summary of usage costs. Through the simple awareness of the billing structure and usage, employees were able to alter habits and see the changes reflected in their individual bills.

In addition to providing funding for federal salaries and benefits for DNDO personnel, M&A funds support detailees from other DHS Components and from other Federal agencies such as the Department of Energy, the Federal Bureau of Investigation, the Department of Defense, the Nuclear Regulatory Commission, and others.

The M&A appropriation also supports the following:

- DNDO Professional Development Program – The program works to upgrade employees’ knowledge, skills, and abilities and supports required certifications and training. This program works to meet individual development plans, departmental requirements, and DNDO’s need to employ and retain skilled personnel.
- Facilities – Provides day-to-day building and maintenance services, utilities, security upgrades, document destruction service, moving services, furniture repair and replacement and any additional services that directly support the physical work environment.
- Information Technology (IT) – Includes all IT services not directly procured through the WFC such as maintenance support, printing supplies, video teleconferencing equipment, and operation and maintenance of the secure network and records management applications such as SharePoint.
- Official Reception and Representation (ORR) – Provides a small amount of funding to host official events and extend official courtesies on behalf of DHS, within the limitations established by Congress.
- DNDO Accounting Database – Provides funding to utilize the United States Coast Guard and other contract services for operations and maintenance of accounting databases, and to provide compensating controls to ensure financial data integrity.

The M&A appropriation provides funding that assists in the achievement of DNDO’s mission through the following leadership and administrative elements:

### *Office of the Director*

- **Director’s Office.** The Director’s Office supports the Director in disseminating information and communicating the DNDO vision, plans, strategies, and activities to partners including DHS Components, other Executive Branch agencies, Congress, international partners, and the American public. Communications and policy support for the Director and Deputy Director include coordination of DNDO messaging and external affairs and associated preparation of materials (papers, responses, speeches, testimony, fact sheets, briefings, etc.), as appropriate.
- **Office of the Chief Financial Officer (OCFO).** OCFO oversees financial management activities including Budget Planning and Formulation, Budget Execution, Internal Controls, Data Management, and Performance-Based Budgeting.
- **Office of the Assistant General Counsel.** Serves as primary legal advisor to DNDO regarding legal issues arising under all aspects of the DNDO mission. This includes advising on the scope of authority of DNDO, procurement contracts, assistance agreements, claims, protests, litigation, ethics, privacy, and other areas. Serves as liaison between DNDO and the DHS Headquarters (HQ) Office of the General Counsel.

- **Red Team and Net Assessments.** Serves as DNDO’s primary means to assess the operational effectiveness and performance of DNDO programs and deployed radiological and nuclear (rad/nuc) detection capabilities at the Federal, State, local and tribal levels in support of the GNDA.

*Office of the Chief of Staff*

- **Information Technology.** Provides oversight of and leads DNDO IT initiatives and programs and coordination with the DHS HQ Office of the Chief Information Officer.
- **Executive Secretariat.** Collaborates within DNDO and with other Component Executive Secretariats to ensure full compliance with and cross coordination for tasks assigned to DNDO. Coordinates internally-generated tasks, ensuring timely response.
- **Security.** Implements, directs, and manages the following programs for DNDO: Counterintelligence, Information Security, Foreign Disclosure, Operations Security (OPSEC), Physical Security, Personnel Security, Anti-Terrorism/Force Protection, and Crime Prevention.
- **Human Resources.** Executes the functions of the Human Resources Officer and ensures the provision of a variety of human capital services in support of DNDO personnel in accordance with DHS Chief Human Capital Office requirements. This includes oversees recruitment, staffing, performance management, professional development, and employee relations.
- **Administration and Facility Resources.** Oversees and provides various administrative support services pertaining to general office operations, facilities, purchase cards, travel, and records management.

M&A further provides support to the Directorates operating within the organizational structure of DNDO. The functions of each Directorate include:

- **Architecture and Planning Directorate (APD).** In cooperation with DNDO’s intra- and interagency partners, APD develops the GNDA’s strategies and plans for improving the Nation’s ability to detect and prevent rad/nuc attacks. APD also identifies, coordinates, and prioritizes programs across DNDO that meet the needs and enhance the capability of stakeholders, thereby, reducing the risk of rad/nuc terrorism.
- **Systems Engineering and Evaluation Directorate (SEED).** Characterizes and evaluates technical solutions for rad/nuc detection and ensures that systems are thoroughly tested prior to deployment. SEED also maintains DNDO test infrastructure and works to develop standards for rad/nuc detection equipment.
- **Transformational and Applied Research Directorate (TAR).** Develops break-through technologies that will address gaps in the GNDA and have a positive impact on capabilities to detect nuclear threats, through an aggressive and expedited research and development program.

- **Product Acquisition and Deployment Directorate (PADD)** Carries out the engineering development, production, logistics, procurement and deployment of current and next-generation nuclear detection systems in support of an end-user community, including Customs and Border Protection, U.S. Coast Guard, and Transportation Security Administration.
- **Operations Support Directorate (OSD)**. Develops the information sharing and analytical capacity necessary to create a fully integrated operating environment. OSD also conducts training, exercises, outreach, and technical assistance in support of rad/nuc detection programs.
- **National Technical Nuclear Forensics Center (NTNFC)**. Provides national-level integration, centralized planning, and stewardship for the technical nuclear forensics community, and leads the United States Government efforts in establishing a robust and enduring pre-detonation rad/nuc materials forensics capability.

#### **IV. Program Justification Changes**

N/A

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

For salaries and expenses of the Domestic Nuclear Detection Office, as authorized by title XIX of the Homeland Security Act of 2002 (6 U.S.C. 591 et seq.), for management and administration of programs and activities, **\$39,692,000**: Provided, That not to exceed \$2,500 shall be for official reception and representation expenses.

#### **Explanation of Changes:**

No substantive changes included.

### Management and Administration: Mission Statement

Per the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, the mission of Domestic Nuclear Detection Office (DNDO) is to substantially reduce the risk of nuclear terrorism against the United States by continuously improving capabilities to deter, detect, respond to, and attribute attacks, in coordination with domestic and international partners. The M&A appropriation provides for the management and administrative support of that goal. M&A includes all costs related to Federal personnel, including detailees from other organizations. The M&A appropriation accounts for the funding that assists in the achievement of DNDO's mission through the maintenance of an operations level that provides facilities, supplies and materials, IT equipment and administrative support. Most of DNDO's contributions to the DHS Working Capital Fund are included within the M&A request.

### Summary Justification and Explanation of Changes

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
11.1 Total FTE & personnel compensation	14,027	16,568	16,769	201
11.5 Other personnel compensation	486	406	411	5
12.1 Benefits	3,829	4,088	4,139	51
<b>Total, Salaries &amp; Benefits</b>	<b>18,342</b>	<b>21,062</b>	<b>21,319</b>	<b>257</b>

Salaries and Benefits include costs for 130 FTE. The FY 2013 request is \$21,319,000 for personnel compensation and benefits (Object Classes 11.1, 11.5, and 12.1). The FY 2013 program increase for Management and Administration for FY 2013 includes funding sufficient to maintain a staffing level of 130 FTEs.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	\$65	\$84	\$100	\$16

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request is \$100,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.1 GSA rent	\$3,467	\$3,467	\$4,990	\$1,523

GSA Rent includes all payments to General Services Administration (GSA) for rental of space and rent related services. The FY 2013 request is \$4,989,849. Factored into the GSA cost is the rental of space through GSA to accommodate DNDO office requirements at a secondary location in Washington D.C.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
23.3 Communications, utilities, and misc. charges	\$105	\$90	\$130	\$40

Communications, utilities, and miscellaneous charges include all payments for rental or lease of information technology equipment and services, postal services and rentals, and utility services. The FY 2013 request is \$130,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
24.0 Printing	\$9	\$20	\$30	\$10

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal entities. The FY 2013 request is \$30,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	\$391	\$319	\$368	\$49

Other services include contractual services with non-Federal sources that are not otherwise classified under Object Class 25 including training development and delivery. The FY 2013 request is \$368,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.3 Purchases from Gov't accts.</b>	\$11,116	\$12,135	\$11,787	-\$348

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 request is \$11,787,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.7 Operation and maintenance of equipment</b>	\$852	\$675	\$422	-\$253

Operation and maintenance of equipment includes costs for operation, maintenance, repair, and storage of equipment, when done by contract with the private sector or another Federal Government account. The FY 2013 request is \$422,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	\$177	\$148	\$160	\$12

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2013 request is \$160,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	\$400	0	\$386	\$386

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2013 request is \$386,000.

# I. Changes In Full Time Employment

## **BUDGET REQUEST AND SUPPORTING INFORMATION**

### **Domestic Nuclear Detection Office Research, Development, and Operations**

#### **I. Appropriation Overview**

##### **Mission Statement for Research, Development, and Operations:**

The mission of the Department of Homeland Security's (DHS) Domestic Nuclear Detection Office (DNDO) is to counter the risk of nuclear terrorism against the United States by continuously improving capabilities to deter, detect, respond to, and attribute attacks, in coordination with domestic and international partners. DNDO's strategic focus includes prevention of acts of nuclear terrorism by developing and implementing a Global Nuclear Detection Architecture (GNDA) and advancing technical nuclear forensics capabilities. The GNDA incorporates detector systems, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, identify, and report on nuclear and radioactive materials and weapons out of regulatory control. To be effective, the GNDA requires close coordination with partners at the State, local, and tribal levels, within the Federal Government, with the private sector, and internationally. This strategy incorporates the concept of deterrence which serves as a capability multiplier against failure-averse adversaries and their enablers.

Because countering nuclear terrorism is a whole-of-government challenge, the United States Government (USG) has multiple Departments and Agencies with responsibilities within the GNDA, including the Departments of Defense (DoD), Energy (DOE), Justice (DOJ), and State (DOS), the Office of the Director of National Intelligence (DNI), and other Intelligence Community (IC) members, and the Nuclear Regulatory Commission (NRC). Within DHS, the Domestic Nuclear Detection Office (DNDO) has been charged with coordinating the development of the GNDA among the USG partners. In December 2010, DNDO delivered the GNDA Strategic Plan to Congress. This interagency product is designed to guide the nation's nuclear terrorism detection capacity and capability development over the next five years.

DNDO also annually submits the report on the "Global Nuclear Detection Architecture Joint Annual Interagency Review 2011" (2011 GNDA Annual Report) to Congress. The 2011 report includes information about the multiple USG programs that collectively seek to prevent radiological and nuclear (rad/nuc) terrorism against the United States by means of detection, analysis, and reporting on rad/nuc materials out of regulatory control<sup>1</sup>. This report fulfills a requirement of Section 1907 of the Homeland Security Act of 2002 (6 U.S.C. 101 et seq.) as added by Section 1103 of the "Implementing Recommendations of the 9/11 Commission Act of 2007" (P.L. 110-53), which mandates a Joint Annual Interagency Review of the GNDA. The report is jointly prepared by interagency partners including DoD, DOS, DOE, and DOJ, the ODNI, and the NRC.

---

<sup>1</sup> The term "out of regulatory control" refers to materials that are being imported, possessed, stored, transported, developed, or used without authorization by the appropriate regulatory authority, either inadvertently or deliberately.

This year's budget submission reflects the impacts of the GNDA Strategic Plan and the Annual Report as DNDO continues to develop the GNDA. The Strategic Plan established the USG definition of the GNDA and established a framework for nuclear detection efforts that has been carried through in DNDO's planning and budgeting. In the Annual Report, departments and agencies were asked to specifically report on the performance goals identified in the GNDA Strategic Plan. Building upon these foundational documents and internalizing the recommendations has paved a path forward for DNDO's efforts and continued implementation of the architecture.

DNDO is also continuing to improve its modeling and analysis in support of the annual report and other GNDA analyses by integrating its advanced risk analysis capabilities, developed as part of the radiological and nuclear threat risk assessment (RNTRA) program and other risk analysis efforts, with other analysis capabilities into a GNDA analysis toolkit. This toolkit will apply best-of-breed, verified and validated analytic capabilities to support program assessments and prioritization, risk management, and architecture analyses of all types.

DNDO is focusing efforts to develop surge capabilities to detect threats within the context of limited or imperfect intelligence, warnings, or indicators. Ongoing work on the GNDA emphasizes mobile or agile detection components, which will increase the capability to respond to escalated threat levels by focusing detection assets on effective interdiction. The architecture must account for physical and technical limitation in order to achieve the best strategies, systems, and operations for nuclear detection. DNDO will use existing capabilities and a variety of operations and assets at the Federal, State, local, and tribal levels to surge our radiological and nuclear detection abilities in a coordinated fashion in response to suspected threats. The ability to surge rad/nuc detection capabilities will necessarily rely on the multiple State and local law enforcement agencies that are available to perform rad/nuc detection operations using mobile and human-portable sensors. DNDO is promoting several opportunities to emphasize the rad/nuc detection capabilities and operations at the State, local and tribal levels. Along with the Securing the Cities (STC) Program, DNDO will increase the number of engagements with stakeholders to conduct covert testing.

DNDO was established by National Security Presidential Directive (NSPD)-43 and Homeland Security Presidential Directive (HSPD)-14 to provide a focal point addressing rad/nuc detection. Title V of the Security and Accountability for Every Port Act of 2006 (SAFE Port Act of 2006, P.L. 109-347) directs DNDO to "serve as the primary entity of the United States Government (USG) to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop, or use an unauthorized nuclear explosive device, fissile material, or radiological material in the United States, and improve that system over time." DNDO is responsible for the acquisition of current and next generation of nuclear detection systems to maintain and expand the detection capability at all U.S. borders and U.S. interior. DNDO Systems Acquisitions provides for both the initial fielding of new equipment and ongoing recapitalization of existing equipment as it ages, needs upgrade, or replacement. DNDO is also responsible for integrating, advancing, and stewarding national nuclear forensics capabilities amongst the Departments of Defense, Energy, Justice, State, Homeland Security and the Intelligence Community.

DNDO has organized the majority of its detection-related development, test, evaluation, and acquisition programs into four mission areas. At the foundation of this mission space construct is the GNDA delineation of geographic layers (exterior, trans-border, interior, cross-cutting efforts), and

transportation pathways (air, land, and sea). DNDO works closely with Federal, State, and local entities with the primary operational responsibility for each pathway or within each layer to forge a more effective linkage between user requirements and technology and operational capability development efforts. The four mission areas to which DNDO has aligned activities, and the scope of activity addressed by each mission area, are described below:

The *land border* mission area addresses the development and deployment of systems designed to detect illicit rad/nuc materials entering the United States at and between land border ports of entry (POEs). This area includes official U.S. Customs and Border Protection (CBP) Ports of Entry (POE), and areas between the POEs manned by CBP's Office of Border Patrol. The Land Border environment includes all types of commercial conveyances and cargo, all personally-owned vehicles (POV), passenger buses, international freight rail, international passenger rail (including baggage), pedestrians (including baggage), as well as those making illegal entry into the U.S. at areas between the POEs.

The *aviation mission area* addresses all threat pathways involving civil air transport – both commercial operations and general aviation. Radiological and nuclear threats may be transported via air as a prelude to an attack elsewhere, or the actual attack involving a rad/nuc threat device may be executed and delivered directly by air. Rad/nuc detection capabilities address the scanning of air cargo, aviation passengers and their baggage, as well as the aircraft and crew.

The *maritime mission area* addresses the scanning of people, cargo, vessels, and other conveyances at seaports of entry and on seas, oceans, or other navigable waterways within U.S. Federal, State, local and tribal law enforcement jurisdiction. All vessels, including container ships, commercial fishing boats, tug boats, barges, commercial tour boats, cruise ships, tankers, bulk cargo ships, and privately owned/operated pleasure craft and sailboats, within the defined maritime domain may be exploited by terrorists to transport illicit rad/nuc material. The current state of the maritime architecture has primarily addressed portions of the pathway corresponding to containerized cargo and some elements of small vessel security. DNDO is prioritizing efforts towards addressing the gaps in maritime domain awareness, unresolved small vessel security countermeasures, and commercial non-container maritime cargo, in parallel with continued development of existing elements of the maritime architecture.

The *interior mission area* comprises all detection opportunities within U.S. borders across all pathways – land, air, and water. The risk to metropolitan urban areas and critical infrastructure is reduced through facilitated build out of relevant rad/nuc detection programs, which are coordinated with State and local partners

Further, in its *cross mission and infrastructure support* role, DNDO directly interfaces with Federal, State, and local stakeholders to gather rad/nuc technology and operational capability requirements and provide these requirements to the systems development and operations support activities within DNDO. Once these systems are deployed, DNDO provides ongoing, centralized alarm adjudication and information sharing services which allow for situational awareness of the GNDA across all domains and pathways with inputs from partners.

DNDO is committed to ongoing interaction with Federal, State, and local groups across the full range of systems development efforts, which include all necessary systems engineering and test and evaluation needs. In addition, DNDO develops training and exercises specific to user groups, their

operations, and relevant technologies. As a complement to the activities of these mission areas, DNDO will continue a full range of mission support efforts such as systems engineering, test and evaluation infrastructure, red team and net assessments, architecture studies, and operations support activities, including technical and secondary reachback.

Finally, DNDO also plays a key role in a mission that is linked to the GNDA – the identification of smuggling networks and those responsible for illicit trafficking in rad/nuc materials and for planned and actual attacks using rad/nuc weapons or materials. Specifically, DNDO is the USG focal point for the national technical nuclear forensics (NTNF) program, which supports the attribution of rad/nuc events in concert with intelligence and law enforcement information. DNDO has the responsibility for planning, advancing, integrating and stewarding nuclear forensics capabilities amongst DHS, DoD, DOE, DOJ, DOS, and ODNI.

Together, the GNDA and NTNF work to strengthen prevention and deterrence by detecting rad/nuc materials out of regulatory control, enabling the identification and closure of illicit rad/nuc trafficking networks, promoting nuclear security, disrupting planned attacks in the initial stages and potential follow-on attacks, and influencing potential adversaries by increasing their perceived risk of failure and the prospect of being held accountable for planned and executed attacks. The National Technical Nuclear Forensics Center (NTNFC) provides the technical capability to determine the origin and nature of nuclear or radiological attacks, interdicted source materials and devices to support national priorities for deterrence, attribution and prosecution. The Nuclear Forensics and Attribution Act (NFAA), signed into law on February 16, 2010, codified this mission within DNDO and included specific requirements to lead the development and implementation of the National Strategic Five-Year Plan for improving U.S. nuclear forensic and attribution capabilities, and to establish a National Nuclear Forensics Expertise Development Program to address the workforce pipeline needs in nuclear forensics.

The Research, Development, and Operations (RD&O) request identifies resources required for GNDA Development and the implementation of solutions to address vulnerabilities in the GNDA and all required mission and operations support activities.

## **B. Budget Activities:**

In the present budget environment, DNDO has prioritized its request from RD&O to Systems Acquisition to continue the recapitalization of Customs and Border Protection Radio-Isotope Identification Devices (RIID) to Next Generation devices to support the fielding of enhanced detection capability to U.S. borders. The presently-deployed RIIDs have known technical limitations and are approaching or past their anticipated service lives. Funding decreases, primarily from the Systems Development PPA, also provide support to acquire new capability for stand-off detection in the maritime domain.

## **Systems Engineering and Architecture**

All DNDO programs and mission areas require the implementation of a strong and disciplined systems engineering approach. Systems engineering is integral to program support, and includes areas such as risk management, configuration control, requirements development, and technical evaluation and

analysis. Systems engineering is also a key component of test and evaluation efforts, providing the bases for the development of test strategies and plans, generation of test requirements, selection of appropriate test venues and equipment, support of test implementation, and reporting of test results. Additionally the development of detection technology standards to set the goals of the technology performance is included in this program.

At the core of all DNDO activities is the systems architecture function: determining gaps and vulnerabilities and then formulating recommendations and plans to mitigate the same.

The Joint Annual Interagency Review of the GNDA provides a means to evaluate and document the GNDA. DNDO Systems Architecture efforts are focused on developing an enhanced GNDA, including both domestic and international components. The global architecture is a worldwide network of sensors, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, and report on rad/nuc materials that are out of regulatory control.

The GNDA Strategic Plan completed and approved in FY 2011, will be used as a framework for implementation planning and for smaller, more focused implementation plans such as the domestic GNDA implementation plan. The completion of the strategic plan also supports additional strategic analyses such as the GNDA Capabilities Based Assessment (CBA) which will complete its first spiral development in FY 2012. This CBA will be a structured accounting of current rad/nuc detection capabilities compared to envisioned capabilities and an assessment of how to bridge the difference.

Both the GNDA Strategic Plan and the Joint Annual Interagency Review serve to inform DNDO's budget process by providing, respectively, an overall strategic direction to USG (and DNDO) efforts on behalf of developing and implementing the GNDA and a examination of the progress of the GNDA. The Joint Annual Interagency Review for 2011 provided particular recommendations to aid in improving the GNDA by listing specific objectives and performance goals that describe what the USG, and in particular DNDO, must do to develop and implement the GNDA. This document also identifies metrics for a number of programs supporting the GNDA. In the future, these metrics will be evaluated in the context of the Strategic Plan's objectives and performance goals, thereby defining a more robust set of performance measures that collectively will gauge the effectiveness of GNDA implementation. This information will then be used in developing DNDO's budget.

Near-term priorities for Systems Engineering and Architecture are:

- Initiate a spiral development process to coordinate and synchronize the collaborative development of the GNDA products by the stakeholders such as the annual review, capabilities based assessment, and the radiological and nuclear threat risk assessment (RNTRA). This spiral process will build upon and formalize the collaborative process that was followed by the interagency stakeholders to successfully develop the GNDA Strategic Plan 2010, the GNDA Joint Interagency Annual Review 2011, and the Interagency Domestic Radiological/Nuclear Search Plan.
- Complete the first spiral of a Capabilities-Based Assessment (CBA) for the GNDA.
- Continually update the architecture gap and risk analyses models.
- Complete the 2012 Joint Annual Interagency Review.

- Complete the 2012 RNTRA update.
- Expand structured architecture studies to a broader range of potential pathways and identify solution options for enduring vulnerabilities in the GNDA.
- Incorporate Domain Awareness requirements into appropriate architecture analyses. Domain awareness remains an important GNDA priority. The ability to encounter, detect, and identify conveyances and people in land, air, and sea pathways in the trans-border layer is the foundation for nuclear detection. Incorporate information connectivity requirements into architecture analyses. Identify connectivity of nuclear detection capabilities, communications, and information/intelligence sharing among GNDA partners to enhance real-time tracking, trend analysis and threat evaluation, both domestically and worldwide.
- Publish Technical Capability Standards for backpack and vehicle mobile rad/nuc detection equipment.
- Develop a draft, threat-based technical Capability Standard for maritime rad/nuc detection systems.
- Continue to participate in the development of national and international standards for rad/nuc detection equipment.
- Develop and implement an Operating Instruction for the planning and execution of Systems Engineering Technical Reviews to assess program maturity and to assist the Program Manager in determining if the program is ready to proceed to the next stage of the DNDO Solutions Development Process.
- Establish a Risk Management Program to promulgate consistent, disciplined risk management principles across DNDO.
- Establish and execute a Configuration Management Program for DNDO to prescribe and carry out disciplined configuration management principles and procedures.

## **Systems Development**

DNDO Systems Development programs serve as the rad/nuc detection improvement component within DNDO, taking concepts for new detection systems from exploratory (or long-range) research to a level of maturity sufficient for production and deployment. DNDO meets its Systems Development responsibilities by applying two different yet complimentary approaches. In the more direct approach, DNDO identifies proven technology found suitable to meet various mission requirements applicable to current vulnerabilities identified in the GNDA, including identifying potential end uses. In these cases, Systems Development activities include engineering development and all developmental logistics elements associated with current as well as next-generation nuclear detection systems. The second approach is less direct. It is designed to foster initiatives within industry, academia, and the broader community of stakeholders to leverage their own programs and creativity toward advancements that will benefit the GNDA. By increasing communications, promoting competition, and enhancing the sharing of ideas among stakeholders DNDO is able to leverage normal market incentives in the development of next-generation products. The result is that commercial off the shelf (COTS) products are available for GNDA applications, at lower risk and cost to the Federal Government. The long-range research will be done through DNDO's transformational research activities. This research directly feeds the development activities detailed here. Current programs include advanced radiation portal monitors, human portable systems, and imaging techniques, as well as neutron detection technology replacement, among others.

In order to implement the requirements of the DHS Acquisition Directive 102-01 (AD 102-01) and improve overall program oversight, DNDO has implemented and continues to improve the Solution Development Process. The process includes foundational guidelines for long term plans, stage requirements and stage gates for program decision phases. This process provides a structured mechanism for leadership to initiate programs and objectives; to conduct periodic reviews and evaluate programs against approved objectives and milestones. As this process matures it will continue to provide insights to health of DNDO programs toward meeting their cost, schedule, and performance objectives. Improvements will increase effectiveness in linking program contributions to filling gaps in the GNDA and, ultimately, reduction of risk to nuclear terrorism.

DNDO is promoting several opportunities to further develop rad/nuc detection capabilities and operations at the State and local level. DNDO's first Rad/Nuc Challenge, planned for FY 2012 will provide a competition within the rad/nuc detection community, and will include industry demonstrations and information exchange forums. Expos, trade shows, and competitions (as in this context) have been shown to provide a cost effective way to foster and sustain communication with many members of a community and advance development in the field in a relatively short amount of time. Hosting the Rad/Nuc Challenge will move DNDO toward a position of prominence, recognized leadership, and excellence necessary for the effective and efficient accomplishment of its mission.

Near-term priorities for Systems Development are:

- Advance the technical maturity of emerging technologies to passively detect rad/nuc threats from a stand-off distance.
- Development and evaluation of boat-mounted rad/nuc detection technologies to address the "detection at sea" mission.
- Development of non-Helium-3 ( $^3\text{He}$ ) based neutron detectors.
- Analysis of operational needs of domestic Airports of Entry (APOEs) sites, with a focus on inbound international air cargo, and identify potential solution options.
- Improve rad/nuc systems' algorithm performance for detection and identification of radiation.
- Drive improvements to human portable nuclear detection equipment through a commercial first approach.
- Complete Field Validation Testing of selected improvements to deployed PVT solutions.

### **Transformational Research and Development**

DNDO established a transformational research and development (R&D) program to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational R&D is carried out within three major programs: Advanced Technology Demonstrations (ATD), Exploratory

Research Program (ER) Program, and the Academic Research Initiative (ARI). Maintaining a robust research and development program is key to developing and delivering new technologies that are crucial to countering the threat of nuclear terrorism.

The ATD program builds on technology concepts previously demonstrated under the ER Program, or equivalent. Through the ATD, technology concepts are developed into Performance Test Units (PTU) that are capable of providing reliable and scalable performance measurements in a challenging and realistic simulated operational environment. Through this technology characterization, sufficient understanding of the technology potential is obtained to inform a Cost-Benefit Analysis (CBA) for the transition of the PTU technology to a Government acquisition program or to commercial system development.

The ER Program consists of innovative, high-risk, early-stage, new ideas that can make a transformational contribution to the DNDO mission of reducing the risk of nuclear terrorism. Specifically, the ER Program focuses on potential techniques for closing gaps in the GNDA and substantially improving the performance or reducing the cost of radiological/nuclear detection capabilities. Projects cover all major technical areas including materials development, passive detection techniques, neutron detection /  $^3\text{He}$  replacements, shielded Special Nuclear Material (SNM) detection, modeling and algorithms, and nuclear forensics.

The ARI is a joint National Science Foundation (NSF) and DNDO program established through a formal Memorandum of Understanding (MOU) in January 2007 to conduct basic and long-term research to stimulate innovation across many radiation detection sectors while augmenting the ER Program and supporting the DNDO research goals. The ARI has the additional goal to develop and train the next generation of researchers in nuclear detection technology.

Near-term priorities for Transformational Research and Development are:

- Initiate at least one new Advanced Technology Demonstration (ATD) every year as programs build on past success. Continue to initiate one ATD per year with a performance period of two to three years per ATD with transitions throughout FY 2012 and FY 2013.
- Maintaining a robust rad/nuc ER program by reviewing projects each year, with an emphasis on culling the less-promising efforts while initiating new ones. A strong ER program which explores innovative, high-risk, early-stage, new ideas can make a transformational contribution to the DNDO mission of reducing the risk of nuclear terrorism.
- The ARI is most effective when supported through continuous and constant funding. Continue the ARI to engage the academic community in DNDO research goals, building a community dedicated to solving long-term, high-risk research issues and to develop the next generation of researchers in nuclear detection technology.

### **Assessments**

The DNDO capability development process is anchored by a critical assessment of technologies as they are developed, deployed and operated, as well as a continual assessment of the GNDA itself. Development and acquisition programs are supported by a rigorous and objective test and evaluation (T&E) program to characterize technologies and systems to understand technical performance, operational effectiveness, and system limitations. Red teaming deepens our understanding of

adversary capabilities and presents those adversarial-based capabilities to Federal, State, local, and tribal operations in overt and covert tests. Overt and covert tests use inside information to intentionally introduce radioactive sources against operationally deployed defenses to assess the performance of fielded technology, training, and protocols. Adversarial-based assessments are from an outsiders' perspective without using any "inside" information of current or planned capabilities. Net assessments provide independent reviews to identify the effectiveness of planned and deployed programs and operations, which support the GNDA. Net assessments examines the various DNDO programs; reviews procedures and policies; identifies lessons learned; and conducts continuous independent assessments to determine value added against the global threat. Net assessments, with cooperation from Federal, State, local and tribal operational partners, are part of an on-going strategy to improve the overall probability of success in the rad/nuc mission.

In addition to the above activities, DNDO executes pilots – activities planned as operational tests or trials that serve as a tentative model for future development or deployment decisions. While DNDO's aforementioned test campaigns are intended to evaluate the technical performance of detection technologies in controlled environments, pilot programs allow DNDO to conduct limited deployments of new CONOPS or emerging rad/nuc detection technologies in existing operational environments, or alternately, existing CONOPS or technologies in new operational environments. These pilots provide an assessment of the processes, equipment, and/or systems to support nuclear detection mission objectives and customer/stakeholder requirements. Pilots offer the opportunity for DNDO to identify and leverage lessons learned that will reduce the risk of full scale deployments, enhance the impact of limited and competing resources, and expedite deployment of the GNDA, thereby increasing the Nation's ability to respond to the rad/nuc threat. In addition, DNDO has established Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER<sup>SM</sup>), a program to ensure independent and consistent testing of radiation detectors is performed by accredited laboratories against ANSI standards.

Near-term priorities for Assessments are:

- Maintain the expertise and resources to conduct up to 10 individual test campaigns.
- Design an Archival and Retrieval Management System (ARMS)/Report Analysis and Archive System (RAAS) interface with test and evaluation modeling methodologies, so that experimental data can support emerging modeling capabilities.
- Initiate GRaDER testing of the Technical Capability Standard for Handheld Instruments Used for the Detection and Identification of Radionuclides.
- Conduct overt and/or covert red team operations that test, at a minimum, the following GNDA nodes each year: official Ports of Entry (POE); commercial vehicle screening; transportation venue screening; federal, state, or local maritime operations; and special event screening. Number of test is highly dependent on the complexity of the venues chosen.
- At least once per fiscal year, red team operations should conduct covert tests designed to assess the entire adjudication process from the point of detection, through reachback, and hand off to appropriate federal response elements.
- Net Assessments' primary focus will be performing an assessment of the GNDA, including both intra and inter-agency partners.

- Provide assessment and Red Team findings and lessons learned for appropriate integration into the next Securing the Cities (STC) region. Continue to assess STC program in the New York City region and a second STC region.

## **Operations Support**

DNDO Operations Support Directorate (OSD) provides resources, strategies, and standards to Federal, State, and local stakeholders who are developing or enhancing their nuclear detection capabilities, especially as they relate to the GNDA. This support includes keeping stakeholders aware of relevant nuclear detection information or incidents, assisting in developing local or regional programs and integrating those programs' interactions with the GNDA, guiding the development of CONOPS and standard operating procedures (SOPs), and developing training and exercise products to ingrain those procedures into day-to-day activities.

To accomplish this, operational support activities at DNDO are grouped into three basic functions:

**Securing the Cities (STC):** This activity seeks to assist stakeholders to prevent the successful deployment of a radiological/nuclear terrorist weapon against the major metropolitan areas in the United States by establishing sustainable capability among State, local and tribal agencies to detect and report unauthorized radiological/nuclear materials within their jurisdictions in support of the GNDA. STC utilizes Systems Acquisition funding for the program.

**Training, Exercising, and Assistance (to non-Tier 1 cities):** Training, exercising, and assistance (TE&A) for nuclear detection is provided to Federal, State, local and tribal agencies. The assistance can be part of establishing a startup nuclear detection program, working to enhance an existing program, or providing standards and materials for training and exercises. The efforts of the TE&A section are tied to the performance and organization of the existing rad/nuc detection programs within the Federal, State, or local jurisdiction or agency. Support activities are jointly planned with the agency or region requesting the assistance. The plan establishes the level of support appropriate to the program. TE&A materials and standards are provided to these agencies and regions to ensure consistent application of the processes, functional compatibility between agencies and regions, and integration at the Federal level. These services, combined with others, assist in building the domestic portion of the GNDA and assist in DNDO's mission of assuring an effective response to a rad/nuc event.

**Joint Analysis Center (JAC) (for analysis and sharing of information related to the GNDA):** The JAC works directly with State and local law enforcement, the Intelligence Community and other Federal partners to determine indicators of nuclear terrorism to disseminate this information to relevant decision makers. Additionally, OSD develops and maintains information sharing capabilities and analytical tools necessary to support the GNDA during all modes of operation across Federal, State, local, and tribal law enforcement.

DNDO works directly with law enforcement and other Federal partners to determine indicators of nuclear terrorism to recommend appropriate response, including interdiction. Additionally, DNDO develops and maintains information sharing capabilities and analytical tools necessary to support an integrated operating system to be used by Federal, State, local, and tribal law enforcement agencies, as

well as the larger intelligence and counterterrorism communities. DNDO rounds out its support to State and local entities through a training and exercise program tailored to the needs of the community.

More specifically, a centralized support capability is provided through the DNDO JAC, a 24/7 information and analysis function that provides for situational awareness of the deployed nuclear detection architecture, timely information reporting, and facilitation of technical support for alarm adjudication and resolution. The JAC relies on the national laboratory-based Secondary Reachback Program (SRB) to provide expert advice and analysis in support of detection operations, and on the Nuclear Assessment Program (NAP) to provide technical analysis related to nuclear incidents as well as foreign and domestic detection capabilities. With the release of the GNDA Strategic Plan, DNDO has refocused the technical expertise resident within NAP towards specific requirements of DNDO to include the development of classified annexes for architectural studies; creation of GNDA visualization tools; operations support activities and the ongoing development and execution of red team and assessment activities. Specifically, NAP provides technical advice and assistance to DNDO operations and the supporting elements of the GNDA. NAP assists DNDO in defining, monitoring, and updating the evolution of the GNDA.

The Information Sharing Program provides the necessary Enterprise and Data Architecture to enable our Federal, State, local and commercial partners to effectively share rad/nuc information. The Mission Critical Messaging (MCM) program provides the capability to implement automated sharing of situational awareness with our partners. As the programs mature, DNDO is consolidating them under the Operation Support PPA to enable and better align with the common objectives of other programs in the account.

Near term priorities for Operations Support are:

- Systematically build integrated radiation detection capabilities in the Interior layer of the GNDA, including information sharing mechanisms.
- Routinely gather, analyze and share rad/nuc informational products to ensure the Department and all its partners can conduct collaborative rad/nuc operations based on a common frame of reference.
- Ensure that detection events lead to an appropriate response by local or Federal law enforcement, fire and other public safety operations.
- Conduct engagements with State and local communities to increase awareness, partnerships, and capabilities.
- Expand existing foundational programs, such as training, exercises, and onsite program assistance to include a broader range of customers, evolving risks and vulnerabilities, technologies, and proven operational concepts.
- Operate, maintain, and enhance the JAC Collaborative Information System, as the government's capability to receive, analyze, store, and report on rad/nuc-related information.
- Creating the GNDA Information Exchange Architecture and begin implementation of key data exchange connections with selected Federal, State, and local partners to enable situational awareness and coordinated response to the rad/nuc threat.

## **National Technical Nuclear Forensics**

Technical nuclear forensics supports nuclear attribution – the identification of those responsible for planned or executed attacks using rad/nuc weapons or materials – when combined with intelligence and law enforcement information. Through its contribution to attribution, technical nuclear forensics strengthens U.S. defenses against nuclear threats by:

- Encouraging nations to ensure the security of their rad/nuc materials or weapons to help prevent their unwitting transfer to third parties through loss of control;
- Tracing the source of materials to help identify and close smuggling networks;
- Deterring nations from providing nuclear weapons or materials to terrorists;
- Disrupting terrorist plans in the initial stages;
- Informing national and international decisions should a plot be uncovered or an attack occur;
- Assisting efforts to prevent follow-on attacks; and,
- Helping to bring terrorists and their facilitators to justice.

The National Technical Nuclear Forensics Center (NTNFC), which serves as the USG focal point for the National Technical Nuclear Forensics (NTNF) program, was established within DNDO on October 1, 2006 and codified by NSPD-17/HSPD-4 (Annex IV) in July 2007. This Presidential Directive assigned roles and responsibilities to six Federal departments and agencies for developing and maintaining a comprehensive NTNF capability. DNDO was given two core missions. The first is to provide national-level integration, centralized planning, assessment and stewardship as the USG integrator for a nuclear forensics capability that must be ready, robust, and enduring. The second mission is to advance the capability to conduct forensics on rad/nuc materials prior to detonation materials which may have been illicitly trafficked and/or extracted from an interdicted weapon. The *Nuclear Forensics and Attribution Act* (NFAA) (P.L. 111-140), signed into law on February 16, 2010, further codified this two-tiered mission and mandated DNDO to lead the development and implementation of the National Nuclear Forensics Expertise Development Program (NNFEDP) and the National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States. DNDO is striving to appropriately resource and advance NTNF capabilities in order to support the U.S. declared commitment to hold fully accountable any State, terrorist group, or other non-State actor that enables terrorist efforts to obtain or use weapons of mass destruction.

DNDO staffs the NTNFC with DHS experts and detailees from partner departments, including DoD, DOE and DOJ/FBI, which provides a Supervisory Special Agent from the FBI Laboratory as the NTNFC Deputy Assistant Director. This team addresses the program integration and pre-detonation materials missions comprehensively, by organizing NTNFC's activities into three key work areas: 1) Operational Readiness, 2) Technology Advancement, and 3) Expertise Development.

The nuclear forensics Operational Readiness work area comprises activities that ensure the USG has robust jointly-developed plans that are regularly exercised and assessed, to assure preparedness for a nuclear attack or interdiction, immediately and without warning. NTNFC leads the nuclear forensics community in the implementation of the National Strategic Five-Year Plan and activities outlined therein, through the use of its well-established interagency forums. In addition, NTNFC leads the development and revision of foundational documentation, the organization and evaluation of interagency exercises, and the conduct of periodic capability assessments.

Due to the complexity of pre-detonation materials characteristics, NTNFC addresses Technology Advancement systematically, across the nuclear fuel cycle and the pre-detonation forensics phases of materials collection, analysis, and evaluation. NTNFC works with domestic and international partners to design and build programs that define the use of standardized methods for lab analyses, articulation of confidence in results, and practice of demonstrated competencies in measurements and evaluations. This strategy increases knowledge of the characteristics of domestic and foreign materials, signatures, and manufacturing processes – utilizing current and emerging techniques and tools tied to rigorous standards for forensics investigations.

Finally, the Expertise Development work area ensures that a sufficient population of highly qualified scientists is cultivated and sustained to provide the critical technical expertise that underpins the entire NTNF enterprise. DNDO plans to continue to expand the NNFEDP gradually, in step with the mission requirements and assessments of the supply and demand. The NTNFC will introduce three to four new Ph.D. scientists into the NF workforce annually as it advances toward the goal of adding at least 35 new scientists by 2018. These metrics are based on the recommendations of the expert Nuclear Forensics Science Panel and the American Association for the Advancement of Science (AAAS)/American Physical Society (APS) to stem the loss of qualified personnel and maintain baseline staffing levels. NTNFC reports on these metrics in the DHS GPRA, in which NNFEDP reporting is combined with TAR Academic Research Initiative (ARI) reporting to reflect comprehensive DNDO progress toward meeting its academic/expertise development-related goals.

The following near-term priorities for NTNFC are underpinned by Public Law 111-140, Presidential Directive, National Strategic Five-Year Plan, and National Academy recommendations:

- Address each of the strategic objectives for improvement of technical nuclear forensics, as described in the National Strategic Five-Year Plan.
- Advance the rigor and effectiveness of the interagency exercise program, as recommended by the National Academy of Sciences.
- Advance international cooperation in nuclear forensics best practices, exercising, and development of national libraries through collaboration with the IAEA, Global Initiative, Nuclear Security Summit, and other venues.
- By the end of FY 2017, develop analytical measurement methods for rad/nuc materials in the following categories: chemical form of the material; physical form of the material; concentration of major, minor, and trace elements; and age-dating.
- Develop a capability to process uranium and plutonium on a laboratory scale for the purposes of producing material of known provenance, which can be used to develop a predictive model for signature development.
- Produce nuclear forensic-specific Certified Reference Materials to validate methods used for characterizing materials.
- Continue to expand the NNFEDP gradually to meet the goal of adding at least 35 new Ph.D. scientists into the workforce by 2018.

**C. Budget Request Summary:**

The Domestic Nuclear Detection Office requests \$236.830 million in FY 2013 funding for Research, Development, and Operations.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:**  
Summary of FY 2013 Budget Estimates by Program Project Activity

FY 2013 Request  
(Dollars in Thousands)

Program Project Activity	FY 2011		FY 2012		FY 2013		Increase(+) or Decrease(-) for FY 2013

DNDO requests \$30.091 million for this activity in FY 2013. DNDO has identified efficiency savings of \$1.204 million in FY 2013 by refining our approach to completing Capabilities Based Assessments, and modeling in support of the radiological and nuclear threat risk assessment (RNTRA).

**CURRENT SERVICES PROGRAM DESCRIPTION:**

DNDO Systems Engineering and Architecture Program develops, implements, and supports a disciplined systems engineering (SE) approach throughout DNDO and enhances the Global Nuclear Detection Architecture (GNDA), including both domestic and international components.

**QHSR Strategic Alignment - Systems Engineering and Architecture**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1, Preventing Terrorism and Enhancing Security
  - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
    - Objective 1.2.3: Control Movement of CBRN
    - Objective 1.2.4: Protection Against Hostile Use of CBRN

## SYSTEMS ENGINEERING

### *Description*

Application of sound systems engineering principals is the foundation for successful system development and acquisition programs. The Systems Engineering Process Integration (SEPI) program provides the independent review and assessment that is required to ensure that systems engineering principles are consistently applied across the multiple Systems Engineering efforts supporting various DNDO Directorates and Programs. SEPI will also provide for consistent policies, procedures, and execution of a disciplined configuration management program for all systems engineering products, common implementation of programmatic risk management principals, and development of multiple life-cycle cost estimates throughout the year. This project will also provide for the capability to conduct several Analysis of Alternatives (AoAs) or Alternative Analysis (AAs)<sup>2</sup> concurrently and in a uniform and defensible manner consistent with the Department's Acquisition Directive (AD) 102-01 and the Solutions Development Process. SEPI will also provide required independent technical reviews in support of the DNDO Lead Technical Authority as required by the DHS AD 102-01.

## Rad/Nuc Detection Standards

### *Description*

The SAFE Port Act of 2006 (PUBLIC LAW 109–347) requires that “*the Secretary, acting through the Director for Domestic Nuclear Detection and in collaboration with the National Institute of Standards and Technology, shall publish technical capability standards and recommended standard operating procedures for the use of nonintrusive imaging and radiation detection equipment in the United States.*” The Rad/Nuc Detection Standards program fulfills the U.S. Government responsibility for providing necessary support for the development and maintenance of standards for rad/nuc detection. This includes participating on the national and international standards committees developing consensus standards (ANSI and IEC) as well as leading the inter-agency teams developing threat-informed government unique technical capability standards. It should be noted that the process for developing consensus standards and technical capability standards is an iterative process that re-evaluates the requirements over time as the standards committee considers new information developed during standards validation, testing, and use by industry and end-users. It is anticipated that two – three standards will be under review revision or update in any given fiscal year. The specific goal for the planning year is to finalize and publish inter-agency approved Technical Capability Standards for backpack radiation detection systems and for vehicle mobile radiation detection stems, and a draft, threat-based Technical Capability Standard for aerial rad/nuc detection systems.

---

<sup>2</sup> In accordance with “DHS Acquisition Instruction/Guidebook 102-01-001”, the AoA is an analytical comparison of alternatives for fulfilling the specific capability gaps/needs. The AoA explores these alternatives within practical performance, cost, schedule, and risk boundaries, covering DOTMLPF + R/G/S spectrum. An AA differs from an AoA since the former can be used when the preferred solution is already narrowed down to a specific materiel solution. An AA examines more detailed performance characteristics of various alternative ways to implement the materiel solution, and may be affected by cost and schedule constraints and trade-offs.

## **SYSTEMS ARCHITECTURE**

### **GNDA Development Program**

#### *Description*

The overarching goal of GNDA Development is to develop strategies for building out the GNDA. The GNDA is a worldwide network of sensors, telecommunications, and personnel, with the supporting information exchanges, programs, and protocols that serve to detect, analyze, and report on nuclear and radioactive materials that are out of regulatory control. The work of developing the GNDA is an intimate part of the Solution Development Process (SDP), initially feeding into Stage Zero, which is a quantitative analysis of the entire GNDA at the strategic and operational level, including a deliberate incorporation of validated end user and stakeholder needs, resulting in an initial prioritization of new preliminary mission needs statements among the existing portfolio of needs. This work then leads to a Capabilities-Based Assessment (CBA) to identify and prioritize risk-informed recommendations, over all mission areas, which include both solutions that feed into later stages of the SDP as well as identification of areas which require further study.

### **GNDA Development - GNDA-Wide Planning, Modeling, and Analysis Project**

#### *Description*

A nuclear detection architecture can help reduce the threat of nuclear terrorism and its consequences. Such an architecture provides the framework to integrate a comprehensive set of detection systems and the associated technical and non-technical resources and infrastructure to improve a nation's ability to detect and interdict rad/nuc threats. An effective Planning, Modeling and Analysis function is an important part of the strategic basis that drives effective implementation of enhanced detection.

At the core of all DNDO activities is the GNDA delineation of geographic layers (exterior, trans-border, interior, and crosscutting efforts) and transportation pathways (air, land, and sea). Strategic planning and evolving risk evaluations will culminate in an annual report that will provide both the status of current detection architecture capabilities as well as provide direction for further enhancements to detection capabilities across the architecture. Other annual activities include updating the GNDA Strategic Plan, and completing the GNDA Joint Annual Interagency Review, the next spiral of the Radiological/Nuclear Terrorism Risk Assessment (RNTRA), the annual DNDO Solution Development Process Stage Gate 0 Review, the next spiral of the Capabilities Based Assessment and the second spiral of the GNDA Architecture Spiral Development.

These activities are intended to reduce both the technical and programmatic risk of new efforts and enhance their integration and interoperability with the overall GNDA.

### **GNDA Development - International GNDA Studies and Engagement Project**

#### *Description*

International studies and analyses are performed to characterize the gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans to reduce risks to the exterior layers of the GNDA. As a crosscutting function, ongoing development of the GNDA must involve analyses of all potential pathways, suggest technologies or programs to address any

identified vulnerabilities, and strive for stronger linkages at every point in the architecture. This includes performance of international geographical architectural analyses and investigation of key relationships with international partners to enhance national level detection capacity in their respective countries.

A significant portion of the development of a GNDA is incumbent on the sovereign decisions of foreign partners to enhance their own national and regional-level detection architectures and capacities. As such, country and regional architecture analyses must be done to characterize existing detection capabilities in order to identify potential areas for engagement/enhancements. Prioritization methodologies and engagement will be conducted under both bilateral discussions and arrangements as well as under the framework of existing international agreements (e.g., UNSCR 1540, Global Initiative to Combat Nuclear Terrorism) as well as existing institutions (e.g., International Atomic Energy Agency, World Customs Organization, Interpol, International Civil Aviation Organization, International Maritime Organization, etc.) as a means to bolster the GNDA.

Annual activities include conducting multiple “Global Initiative to Combat Nuclear Terrorism” workshops to facilitate the continued development of the best practices guides for “Planning and Organization” and “Planning and Organization” related to nuclear detection architecture development, conducting multiple GNDA Workshops for expanding GNDA capabilities within bi-lateral or multi-lateral constructs and ongoing bilateral and multilateral engagements with key foreign partners on nuclear detection architectures, to include the International Atomic Energy Agency, the Global Initiative to Combat Nuclear Terrorism and other partners. Additionally the program continues to support the Secretary of Homeland Security’s “Secure Supply Chain Initiative” and engage with organizations such as the World Customs Organization, International Civil Aviation Organization and International Maritime Organization to facilitate the integration of best practices for nuclear detection.

## **GNDA Development – Land Border GNDA Requirements Development Studies Project**

### *Description*

The GNDA Development Program consists of three continuing Projects: Development Studies, Non-POE Capabilities Based Assessments (CBA), and POE CBA. Through these projects, vulnerabilities in the existing GNDA will be determined and recommendations and plans formulated to develop an enhanced architecture that includes appropriate linkages with international partners, and across Federal, State, territorial, tribal and local agencies. These projects will focus on studies and architecture requirements, examining issues for official road POEs, rail POEs, land border checkpoints, and illicit traffic along the border in areas between all official land border POEs and land border checkpoints. These efforts support the work described in the Land Border Capabilities section.

### *Development Studies - Description*

DNDO develops time-phased strategies and plans for improving the probability of detecting and interdicting rad/nuc attacks. Plans are developed jointly with DNDO’s interagency partners and in close coordination with relevant DNDO offices. These plans are focused on analyzing and improving the GNDA through the development of specific architecture studies, Concept of Operations (CONOPS) analyses, detector modeling studies, and enterprise architecture support specific to land border issues. These studies typically will focus on specific programs, operating environments, modes

of transportation, and/or specific threats and will directly feed into and support the efforts of the Land Border CBAs identified below.

The global architecture comprises several key elements: a multi-layered structure of rad/nuc detection systems (deployed both domestically and overseas), a well-defined and carefully coordinated network of interrelationships among them, and a set of systems engineering based principles and guidelines governing the architecture's design and evolution over time.

Guided by the GNDA, DNDO provides support relative to the assessment and mitigation of threats in the land border, such as the development of specific architecture studies, CONOPS analyses, detector modeling studies, and enterprise architecture support that are specific to land border issues. As an example, an Alaska Regional Architectural Study will be performed during FY 2011 and FY 2012 to baseline the rad/nuc capabilities available in Alaska as input to a "quick look" CBA. In general, studies will be commissioned to identify and characterize trade-offs, risks, and costs before deciding on specific implementation paths. These preliminary studies are intended to reduce the technical and programmatic risk of new efforts and enhance their integration and interoperability with the overall GNDA.

#### *CBAs - Description*

The Non-POE CBA project will address the areas within the GNDA that are between official Land Border POEs. A CBA consists of two primary components:

- The functional area analysis where capabilities, tasks, resources and metrics are identified within the defined architecture; and,
- The functional needs analysis where gaps are identified through an analysis of capabilities which are modeled against particular threats and defined measures of effectiveness.

In addressing these Non-POEs, the project will provide gap summaries and recommendations that will be used by the Land Border Capabilities Program Non-POE Project to develop Mission Need Statements, Capability Development Plans, and other required documents in accordance with DHS Acquisition Management Directive 102-01.

In order to complete the two components of the CBA, a combination of approaches will be used including Subject Matter Expert (SME) elicitation, site visits, data collection, interviews, and modeling/simulation. Using these approaches, CBAs and studies will be conducted to:

- Develop and improve overall effectiveness of the Non-POE Land Border architecture;
- Analyze and identify gaps, vulnerabilities, and options; and,
- Formulate recommendations to mitigate shortcomings and strengthen capabilities development efforts and deployments.

#### *POE CBAs - Description*

The POE CBA project will address the areas within the GNDA at official Land Border POEs. In addressing these Land Border POEs, the project will provide gap summaries and recommendations that will be used by the Land Border Capabilities Program POE Project to develop documentation such as Mission Need Statements in accordance with DHS Acquisition Management Directive 102-01.

As with the Non-POE CBA Project, CBAs will be provided using a combination of approaches. These include SME elicitation, site visits, data collection, interviews, and modeling/simulation. Using these approaches, CBAs and studies will be conducted to:

- Develop and improve overall effectiveness of the POE Land Border architecture;
- Analyze and identify gaps, vulnerabilities, and options; and,
- Formulate recommendations to mitigate shortcomings and strengthen capabilities development efforts and deployments.

## **Land Border Capabilities**

### *Description*

The Land Border Capabilities Program is composed of three projects. Whereas GNDA Development – Land Border is focused on studies and requirements, this section is focused on conceptualizing and developing solutions and projects to fill those gaps and meet the identified requirements. It is the next step in developing capabilities. In performing these projects, DNDO will continue to strengthen its partnerships with representatives from Customs and Border Protection (CBP) Office of Field Operations (OFO), Office of Border Patrol (OBP), Office of Intelligence and Operations Coordination (OIOC), and Laboratories and Scientific Services (LSS) to further define requirements and identify and evaluate technology solutions. The POE Project addresses rad/nuc detection capabilities at official land ports of entry other than rail ports of entry. The OBP Checkpoint Fixed Detection Project and Non-POE Project address rad/nuc detection capabilities in areas between the official land ports of entry. The OBP Checkpoint Fixed Detection Project is focused on the 35 permanent checkpoint areas through which vehicular traffic travels. These checkpoints are not considered as part of the official land ports of entry. The Non-POE Project covers the vast area between the official land POEs not addressed by the OBP Checkpoint Fixed Detection Project.

### *OBP Checkpoint Fixed Detection - Description*

Within the GNDA there is a lack of deployed capabilities to address radiation and nuclear detection between official POEs. The *OBP Checkpoint Fixed Detection Project* will address rad/nuc detection for vehicles at 110 checkpoint lanes located at 35 permanent checkpoint areas.

Some initial capabilities have been deployed to OBP checkpoints through Phased Deployment Implementation Plan (PDIP), which formally ended in FY 2010. PDIP involved the evaluation of COTS detectors in both laboratory and operational environments, integration of these COTS detectors with existing CONOPS, and the purchase and deployment of those detectors found technically and operationally acceptable. The outcome of this phase was the fielding of Personal Radiation Detectors (PRDs) and Radioisotope Identification Devices (RIIDs) to Border Patrol Agents at checkpoints along the northern and southern borders of the United States. Procurement of this equipment is anticipated to be completed in FY 2012.

Activities are being performed within the Land Border Capabilities Program to address gaps not addressed by the aforementioned PRD and RIID deployment at OBP checkpoints. The deployment of rad/nuc detection capabilities at these locations must address potential impacts on traffic flow, fourth amendment issues and operational demands on OBP agents. An AoA is targeted for FY 2013 to

recommend proposed solutions to be implemented. Current assumptions are that the solutions selected will be commercially available and will not require Government Research & Development (R&D) funding. DNDO will seek to deploy solutions covering 50% of OBP Checkpoint lanes in the out-years.

#### *Non-POE - Description*

The Non-POE Project will address the lack of deployed capabilities to meet the GNDA goals to provide rad/nuc detection between official POEs and supplement the coverage provided by the OBP Check Point Fixed Detection capability.

Within the Land Border Capabilities Program, activities are being performed to address gaps associated with Non-POE locations. Addressing rad/nuc detection in these vast non-POE geographic areas has many major challenges. In these areas the probability of encounter is the major issue and the deployment of rad/nuc detection capabilities must be able to operate in extremely varied environments. An AoA for the Non-POE Project is planned for the future to recommend proposed solutions for implementation. Current assumptions are that the solution(s) identified will be commercially available and will not require Government R&D funding.

#### *POE - Description*

The POE project continues to develop time-phased strategies and plans for improving the probability of preventing and deterring rad/nuc attacks. Plans are developed jointly with DNDO's intra-agency and interagency partners and in close coordination among relevant DNDO offices. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase and not available for implementation for several years.

Efforts during FY 2013 and in the years following will continue to support analyses of detection strategies for the remaining vulnerabilities at Land Border POEs, as well as modeling and risk assessments focused on characterizing the threat and identifying opportunities for detection and interdiction at the border. A specific area of study moving forward will be an evaluation of the Land Border POE architecture and technology base. A study will assess the effectiveness of the existing rad/nuc prevention and deterrence capabilities currently at the Land Border POEs in light of new prevention and deterrence technologies on the horizon, updated operational approaches to prevent the smuggling of illicit rad/nuc materials, and the introduction of prevention/deterrence processes. Then, if warranted, technological, operational, and policy changes will be recommended to make rad/nuc prevention and deterrence efforts more effective and in-line with current approaches to the rad/nuc smuggling challenge. Beginning in FY 2013, an AA will be performed that evaluates options for replacing radiation portal monitors. As these units, which are deployed most heavily at Land POEs, approach the time period when equipment repair costs requirements due to aging could spike, a study to explore alternatives is prudent.

The Land Border POEs is addressing several major challenges to include the potential impacts on traffic flow and the operational and staffing demands on port personnel. Many capabilities have been deployed to these POE's (e.g., RPM's, RIID's, and PRD's); however, architecture and other studies will continue with a goal of identifying improved strategies and/or advanced technologies that would provide optimum POE detection capabilities.

## **GNDA Development – Interior GNDA Requirements Development Studies Project**

### *Description*

DNDO develops time-phased strategies and plans for improving the probability of detecting rad/nuc materials that are out of regulatory control. Plans are developed jointly with DNDO's interagency partners and in close coordination with relevant DNDO offices. These plans are focused on analyzing and improving the GNDA through the development of specific architecture studies, CONOPS analyses, detector modeling studies, and enterprise architecture support that are specific to interior issues. These studies will typically be focused on specific programs, operating environments, modes of transportation, and/or specific threats and will directly feed into and support the efforts of the Capabilities Based Assessments identified below.

Capabilities Based Assessments (CBA) will be conducted to develop and improve overall effectiveness of the interior architecture; analyze and identify gaps, vulnerabilities, and options; and formulate recommendations to mitigate shortcomings and strengthen capabilities development efforts and deployments. The CBA consists of two primary components: the functional area analysis where capabilities, tasks, resources and metrics are identified within the defined architecture; and the functional needs analysis where gaps are identified through an analysis of capabilities which are modeled against particular threats and defined measures of effectiveness. The Interior Regional CBA will provide gap summaries and recommendations regarding the regional layers of the interior architecture and will be used by interior programs to document Missions Needs Statements, Capability Development Plans, and other required documents in accordance with Acquisition Management Directive 102-01. The Interior Target / Target Vicinity CBA will perform similar tasks for the target/target vicinity portions of the interior architecture.

The annual planned study cycle includes:

- Interior Requirements Development Studies
- Interior Regional Capability Based Assessment
- Interior Target / Target Vicinity Capability Based Assessment

## **GNDA Development – Maritime GNDA Requirements Development Studies Project**

### *Description*

The Maritime GNDA Requirements Development Studies Program consists of conducting a series of studies of the baseline maritime pathways architecture. The objective is to assess nuclear detection capabilities, rad/nuc threats (materials, weapons, and conveyances), waterway/seaport vulnerabilities, options to mitigate these vulnerabilities, and recommendations for achieving the maximum risk reduction within the constraints of the available budget.

A CBA will be conducted to develop and improve overall effectiveness of the maritime architecture; analyze and identify gaps, vulnerabilities, and options; and formulate recommendations to mitigate shortcomings and strengthen capabilities development efforts and deployments. The CBA consists of two primary components; the functional area analysis where capabilities, tasks, resources and metrics are identified within the defined architecture, and the functional needs analysis where gaps are

identified through an analysis of capabilities which are modeled against particular threats and defined measures of effectiveness. The Maritime Capability Based Assessment CBA will provide gap summaries and recommendations regarding the layers of the maritime architecture and will be used to document mission needs statements, capability development plans, and other required documents in accordance with Acquisition Management Directive 102-01.

## **GND A Development – Aviation GND A Requirements Development Studies Project**

### *Description*

This program details the identification of aviation environments to inform architecture development planning. It provides input into the GND A Gap(s) / Problem(s), including IGA Non-Compliant Aircraft Vulnerability Analysis, Mobility/Agility and Deterrence, and Characterization of Specific International Regions of Interest. The studies produced will be of sufficient quality to identify gaps and produce mission needs statements.

### *General Aviation and Commercial Aviation Capabilities Based Assessment (CBA) – Description*

A CBA process will be executed to define gaps and inform prioritized solutions for the GND A with respect to the commercial aviation pathway. A set of scenarios currently under development will be used as the basis for validating capability needs. The CBA will provide recommendations for addressing the gaps with non-materiel and/or materiel approaches.

General aviation has a significant threat associated with a direct-to-target attack. The CBA targeted in this aviation pathway will consider both the domestic and international general aviation.

Commercial aviation has distinct scope and challenges differing from general aviation. The CBA will include consideration of deterrence factors due to the significant security apparatus already in place for commercial aviation. The defense in depth desired of the GND A requires that this assessment span the full expanse of commercial aviation, including that outside the United States. Anticipated solutions informed by this CBA will require coordination among USG agencies and have the potential to drive international outreach efforts.

### *Prioritized Targeted Regional Studies – Description*

A series of studies is planned which will concentrate analysis of the aviation environment within a regional level of interest.

Current studies of the aviation portion of the GND A span the entire international aviation environment. This scale is sufficient to highlight regions of interest or opportunity in development of the GND A, and target possibilities for policy development. However, a regional scale will be better suited to reveal details of effectiveness of security implementation at the scale of individual nations or even airports. This information is needed to effectively tailor individual outreach efforts and inform prioritization efforts.

**SUMMARY:** The table below assists in illustrating the crosswalk between specific projects and activities and the DNDO mission areas.

<b>2013 Total Requested Budget Authority</b>	-	-	<b>28,401</b>
Total Change 2012 to 2013	-	-	(22,599)

The Domestic Nuclear Detection Office (DNDO) requests \$28.401 million for this activity in FY 2013. DNDO has identified efficiency savings of \$1.103 million in FY 2013 through the implementation of the Commercial First approach for the development of classes of nuclear detection equipment. The strategy of the Commercial First approach is to promote industry development of nuclear detection equipment where there are sufficient market drivers to make the investment of development more feasible. These savings allowed DNDO to shift funding to improve and extend the life the current deployed fixed detectors and the acquisition of nuclear detection equipment to enhance front line capabilities.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The Department of Homeland Security (DHS) is responsible for ensuring that the Nation maintains a preeminent research and development (R&D) program to address user requirements in radiation detection science and technology. Long range radiological and nuclear (rad/nuc) basic research activities are conducted through the Transformational and Applied Research (TAR) activities. Consequently, DNDO has implemented a standard solutions development process (SDP) to build on these activities and to address technical requirements arising from gaps in operational capabilities and to meet mission requirements.

**QHSR Strategic Alignment - Systems Development**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1, Preventing Terrorism and Enhancing Security.

- Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities.
    - Objective 1.2.3: Control Movement of CBRN.
    - Objective 1.2.4: Protection Against Hostile Use of CBRN.
- Mission 2, Securing and Managing Our Borders.
- Goal 2.1: Effectively Control U.S. Air, Land, and Sea Borders.
    - Objective 2.1.1: Prevent illegal entry; protect against cross-border threats.

## **State & Local Initiatives – Rad/Nuc Challenge**

### *Description*

Background. The Domestic Nuclear Detection Office’s (DNDO) mission, as codified in the SAFE Port Act of 2006, National Security Presidential Directive-43, and Homeland Security Presidential Directive-14, points to numerous requirements that can best be met by positioning DNDO as an international center of excellence in the Rad/Nuc Detection community. Sponsorship of a Rad/Nuc Challenge is an effective and powerful method of moving DNDO toward a position of prominence, recognized leadership, and excellence necessary for the effective and efficient accomplishment of its mission.

Competitions in the form of challenges have proven to be a cost effective way to foster and sustain communication with many members of a community and advance technical developments in the field in a relatively short amount of time. In support of this, the GSA has recently created a new schedule specifically for challenges to make it easier to contract for services from approved challenge integrators. The GSA has also recently created a new website, [challenge.gov](http://challenge.gov), which provides a range of information about government challenges. Among other things the website lists current government challenges, many of which carry cash prizes through the America Completes Act.

DNDO plans to host the first Rad/Nuc Challenge in calendar 2012 in an effort to: improve and advance the rad/nuc detection capabilities of our Federal, State, local, industry and academia partners through increased awareness, cooperation and competition; expose industry and academia to Federal, State and local radiation detection requirements, helping to shape independent research and development programs and alert mission stakeholders to upcoming opportunities; provide an environment for networking within the rad/nuc community; and foster community-wide awareness of the current state-of-the-art of technology and best practices in the field.

Hosting the Rad/Nuc Challenge will be an effective and powerful method of advancing nuclear detection capabilities and maturing the Global Nuclear Detection Architecture (GNDA). It will also provide DNDO the opportunity showcase and promote the unique RND mission, and improve and expand DNDO’s standing among our RND partners and other stakeholders.

## **Human Portable Wide Area Search (HPWAS)**

### *Description*

The HPWAS program will address the mission need for more effective, efficient, and suitable purposeful searches performed to find rad/nuc material in large areas, such as large aircraft, medium to large-sized maritime vessels, open-air events, parking lots, and stadiums. A HPWAS capability is

appropriate for all environments in which rad/nuc detection is conducted, including air, land, and sea Ports of Entry (POEs), between POEs, the interior of the United States, and coastal waters. HPWAS systems will be used by Federal, State, local, and tribal authorities.

The program is subordinate to the Human Portable Radiological/Nuclear Detection System (HPRDS) program and addresses the need for improved Wide Area Search capability as detailed in the HPRDS Mission Needs Statement (MNS). HPWAS will replace existing backpack-sized and other similar rad/nuc detectors with more capable systems. Funding will be used to integrate and evaluate in an operational environment promising new technologies that are ready for transition to systems development, such as Non-<sup>3</sup>He Neutron Detection Alternatives for Backpacks and Intelligent Radiation Sensing System. The program will use a “commercial first” approach of defining and publishing requirements and relying upon industry to develop a solution based upon expected demand. Candidate HPWAS systems will be thoroughly tested in a range of operational environments and scenarios.

### **Human Portable Tripwire Program**

#### *Description*

The Human Portable Tripwire (HPT) program will increase the opportunity and likelihood of detecting rad/nuc material through constant, non-deliberate rad/nuc scans. HPT detection systems will be small and light enough to be worn by operators at all times and both easy to use and cost effective so they can be easily deployed to a large number of operators, increasing the opportunity for detection.

This HPT program focuses on tripwire detection capability, comprised of passive monitoring operations, not deliberate screening, intended to increase the opportunity and likelihood of detecting illicit material. Human portable tripwire detection systems used to perform passive monitoring should be considered standard equipment and worn by operators at all times. These systems should be wearable, easy to use, and cost effective so they can be easily deployed to a large number of operators to increase the opportunity for detection. Because the systems used in this role should be worn at all times, they may also function as Personal Protective Equipment (PPE), which provide personnel with warnings when exposed to potentially harmful levels of radiation.

The HPT was deferred because of ongoing technical challenges and perceived anticipated higher procurement costs. However, results of an HPT Industry Day indicated interest by industry to invest R&D funding into an HPT solution. Based on industry feedback the HPT program was initialized to move forward as a Commercial Fires initiative.

Due to current budget constraints, the CISNT program will be unfunded in FY 2013. The system development of this capability will be postponed and re-evaluated once funding becomes available.

### **Long Range Radiation Detection (LRRD)**

#### *Description*

The overarching goal of the Long Range Radiation Detection (LRRD) program is to determine if a passive long range rad/nuc detection system should be developed and fielded. To transition the technology to a systems development phase, it will be necessary to collect and validate user needs to address two of the most problematic constraints for passive detection and classification of radioactive

materials in the Interior (as well as in other mission areas): the need to detect rad/nuc materials at a large distance from the source and to quickly localize the source of the radiation

LRRD builds upon the capabilities demonstrated by the Stand-Off Detection Systems (SORDS) and Roadside Tracker technology demonstration projects conducted by TAR. The technology demonstrations produced an increase in passive stand-off detection capability for stationary source /moving detector and moving source/stationary detector scenarios.

Analysis of the underlying technology concluded that the LRRD program holds promise but that it is not mature enough to proceed to an acquisition without further development. Therefore, the program has been delayed for two years while a spiral development is conducted. The effort will be guided by operational requirements and concepts of operation based on State, local, and Federal stakeholder interactions and evaluation activities. Stakeholders will continue their involvement in the program and help inform the development efforts throughout the spiral.

### **Small Vessel Standoff Detection Program (SVSD)**

#### *Description*

The Small Vessel Standoff Detection (SVSD) program will develop and field a capability to provide standoff rad/nuc detection systems for scanning small vessels (less than 300 gross-tons). Currently, rad/nuc scanning of small vessels is accomplished by boarding the vessel and conducting an inspection with human portable systems. However, current and future force levels for USCG, CBP, and other Federal, State, and local partners are only capable of boarding a small fraction of the daily U.S. small vessel traffic. This program will allow maritime enforcement officers to increase rad/nuc scanning of small vessels by reducing the need to board each encountered vessel.

The program will initially develop a capability for scanning small vessels from maritime law enforcement vessels on the water (“boat-to-boat” scanning). Using information from previous operational testing of current COTS and government off-the-shelf (GOTS) standoff detection equipment in a maritime environment, the SVSD Program will inform the future development of CONOPS, tactics, techniques, and procedures as well as the development of a materiel capability to reduce the risk of a rad/nuc threat being transported or deployed by a small vessel.

#### *Boat-to-Boat Scanning – Description*

Analysis, selection, design, development, and testing of boat-to-boat systems are being conducted from FY 2010 - 2013, with acquisition and deployment of the systems from FY 2013 - 2015. Initial fielding plans include outfitting USCG and CBP Office of Air and Marine (OAM) patrol vessels for employment during routine maritime operations and periods of heightened maritime security.

#### *Phase II and III - Description*

Follow-on phases will address additional modes of encountering small vessels identified in the Mission Needs Statement, including: aircraft-to-boat (“aerial”) as well as maritime geographic chokepoints and maritime/port infrastructure (collectively referred to as “fixed”). Previous program planning included the development of aerial systems upon completion of boat-to-boat systems development and subsequently development of fixed detection systems. However, as to not pre-suppose technological maturity or a certain materiel solution, an Analysis of Alternatives (AoA) is planned for FY 2013 to

systematically determine the best alternative to develop in subsequent phases of the program and re-titled Phase II and Phase III. As a result, systems development of Phase II will be delayed one year

### **<sup>3</sup>He Shortage Mitigation Program**

#### *Description*

The initial focus of the <sup>3</sup>He Shortage Mitigation Program was on finding an alternative technology to replace the <sup>3</sup>He-based neutron detectors within radiation portal monitors (RPMs). The initial effort concentrated on RPMs because these are high priority systems, and RPMs used the largest amount of <sup>3</sup>He gas in all of DHS. Over the past few years, alternative technologies for RPMs have advanced sufficiently enough to change the focus to investigate alternative technologies for neutron detection for backpack radiation detection systems, which are used when performing wide area searches. This program has two projects: (1) The Government Sponsored Backpack and Handheld Test Campaign and (2) the <sup>3</sup>He Acquisition project. The first is directed at engaging with the commercial sector and Government-sponsored projects to assess alternative neutron detection technologies proposed for current backpack systems to fill the void until a more permanent solution is found. The focus of <sup>3</sup>He Acquisition is to procure 1,200 liters of <sup>3</sup>He each year to ensure DHS has the <sup>3</sup>He gas it needs to execute its mission during this transition period where alternative technologies are being investigated as well as to manage and distribute the <sup>3</sup>He gas supply.

A major element of this program is directed at engaging with the commercial sector and Government-sponsored projects to encourage development of and to assess alternative neutron detection technologies being proposed for current backpack systems to fill the void until a more permanent solution can be achieved through the Wide Area Search effort within DNDO. To compliment the FY 2012 test campaign of near term commercial backpacks with alternative technologies, the FY 2013 effort will evaluate Government-sponsored alternative neutron detectors under development (e.g., DNDO/TAR, DOE/National Nuclear Security Administration [NNSA] NA-22]) and DOD/Defense Threat Reduction Agency [DTRA]) to encourage and accelerate the commercialization of these detectors.

### **Multi-Pathway Scanning Integration**

#### *Description*

Aviation environments present unique and complex challenges for nuclear detection operations. While efforts have been made to characterize individual components of aviation pathways for nuclear detection purposes, greater understanding and consideration of broad aviation environments is required in order to maximize system effectiveness and efficiency. DNDO has initiated the Multi-Pathway Scanning Integration Program to support this approach. This program consists of four projects: (1) Domestic Airport Deployments; (2) Multi-Pathway Systems Evaluation; (3) Domestic General Aviation Systems Evaluation; and (4) Pre-arrival Systems Evaluation.

This approach aligns with the latest DNDO planning principles and strategies, considers the perspective of end user (airport/location and stakeholder, versus pathway), leverages current rad/nuc systems, and accounts for the deterrence provided by non rad/nuc security measures already in place. The approach examines the intersection of International Commercial Aviation (ICA) Pax/Bag, ICA Air Cargo, and International and Domestic General Aviation (GA) pathways including the commonality of

systems and processes that can be leveraged and shared. In addition to potentially increasing effectiveness against rad/nuc threats, the cumulative benefits gained from enhanced efficiencies across national and global operations has the potential to significantly reduce long-term burdens of system acquisition, maintenance, and operation. This effort includes analysis of operational needs and selection of potential solution options for these pathways; future efforts may initiate support for systems development and/or acquisition as appropriate.

#### *Pre-Arrival Systems Evaluation Strategic Alignment*

The Pre-Arrival Systems Evaluation (IGA) project strategically links to the following:

- National Security Presidential Directive 47/ Homeland Security Policy Directive 16 (NSPD-47/ HSPD-16) provide overarching guidance and authority for interagency cooperation for the protection of the homeland against future terrorist attacks involving the Air Domain, including IGA.
- The National Strategy for Aviation Security (NSAS) dated March 26, 2007, directs a comprehensive national effort to prevent hostile or illegal acts within the Air Domain, promote global economic stability, and protect legitimate aviation activities.
  - The NSAS has seven supporting plans including the Air Domain Surveillance and Intelligence Integration (ADSII) Plan dated March 26, 2007. The ADSII states, “*The Secretary of Homeland Security is responsible for closely coordinating the U.S. department and agency activities under the national aviation security program.*” ADSII resulted in a significant interagency effort recommending a detailed list of critical actions and implementation tasks to achieve a whole government solution.
- Direct-to-target threats present a particular vulnerability related to IGA. With regard to radiological and nuclear threats specifically, international air cargo (IGA) represents a vital part of the aviation pathway in the Global Nuclear Detection Architecture (GNDA).

#### *Domestic Airport Deployments - Description*

The Domestic Airport Deployment project will develop and field capabilities by optimizing combinations of mobile, fixed, and human portable rad/nuc detection systems for scanning international air cargo. These systems may also provide opportunities to enhance IGA rad/nuc detection operations. Currently, rad/nuc scanning of cargo and IGA is by conducting an inspection with human portable systems. With current and anticipated staffing, CBP will only be capable of scanning a small fraction of the daily inbound international air cargo using human portable systems alone. This program will provide systems that allow more rapid scanning of a much greater volume of air cargo, with potential dual use for enhancing IGA operations, reducing the burden of using hand-held equipment as primary scanning equipment in those environments.

To date, initial capabilities to scan air cargo for rad/nuc have been established at several air ports of entry (APOEs) to validate operational feasibility. Lessons will be drawn from those deployments and applied as appropriate to the future deployments of fixed or mobile systems.

Based on an alternatives analysis for deployment of fixed systems to be conducted in FY 2012, the program will initially deploy a limited number of fixed systems to APOEs with heavy volumes of international air cargo where chokepoints of cargo flows exist and fixed systems are operationally feasible.

Concurrently, analysis, selection, design, development, and testing of mobile/re-locatable systems will be conducted in FY 2012 and FY 2013, with possible continuation of development and potential acquisition and deployment of the systems following the FY 2013 work. Initial fielding plans include outfitting APOEs that receive large volumes of international air cargo where fixed portals are not a viable solution.

As a planning process, many of the measures for this project will be output-based (i.e. measurements of activities done by DNDO), but will ultimately improve the outcomes of programs operated by other entities (other Federal agencies, State and local) by providing these entities with the means to make better decisions about how to reduce the risk of a terrorist attack involving radiological material. One set of metrics will be the number of fixed and mobile/re-locatable rad/nuc detection systems acquired and deployed. Another key set of metrics will be the percent of total arriving international air cargo scanned with deployed systems. After fixed systems are deployed, approximately 40% of inbound international air cargo will be scanned upon arrival.

#### *Multi-Pathway Systems Evaluation - Description*

The Multi-Pathway Systems Evaluation project will involve interagency partners in analyzing currently deployed systems (technical, operational, and other) in commercial aviation pathways and determine where limited investments in technology, training, and/or CONOPS could yield meaningful enhancements to the GNDA. For example, computed tomography (CT) and other x-ray systems are currently deployed across aviation pathways, but are not typically used to search for rad/nuc materials. Coupling those systems with increased knowledge of rad/nuc threats, appropriate handheld detection equipment, and associated training and CONOPs could significantly increase the number of personnel involved in layered rad/nuc detection across aviation pathways. DNDO will work with TSA and other relevant partners in these efforts.

Some of the metrics that will be used to measure performance for the Multi-Pathway Systems Evaluation project include core SDP activities. Additionally, metrics on the number of RIIDs or other hand-held rad/nuc identification equipment acquired and deployed will be included. Other key metrics will address the number and percent of TSA sites with enhanced rad/nuc detection capabilities, and the percent of total domestic passenger flow that is covered by the deployed systems. Those metrics will be established upon refinement of operational alternatives and deployment configurations.

#### *Domestic General Aviation Systems Evaluation - Description*

The goal of the Domestic General Aviation Systems Evaluation project is to enhance capability of Federal, State, and local public safety organizations and applicable private organizations to secure domestic general aviation environments, and identify and respond to rad/nuc threats.

The following is the strategic approach for the Domestic General Aviation Systems Evaluation project:

- The Domestic General Aviation Systems Evaluation project is currently in SDP Initialization/ Stage 0 and plans to utilize Architecture capability based assessments and previously performed TSA studies to initiate Stage 1a in FY 2013.
- The MNS, P-CONOPS, CDP, ORD, and AoA will be developed with interagency partners, such as TSA, FAA, as well as applicable State, local, tribal, and private sector entities.

- The project will support programs (guidance/program assistance) for State and local agencies and the domestic general aviation community, and may lead to regulatory changes to enhance security in domestic general aviation environments.

As a planning process, many of the measures for this project will be output-based (i.e. measurements of activities done by DNDO), but will ultimately improve the outcomes of programs operated by other entities (other Federal agencies, State and local) by providing these entities with the means to make better decisions about how to reduce the risk of a terrorist attack involving radiological material. Some of the metrics that will be used to measure performance for the Domestic General Aviation Systems Evaluation project include core SDP activities. Additionally, metrics will be established to measure the number of planning, training and awareness programs that are developed for domestic GA and the number of agencies/individuals/communities that have received the training or information. Those metrics will be established upon refinement of operational alternatives/priorities and associated training/planning requirements. Metrics measuring the impact of any new regulations will also be established (for example, the number of registered aircraft subject to new security regulations).

#### *Pre-Arrival Systems Evaluation - Description*

This project seeks to enhance systems outside of the U.S. and the U.S. operating authority to prevent rad/nuc weapons and materials from being transported by aircraft into the country (thereby moving this threat away from U.S. borders), and to support enhancements to U.S. air domain awareness systems to detect non-compliant flights. The project includes points of departure for international general aviation, international air cargo, and commercial passengers as well as transit environments. Overseas general aviation and commercial environments have some important commonalities where joint/combined solutions can be leveraged, yet other distinct differences that will need to be addressed separately. Therefore, separate project activities will address the unique aspects of these environments, while maintaining synergy between activities through the solutions development process to ensure that efficiencies and effectiveness are maximized across those aviation pathways.

In an effort to maintain a level of uncertainty in the adversary, DNDO must continue to develop scanning solutions along the “compliant” portion of the IGA pathway, while simultaneously addressing non-compliant IGA issues with interagency partners. The investment will enable DNDO to begin working with stakeholders, including other DHS component organizations, the interagency, and foreign partners, to develop a mission needs statement (MNS) and continue participation on several interagency working groups. Interagency efforts will focus on support programs to assist international partners in designing and developing IGA security and rad/nuc scanning program, and may also result in new international agreements related to IGA security.

The funds requested in FY 2013 will enable DNDO to expand efforts with its stakeholders to address vulnerabilities in pre-arrival operational environments, with more extensive analyses and operational support activities in out-years. Interagency efforts will focus on support programs to assist international partners in designing and developing IGA security and rad/nuc scanning programs, and may also result in new/enhanced international agreements related to commercial aviation security. A metric to determine the effectiveness of the Pre-Arrival Systems Evaluation project will be to measure the number of foreign partners that incorporate DNDO-developed guidance at overseas points of departure.

## **Algorithm Improvement Program**

### *Description*

The Algorithm Improvement Program's (AIP) aim is to improve algorithm performance in Government-sponsored as well as commercial sector algorithms. Thus, the ultimate objective is to increase detection and identification speed and accuracy in the field for spectroscopic and non-spectroscopic, e.g., NaI and PolyVinyl Toluene (PVT) systems. Benchmark spectra will be identified and collected to capture the response needed in the field and to simultaneously develop and establish the infrastructure needed for scoring algorithms. The DHSIsotope ID project will continue support and development of DHSIsotopeID as a crucial tool needed for secondary reachback analysis.

The Algorithm Improvement Program has four projects: (1) Benchmark Define and Collection; (2) Benchmark Analysis and Evaluation; (3) Algorithm Test Bed (ATB) Management and Replay Scoring; and (4) DHSIsotopeID and Support and Development.

### *Benchmark Define and Collection - Description*

The Benchmark Define and Collection project will focus on identifying isotopes of concern, shielding variations expected in the field, detector materials of interest, detector electronics, statistics for the data, source strengths, data collection distances, and needed benchmark documentation requirements.

### *Benchmark Analysis and Evaluation - Description*

The Benchmark Analysis and Evaluation project will analyze proposed benchmark configurations prior to the data collection. After the data has been collected, an analysis will be made to ensure the spectrum can be used for algorithm development as well as to score algorithm performance. The project will continuously evaluate the proposed benchmarks for improvements or needed improvements to the approach.

Before and after the spectrum files are identified and collected, an analysis effort will be conducted to ensure the benchmarks are consistent with the conditions expected in the field and the collected spectrum file will help improve algorithm performance if included in the open and closed data sets. Spectra files will be replayed in an algorithm to ensure the file will improve detection and event analysis from the standpoint of improved isotope identification.

### *ATB Management and Replay Scoring - Description*

In the ATB Management and Replay Scoring project, Benchmark files collected for spectroscopic and non-spectroscopic detectors will be validated as being properly collected, in the correct data format, placed under configuration control, stored as either open or classified (e.g., FOUO or Secret), or closed data sets. Each organization will score the performance of their submitted algorithm (i.e., industry and Government) using the open data sets. The ATB will independently score the performance of any submitted algorithm by rescoring any vendor claims with the open data sets as well as to score the algorithm against the closed data set.

Spectra data files collected will be archived in a standardized data format, validated to be properly collected with all the ground truth associated with the spectrum file, replay tool defined, and the scoring criteria for algorithms to ensure all interested parties will have the information.

### *DHSIsotopeID Support and Development Project - Description*

The DHSIsotopeID Support and Development Project will support improvement of the leading secondary reachback analysis tool. It will improve isotope identification performance, range of applicable isotopes, and expand the algorithm capability for run time, low power processors, ease of use, and emerging new detector materials and detectors.

Annually improve and maintain under configuration control DHSIsotopeID to improve algorithm performance as needed and to expand the capability to address new detection materials and shielding variations needed to support the secondary reach back analyst.

## **Land Border Capabilities**

### *Description*

The Land Border Capabilities Program is composed of three projects. In performing these projects, DNDO will partner with representatives from Customs and Border Protection (CBP) Office of Field Operations (OFO), Office of Border Patrol (OBP), Office of Intelligence and Operations Coordination (OIOC), and Laboratories and Scientific Services (LSS) to further define requirements and identify and evaluate technology solutions. The Ports of Entry (POE) Project addresses rad/nuc detection capabilities at official land ports of entry other than rail ports of entry. The OBP Checkpoint Fixed Detection Project and Non-POE Project address rad/nuc detection capabilities in areas between the official land ports of entry. The OBP Checkpoint Fixed Detection Project is focused on the 35 permanent checkpoint areas through which vehicular traffic travels. These checkpoints are not considered as part of the official land ports of entry. The Non-POE Project covers the vast area between the official land POEs not addressed by the OBP Checkpoint Fixed Detection Project.

### *OBP Checkpoint Fixed Detection - Description*

Within the GNDA there is a lack of deployed capabilities to address radiation and nuclear detection between official POEs. The OBP Checkpoint Fixed Detection Project will address rad/nuc detection for vehicles at 110 checkpoint lanes located at 35 permanent checkpoint areas.

Some initial capabilities have been deployed to OBP checkpoints through the Phased Deployment Implementation Plan (PDIP), which formally ended in FY 2010. PDIP involved the evaluation of COTS detectors in both laboratory and operational environments, integration of these COTS detectors with existing CONOPS, and the purchase and deployment of those detectors found technically and operationally acceptable. The outcome of this phase was the fielding of Personal Radiation Detectors (PRDs) and Radio-Isotope Identification Devices (RIIDs) to Border Patrol Agents at checkpoints along the northern and southern borders of the United States. Procurement of this equipment is anticipated to be completed in FY 2012.

Activities are being performed within the Land Border Capabilities Program to address gaps not addressed by the aforementioned PRD and RIID deployment at OBP checkpoints. The deployment of rad/nuc detection capabilities at these locations must address potential impacts on traffic flow, fourth amendment issues and operational demands on OBP agents. An AoA is targeted for FY 2013 to recommend proposed solutions to be implemented. Current assumptions are that the solutions selected will be commercially available and will not require Government-led development.

### *Non-POE - Description*

The Non-POE Project will address the lack of deployed capabilities to meet the GNDA goals to provide rad/nuc detection between official POEs and supplement the coverage provided by the OBP Check Point Fixed Detection capability.

Within the Land Border Capabilities Program, activities are being performed to address gaps associated with Non-POE locations. Addressing rad/nuc detection in these vast non-POE geographic areas has many major challenges. In these areas the probability of encounter is the major issue and the deployment of rad/nuc detection capabilities must be able to operate in extremely varied environments. An AoA for the Non-POE Project is targeted for FY 2015 to recommend proposed solutions for implementation. Current assumptions are that the solution(s) identified will be commercially available and will not require Government R&D funding.

### *POE - Description*

The POE project continues to develop time-phased strategies and plans for improving the probability of preventing and deterring rad/nuc attacks. Plans are developed jointly with DNDO's intra-agency and interagency partners and in close coordination among relevant DNDO offices. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase and not available for implementation for several years.

Efforts during FY 2013 will continue to support analyses of detection strategies for the remaining vulnerabilities at Land Border POEs, as well as modeling and risk assessments focused on characterizing the threat and identifying opportunities for detection and interdiction at the border. A specific area of study will be an evaluation of the Land Border POE architecture and technology base. A study will assess the effectiveness of the existing rad/nuc prevention and deterrence capabilities currently at the Land Border POEs in light of new prevention and deterrence technologies on the horizon, updated operational approaches to prevent the smuggling of illicit rad/nuc materials, and the introduction of prevention/deterrence processes. Then, if warranted, technological, operational, and policy changes will be recommended to make rad/nuc prevention and deterrence efforts more effective and in-line with current approaches to the rad/nuc smuggling challenge. Starting in FY 2013, radiation portal monitors will be addressed. As these units, which are deployed most heavily at Land POEs, approach the time period when equipment repair costs requirements due to aging could spike, a study to explore alternatives is prudent.

The Land Border POEs is addressing several major challenges to include the potential impacts on traffic flow and the operational and staffing demands on port personnel. Many capabilities have been deployed to these POE's (e.g., RPM's, RIID's, and PRD's); however, architecture and other studies will continue with a goal of identifying improved strategies and/or advanced technologies that would provide optimum POE detection capabilities.

## **PVT Improvement Program**

### *Description*

The FY 2010 DHS Appropriations Act (P.L. 111-83) Explanatory Statement and Senate Report 111-31 created the PVT Improvement Program to develop improvements to operations and capabilities of currently deployed PVT radiation portal monitors (RPM). The program focuses on the development

and testing of prototype improvement candidates for deployed PVT systems. The two main areas of interest are algorithm and hardware/life extension improvement projects.

Many of the DHS Radiation Portal Monitors (RPM) are approaching 10-years in service. The RPM program began deployment of the current generation PVT Portal Monitors in 2003 and has deployed approximately 1,400 systems which represent a very significant dollar and material investment for DHS. DNDO has been studying the issue of how to extend the usefulness of this investment and develop the system to its full potential. The program investigates ideas and suggestions for improving the hardware and software to increase system performance and extend the service life.

**SUMMARY:** System Development projects and activities, in conjunction with transformational development R&D activities, maintain the Nation's preeminent research and development program. The following table illustrates the crosswalk between specific programs and the DNDO mission areas. It is clear that programs and activities have applicability to more than one mission area and are represented in a cross-cutting manner.

The Domestic Nuclear Detection Office (DND) request \$83.897 million for this program activity in FY 2013. The level requested represents a healthy and robust research and development program.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

DNDO’s transformational research and development (R&D) program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of radiological/nuclear (rad/nuc) detection. Dramatic technological improvements include improvements in system effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors – government laboratories, academia, and private industry – encouraged to participate. This program takes advantage of the qualities and advantages of all three sectors to develop products. Teaming is encouraged across the sectors. Transformational R&D is carried out within three major programs: Advanced Technology Demonstration (ATD), Exploratory Research (ER), and the Academic Research Initiative (ARI). Each program is described in detail below.

**Strategic Alignment: Transformational and Applied Research**

- DHS Quadrennial Homeland Security Review (QHSR)

- Mission 1: Preventing Terrorism and Enhancing Security
  - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
    - Objective 1.2.3: Control Movement of CBRN
    - Objective 1.2.4: Protection Against Hostile Use of CBRN
- Maturing and Strengthening the Homeland Security Enterprise
  - Foster Innovative Approaches and Solutions Through Leading-Edge Science and Technology
    - Scientifically study threats and vulnerabilities
    - Develop innovative approaches and effective solutions

## Advanced Technology Demonstration Program

### *Description:*

The ATD program performs accelerated development, characterization, and demonstration of leading-edge technologies that address critical gaps in nuclear detection capabilities. It builds on technology concepts previously demonstrated under the ER program, research conducted by our interagency partners, or privately funded research. Through the ATD, technology concepts are developed into prototype systems called Performance Test Units (PTU) that are capable of providing reliable and scalable performance measurements in a challenging and realistic simulated operational environment. Through this technology characterization process, sufficient understanding of the technology potential is obtained to inform a Cost-Benefit Analysis (CBA) for the transition of the PTU technology to a Government acquisition program or to commercial system development. Contracts awarded under the ATD programs are typically executed in four distinct phases: preliminary design review (PDR), critical design review (CDR), characterization readiness review (CRR), and a Government characterization assessment. Historically, one ATD had been initiated each fiscal year. The ATD projects are discussed separately below:

- *Long Range Radiation Detection (LRRD) Project:* This demonstration seeks to enhance and assess performance of LRRD systems based on findings and observations from the LRRD Limited User Experiment (LUE) and Stand-off Radiation Detection System (SORDS) characterization events conducted in 2010 and 2011. Specifically, the effort will perform a detailed characterization of the Roadside Tracker (RST) and Target Linked Radiation Imaging (TRLI) technologies, and support algorithm development on these and the SORDS demonstration systems. RST and TRLI will enable advanced chokepoint monitoring without impacting the flow of commerce, providing a significant new capability to the GNDA. The RST and TRLI units were originally developed under the ER program, and were deemed ready for full ATD characterization. The SORDS units can support intelligence directed surge operation where surveillance or search of wide areas is required. This multi-faceted ATD will conclude in 2013.
- *Shielded Nuclear Alarm Resolution (SNAR) Project:* This project develops and characterizes advanced technologies required to resolve alarms and to detect special nuclear material (SNM) even when heavily shielded or masked. The project has two principal applications: 1) Dramatic performance enhancement to commercially or near commercially available x-ray non-intrusive inspection (NII) screening systems by integrating solutions directly into hardware and software to substantially reduce the number of manual inspections while increasing probability of SNM detection; and 2) Targeted and choke point screening in multiple venues, including vehicle

border crossings, checkpoints, rail, air cargo, and general aviation, with rapidly re-locatable inspection systems. Currently there are two SNAR Performance Test Units (PTUs) in development.

- *Intelligent Radiation Sensing System (IRSS)*: This project utilizes advanced data fusion algorithms to maximize performance of a group of independent sensors communicating through a flexible wireless network. IRSS leverages recent breakthroughs in small, efficient radiation detectors and information synthesis methods developed under various ER programs to enable improved detection and source localization capabilities and situational awareness in both monitoring and search operations. USCG boarding parties and security teams at special events could benefit from the networked system, which may include many different types of detectors. This system could increase sensitivity, expand surveillance area, locate threats faster, and detect and identify radiation sources more accurately compared to single detectors or multiple detached (non-networked) detectors.
- *Advanced Radiation Monitoring Device (ARMD) Project*: This project builds upon advances in new detection materials discovered under previous ER projects utilizing advanced scintillator materials and neutron detection techniques. Two materials of particular interest are strontium iodide (SrI<sub>2</sub>) and cesium lithium yttrium chloride (CLYC). SrI<sub>2</sub> has demonstrated exceptional performance as a gamma ray detector with excellent energy resolution and a potentially lower cost due to outstanding growth characteristics. CLYC has demonstrated excellent performance for detecting both gamma rays and neutrons. In addition, CLYC material provides a cost effective alternative to helium-3 neutron detectors. The photo-multiplier tube (PMT) replacements evaluated for this project are much more compact, rugged, and have lower power requirements and cost compared to traditional PMTs. This project combines these breakthroughs in new detection materials with both gamma and combined gamma/neutron detection capabilities to develop lower cost and greater efficiency hand-held detection system to ensure wider deployment of high performance equipment.
- *Aerial and Maritime Stand-off Detection (AMSD) Project*: This project develops stand-off radiation measurement systems for the detection of rad/nuc material from an airborne or maritime platform. These systems will be able to detect and locate point-like sources in a complex and dynamic background. These systems could be used in urban, maritime, and coastal environments, with a concept of operations more in line with law enforcement practices rather than past radiological mapping operations. The proposed systems will be deployable on rotary winged aircraft or an appropriate maritime vessel. The system will provide real time data on the presence, location, and isotope identification enabled by the fusing of radiation detection with other sensing modalities (e.g. multispectral imaging, GPS, altimetry, etc). Utilizing new materials, innovative packaging, and algorithm improvements, these systems will offer greater detection sensitivity, lower false alarms, and simultaneously provide a greater range of operation.
- *New Advanced Technology Demonstrations*: New ATD projects will be initiated on a yearly basis based on: 1) prioritized gaps in the Global Nuclear Detection Architecture and; 2) technological successes from the ER Program, the ARI, or other private or public research programs that support Item 1. Multiple research projects are being monitored for potential transition to an ATD. The following projects are key in upcoming technologies demonstrations:
  - The Mobile Radiation Imaging and Tracking System (MRITS) ATD project. This project will develop and characterize land-based radiation detection, identification, localization,

and tracking system by integrating into a single mobile platform the technology and the lessons learned from the Stand-Off Radiation Detection System (SORDS) ATD, the Roadside Tracker ER Program, and DNDO's Long Range Radiation Detection (LRRD) Limited Use Experiment (LUE). This device could be used in multiple applications including urban search, long range monitoring in between ports of entry, multi-lane vehicle inspection, mobile replacement for fixed portals, and special event monitoring.

- The Portable Advanced Neutron Detector (PAND) project will develop and characterize solid-state neutron detection technology to replace He-3 detectors commonly being used in pager and hand-held devices including DNDO's Human Portable Radiation Detection System (HPRDS) handheld detectors. This ATD will investigate several new promising technologies developed through the ER and ARI programs, which include but is not limited Li<sub>6</sub>/ZnS optical fiber scintillators, boron lined straw type gas tubes, and Li/B intrinsic semiconductor materials. This technology will enable rugged low cost neutron detection solutions enabling wide spread utilization.

## **Exploratory Research Program**

### *Description:*

The ER Program explores innovative, high-risk, early-stage technologies, concepts, and ideas that can make transformational contributions to support the GNDA and reduce the risk of nuclear terrorism. Specifically, the ER program researches technology and techniques that:

- 1) Address capability gaps and weaknesses in the GNDA, with emphasis on radiological and nuclear detection;
- 2) Provide substantial performance improvement or cost reduction of rad/nuc detection capabilities; and,
- 3) Improve nuclear forensics capabilities.

Efforts under the ER program are intended to transform the basic building blocks of nuclear detection technology and supporting fields, with the research generally culminating in a proof of concept or proof of feasibility demonstration in a laboratory setting. Successful ER technologies and concepts may then transition to support subsequent ATD projects or spur commercial development. ER also provides performance modeling, improved algorithm development, and other support capabilities for the broader DNDO mission. The ER Program is divided into the six topic areas described below.

- *Materials Research and Other Supporting Technologies Project:* Advances radiation detection through focused research in sensor materials, front-end electronics, signal processing, modeling, and supporting technologies. Advances in one or more of these areas can provide new and improved capabilities to search and screen for rad/nuc materials of concern, improved identification of these materials, and reduced or simplified operational burden for end-users. Main categories of sensor materials include scintillators, semiconductors, 3D topologies, and materials which provide non-traditional mechanisms of gamma or neutron detection. Advances in one or more of these areas can impact a number of application spaces and venues. The main component of Other Supporting Technologies is Photomultiplier Tube (PMT) replacements. Elements of this project are noted below:

- *Advanced scintillator development* explores gamma-sensitive scintillator materials that most deployed radiation detection systems use (including large portal monitors, mobile, backpack, and hand-held detectors). This effort researches materials to 1) improve energy resolution and hence improve capabilities to discriminate threat from benign radiation sources; 2) increase available volume and other parameters to improve detector element sensitivity; and 3) decrease costs through improved fabrication techniques and lower-cost raw materials.
- *Advanced semiconductor development* investigates room temperature operating semiconductor materials to sense and characterize radiological threat materials. Current state-of-the-art high-performance semiconductors require cryogenic cooling, which significantly limits deployment of detector systems using these materials. This effort researches: 1) novel semiconductor materials or 2) economical production methods (less than \$1000/cm<sup>3</sup>) for high-performance semiconductor materials.
- *Photomultiplier tube (PMT) replacements/photon conversion* effort includes Solid State Photomultipliers (SSPMs) and other semiconductor-based and non-semiconductor-based technologies that convert scintillation photons into electrical signals, and hold the promise to provide photo-detectors which are far superior to traditional PMTs, due to their compact size, low voltage and power requirements, mechanical robustness, insensitivity to radio frequencies and magnetic fields and other environmental effects, non-vacuum requirements, and low cost.
- *Passive Detection Systems Project*: Develops next-generation neutron and gamma ray detection systems for a broad range of passive detection applications. Current deployed radiation portal monitors use large polyvinyl toluene (PVT) panels. The majority of current handheld radionuclide identification systems use sodium iodide (NaI) or cesium iodide (CsI) scintillators, or high-purity germanium or cadmium zinc telluride (CZT) semiconductor materials. Research in this program encompasses new materials integrated with advanced electronics, new detector configurations, and specialized algorithms to greatly improve passive sensing with emphasis on simultaneously improving detection sensitivity and specificity, while minimizing operational burdens associated with employment of these systems. Performance benefits to be derived from this research include longer range stand-off detection of threat materials, improved differentiation of threat materials from environmental background and benign sources of radioactivity, and decreased false alarms with greater confidence in alarm resolution.
- *Helium-3 Replacement Technologies and Fast Neutron Detection Project*: Explores near-term and longer-term alternatives to <sup>3</sup>He neutron detectors currently used in various radiation portal monitor (RPM) applications, as well as backpack, hand-held and personal radiation detection instruments. <sup>3</sup>He has been a vital isotope in instrumentation for neutron detection because of its high absorption cross-section for thermal neutron beams, excellent gamma rejection properties, and, until recently, it's historically low cost. However, there is now a generally-recognized, world-wide critical shortage of <sup>3</sup>He due to 1) increased demand by industries such as oil, medicine, basic science, defense, and security; and 2) decreased supply because the source of <sup>3</sup>He has been from the nuclear weapons program, which has reduced production over the years. Because the need for better and more efficient neutron detectors continues, an intensified and more focused research and development effort has gone into alternative technologies for <sup>3</sup>He neutron detectors. Particular focus was initially on portal applications since this requires the most <sup>3</sup>He, but increasing attention is being given to applications which are the next largest users of <sup>3</sup>He – backpacks and handhelds. This project investigates a range of materials, technologies,

and sensor systems, many of which are based on either boron-10 or lithium-6 as neutron capture agents. This project also explores novel techniques for fast neutron detection.

- *Detection of Shielded SNM Project:* Expand and improve detection technologies for highly shielded special nuclear material (SNM) for existing and new application scenarios. SNM produces a relatively weak passive signature that can be easily shielded, making passive detection difficult, if not impossible. Active Interrogation (AI) detection, which includes radiography, uses particle interrogation techniques to produce and/or enhance one or more unique signature from SNM, greatly improving detection performance. AI detection methods typically employ x-rays, gamma-rays, or neutrons to penetrate shielding and the normal cargo found in containers, vehicles, or trucks. Other techniques of interest use natural fields such as cosmic rays and gravity to penetrate large volumes and detect the presence of objects with high mass density such as metals with high atomic numbers found in shielding and in SNM.
- *Algorithms, Modeling, and Software Project:* Researches signal processing and signal analyses that improve detection and characterization of signals from threat objectives, and compensation, correction, or reduction of background noise to improve detector performance. Normally occurring background radiation affects detector sensitivity and limits current radiation detection technologies' performance. Further, temporal and spatially varying environmental background and nuisance sources (e.g., benign materials containing naturally occurring radioactive materials and patients experiencing nuclear medicine procedures) often lead to unacceptable false alarm rates. This project uses advanced statistical approaches to data analysis to include machine learning and use of correlated data to improve the sensitivity/specificity of nuclear detection and models detector performance. Research in this area also includes advanced abilities to model detector performance and support capability-based design of advanced detection concepts.
- *Forensics Data Collection and Analyses Project:* Develops analytical techniques for determining the origin and transit route of nuclear materials. Nuclear forensics analyzes pre-detonation materials and supports analysis of post-detonation materials. These analyses inform and support attribution and response decision-making. Laboratory analysis determines physical, chemical, radiological, or morphological properties of sample material or debris. Analytical results help determine specific processing the material underwent, geographic origins, transport pathways, and intended use of the materials.

New Exploratory Research activities are initiated through a yearly Broad Agency Announcement (BAA) for industry and a Call for Proposals (CFP) for National and Government Laboratories. Topics areas for this research are defined from prioritized gaps in the Global Nuclear Detection Architecture, technology needs defined by DNDO and other DHS Components, and remaining technology hurdles discovered in prior research.

### **Academic Research Initiative**

#### *Description:*

This program has two primary objectives: 1) Engage the academic community to advance fundamental knowledge for rad/nuc threat detection and related sciences with emphasis on fundamental research to solve long-term, high-risk challenges; and 2) Develop human capital for the nuclear science and engineering profession. Further, the program works to sustain a long-term commitment to basic research in this field and coordinates research efforts across the Federal government. In January 2007,

DNDO formally established the ARI through a Memorandum of Understanding with the National Science Foundation (NSF). NSF administers the proposal solicitation, evaluation, and grant award process as well as manages the first year of grant execution. The DHS Grants Office administers the subsequent years in conjunction with DNDO. Since inception, 57 grants have been awarded to over 45 academic institutions across the country. In FY 2011 the ARI program supported 39 grants and over 150 students. In addition to its focus on basic and fundamental radiation detection science, the ARI funds academic disciplines traditionally not associated with radiological/nuclear detection, such as social sciences and applied mathematics. The ARI program portfolio encompasses a number of research categories described below.

- *New Radiation Detector Materials Research:* Focuses on long-term research aimed at developing greatly improved radiation detector materials that are highly sensitive, selective, low cost, and rugged. Research to significantly improve the yield and performance of sensor materials beyond those presently available is needed with particular emphasis on the growth, processing, and characterization of new detection materials. This includes development and improvement of scintillator materials (e.g., faster response, higher light output, better linearity, and improvements in growth and fabrication) as well as semiconductor materials (e.g., reducing impurities, optimizing charge transport, allowing room temperature operation, and innovatively improving contacts and charge collection) with the goals of excellent efficiency and energy resolution at room temperature.
- *Novel Nuclear Detection System Concepts, Approaches, and Architectures Research:* Explores radically new approaches to threat detection, eventually leading to sensor or detection system concepts that are highly sensitive to rad/nuc signatures and selective in the ability to distinguish and locate these materials from naturally occurring background. This includes research into new detection system concepts, approaches, and architectures that can support detection of rad/nuc threats being transported via general aviation (non commercial aircraft), small maritime craft (under 300 tons), and/or across the expansive land borders between official Points of Entry. A large focus of this research is on fundamental understanding of how threat detection can be enabled through radiation imaging and modeling threat detection environments.
- *Alternative Neutron Detection (He3 Alternative) Technologies Research:* Investigates alternatives for neutron detection due to the scarcity of Helium-3 ( $^3\text{He}$ ). It also seeks to greatly improve neutron detection capabilities in general, with performance that would provide substantial improvements over existing  $^3\text{He}$  technologies. This includes development and improvement of neutron sensitive scintillator materials as well as semiconductor materials with the goals of excellent efficiency and excellent ability to discriminate neutrons from gamma-rays. Additionally, neutron detection systems that improve the directionality, localization, and/or imaging capabilities are also being investigated.
- *Shielded SNM Detection Technologies, Signatures, and Sources Research:* Investigations to overcome the challenge of detecting shielded SNM, principally through non-intrusive inspection (NII) approaches to air, land, and sea cargo scanning; vehicle scanning; and human portable scanning applications. Existing NII systems use radiography, computed tomography, spectral analysis and neutron-based assays. Fundamental research in this area addresses a range of studies to augment conventional NII approaches including: 1) transformational low-power, low weight, high-yield neutron and gamma ray production sources; 2) high-efficiency, fast-recovery, low cost spectral detectors; 3) novel inspection concepts and 4) investigations

into unique signatures and fundamental data associated with active detection methods such as nuclear resonance fluorescence (NRF).

- *Expert Systems, Networks, Algorithms, and Data Processing for Nuclear Detection Research:* Investigates innovative data processing and analysis techniques that will lead to significant performance improvements, including 1) accuracy of spectral analysis of gamma-ray sensor systems, 2) sensitivity and precision of detection systems, 3) sensor fusion (both radiation and other sensors), and 4) detector implementation and networking. The research includes significant simulation and modeling to provide a fundamental basis to support these new approaches.
- *Nuclear Forensics Technologies Research:* Investigates advanced analytical techniques used to determine the origin and transit route of pre-detonation nuclear materials. Research emphasis includes 1) identifying ways to improve techniques and methodologies (i.e., speed, accuracy, and precision in both existing and emerging methods) for the physical, chemical, radiological, or morphological analysis of nuclear or radioactive materials, including determining specific processing the material underwent, geographic origins, transport pathways, and intended use; 2) improving the separation or analysis of non-nuclear material associated with nuclear materials; and/or 3) improving the use of signatures to identify source materials in the nuclear fuel cycle.

The ARI program refreshes its research portfolio every year through an annual solicitation developed jointly between the NSF and DNDO, and administered by the NSF. Topic areas for this research solicitation are derived from a number of collaborative sessions with the NSF to determine areas of investigation that best support both DNDO and NSF goals. DNDO goals include addressing gaps in the Global Nuclear Detection Architecture, addressing fundamental technology needs defined by DNDO and other DHS Components, and focusing on technology challenges that are best addressed by the unique capabilities and skills of academia. NSF goals include supporting research that could have broad societal impact, and that is of the highest technical caliber.

The Domestic Nuclear Detection Office (DNDO) requests \$33.198 million for this activity. DNDO has identified efficiency savings of \$0.608 million in FY 2013 through the review of test facility requirements and funding strategy for conducting Pilots and the Directed Test Program. DNDO will utilize test facilities located at the National Laboratories to simulate operational environments to achieve the necessary test results that were formerly conducted at actual operational sites.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The DNDO development and acquisition process is anchored by the assessment of DNDO mission-related technologies as they are developed, deployed, and implemented. DNDO continually assesses the global nuclear detection and reporting architecture through a variety of means, including test and evaluation (T&E) campaigns to characterize and collect performance data on commercially available and emerging technologies and systems; execution of pilots with operational agencies to evaluate concepts of operations (CONOPS); red team assessments to deepen the understanding of adversary capabilities; and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

**QHSR Strategic Alignment – Assessments**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1, Preventing Terrorism and Enhancing Security
  - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities

- Objective 1.2.1: Anticipate Emerging Threats
- Objective 1.2.3: Control Movement of CBRN
- Objective 1.2.4: Protection Against Hostile Use of CBRN

## **Test and Evaluation (T&E) Program**

### *Description*

DNDO technology development and acquisition programs are supported by test and evaluation (T&E) campaigns to characterize and assess the effectiveness of technologies under development as well as Commercial Off-The-Shelf (COTS) and/or Government Off-The-Shelf (GOTS) technologies or systems. The DNDO research, development, and acquisition process is anchored by rigorous assessments of mission related technologies as they are developed, deployed, and implemented. The testing of detection systems against special nuclear materials (SNM) in significant quantities and in realistic configurations is a key to assessment of radiological and nuclear (rad/nuc) systems. This type of testing requires highly specialized and secure testing facilities, such as the Radiological & Nuclear Countermeasures Test and Evaluation Complex (RNCTEC), and resourced with appropriate test instrumentation, equipment, radioactive sources, measurement devices/sensors, and test data collection/archiving systems. The T&E program is comprised of the following projects: T&E Facility Infrastructure, T&E Operations, Test Data Management, Algorithm Test Bed, Directed Testing, Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER<sup>SM</sup>) program, and Test Modeling and Simulation.

Evaluating the performance and operational utility of technologies developed or purchased to detect and identify nuclear weapons and special nuclear material is crucial to thwarting nuclear proliferation and terrorism, the primary goal of DNDO. The T&E Program maintains the core capability to test and evaluate rad/nuc detection technologies in support of DNDO's primary goal, including maintaining essential T&E assets, resources, and facilities and relationships with nuclear scientists who assist in the design and execution of test campaigns. Beyond testing facilities, test data collection systems and nuclear experts, a critical component of T&E is the nuclear material used in the testing of detectors, referred to as sources. Based on threat information, this program identifies the amount (ranges of quantities are listed under the official DOE Category I through IV) and configuration of test objects or sources used for testing, and then uses the DOE national labs to design and fabricate different sources in varying sizes. A T&E source program has been developed to build up the test sources inventory of four different Radiation Signature Training Devices (RSTD) and three plutonium (Pu) source sizes for testing.

## **T&E – Operations, Facilities, and Infrastructure**

### *Operations – Description*

Test and Evaluation capabilities support multiple DNDO program offices, generating and providing critical data to support design and development decisions and to support decision makers with analytical results necessary to make informed decisions. The credibility and timeliness of test products are paramount to advance technology development programs at key decision points and milestones. As such, the need for a repeatable, controlled process in the planning and conduct of testing is required to manage all testing complexities. This process is described and formalized in DNDO Operating Instruction -1 (OI-1) for Test Event Planning, and is used for all testing conducted by DNDO.

Testing strategies differ depending on the program strategy, system(s) to be tested and the questions to be answered through the testing. Based on the purpose and objective of the test, each test effort requires a unique and detailed plan to support its individual needs. Methods such as scientific experimentation, technical evaluations, operational relevance, and characterization must be applied appropriately. As such, individuals must be properly trained in the different aspects of testing and how to apply them while developing the experience to know when to apply them. The DNDO test leaders assemble the proper mix of experts needed to develop and execute timely and credible test and evaluation campaigns by leveraging the intellectual and manpower resources of other organizations, such as the National Institute of Standards and Technology (NIST), the National Laboratories and other Federal agencies.

#### *Facilities and Infrastructure - Description*

Conducting rad/nuc detection systems testing has been accomplished at several locations including the RNCTEC, the primary DNDO test center located at the Nevada National Security Site (N2S2), as well as the Rail Test Center (RTC) at the Port of Tacoma, and various national laboratory facilities such as Pacific Northwest, Los Alamos, Oak Ridge, and Savannah River National Laboratories. DNDO has invested substantial resources in establishing RNCTEC, and intends to leverage this investment to the maximum extent possible by encouraging its use by other agencies with similar needs.

Testing of rad/nuc systems poses many challenges to classic T&E practices due to issues such as nuclear material handling regulations, health and safety of personnel, and security. Compared to other government programs, the challenges for rad/nuc systems testing involve specialized facilities with uniquely qualified experts. In order to enhance the robustness and operational relevance of testing, DNDO has utilized a test center at the Port of Tacoma and has performed system data collections at other ports of entry. Reflecting the need to prioritize infrastructure expenses to match program needs the RTC at the Port of Tacoma, Washington will not be funded in FY 2013. If needed, DNDO will utilize testing capabilities at the national laboratories or at RNCTEC.

Rad/nuc systems require specialized equipment to measure results and collect the necessary data to conduct credible testing with repeatable results. In addition, forecasting the needs of developmental and research systems is vital to maintain state of the art facilities. Included in this outfitting is the special consideration of fabricated SNM sources which represent threat articles and configurations.

### **T&E – Test Data Management**

#### *Description*

This project focuses on the collection, verification and validation, analysis, reporting and archiving of test data collected during DNDO test campaigns as well as the collection of similar test reports by other agencies. There are three data management systems included in the Test Data Management program: the Archive and Retrieval Management System (ARMS), the Report Analysis and Archive System (RAAS), designing and/or maintaining test data collection software.

The Archive and Retrieval Management System (ARMS) is a repository that will store and retrieve all T&E data for every DNDO system under test. This includes all test data associated with every DNDO test including spectra, scenarios, sources, test plans, and reports. The fundamental need for this system

is derived from the requirement for a centrally controlled repository of verified data sets, traceable distribution of DNDO data as requests are made to perform additional analysis with the test results, document ground truth-based detector response characteristics for all systems under every test, and retrievable test data for independent audit report recommendations.

RAAS was developed to store and retrieve test reports containing evaluations of radiation detection and radiography systems from various agencies such as DHS, DOD (Defense Threat Reduction Agency), Department of Energy National Laboratories, and others. These agencies have sponsored and/or conducted studies, evaluations and tests on equipment currently in their inventories and deployed for the detection, localization and identification of SNM and other radioactive materials. This repository of test reports is made available to all appropriate organizations with an interest in rad/nuc detection and radiography equipment performance. There are approximately 40 active users of this system that can access approximately 700 reports in 14 classes of technologies.

ARMS and RAAS are linked efforts. Links to ARMS are created in the RAAS system to allow the user to access the data supporting the report for a more cost effective approach, leveraging similar assets for both projects.

The Data Collection Systems (DCS), which uses a client-server software architecture model, is a highly configurable test data management system that is customizable for each specific test event. The baseline DCS software will require continued development to keep pace with the new technologies and operational environments being considered by DNDO programs.

## **T&E – Algorithm Test Bed**

### *Description*

Radiation detectors utilize algorithms to alert users of the presence of radioactive material. For some instruments, these algorithms can also identify and classify the type of material that is detected, such as medical isotopes. In short, algorithms interpret the collected data and determine the response of the detector whether it be to alarm or identify radioactive material. The sophistication of algorithms varies between radiation detectors; therefore it is important to understand the capabilities and limitations of algorithms utilized in a variety of different radiation detectors.

To this end, DNDO needs the capability to evaluate the baseline performance of detector algorithms; and compare new and existing detector algorithms against standardized sets of both modeled and measured threats in a virtual environment. These modeled results can be used to significantly augment the physical tests performed by DNDO to help improve current algorithms and map out the limits of performance for existing algorithms. DNDO's primary resource for performing these types of computational studies is the Algorithm Test bed (ATB). Additionally, this program is designed to integrate with the parallel Algorithm Improvement Program (AIP). ATB will provide an evaluation capability for the algorithms developed under AIP.

The ATB provides an avenue for performing algorithmic studies, which can supplement physical testing that is significantly more expensive, and often limited in what measurement configurations can be evaluated due to time, resource, and budgetary constraints. More specifically, some of the analytical studies that can be investigated at the ATB include threat injection studies, receiver operator

characteristic (ROC) curve studies, degraded mode studies, and concept of operations studies. Currently, DNDO has developed and continues to develop the capability to evaluate a variety of different types of radiation detectors using the ATB including portal monitors (ASP and PVT-based systems), hand-held radioisotope identification devices, and mobile platform radiation detection systems. The ATB provides a mechanism to evaluate the effectiveness of improvements to algorithms against a standard reference set of measured threats.

## **T&E – Directed Testing**

### *Description*

DNDO routinely conducts test campaigns to evaluate the performance and operational relevance of rad/nuc equipment currently available. Such tests provide for the independent assessment of equipment to confirm vendor performance claims. State and local entities have repeatedly stated their need for these test results to inform them in the development of effective nuclear detection programs at the State, local, and tribal level using appropriate CONOPS.

State and local law enforcement and other public safety personnel are procuring nuclear detection technologies that are commercially available. Two primary issues associated with the use of nuclear detection technologies by law enforcement and public safety personnel are: 1) their effectiveness in detecting various radioactive sources, and 2) their performance in certain operationally relevant environments. DNDO has evaluated off-the-shelf or government available rad/nuc detection equipment in order to provide performance evaluation information on specific models and their potential operational utility. The following classes of detectors have been evaluated in the past under the Directed Test funding: personal radiation detectors, handheld, backpack and mobile detection systems, and radiation detection systems suitable for maritime environments and aerial platforms (testing conducted 4Q FY 2011 through 1Q FY 2012). In FY 2012, funding will be used to complete a collaborative test with the European Union on nine classes of rad/nuc technologies used in the U.S. as well as worldwide.

While the Directed Testing program has similar goals and users of the test data as the GRaDER program, Directed Testing is conducted by DNDO and is based on threat informed and mission related DHS performance requirements. Such requirements are based on the current nuclear threat. The test objectives therefore change for specific scenarios and over time.

## **T&E – Graduated Rad/Nuc Detector Evaluation and Reporting Program**

### *Description*

The Graduated Rad/Nuc Detector Evaluation and Reporting (GRaDER®) Program evaluates commercial off-the-shelf (COTS) rad/nuc detection equipment independently tested against national consensus standards adopted by the Department of Homeland Security and Federal government Technical Capability Standards (TCSs). The program was established to provide objective and reliable performance testing information to Federal, State and local stakeholders. The information will assist stakeholders in making Rad/Nuc detection equipment procurement decisions.

This program was established to provide a venue to test, evaluate, and share test results of rad/nuc detection equipment against standards utilizing competent and capable independent, third-party

laboratories. Manufacturers may have their products tested against these consensus standards through a fee-for-service transaction with independent laboratories that have been accredited under the National Institute of Standards and Technology (NIST) National Voluntary Laboratory Accreditation Program (NVLAP), or accepted by DNDO pending accreditation. DNDO, with the support of NIST, performs an independent evaluation of the test results, determines the level of compliance with the applicable standards using published criteria, and publishes the results of evaluation in the form of a GRaDER Evaluated Equipment List (GEEL), an instrument model evaluation, and a brief model evaluation summary. These evaluation products are distributed through controlled access electronic media to validated stakeholders that may include Federal, State, local, tribal and territorial agencies with law enforcement and first responder mission requirements.

The Rad/Nuc detector industry continues to develop new technologies and enhancements to existing technology. Federal, State, and local technology users need accurate and objective performance information of this equipment before purchasing. The pace of innovation and new products in the marketplace and the cost of testing makes it prohibitive for the Federal government to continually test to ensure equipment procured meets DHS adopted voluntary consensus standards.

DNDO is mandated by Congress (SAFE Port Act of 2006) to implement a test and evaluation program to provide effectiveness information and metrics for evaluating nuclear detection technology. The GRaDER program was established to meet this mandate. This testing framework can be accessed any time a vendor has a new technology and is ready to perform testing of the technology against standards, rather than waiting for a government-sponsored test.

The law also requires DHS to publish technical capability standards (or government unique standards). The GRaDER program will integrate these technical capability standards into the program as the standards are approved. The first of these technical capability standards was published in November, 2011. The first use of this technical capability standard in a GRaDER test is planned in 2013.

While the Directed Testing program has similar goals and users of the test data as the GRaDER program, Directed Testing is conducted by DNDO and is based on threat informed and mission related DHS performance requirements. In GRaDER, tests are performed against the consensus standards by NVLAP accredited or DNDO accepted laboratories and therefore provide a common basis of comparison of instruments for each category of equipment.

## **T&E – Test Modeling & Simulation**

### *Description*

Recent National Academies' evaluation of DNDO efforts have strongly recommended increased focus by DNDO on modeling and simulation. In response, DNDO is establishing a test Modeling and Simulation strategy to guide the various testing efforts supporting DNDO programs. The purpose of the effort is to leverage the substantial radiation detector test, evaluation and analysis work that has been done, and consider whether a guiding methodology or architecture can be developed, to improve the efficacy of testing moving forward. The use of modeling and simulation will enhance test design and extend DNDO's understanding of system performance beyond the conditions tested.

Through DNDO's international relationship with the IAEA, we are evaluating the Replicative performance Assessment of Spectroscopic Equipment (RASE) program developed by the IAEA, utilizes a semi-empirical approach to study the performance of radionuclide identification equipment. The approach is to acquire gamma-ray spectra (base spectra) with high statistical accuracy using the detector systems. The base spectra are then used as the source to generate sample spectra, using a Monte Carlo approach, with user defined parameters such as acquisition time, superposition of spectra, and distortions due to environmental effects. These sample spectra are then run through the manufacturers' algorithms to assess their effectiveness, allowing a rigorous analysis of their overall capability.

RASE, first and foremost, generates empirical spectral data of any sources or configuration thereof, under any set of conditions as a function of instrument and instrument types. This is a key component of any modeling and simulation effort. The scoring logic of the algorithms, which can be easily modified in RASE, includes cases for which the solution found by the vendors' algorithms were complete, conclusive and correct, inconclusive, incomplete, incorrect, incorrect and incomplete (see NSS1 scoring criteria).

RASE can then perform an integral analysis of the performance of an algorithm by replicating a number of spectra, feeding them to the vendors', or anyone's, algorithms and analyzing the results there from in terms of correct, partially correct, etc solutions. The framework can also provide a differential analysis where the responses of the algorithms are analyzed in terms of isotope and how often they turn out to be correctly identified or misidentified.

The RASE process can be of use by DNDO and has a result DNDO is entering into a partnership with the IAEA. Together we will improve usability of the existing program and add a time component to it. This will be the basis for a new approach to modeling the response of portals and also determining the effectiveness of detection and identification of moving sources in the operational environment. It is essentially an algorithm test bed based on a comparatively small number of measurements.

### **Red Team and Net Assessments (RTNA)**

RTNA is DNDO's primary means to independently assess the operational effectiveness and performance of DNDO programs and deployed rad/nuc detection capabilities at the Federal, State, local and tribal levels in support of the Global Nuclear Detection Architecture (GNDA).

RTNA is comprised of the following efforts:

#### *Red Team (RT) Division - Description*

RT employs two models in assessing the GNDA. Overt and covert tests use inside information to intentionally introduce radioactive sources against operationally deployed Federal, State, local, and tribal defenses to assess the performance of fielded technology, training, and protocols. Adversarial-based assessments are from an outsider's perspective without using any "inside" information of current or planned capabilities.

RT builds models that integrate validated lessons learned from overt and covert operations and assessments, intelligence estimates, expert elicitation, and workshops into probabilistic measures of the effect that implemented capabilities have on adversary decision making.

*Net Assessments (NA) Division - Description*

NA assesses the effectiveness of concepts of operations, protocols, training, technologies, and technical support for RPND programs and deployed capabilities. NA examines the various GNDA programs; reviews procedures and policies; identify lessons learned from all RTNA assessments; and conducts continuous independent assessments to determine value added against the global threat. These assessments provide DNDO Directorates with an analytical tool that affords independent evaluation of their programs and activities. The NA program, in cooperation with Federal, State, local and tribal operational partners, is part of an on-going strategy to improve the overall probability of success in the rad/nuc detection mission.

**SUMMARY:** The following table illustrates the crosswalk between specific projects and activities and the DNDO mission areas. Programs and activities have applicability to more than one mission area and are represented in a cross cutting manner.

*DHS QHSR Mission 1- Preventing Terrorism and Enhancing Security  
Goal 1.2 - Prevent Unauthorized Acquisition or Use of CBRN Materials and Capabilities*

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Operations Support  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Operations Support**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>32,656</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>33,000</b>
2013 Adjustments-to-Base	-	-	(611)
<b>2013 Current Services</b>	-	-	<b>32,389</b>
2013 Program Change	-	-	3,290
<b>2013 Total Requested Budget Authority</b>	-	-	<b>35,679</b>
Total Change 2012 to 2013	-	-	2,679

The Domestic Nuclear Detection Office (DNDO) requests \$35.679 million for this program. DNDO has identified efficiency savings of \$0.611 million in FY 2013 through a review of the Nuclear Assessments Program (NAP). The savings from NAP were achieved by prioritizing the assessments and eliminating the efforts that did not provide direct support to DNDO.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Radiological and nuclear (rad/nuc) detection capability development and enhancement are not solely accomplished by technology deployments. All detection and interdiction efforts must be conducted in coordination with trained Federal, State, local, and tribal law enforcement agencies, as well as the larger intelligence and counterterrorism communities. Accordingly, while DNDO has initiated the capability enhancement and training and exercise functions, it is also responsible for developing the information sharing and analytical tools necessary to create a fully-integrated and common operating picture. Furthermore, DNDO establishes additional protocols and procedures to ensure that the detection of unauthorized nuclear explosive devices, fissile material or radiological material is promptly reported to the Secretaries of Defense, Homeland Security and Energy, the Attorney General, and other appropriate officials for appropriate action by law enforcement, military, emergency response, or other authorities.

DNDO must have the ability to integrate detection data and intelligence assessments in near real-time to develop information that enables an overall system and situational awareness. This requires DNDO to closely interact with the Intelligence Community (IC) as a developer of intelligence requirements and consumer of intelligence products, not as an intelligence collection agency. Conversely, DNDO

partners directly with the law enforcement community, which is the primary user of preventive radiation detection equipment in the domestic layer of the GNDA. This integrated approach to detection and information analysis provides a substantial improvement and efficiency in alarm resolution, threat assessments, data trend analysis, and, most importantly, overall probability of success in countering the threat of nuclear terrorism.

### **QHSR Strategic Alignment – Operations Support**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1, Preventing Terrorism and Enhancing Security
  - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
    - Objective 1.2.3: Control Movement of CBRN
    - Objective 1.2.4: Protection Against Hostile Use of CBRN

### **Joint Analysis Center (JAC)**

#### *Description*

The Joint Analysis Center (JAC) was established as an element of DNDO to provide a timely information sharing and analysis capability that monitors the status of and collecting information from both overseas and domestic elements of the GNDA. In other words, the JAC serves as the interagency coordination mechanism and central monitoring point for the GNDA, maintaining awareness of and for the GNDA – to include status of rad/nuc detection operations, visibility into the status of rad/nuc alarms, and awareness of rad/nuc-related incidents and events. To do so, the JAC coordinates adjudication of nuclear detection events (including Technical Reachback); analyzes intelligence and sensor information; facilitates technical support to Federal, State, and local authorities; and coordinates the government technical response to rad/nuc detection incidents. GNDA priorities for crosscutting and foundational capabilities include fully stand up and equip the JAC, which will receive detection information from as many sources as possible electronically, enhance communication and coordination mechanisms, and create a global situational analysis capability for monitoring radiological threats. Within the JAC program are two operational elements and an Information Technology (IT) system. Previous CJ characterizations of the JAC have described in terms of “JAC Operations” and “Secondary Reachback” capabilities. As the GNDA has been better defined during the past year, culminating in the publication of the GNDA Strategic Plan, we have found it useful to align JAC functions to new operational elements. Presently the operational elements are: JAC Information Sharing, maintaining a common operating picture for stakeholders throughout the GNDA; and Information Analysis, providing technical assistance, data mining, and trends analyses to stakeholders. The JAC relies on the national laboratory-based Secondary Reachback Program (SRB) to provide expert advice and analysis in support of detection operations, and on the Nuclear Assessment Program (NAP). The Joint Analysis Center Collaborative Information System (JACCIS) is the IT system that supports the overall JAC mission.

#### *JAC Information Sharing – Description*

JAC Information Sharing consists of three primary activities which combine to ensure a common operating picture across the GNDA and facilitate coordination between Federal, State, and local jurisdictions. The three activities are Information Product Development and Deployment, Enable

Operational Planning, Cross-jurisdictional Collaboration Support, and Information Product Development and Deployment generates packaged information on both a routine and on-demand basis and delivers them directly to stakeholders or publishes them on appropriate Community of Interest sites. Enable Operational Planning provides information support to GNDA stakeholders as they plan or prepare to conduct rad/nuc detection operations. Cross-jurisdictional Collaboration Support facilitates the timely delivery of pertinent information across the GNDA to appropriate stakeholders to ensure accurate and relevant awareness supporting ongoing operations. All three activities look across the GNDA including intelligence/law enforcement traffic, operational activity including exercises, training, and incident response, and serve as a mechanism with which partners submit and receive information pertinent to radiological nuclear terrorism prevention. The strategy for JAC Information Sharing includes use of existing processes and policies and sharing visibility of information with appropriate stakeholders.

#### *JAC Information Analysis– Description*

Information Analysis consists of SRB Adjudication Support and Data Fusion & Analysis. SRB is an essential component of the “U.S. Government Nuclear and Radiological Alarm Technical Adjudication and Resolution Process,” Annex 1 to NSPD-43/HSPD-14 (Domestic Nuclear Detection) and Annex 1 to PDD-41 (U.S. Policy on Improving Nuclear Material Security in Russia and the Other Newly Independent States), 15 May 2007. In coordination with the Department of Energy’s (DOE) National Nuclear Security Administration (NNSA), SRB provides 24/7 technical capability, at the National Level, to facilitate radiation detection alarm resolution and effectively transition to response operations if required. SRB is used when alarms can’t be resolved at the point of detection. Facilitated and coordinated by JAC program management, SRB provides support to Federal, State, local, tribal, and territorial stakeholders at the National Reachback Level including response to CBP’s Laboratories and Science Services (LSS).

To be accomplish this mission, the JAC ensures SRB maintains a strong foundation that includes: maintaining a qualified and trained expert workforce at the appropriate level and quantity, ensuring the reachback community has access and training on the best analytic tools, data fusion of multiple data sources to provide a most complete vision of the operational environment, and developing awareness within the nuclear detection community to enable alarm resolution at the lowest level possible. Data Fusion & Analysis ensures that stakeholders are armed with the most complete and relevant information, in addition to the spectral analysis support provided by SRB, to ensure timely adjudication of detections in keeping with the operational concepts prescribed by the GNDA. Data Fusion & Analysis integrates broader knowledge of the operational situation with data derived from a detection event to help set adjudication and post adjudication action priorities.

#### *JAC – Secondary Reachback Program Description*

SRB provides 24/7 technical capability to facilitate radiation detection alarm resolution and effectively transition to response operations if required. SRB is used when alarms can’t be resolved at the point of detection. Facilitated and coordinated by DNDO, SRB provides support to Federal, State and local customers. The program sustains this reachback function, while enhancing the expertise of the technical personnel who support reachback capability through knowledge of equipment capabilities and limitations, awareness of technical signatures of threats, and specific knowledge of end-user CONOPS.

### *JAC – Nuclear Assessment Program Description*

DNDO has refocused the technical expertise resident within NAP towards specific requirements of DNDO to include the development of classified annexes for architectural studies; creation of GNDA visualization tools; operations support activities and the ongoing development and execution of red teaming and assessment activities. Specifically, NAP provides technical advice and assistance to DNDO operations and the supporting elements of the GNDA. NAP assists DNDO in defining, monitoring, and updating the evolution of the GNDA.

### *JACCIS – Description*

The Joint Analysis Center Collaborative Information System (JACCIS) supports the JAC in both its Information Sharing and Information Analysis roles. It is the information technology system developed to receive, manage, analyze, transfer, and report on all data relevant to the GNDA. The JACCIS provides an enterprise infrastructure that integrates the Joint Analysis Center (JAC) operational construct and its processes by means of a focused fusion of raw data from multiple sources (alarm adjudication, intelligence sources, etc.) through collaboration, with shared data between communities of interest. This system will also facilitate the sharing of radiation detection data among Federal, regional, and municipal users and empower the lowest level of authority to evaluate detection events as either threat or legitimate, rapidly determining the appropriate response while reducing the impact on commerce and personal movement. This system is also the backbone for moving technical data from lower levels to the nation's technical experts for those cases when the first responders are not capable of determining threat vice legitimate. This integration was previously done via phone and e-mail and was manpower intensive.

The JAC will manage, control, and maintain the authorization and access for JACCIS ensuring all agencies using JACCIS are properly vetted. Federal, State, and local departments and agencies will have access to JACCIS via a public facing external web interface with a Single Sign-On functionality allowing authorized users to access and query data stored by JACCIS per information sharing agreements. Agencies will use the JACCIS interface to upload (attach files in reachback case) event/case information, request reachback, query material license information, query if a conveyance has previously undergone alarm adjudication/resolution, submit requests for information to the JAC, and access reports and information. The JACCIS, via the external web interface, will facilitate the sharing of information and situational awareness and provide the following performance:

- Provide rad/nuc collaboration in the exchange of information relevant to alarm adjudication.
- Provide rad/nuc operational picture.
- Retrieve information available from the GNDA.
- Store Information: Storage of event information history to include reachback alarms, and exercises.
- Publish Information: Publish mapping information in common user formats.
- Authenticate User.
- Authorize User.
- Provide situational awareness in aggregating information elements relative to the rad/nuc domain.
- Provide status of detection events/alarms.
- Facilitate technical assistance (technical assistance as to technical information regarding detector performance, capabilities, etc).

- Provide detection equipment information.
- Facilitate Request for Information:
  - Publish information.
  - Facilitate operational adjudication.
  - Provide Reliability Availability Maintainability Quality Control (RAMQC) information.
  - Provide license and permit information.

## **Rad/Nuc Detection Training and Exercises Programs**

### *Description*

The following are a list of activities that comprise the Radiological and Nuclear (Rad/Nuc) Training and Exercises programs:

- Developing comprehensive Federal/National planning guidance.
- Developing nuclear detection training policies and standards, identifying and resolving nuclear detection training curriculum and delivery gaps, development and delivery of next generation nuclear detection training, assistance and integration of nuclear detection training within Federal, State, and local agencies, maximizing development and use of decentralized support mechanisms, and training program assessment.
- Developing a comprehensive set of nuclear detection exercise templates and tools to be made available for use by all DNDO stakeholders and partners.

The development, continued improvements, and direct delivery of exercise support consists of a common suite of products and methodologies that support exercise design, development, conduct, and reporting. This support includes tools to track the improvement actions of identified deficiencies and to ensure all exercise products are created in accordance with the needs of the GNDA.

As national awareness increases and more resources are dedicated by Federal, State, and local governments to the nuclear detection mission, operational programs will expand and create further demand on support services. To meet these needs, DNDO will develop additional training, exercise, and other support resources that remain relevant to the full range of operations, technologies, and threats. Specialized capabilities at the State and local levels, as well as Federal capabilities such as the Transportation Security Administration's (TSA) Visible Intermodal Prevention and Response (VIPR) program and DNDO's Mobile Detection Deployment Program (MDDP), will require much greater coordination to foster and develop comprehensive, integrated, and regional approaches to nuclear detection.

DNDO will also continue close working relationships with the Federal Emergency Management Agency (FEMA) to assist them in developing National planning guidance, including specific planning scenarios, Target Capability Lists (TCLs), and guidance for Homeland Security grants related to nuclear detection. Beyond existing partnerships, DNDO will enhance relationships with other Federal partners inside and outside DHS. As a result, DNDO will leverage DHS resources, contacts, and expertise to foster more expansive and fully networked communities integrating State and local agencies at regional and national levels to achieve effective nuclear detection capabilities.

The Training and Exercises Program develops and executes nuclear detection training and exercises for Federal, State, and local law enforcement and public safety professionals to increase operational

capabilities. The program's main objectives are to increase operational capabilities at the Federal, State, and local levels; develop and exercise protocols and standards for effective use of radiation detection equipment and associated alarm resolution and reporting processes; develop training curricula in support of emerging detection technologies; and foster organic capabilities by assisting Federal, State, and local agencies in institutionalizing training courses in their academies. The Training and Exercises Program is responsible for the development, oversight and administration of the design, delivery, evaluation and continual improvement of the radiation detection training and associated exercise support services. This training is directed by DNDO personnel and provided by contracted instructors in the vicinity of the requesting State or local agency utilizing their own equipment. Additionally, the Training and Exercises Program will finalize development of a comprehensive Train-the-Trainer curriculum, including distribution of self-study courseware compact discs to a wide spectrum of State and local law enforcement and public safety agencies. This training will significantly increase the number, awareness and capabilities of participants involved with the DNDO mission.

Furthermore, the Training and Exercises Program supports exercise services for nuclear detection and prevention in States, regions and domains within the Interior layer of the GNDA, as well as providing exercise support and consultation to international partners. The Securing the Cities (STC) program in New York is a customer of the Training and Exercise program. Funding will be used to further develop training curricula and exercise execution for the maturing and expanding domains, including: (1) Conduct training gap analyses for ongoing curriculum development; (2) Develop alternative training methods and products that sustain and enhance skills for target audiences; (3) Conduct exercises, drills and workshops to test and evaluate capabilities and pre-and post-training course deliveries, and (4) develop regional training hubs.

## **Interior Capability Development**

### *Description*

Interior capability development programs utilize various levels of engagement and program assistance to initially develop rad/nuc detection capabilities among Federal, State, local, and tribal jurisdictions, and then continue to assist these stakeholders to sustain their programs. Interior capability development consists of:

- Nuclear Detection Program Assistance,
- The Securing the Cities program which helps build capability in Tier I Urban Area Security Initiatives (UASIs) (funded through the Systems Acquisition Appropriation), and,
- Equipment refresh to sustain the twenty five existing TSA Visible Intermodal Prevention and Response (VIPR) Teams.

### *Rad/Nuc Detection Program Assistance (PA) - Description*

Rad/Nuc Detection (RND) Program Assistance is designed to provide guidance to non-STC State and local partners on how to plan, develop, manage, evaluate, and sustain a rad/nuc detection program. In support of this approach, DNDO Directorates coordinate expertise and resources to develop and deliver the necessary threat awareness and understanding, training and exercise support, equipment test reports, information sharing capabilities, and other essential program tools to create an integrated rad/nuc detection environment.

Program assistance includes the following phases:

- *Outreach Phase.* Provides the State, local and tribal (SL&T) partners with general information to raise their awareness or enhance familiarity with rad/nuc detection practices and protocols.
- *Engagement Phase.* Provides the SL&T partners with solution packages and performance models, best practices and experiences that guide implementation of various initiatives.
- *Program Delivery Assistance and Support Phase.* Delivers rigorous, customized solutions to the SL&T partners through direct on-site support. In addition to the resources required to develop the engagements materials up front, providing direct on-site support is the most resource intensive method of delivery and is provided to the highest priority State and local partners first.
- *Sustainment Phase.* Beyond awareness and promotion of the rad/nuc detection mission, DNDO is addressing the needs of State and local partners that are dedicating resources toward the rad/nuc detection mission by establishing support systems that will grow over time to meet increasing demands.

The various DNDO programs to develop and sustain rad/nuc detection capability all utilize a graded approach. Federal agencies that need to develop and sustain rad/nuc detection capability are engaged with and a Memorandum of Understanding signed to outline the mutually agreed-upon support.

SL&T agencies are engaged based on their priority, as determined through the prioritization methodology described in the Integrated State, Local, and Tribal Engagement Strategy Strategic Approach based on the rad/nuc detection capability development framework tool. This then corresponds to a desired level of capability class based on population, pathways and risk factors. Because resources are limited, employing this graded approach helps DNDO to determine the appropriate level of rad/nuc detection capability development resources and methods to apply corresponding to the class of capability. It allows DNDO to maximize the number of engagements conducted while conserving more costly resources to address partners that are considered of higher priority.

Initial engagements focus on threat and mission familiarization and are accomplished either by phone and electronic media contact or by State and UASI rad/nuc awareness visits. Subsequent engagements provide training and guidance on rad/nuc detection operations to State, county and municipal agencies in an effort to spur the development of regional nuclear detection programs, thus preparing their expansion over time and addressing gaps in the GNDA. These efforts lead to improved DNDO awareness of the domestic portion of the GNDA and its expanded rad/nuc detection capabilities.

#### *Visible Intermodal Prevention and Response Teams – Description*

The VIPR Project provides coordination between DNDO and TSA to maintain currency with rad/nuc detection plans, training, and exercises; and funds the equipment for the 25 VIPR teams so they may conduct rad/nuc detection missions as part of their routine operations. Funding provides SETA planning support and coordination for the modification/update of VIPR training and exercises.

A VIPR team consists of a supervisor and six members who will be equipped with seven Personal Radiation Detector (PRD) pagers, three Radio-Isotope Identification Devices (RIIDs), and two to four

Radiation Detection Backpacks per team including spares. In addition, a training suite will be provided with a VIPR train-the-trainer module. DNDO is working closely with TSA/VIPR to institutionalize RND courses in VIPR's training academy so that TSA can maintain this capability, as well as aiding VIPR exercise officials to institutionalize rad/nuc detection exercise capabilities.

The TSA VIPR teams are supported pursuant to a Memorandum of Understanding signed by DNDO and TSA which outlines the mutually agreed-upon support.

## **Maritime Capability Development**

### *Description*

This program is intended to use the lessons learned from the West Coast Maritime Pilot (WCMP) to facilitate development of rad/nuc detection capabilities in maritime regions throughout the U.S. Through this program, maritime stakeholders will receive guidance and assistance from DNDO on operational protocols, training, and exercises that support developing small vessel radiation detection capabilities.

The three-year WCMP program began in September 2007 and concluded in December 2010. It contributed to the development of a radiation detection architecture that reduces the risk of rad/nuc threats that could be illicitly transported on recreational or small commercial vessels. The pilot validated the effectiveness of the use of radiation detection equipment by local authorities and maritime partners as part of their routine operations in the maritime environment.

DNDO will work with Federal, State and local authorities, as well as our other maritime partners in maritime regions to assess the geographic configurations of the ports to maximize detection and interdiction opportunities. Maritime stakeholders will also receive guidance from DNDO on operational protocols, training, and exercises that support small vessel rad/nuc detection capabilities.

## **State and Local Users' Groups**

### *Description*

There are numerous ongoing support activities that are important mechanisms for communicating and getting feedback from rad/nuc detection stakeholders. These activities are reflected in the planned projects for this program. Projects included are:

1. State and Local Stakeholder Working Group (SLSWG) Meetings,
2. Executive Steering Council (ESC) Meetings, and,
3. Interior Focus Group (IFG) Meetings.

### *State and Local Stakeholder Working Group (SLSWG) and Executive Steering Council (ESC) - Description*

The SLSWG meetings and the ESC meetings are part of DNDO's ongoing outreach to and collaboration with S&L agencies involved in nuclear detection. Both meetings target operator and leadership partners, and are specifically designed to obtain feedback on DNDO's initiatives, learn about advances in S&L programs, and facilitate communication and coordination among the S&L agencies building rad/nuc detection capabilities.

### *Interior Focus Group (IFG) - Description*

The IFG is primarily inward focused on the refinement or future development of DNDO's Interior mission area strategy and programs. An initial IFG meeting was held at DNDO in February 2010. Two meetings are planned per year to continue efforts to gather user needs and requirements to develop future programs and projects for Interior customers. The focus group is composed of 10-15 State and local representatives and an equal number of representatives from Federal agencies involved in the rad/nuc detection mission. The IFG agenda includes user need collection to drive future rad/nuc detection capability development, identification of areas of interest for future DNDO architecture studies and roundtable discussions to review proposed ideas and identify future initiatives to close domestic rad/nuc detection gaps. The IFG members have also been utilized to peer-review applications from SL&T jurisdictions requesting allocations of  $^3\text{He}$  for the procurement of neutron detection equipment.

### **Mobile Detection Deployment Program (MDDP)**

#### *Description*

Five MDDP systems are currently deployed at DOE Radiological Assistance Program (RAP) team locations around the U.S. and are designated Mobile Detection Deployment Units (MDDUs). These MDDP systems provide a surge capability that can be readily deployed to support rad/nuc detection operations for special events and intelligence-driven searches. RD&O program funds provide for maintenance and operations for 15 deployments annually.

The plan for the deployment of detection systems as part of MDDP was determined by representatives of DNDO and DOE RAP/NA-42. The initial specialized MDDP unit (delivered and fielded in FY 2008) was modeled after a RAP deployment system. The unit will provide a rad/nuc detection package that can be utilized by a myriad of State and local public safety and Federal agencies and will increase RAP capability.

In FY 2009, DNDO procured one large and three small MDDP systems. Utilizing system acquisition funds in FY 2012, the three small systems will be upgraded to large systems by providing an additional 20 sets of HPRDS radiation detection and radionuclide identification instruments, and mobile detection and communications equipment. The five large MDDP response systems will assure full coverage of National Security Special Events (NSSE) and Special Events categorized under the DHS Special Events Assessment Rating Methodology 2008, levels 1 through 4. The deployment strategy is focused on adding systems to expand coverage across the country, increasing the number of events that could be supported, and reducing response times and logistics (costs and resources) to support deployment. Each large response system will consist of a truck towing a tag-along trailer that is configured to safely transport radiation detection and identification instruments, sufficient to field a 40-member team, certain communications-related equipment and support equipment to sites across the United States (i.e., CONUS). Location of systems will be determined according to concentration and priority of identified NSSEs, and Special Events.

## Information Sharing

### *Description*

The DNDO Information Sharing Program establishes and maintains the necessary enterprise and data architectures that enable programs in DNDO, DHS, as well as our Federal, State, local and commercial partners to effectively share rad/nuc information for the purpose of preventing terrorism and enhancing National security. The DNDO Information Sharing program provides subject matter expert support for Governance, Enterprise Architecture, and Data Architecture (to include data management planning and support) to aid the evolution of standardized systems for robust rad/nuc information exchange. The DNDO Information Sharing program conducts activities to aid DNDO programs and projects in collection, documentation, analysis and validation of GNDA-related information. Integrated information sharing and exchange policies, operational concepts, tactics, techniques, and procedures are produced. This enables improved and timelier rad/nuc detection, incident, and information correlation to “connect the dots.”

There are five projects within the Information Sharing program:

- The Data Architecture project provides and sustains validated methods and means for GNDA information exchanges and includes GNDA standard message protocols for information sharing as well as tools and components for implementing interfaces required to exchange data. This project sustains stewardship of the National Information Exchange Model (NIEM) Chemical, Biological, Radiological, and Nuclear (CBRN) domain, maintains the NIEM-conformant N.25 information exchange protocol, and technical tools for producing and validating NIEM artifacts. Subject matter experts under this project are key contributors to and validators of ANSI N42.42, *American National Standard Data Format Standard for Radiation Detectors Used for Homeland Security*.
- The Enterprise Architecture project validates alignment of SDP programs/projects with DHS, DNDO, and GNDA architectures and strategies and assists program/project managers in SDP tailoring decisions. It maintains the DNDO repository of enterprise architecture artifacts and decisions for SDP programs/projects and updates the DHS Enterprise Architecture repositories. This project develops and maintains architecture models and provides associated tools to permit visualization of the GNDA to aid in acquisition decision making.
- The Governance and Process project provides support to all aspects of integrated governance and capital planning: including Capital Planning and Investment Control (CPIC) required under the Clinger Cohen Act, IT Acquisition Review (ITAR) required under DHS Management Directive (MD) 0007.1, and Acquisition Review Process under DHS Directive 102-01. This project provides support for DNDO’s fulfillment of required Enterprise Architecture and Data Architecture governance functions including DNDO participation in the DHS Headquarters governance bodies such as the Data Management and Enterprise Architecture working groups, as well as the Enterprise Architecture Center of Excellence.
- Information Sharing Support provides assistance to DNDO programs to ensure information sharing and interoperability requirements are addressed. The project defines information exchange requirements, strategies, concepts of operation, and develops program and project artifacts such as conceptual and logical data models (CDM and LDM), maps to the DHS, DNDO, and GNDA architecture reference models. This effort also provides support to program and project reviews of artifacts for architecture validation, as well as implementation,

maintenance and administration of the DNDO Enterprise Architecture Repository (DEAR) tool used by various DNDO Directorates.

- The Analysis and Verification project provides expertise and environments for analysis and verification of DNDO's information sharing architecture and capability. The project provides analysis of DNDO's standards and architecture and support for legacy interfaces, and in conjunction with exchanges with existing and emerging GNDA partners provides verification of information exchange architecture, standards, and technology programs and in support of DNDO's programs and projects, to include STC, JACCIS, and MCM. DTRA also maintains a test bed to evaluate compliance with GNDA protocols and standards.

## **Mission Critical Messaging (MCM)**

### *Description*

Mission Critical Messaging (MCM) responds to information integration-related capability gaps identified in the 2009 Joint Interagency Annual Review of the GNDA and the GNDA Annual Report of 2011 - particularly the integration of unclassified information from systems to be used for situational awareness across the GNDA. MCM facilitates the development and implementation of a messaging infrastructure for communicating rad/nuc situational awareness in real time using the NIEM and geospatial message routing by Federal, State, local, tribal, and territorial partners. MCM will leverage the information sharing architecture and standards developed by DNDO to allow our partners to establish messaging infrastructures using commercially available message routing hardware and software which can be acquired and deployed by our Federal, State, and local partners.

Under the efforts of the Southeast Transportation Corridor Pilot (SETCP) in 2007 and 2008, DNDO explored the use of rad/nuc information exchange standards to enhance our ability to share cargo screening information and to support rad/nuc alarm adjudication. With lessons learned in the SETCP, DNDO began prototyping solutions that would scale to provide effective GNDA information sharing. DNDO's partner, DTRA, identified commercial message routing solutions that met DNDO's requirements, and DNDO has successfully connected those technologies to a State counter-terrorism center display system. Based on the success of experimental prototyping efforts and the recommendation of the White House Interagency Policy Committee on "Information Sharing and Architecture," the MCM program is planned to enter the Analyze/Select phase of the DHS Acquisition Lifecycle in FY 2012.

**SUMMARY:** *The following table illustrates the crosswalk between specific projects and activities and the DNDO mission areas.*

<b>PPA: OPERATIONS SUPPORT</b>

<b>2013 Total Requested Budget Authority</b>	-	-	<b>25,564</b>
Total Change 2012 to 2013	-	-	2,564

The Domestic Nuclear Detection Office (DNDO) requests \$25.564 million for this activity. DNDO has identified efficiency savings of \$1.899 million in FY 2013 through a collaborative approach with the national laboratories in the development of methodologies and material signatures.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The importance of accelerating efforts to advance technical nuclear forensics (TNF) capabilities has been highlighted in recent high-level USG policy and planning documents, a study by the National Academy of Sciences (NAS), international counterterrorism forums, and by Congress. The President wrote to Congress on April 30, 2010, in his letter transmitting the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*, that nuclear forensics and attribution are “vital national security priorities.” Both the *Nuclear Posture Review Report* and the *Quadrennial Defense Review (QDR) Report* call for increased efforts to develop nuclear forensics capabilities in light of shifting nuclear policy priorities to a focus on preventing nuclear terrorism. The *QDR* states: “Improving our ability to attribute nuclear threats to their sources can help deter aggressors from considering the use of nuclear weapons, as well as deter state and non-state actors that may provide direct or indirect support of nuclear terrorism...”<sup>3</sup> In its report, *Implementing 9/11 Commission Recommendations: Progress Report 2011*, DHS highlights its efforts to advance nuclear forensics as key to strengthening prevention of rad/nuc terrorism.<sup>4</sup> The NAS conducted a comprehensive two-year study of the nation’s nuclear forensics capabilities and

<sup>3</sup> Quadrennial Defense Review Report, February, 2010, United States Department of Defense, Washington, D.C. p. 36.

<sup>4</sup> *Implementing 9/11 Commission Recommendations: Progress Report 2011*, United States Department of Homeland Security, Washington, D.C., p. 32.

concluded, “Our nation’s ability to conduct forensic analysis of nuclear materials, nuclear explosions, and debris from radiological dispersion devices can contribute substantially to deterring, limiting, and responding to nuclear terrorism.”<sup>5</sup> The NAS report also concluded that nuclear forensics capabilities are “fragile, under resourced, and, in some respects deteriorating. Without...additional resources these capabilities will decline.”<sup>6</sup> This report has become a rallying call for DHS and its partner agencies. International attention has also been turned to the need to develop nuclear forensic capabilities. Participants at the 2010 Nuclear Security Summit stated they would “work together to develop national capacities for nuclear forensics.”<sup>7</sup> Recently, the Global Initiative to Combat Nuclear Terrorism (GICNT) identified nuclear forensics capability development as a near-term priority and established the GICNT Nuclear Forensics Working Group.

DNDO’s responsibility in supporting these national priorities were codified by Congress passed in the *Nuclear Forensics and Attribution Act* (NFAA), which the President signed into law (Public Law 111-140) on February 16, 2010. The NFAA establishes the National Technical Nuclear Forensics Center (NTNFC) within DNDO with the responsibility to provide “centralized stewardship, planning, assessment, gap analysis, exercises, improvement, and integration for all Federal nuclear forensics and attribution activities.” The NFAA also mandates the NTNFC to lead the National Nuclear Forensics Expertise Development Program (NNFEDP) and the development of a Joint Interagency Annual Review of the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.<sup>8</sup>

To fulfill its responsibilities, the NTNFC is organized into three key mission areas. The first assures “Operational Readiness” of the USG national technical nuclear forensics (NTNF) enterprise. Coordination of TNF activities are critical to the success of the forensics mission – ad hoc actions in the aftermath of an event will fail to meet intense demands for rapid and effective response. NTNFC is meeting its integration responsibility by leading joint planning, requirements development, increasingly rigorous exercises, and assessments of nuclear forensics activities to assure readiness at all times and without warning.

Second, the “Technology Advancement” program supports the DNDO mission to serve as the national capability developer for TNF of radiological and nuclear (rad/nuc) materials interdicted before a detonation. These efforts focus on advancing the speed, accuracy, and confidence of TNF analyses, including the development of reference materials necessary for the validation of methods used for characterizing materials; developing new signatures to help identify the origin and pathway of materials; and creating and improving data evaluation and simulation tools to enable the linking of measurement results to both comparison samples and characteristics predicted through modeling and simulation.

Third, NTNFC leads the National Nuclear Forensics Expertise Development Program (NNFEDP), to restore and sustain an enduring nuclear forensics expertise pipeline – one of the most significant challenges facing the national capability. NTNFC is increasing the emphasis it has placed on the

---

<sup>5</sup> *Nuclear Forensics: A Capability at Risk*, (Abbreviated Version), National Research Council of the National Academies, Committee on Nuclear Forensics, (National Academies Press, Washington, D.C.), July 2010, p. vii.

<sup>6</sup> *Ibid.*, 1

<sup>7</sup> *Work Plan of the Washington Nuclear Security Summit*, April 13, 2010, Washington, D.C., p.7

<sup>8</sup> Public Law 111-140-Feb. 16, 2010, United States Government Printing Office.

development and retention of TNF expertise, across the human capital spectrum from the most junior (e.g., student interns, fellows, and junior faculty) to the most senior (e.g., forensic scientists' knowledge capture, formal mentoring, and a stable and sufficient research and development program). The activities in this mission area are well-aligned with the goals for the NNFEDP, as outlined in the NFAA.

### **Strategic Alignment – National Technical Nuclear Forensics Center**

The three mission areas and associated projects of the NTNFC are aligned under the DHS Quadrennial Homeland Security Review (QHSR) Mission 1: Preventing Terrorism and Enhancing Security.

- Goal 1.1: Prevent Terrorist Attacks
  - Objective 1.1.2: Deter and Disrupt Operations
- Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
  - Objective 1.2.1: Anticipate Emerging Threats
  - Objective 1.2.2: Control Access to CBRN
  - Objective 1.2.4: Protection against Hostile Use of CBRN.

The programs and activities of the NTNFC are also aligned with the goals and investment priorities delineated in the *National Strategic Five-Year Plan for Improving the Nuclear Forensics and Attribution Capabilities of the United States*.

### **Operational Readiness Program**

#### *Description*

As highlighted in the NFAA, a fundamental responsibility of DNDO is to advance the TNF readiness of the USG. As the program integrator, NTNFC provides centralized planning, evaluation, and stewardship of USG TNF capabilities through interagency coordination and integration, international collaboration, exercises, assessment, and corrective actions. NTNFC leads the joint development, coordination, and review of foundational planning documents that establish interagency strategic goals, objectives, requirements, processes, plans, and operational procedures for the USG NTNFC mission. NTNFC sponsors and leads assessments to evaluate these efforts and improve the TNF capability across the mission spectrum from pre-detonation to post-detonation, both within the U.S. and abroad. NTNFC coordinates partner agency budgets to facilitate program alignment. Improved integration yields better results by eliminating duplication of effort and examining unfunded gaps.

Concurrent with full interagency integration, another key component of ensuring operational readiness, emphasized by the NAS, is the conduct of regular, rigorous NTNFC exercises. Such exercises assess field sampling techniques, laboratory analysis, data evaluation and reporting, and communication flow. The major exercises alternate between pre-detonation and post-detonation scenarios involving rad/nuc materials. These exercises and focus on the continuous improvement of interactions across the nuclear forensics community. Exploring the technical and operational shortcomings and gaps enable DNDO and its partners to identify corrective actions based on After Action Reports and Lessons Learned. A comprehensive proficiency testing program will also be implemented in step with the validated methodology requirements.

Projects within the Operational Readiness Program:

- The Centralized Planning project addresses the requirement set out in governing documents (NFAA and NSPD-17/HSPD-4) to strengthen USG TNF capability through interagency coordination and stewardship.
- The Assessments and Analysis project addresses the requirement set out in governing documents to strengthen TNF capability through regular evaluations.
- The Exercises project addresses the requirement set out in governing documents to strengthen TNF capability through multi-agency exercises.

## **Technology Advancement**

### *Description*

As recommended by the NAS, the technology of TNF should be advanced, from analytical methods to modeling to validation standards. NTNFC leads activities that advance the USG capability to rapidly, accurately, and credibly characterize and identify the nature, origin and history of rad/nuc materials intercepted before a detonation. The capability develops techniques that enable forensically associating a questioned sample with existing signature families, predictive results from process modeling, or comparative samples (if available) to formulate inclusionary or exculpatory technical conclusions. These efforts strive to close capability gaps in nuclear forensics while increasing performance capabilities for speed, quality, and confidence in collection, analysis, and evaluation techniques. The Technology Advancement program is working to validate methodologies that will provide quality results with well-understood uncertainties in the exploitation of signatures for TNF purposes. NTNFC is developing signatures and data evaluation tools that incorporate all relevant TNF information into technical conclusions that support attribution assessments. Developed methods and signatures are provided to FBI, DoD, DOE, and the Intelligence Community, and other directorates within DNDO could benefit from the products of the Reference Material Development and U and Pu Processing Signatures projects.

Projects within Technology Advancement include:

- The Methodology Benchmarking project will evaluate and benchmark laboratory capability to perform specific analyses and methods that are appropriate for operational forensics use and identify gaps where improved methods are needed.
- Certified reference materials are required by the NTNFC Quality Assurance (QA) Program to validate measurement methods. Well-characterized materials are also required for methodology development, proficiency testing, and exercise activities. The primary goal of the Reference Material Development project is to prepare reference materials and standard tracers to support the schedule of the Methodology Benchmarking project, exercises, and operational QA activities performed by FBI and DOE.
- The New Methodology Development project will develop new methods or improvements to existing methods that increase the speed, accuracy, or precision of a measurement technique. Methodologies developed under this project will advance to the Methodology Benchmarking schedule.

- The Material Characterization project will characterize domestic and foreign material to allow for operational use of validated analytical methods, to inform and support signature development, and to provide information to the Nuclear Materials Information Program (NMIP). As new signatures are developed, materials will be characterized to support development and validation of those signatures. This will be a continuing effort, coordinated with DOE (NMIP), New Methodology Development, New Signature Development, and Data Evaluation Tools projects.
- The New Signature Development project will perform studies to determine material and statistical population characteristics that can uniquely identify linkages with known or predicted material characteristics.
- The Uranium Processing Signatures project will perform small-scale production of uranium materials using a modifiable processing platform for signature development and ability to create well-pedigreed reference materials for signature development and methodology validation.
- Similarly, the Plutonium Processing Signatures project will perform small-scale production of plutonium materials using a modifiable processing platform for signature development and ability to create well-pedigreed reference materials for signature development and methodology validation.
- The Data Evaluation Tools project will develop and demonstrate the next-generation of tools for pattern analysis and methods to articulate whether or not measurements from questioned samples can be included or excluded from specific families of signatures.

## **Expertise Development Program**

### *Description*

A top priority of DNDO's stewardship mission is to lead USG efforts to restore and sustain an enduring nuclear forensics expertise pipeline, one of the most significant challenges facing the national capability. As mentioned, the NFAA recognizes the NNFEDP as critical to cultivating and maintaining a technical workforce capable of performing the NF mission. Led by NTNFC, the NNFEDP provides graduate and undergraduate scholarships, fellowships, and internships; post-graduate fellowships; and university and junior faculty awards for studies and research in specialties relevant to nuclear forensics. Initiatives include the Nuclear Forensics Undergraduate Scholarship Program (NFUSP), the Nuclear Forensics Graduate Fellowship Program (NFGFP), the Nuclear Forensics Post-Doctorate Fellowship Program (NFPDFP), the Nuclear Forensics Education Award Program (NFEAP), and the Nuclear Forensics Junior Faculty Award Program (NFJFAP), among other efforts. The NNFEDP addresses the nation's need for talented, qualified, next-generation nuclear forensics scientists to support an enduring TNF capability. DNDO continuously evaluates the state of work force within the national laboratory system relative to USG NTNFC mission requirements in order to appropriately scale and scope the NNFEDP into the out-years. In addition, DNDO has partnered with the National Academy of Sciences on a study to assess the supply and demand for nuclear chemistry and radiochemistry expertise in the U.S. over the next 20 years.

This program is unique from broader science and technology Federal education programs in its deliberately narrow focus on filling specific, identified gaps within the nuclear forensics field. NNFEDP scholars, fellows, university, and faculty awardees must pursue degrees, conduct research, and build academic programs that directly contribute to advancing the USG TNF mission. The

NNFEDP utilizes a unique interdisciplinary approach to the TNF problem that encourages collaboration among academic programs, universities, and the national laboratories. In addition, DNDO chairs the NTNF Expertise Development Committee (EDC) in order to ensure cross-agency integration and participation in the NNFEDP. The EDC provides a forum to plan, coordinate, and execute joint initiatives within the NNFEDP to facilitate collaborative efforts among NTNF interagency partners, avoiding duplication, leveraging funding, and ensuring robust Federal support and unity of effort. Active participants include DHS, DOE/NNSA, DoD/DTRA, and the FBI.

Projects within Expertise Development include:

- The Academics project supports a current GPRA Performance Metric for DNDO. NTNF Strategic Five-Year Plan activities and investment areas under this goal include the implementation of academic and workforce programs designed to fill gaps in the expertise pipeline and ensure a robust and enduring TNF workforce, and the need to build upon the success of activities initiated in FY 2008-2009 and expand them in a controlled and measured fashion to achieve a steady-state goal beginning in FY 2012. Initiatives included in this project include graduate and undergraduate scholarships, fellowships, and internships and university and junior faculty awards for studies and research in specialties relevant to nuclear forensics.
- The Laboratories project supports post-doctorate fellowships at the national laboratories, and funds these laboratories to provide one-on-one mentorship to graduate students in nuclear forensics-related research areas.
- The Assessments project maintains a current assessment of the needs and status of the TNF workforce and pipeline.

**SUMMARY:** The table below illustrates the crosswalk between specific projects and activities and the DNDO mission areas.

<b>PPA: FORENSICS</b>

## IV. Program Justification Changes

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Transformational Research and Development  
PPA: Transformational Research and Development  
Program Increase: Positions 0, FTE 0, Dollars \$43,897

### Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	40,000
Program Increase							-	-	43,897
<b>Total Request</b>	-	-	<b>98,478</b>	-	-	<b>40,000</b>	-	-	<b>83,897</b>

### Description of Item

Transformational Research and Development focuses on dramatically improving nuclear detection capabilities, addressing enduring vulnerabilities, and reducing the operational burden of rad/nuc detection. The funds requested for Transformational Research and Development in FY 2013 will allow DNDO to sufficiently support efforts across the three major research programs that constitute the TAR research portfolio, including Advanced Technology Demonstrations (ATDs), the Exploratory Research program, and the Academic Research Initiative. The amount requested for FY 2013 will restore DNDO R&D programs to funding levels commensurate with prior years.

### Justification

The funding increase for the Transformational Research and Development (TAR) PPA supports six ongoing programs and restores 14 projects that were put on hold. This restoration of funding ensures a healthy and robust R&D program which delivers new and integrated technologies. To ensure a strong return on investment for R&D projects, all projects are aligned with identified needs or GNDA gaps, and are characterized and evaluated throughout their life to determine their feasibility and merit for further investment or transition to commercial development.

### Impact on Performance (Relationship of Increase to Strategic Goals)

Examples of items funded in FY 2013 include:

- Advanced Technology Demonstrations:

- Due to FY 2012 funding constraints, the Mobile Radiation Imaging and Tracking System (MRITS) ATD initially planned for FY 2012 will begin in FY2013.
- TAR will restore the full effort to the Nuclear and Radiological Imaging Portal (NRIP) ATD and initiate the Mobile Radiation Imaging and Tracking System (MRITS) and Portable Advanced Neutron Detector (PAND) ATD's. These changes will allow TAR to continue its research focus on active interrogation methods using naturally-occurring radiation flux, integration of multiple sensor systems to enhance long-range radiation detection, and alternative systems for neutron detection.
- Exploratory Research Program:
  - Exploratory Research Programs: Restore solicitations for new research and development in all six topic areas considered key to filling gaps in the GNDA including: Algorithms, Materials, Neutron, Passive Detection, Shielded SNM, and Nuclear Forensics. These solicitations will develop high-reward technologies and will resume support for ongoing promising research at both National Laboratories and Industry.
- Academic Research Initiative:
  - Academic Research Initiative: With funding requested in FY 2013, DNDO will renew the DNDO/National Science Foundation partnership by initiating solicitations designed to support research efforts in five topic areas designed to address the gaps identified in the GNDA. In addition to providing potentially break-through technologies, renewing the partnership will have the added bonus of supporting over 90 students conducting graduate research in nuclear chemistry, engineering and physics.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 2:** Operations Support  
PPA: Operations Support  
Program Increase: Positions 0, FTE 0, Dollars \$3,290

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	32,389
Program Increase							-	-	3,290
<b>Total Request</b>	-	-	<b>32,656</b>	-	-	<b>33,000</b>	-	-	<b>35,679</b>

**Description of Item**

DNDO is focusing its efforts towards domestic prevention and detection capabilities, particularly efforts with State and local agencies, including the Maritime Domain, and prioritizing its prime mission of developing the domestic portion of the GNDA. Examples of funded initiatives include establishing and maintaining the necessary enterprise and data architectures that enable programs in DNDO, DHS, as well as our Federal, State, local and commercial partners to effectively share rad/nuc information for the purpose of preventing terrorism and enhancing National security.

**Justification**

The Information Sharing Program (ISP) provides the necessary Enterprise and Data Architecture to enable our Federal, State, local and commercial partners to share rad/nuc information against a common operating picture. The Mission Critical Messaging (MCM) program provides the capability to implement automated sharing of rad/nuc information across a wide range of partners utilizing protocol translation techniques. DNDO is consolidating these programs under the Operations Support PPA to enable and better align with the common objectives of GNDA partners.

The Maritime Capability Development (MCD) program is being combined with all other rad/nuc assistance programs to address standard, but tailorable, methods to scan people, cargo, vessels, and other conveyances at seaports of entry and on seas, oceans, or other navigable waterways. DNDO is working with maritime stakeholders to standardize operational protocols, training, and exercises in the maritime domain to the extent possible.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

Funds requested will contribute to the attainment of the GNDA Strategic Plan Performance Goals for international and domestic information sharing; the development of Federal, State and local nuclear

and radiological detection architectures; and the maintenance of connectivity among those deployed systems.

The MCD program is similar to other assistance programs that provide standard tailorable training, equipment and operational doctrine to aid State and local partners with the implementation or enhancement of their local detection capabilities and the operational coordination with Federal Stakeholders. This program is linked to DNDO programs that will implement additional capability with Federal Partners to ensure a coordinated approach to address this GNDA vulnerability.

These program changes provide for enhanced GNDA situational awareness among all Federal partner organizations as well as improved communication infrastructures, protocols, public messaging systems, and coordination with international organizations and foreign partners.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 3:** National Technical Nuclear Forensics Center  
PPA: National Technical Nuclear Forensics Center  
Program Increase: Positions 0, FTE 0, Dollars \$4,463

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	21,101
Program Increase							-	-	4,463
<b>Total Request</b>	-	-	<b>23,032</b>	-	-	<b>23,000</b>	-	-	<b>25,564</b>

**Description of Item**

The National Technical Nuclear Forensics Center (NTNFC) serves as the USG focal point for the National Technical Nuclear Forensics program. Specific advancements in laboratory technical capabilities for special nuclear material forensics and processing will be funded to enhance the Nation’s ability to handle and examine materials. Additionally, the NTNFC will use funds to strengthen interagency and international coordination and analysis for nuclear forensics, including an end-to-end interagency nuclear forensics exercise.

**Justification**

The forensics funding increase of \$4.463 million will support priorities which are required by Public Law 111-140, Presidential Directive, and the National Strategic Five-Year Plan. Funding will support national Expertise Development, Technology Advancement, and Operational Readiness.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

Requested funding will support implementation of the NFAA requirements for nuclear forensics activities and priorities. The NTNFC will utilize the increase in funds to address capability development identified by the National Academy of Sciences Report (“Nuclear Forensics: A Capability at Risk”) and focus on DHS responsibilities to continue advancement of technical pre-detonation forensics analytical methods, capabilities exercises, and address academic pipeline issues.

With this increase to the Forensics PPA, DNDO will increase its interagency stewardship and leadership in the post-detonation area by expanding its planning and logistics support to accomplish a multi-phase or end-to-end exercise in the FY 2013 timeframe. NTNFC is the driving force behind this

effort to meet the Presidential requirement and NAS recommendation for periodic large scale robust exercises. Additionally, the increase will enable DNDO to produce three certified reference materials as well as advance methods for trace actinide, trace element, and age-dating analyses in preparation for multiple bulk Uranium and Plutonium benchmarking studies. These materials and studies will be used to further forensic analysis development, operational laboratory method validation, and quality assurance.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 4:** Systems Engineering and Architecture  
PPA: Systems Engineering and Architecture  
Program Increase: Positions 0, FTE 0, Dollars \$1,295

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	28,796
Program Increase							-	-	1,295
<b>Total Request</b>	-	-	<b>34,607</b>	-	-	<b>30,000</b>	-	-	<b>30,091</b>

**Description of Item**

In the National Security Presidential Directive (NSPD) 43 / Homeland Security Presidential Directive (HSPD) 14, DNDO is mandated to, “serve as the primary entity in the United States Government to further develop, acquire, and support the deployment of an enhanced domestic system to detect and report on attempts to import, possess, store, transport, develop or use an unauthorized nuclear device, fissile material or radiological material in the United States.”

Systems Architecture determines gaps and vulnerabilities in the existing GNDA and then formulates recommendations and plans to develop an enhanced architecture. Several key elements exist with global architecture including (a) a multi-layered structure of Rad/Nuc detection systems, deployed both domestically and overseas, (b) a well-defined and carefully coordinated network of interrelationships among them, and (c) guidelines governing the architecture’s design and evolution over time. Systems Architecture, in cooperation with DNDO’s intra- and interagency partners, develops time-phased strategies and plans for improving the probability of detecting and preventing rad/nuc attacks.

**Justification**

The funding increase of \$1.295 million will support priorities which are consistent with DHS Secretary’s goal to focus on programs that provide maximize benefit by shifting funds from lower priority activities resulting in gaining resources due to efficiencies.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

Efficiencies initiatives within DNDO have resulted in additional resources to complete Capabilities Based Assessments, and modeling in support of the radiological and nuclear threat risk assessment (RNTRA). These efforts support developing an enhanced GNDA, including both domestic and

international components. DNDO is also leading the development of the GNDA Implementation Plan that catalogs USG Activities that serve to detect, analyze, and report on rad/nuc materials that are out of regulatory control.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Research, Development, and Operations:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:** Systems Development  
PPA: Systems Development  
Program Decrease: Positions 0, FTE 0, Dollars \$(21,496)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	49,897
Program Decrease							-	-	(21,496)
<b>Total Request</b>	-	-	<b>68,420</b>	-	-	<b>51,000</b>	-	-	<b>28,401</b>

**Description of Item**

Funding reductions to the Systems Development PPA are partially the result of DNDO's transition from large, government-sponsored development initiatives to Commercial First approaches in order to more efficiently and effectively develop and deploy technology. The decrease is also a result of prioritizing funding to support the procurement of HPRDS for DHS frontline operators and solutions to address aviation cargo scanning.

**Justification**

The proposed decrease in Systems Development reflects a prioritization of funds to meet the critical need for rad/nuc detection equipment by DHS Operational Components. DNDO reviewed its programs to ensure the right mix of programs are funded and will support GNDA priorities. The following programs will not be funded in FY 2013:

- Cargo Imaging for Shielded Nuclear Threats (CISNT)
- On Dock Rail & International Rail

The following high priority programs will be funded:

- Human Portable Tripwire (HPT) program is able to complete a commercial first approach in FY 2013.
- Algorithm Improvement, <sup>3</sup>He Shortage Mitigation, Human Portable Wide-Area Search (HPWAS), Small Vessel Standoff Detection, Land Border Capabilities, and Multi-Pathway Scanning are fully funded in FY 2013.

- Polyvinyl Toluene (PVT) Improvement program is funded in FY 2013.

### **Impact on Performance (Relationship of Increase to Strategic Goals)**

Meeting the critical acquisition needs for rad/nuc detection equipment by DHS operational components resulted in the elimination of development programs such as International Rail, On Dock Rail, and CISNT, which were planned to deliver solutions for their respective capability gaps. In the future, DNDO will revisit potential solutions that address the technical challenges associated with addressing these capability gaps, and evaluate the risk of threats transported through these gaps to maintain the possibility of restart along with the other funded development programs.

Funding for the HPT and HWAS has been increased from prior years as DNDO attempts to drive development by industry to address nuclear detection requirements. The funding provides for the testing of commercially developed solutions utilizing government sources.

DNDO is shifting funding that would have been directed to improve the capability and possibly extend the service life of existing PVT Systems currently deployed. DNDO began to explore potential improvements in FY 2009, continuing with the funding provided in the FY 2010. In FY 2012, DNDO will complete development for selected improvement candidate solutions. Funding requested in FY 2013 will support the completion of developmental testing and provide for Field Validation testing of solutions.

Current Services Level							-	-	37,392
Program Decrease							-	-	(4,194)
<b>Total Request</b>	-	-	<b>40,799</b>	-	-	<b>38,000</b>	-	-	<b>33,198</b>

**Description of Item**

Specific Assessment programs that maintain level funding as on-going, support programs to all DNDO directorates include: Test and Evaluation (T&E) Operations, T&E Infrastructure, Algorithm Test Bed, Directed Testing, and Test Data Management, and Red Team and Net Assessments (RTNA).

**Justification**

Funding reductions in the Assessments PPA reflect prioritization of the operational need to provide frontline operators with human portable nuclear detectors. Reflecting this need, in FY 2013 infrastructure funding is decreased, eliminating the funding for the Rail Test Center at the port of Tacoma and reducing funding to support the DNDO test data collection system. In addition, funding to support on-going test operations and the DNDO Directed Testing has been reduced and funding for pilots has been eliminated.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

Since 2007, DNDO has maintained a testing capability in an operational port environment with the RTC at the port of Tacoma, Washington. This capability has been invaluable in conducting operationally relevant test and evaluation of rad/nuc systems for use at sea ports of entry. Crane-mounted systems, mobile systems, hand-held detectors, and the radiation detection straddle carrier were all tested at the RTC. The capability of the RTC test team has also supported On-Dock Rail Program Stream of Commerce (SoC) testing, including performing specialized studies (Background Studies, Baseline Data Collections), and Modeling and Simulation support to inform the Alternatives Analysis. The RTC also provides DNDO with an alternative data collection system (CORE) that is currently supporting the ITRAP+10 test campaign. Without the RTC, DNDO will lose the capability to execute 1 or more test campaign annually. The Department will seek to use other facilities and the

RNCTEC, as appropriate, to test and evaluate nuclear detection systems, but these alternative test venues cannot replicate the environment in an actual operational port.

The Directed Test Program provides for structured test campaigns to characterize currently available equipment in operationally relevant scenarios and CONOPS to inform Federal, State and local entities of nuclear detection system capabilities to allow informed equipment selection decisions. The test campaigns funded under this line item have been some of the most impactful test activities conducted by DNDO, including the Crawdad (Maritime Rad/Nuc Detection Systems), Dolphin (Maritime Systems in operational environment), ITRAP+10, and Gryphon (Aerial-Mounted Radiation Detection Systems) test campaigns. At reduced funding levels, the scope and impact of future directed test campaigns will be lessened by approximated 20%.

Funding has also been reduced in the Test and Evaluation Operations Support line item. This will reduce the institutional support from independent Subject Matter Experts (SMEs) and test engineers to plan, execute, and analyze the results. The number of test and evaluation campaigns that can be supported by DNDO T&E program will be reduced by approximately 22%.

Similar to Directed Tests, the Pilots Program provides opportunities to evaluate operational utility of mature nuclear detection technology, but with the pilot conducted in an operational environment with actual end-users operating the equipment to screen stream of commerce in accordance with approved CONOPs, alarm adjudication, and reach-back procedures. DNDO will defer conducting pilots to focus on the highest priority requirements in FY 2013 or those funded by a transformational or development program.

**V. Exhibits and Other Supporting Material**  
**A. Justification of Proposed Legislative Language**

For necessary expenses for radiological and nuclear research, development, testing, evaluation, and operations, \$236,830,000, to remain available until September 30, 2015. (Department of Homeland Security Appropriations Act, 2013.)

**Explanation of Changes:**

No substantive changes included.

### Systems Engineering and Architecture Mission Statement

Systems Engineering and Architecture: DNDO Systems Engineering and Architecture programs are (1) developing an enhanced global nuclear detection architecture, including both domestic and international components, and (2) maintaining and supporting a disciplined systems engineering approach throughout DNDO. The global architecture is comprised of several key elements: a multi-layered structure of radiological/nuclear detection systems, deployed both domestically and overseas; a well-defined and carefully coordinated network of interrelationships among them; and a set of systems engineering-based principles and guidelines governing the architectures design and evolution over time.

### Summary Justification and Explanation of Changes

Object Classes	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel and transportation of persons</b>	<b>194</b>	<b>167</b>	<b>136</b>	<b>(31)</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request is \$136,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	6,406	3,325	4,442	(1,117)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request is \$4,442,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.2 Other services	80	-	-	-

Other services include report contractual services with non-Federal sources that are not otherwise classified under Object Class 25. The FY 2013 request is \$0.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accounts	17,240	7,154	7,303	149

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 request is \$7,303,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.5 Research and development of contracts	10,688	21,824	18,211	(3,613)

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2013 request is \$18,211,000. DNDO develops time-phased strategies and plans for improving the probability of detecting and interdicting rad/nuc attacks. Studies and analyses are performed to characterize GNDA gaps, identify options, evaluate the advantages and disadvantages of alternative solutions, and formulate time-phased plans for reducing risk. The time-phased aspect of the plans is important because it allows for the integration of current and near-term technologies and approaches, as well as longer-term options that may draw upon technologies that are currently in the R&D phase that may not be available for implementation for several years.

**Transformational research and development Mission Statement**

DNDO's transformational and applied R&D program seeks to identify, explore, develop, and demonstrate scientific and technological approaches that meet one or more of the following criteria: address gaps in the GNDA, dramatically improve the performance of nuclear detection components and systems, or significantly reduce the operational burden of rad/nuc detection. Dramatic technological improvements may include improvements in system or component effectiveness and performance characteristics; reduction in cost of acquisition or maintenance; or reduction of operational burden by users in the field. R&D investments are made based on competitive awards, with investigators in all sectors government laboratories academia, and private industry encouraged to participate. This program takes advantage of the qualities and respective advantages of all three sectors to develop products, and teaming among them is encouraged. Transformational and applied R&D is carried out within three major programs: Exploratory Research (ER), Academic Research Initiative (ARI), and Advanced Technology Demonstrations (ATD).

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change

**Assessments Mission Statement**

Assessments: The DNDO research, development, and acquisition process is anchored by an independent assessment of DNDO-mission related programs as they are developed, deployed, and implemented, as well as a continual assessment of the global nuclear detection and reporting architecture, through a variety of means. Assessments programs include test and evaluation (T&E) campaigns to characterize technologies and systems, execution of pilots with operational agencies to evaluate concepts of operation, red teaming assessments to deepen our understanding of adversary capabilities, and net assessments to identify the effectiveness of the planned and deployed global nuclear detection and reporting architecture.

**Summary Justification and Explanation of Changes**

Object Classes	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel and transportation of persons</b>	<b>413</b>	<b>573</b>	<b>421</b>	<b>(152)</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. Travel supports Cross Cutting Functions such as Red Team and Net Assessments, and includes Test and Evaluation Program and Test and Evaluation Operations as well. The FY 2013 request is \$421,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	7,129	6,505	5,008	(1,497)

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request is \$5,008,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.3 Purchases from Gov't accounts</b>	27,308	11,430	12,185	755

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. Purchase from Government Accounts includes inter-agency agreements with national laboratories. The FY 2013 request is \$12,185,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.4 Operation and Maintenance of facilities</b>	-	10,152	9,523	(629)

Operation and maintenance of facilities include all payments for the operation and maintenance of facilities when done by contract with the private sector or another Federal Government account. The FY 2013 request is \$9,523,000. The testing of detection systems against special nuclear materials in significant quantities and in realistic configurations is a key assessment of rad/nuc systems.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.5 Research and development of contracts</b>	5,665	5,491	5,902	411

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The DNDO research, development, and acquisition process is anchored by the assessment of DNDO-mission related programs as they are developed, deployed, and implemented. The FY 2013 request is \$5,902,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>41.0 Grants/Subsidies/Contributions</b>	284	4,000	159	(3,841)

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2013 request is \$159,000.

**Operations support Mission Statement**

DNDO Operations Support is responsible for supporting the situational awareness of the nuclear and radiological landscape and the global nuclear detection architecture, while directly facilitating the technical adjudication of rad/nuc incidents. The capability of the JAC is the 24/7 DNDO information hub, and the essence of DNDO's rapid information reporting. Additionally, Operations Support develops training, exercises, information sharing capabilities, and analytical tools necessary to create a fully integrated operating environment to be used by Federal, State, and local law enforcement agencies, as well as the larger intelligence and counterterrorism communities.

**National Technical Nuclear Forensics Center Mission Statement**

DNDO's National Technical Nuclear Forensics (NTNF) capability serves as an integral component and layer of the United States Government (USG) effort to combat nuclear terrorism. This capability provides means for the collection, analysis, and evaluation of rad/nuc materials and associated evidence for the purpose of comprehensive and timely forensic analysis to contribute to attribution conclusions. An effective forensics and attribution capability will inform national response deliberations and can also help to prevent a follow-on attack. At the strategic level, nuclear forensics can contribute to deterrence and prevention by promoting the concept of nuclear accountability for nations that may wittingly or unwittingly enable a terrorist to obtain nuclear devices or materials.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel and transportation of persons</b>	<b>84</b>	<b>108</b>	<b>118</b>	<b>10</b>

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request is \$118,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	3,286	2,101	2,288	187

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request is \$2,288,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.3 Purchases from Gov't accounts	19,347	21,034	22,908	1,874

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 request is \$22,908,000. The National Technical Nuclear Forensics Center (NTNFC) serves as the USG focal point for the National Technical Nuclear Forensics program. The funding increase in the NTNFC PPA supports priorities which are required by Public Law 111-140, Presidential Directive, and the National Strategic Five-Year Plan. Funding will support national Expertise Development, Technology Advancement, and Operational Readiness.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.5 Research and development of contracts	315	230	250	20

Research and Development includes costs for contracts for the conduct of basic and applied research and development. The FY 2013 request is \$250,000. The pre-detonation rad/nuc materials forensics capability development is the NTNFC's primary R&D mission. Forensics is focused on ensuring and advancing the capability to perform rad/nuc materials analysis and evaluation. This involves isotopic and chemical composition and physical structure. This R&D is used to address identified gaps and shortfalls in the capabilities.

# **BUDGET REQUEST AND SUPPORTING INFORMATION**

## **Domestic Nuclear Detection Office Systems Acquisition**

### **I. Appropriation Overview**

#### **A. Mission Statement for Systems Acquisition:**

The Domestic Nuclear Detection Office (DNDO) acquires radiological/nuclear (rad/nuc) detection equipment for other Department of Homeland Security (DHS) Components, including the United States Coast Guard (USCG), Customs and Border Protection (CBP), and the Transportation Security Administration (TSA). In addition, DNDO issues grants under the Securing the Cities Program allowing State, local and tribal authorities in the highest risk metropolitan areas to develop nuclear detection capabilities enabling them to interdict radiological material out of regulatory control. DNDO plays an important role in ensuring that deployed systems are evaluated prior to acquisition decisions, so that the performance capabilities of these systems are well understood. All deployed technologies, for Federal, State and local partners are accompanied by the appropriate concepts of operations (CONOPS) development, training, exercises, and alarm response protocols.

Additionally, DNDO is focusing efforts to develop surge capabilities to detect threats within the context of limited or imperfect intelligence, warnings, or indicators. Ongoing work on the Global Nuclear Detection Architecture (GNDA) emphasizes mobile or agile detection components, which will increase the capability to respond to escalated threat levels by focusing detection assets on effective interdiction. The architecture must account for physical and technical limitations in order to achieve the best strategies, systems, and operations for nuclear detection. DNDO will use existing capabilities and a variety of operations and assets at the Federal, State, local, and tribal levels to surge our rad/nuc detection capabilities in a coordinated fashion in response to suspected threats. The ability to surge rad/nuc detection capabilities will necessarily rely on the multiple State and local law enforcement agencies that are available to perform rad/nuc detection operations using mobile and human-portable sensors.

#### **B. Budget Activities:**

##### **Radiation Portal Monitor Program**

The U.S. land border is the first layer within the GNDA where the United States has full control over detection and interdiction operations. As such, significant effort and resources have been placed since 2004 at this layer, particularly at ports of entry (POEs). After 9/11, considerable concern was raised about the possibility that terrorists could use the enormous volume of cargo flowing into the United States as a pathway for bringing in nuclear material or a nuclear weapon. The Radiation Portal Monitor Program (RPMP) was established by CBP, and later transferred the acquisition aspects to DNDO, with the objectives of deploying monitoring equipment at the United States POEs and providing the scientific and technical expertise to design, acquire, and deploy these systems. CBP retained the operations and maintenance functions of the RPMP program. Additionally, in the SAFE

Port Act, Congress mandated that all containers coming in through the top 22 seaports, by volume, be scanned for radiation. To address this mandate, DNDO has acquired and deployed commercial-off-the-shelf (COTS) first-generation polyvinyl toluene (PVT) RPMs in accordance with CBP priorities, as defined in a joint DNDO/CBP deployment strategy.

A key consideration in rad/nuc detection is the ability to effectively detect threats without impeding the flow of legitimate trade and travel across the border in the most effective and efficient manner. CBP currently scans cargo entering the nation's POEs using Polyvinyl Toluene (PVT) based RPMs that can detect radiation, but cannot distinguish between threat materials and naturally-occurring radioactive material (NORM), such as kitty litter and ceramic tiles. These are often sent for secondary screening where additional PVTs or Radio-Isotope Identification Devices (RIIDs) are utilized.

The FY 2013 RPMP budget request will support the Domestic Airport Deployment project, as a part of the Multi-Pathway Systems and Scanning Integration program. This program directly supports Performance Goal 2.1 as stated in the GNDA Joint Annual Interagency Review 2011: "Deny entry of unauthorized nuclear and radiological materials into the United States at ports of entry." The Domestic Airport Deployment project will develop and field capabilities by optimizing combinations of mobile, fixed, and human portable rad/nuc detection systems for scanning inbound international air cargo at air ports of entry (APOEs). These systems may also provide opportunities to enhance international general aviation (IGA) rad/nuc detection operations, where rad/nuc scanning is conducted using hand-held nuclear detectors. The budget requested for FY 2013 begins the deployment of RPMs to Airports of Entry (APOEs). Initial deployment plans include outfitting APOEs that receive large volumes of international air cargo where chokepoints of cargo flow exist and fixed systems are operationally feasible.

### **Securing the Cities Program**

The objective of the Securing the Cities (STC) Program is to reduce the risk of a rad/nuc attack in high-risk metropolitan areas by evaluating and enhancing regional capabilities to detect and interdict radiological materials out of regulatory control. The New York City (NYC) region was the first to participate in this initiative. The FY 2013 budget request continues the emphasis on supporting State and local nuclear detection operations through a three-phased STC Program. This three phase approach will provide for the implementation of nuclear detection capabilities in select Urban Area Security Initiative (UASI) Tier 1 regions. Risk based objectives will form the cornerstone of DNDO's implementation the domestic layer of the GNDA. Additional resources for the NYC region for the development of enhanced detection, communication, and coordination are included. The three program phases are described below.

#### **Phase I**

DNDO provides a mechanism for cities to develop an initial operating capability to detect and report the presence of rad/nuc materials that are out of regulatory control. This capability utilizes detection equipment, protocols, and personnel and is integrated into and supports the GNDA. During Phase I, efforts will focus on satisfying the immediate needs of State and local agencies in developing baseline detection and reporting capability. DNDO will provide resources that give partners an increased understanding and awareness of the nuclear threat, enhanced regional capabilities to detect and interdict radiological or nuclear threats, and

increased cooperation and coordination among regional jurisdictions and agencies. Initial capabilities include development of CONOPS and alarm adjudication protocols, deployment of equipment, training and exercise support, as well as technical program assistance. Phase I concludes when the region establishes a nuclear detection program encompassing coordinated operations, self-delivered nuclear detection training and exercise capabilities, and puts in place a plan to sustain the program over time in support of the GNDA.

## **Phase II**

DNDO provides additional resources to enhance detection, analysis, communication and coordination that better integrates State and local capabilities with Federal government activities and the GNDA above existing or Phase I levels. In this phase, the Federal government will leverage capabilities established locally in Phase I to partner with State and local jurisdictions to ensure a nationally coordinated response in support of the GNDA. In addition, DNDO will work with the STC partners to define end states for DNDO direct support to State and local activities. Phase II concludes when a region successfully demonstrates its ability to integrate into a national nuclear detection framework in support of the GNDA.

## **Phase III**

DNDO provides indirect support to sustain the program. Although no additional DNDO funding will be provided to the region, DNDO will maintain connectivity with the established local architecture through alarm adjudication and subject matter expertise to provide advice on training, exercise, and other program support. State and local participants will maintain and improve their developed capabilities to support the GNDA using local funds or other Federal government grant funds.

STC aims to produce linkages between implementation sites allowing a comprehensive national security layer. A multi-year engagement is needed for each UASI region to complete Phases I through III, depending on the complexity and needs of the region. However, the project plan for an engagement includes programmatic controls with specific time limits and a 5-year cap for DNDO funding through the first two phases.

The FY 2013 budget request for STC will focus on maturing a second UASI region and will complete directed STC activities within the Newark & New York City (NYC) regions with the funding requested in FY 2013. The model built in the NYC region is a successful architecture and the knowledge gained in this endeavor has allowed DNDO to realize significant efficiencies for future metropolitan areas. Continued operational support for the Newark & NYC Regions is provided through alarm resolution, exercise planning and assessment of capabilities. In transitioning from the Pilot in the NYC region, DNDO has set programmatic controls with specific time and funding limits, and will provide life cycle costs specifically detailing State and local resource requirements.

## **Human Portable Radiation Detection Systems**

Federal, State, and local law enforcement communities all require human portable radiation detection capabilities for illicit nuclear material for their routine and contingency radiation detection missions. DNDO procures rad/nuc detection and identification equipment on behalf of DHS Components and for specific events State and local law enforcement. Human Portable Radiation Detection Systems

(HPRDS) consists of projects supporting multiple users and programs designed to detect and identify rad/nuc threats. The objectives of HPRDS projects are to expand the range of activities and address different types of conveyances and cargo to be scanned for rad/nuc material. HPRDS PPA supports the procurement of multiple types of equipment for CBP, USCG, TSA's Visible Intermodal Prevention and Response (VIPR) teams; procurement of equipment for the Mobile Detection Deployment Program (MDDP), to provide a surge capability in support of nuclear and radiological detection operations; and the Helium-3 ( $^3\text{He}$ ) Shortage Acquisition Program.

The FY 2013 budget request will provide funding to meet the partial fulfillment of technology refresh for the USCG and CBP with enhanced Radio-Isotope Identification Devices (RIIDs), and initiate the acquisition of nuclear detection equipment for boat-to-boat scanning capability. The Small Vessel Standoff Detection (SVSD) Program will improve the efficiency of scanning vessels under 300 tons by providing equipment to conduct stand-off detection for nuclear material. Even though the budget request reflects the deployment of significantly enhanced capability to priority mission areas that will close the gap inherent to the currently-fielded equipment and reflects an ongoing emphasis on detection capabilities that can be surged in response to threat data.

**C. Budget Request Summary:**

The Domestic Nuclear Detection Office requests \$51.455 million in FY 2013 funding for the Systems Acquisition appropriation.

## II. Summary of FY 2013 Budget Estimates by Program/Project Activity (PPA)

### III. Current Services Program Description by PPA

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Radiation Portal Monitor Program  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Radiation Portal Monitor Program**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>26,274</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>7,000</b>
2013 Adjustments-to-Base	-	-	-
<b>2013 Current Services</b>	-	-	<b>7,000</b>
2013 Program Change	-	-	(5,645)
<b>2013 Total Requested Budget Authority</b>	-	-	<b>1,355</b>
Total Change 2012 to 2013	-	-	(5,645)

The Domestic Nuclear Detection Office (DNDO) requests \$1.355 million in FY 2013 for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

The objective of the Radiation Portal Monitor Program (RPMP) is to acquire and deploy fixed or transportable nuclear detection monitoring equipment to the United States ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, and deploy these systems.

**QHSR Strategic Alignment - RPMP**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR)
  - Mission 1, Preventing Terrorism and Enhancing Security
    - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
      - Objective 1.2.3: Control Movement of CBRN
      - Objective 1.2.4: Protection Against Hostile Use of CBRN

**Radiation Portal Monitor Program**

*Description*

Historically, the Radiation Portal Monitor Program, within the RPMP PPA, has been the source of funding for the acquisition and deployment of fixed portal monitors at the nations’ Land Border and

Sea Ports of Entry (POE). While DNDO will continue to oversee the deployment of remaining Polyvinyl Toluene (PVT) Systems, new acquisition of fixed systems under the Domestic Aviation Deployment Project will take priority in FY 2013. No funding is requested in FY 2013 for the acquisition of new systems at Land Border or Sea POEs.

Background: The U.S. border is the first layer within the Global Nuclear Detection Architecture (GNDA) where the United States has full control over detection and interdiction. As such, over \$630 million has been invested in this layer to provide comprehensive radiological and nuclear (rad/nuc) detection capabilities, POEs. After 9/11, considerable concern was raised about the possibility that terrorists could use the enormous volume of cargo flowing into the United States as a pathway for bringing in nuclear material or a nuclear weapon. By far, the largest mode for incoming cargo is maritime shipping containers, with approximately 11 million containers coming into the country every year, so it was with a sense of urgency that this pathway was addressed. In the SAFE Port Act, Congress mandated that all containers coming in through the top 22 seaports, by volume, be scanned for radiation. DHS is meeting this mandate.

A critical component of the DNDO nuclear detection architecture is a passive radiation detection portal suitable for examining cargo containers, trucks, privately owned vehicles, mail, and bundled cargo. The primary technical challenge associated with the development of such a device is the accurate and rapid detection of radiological and nuclear threat objects and materials, with efficient discrimination of innocent radiating materials from dangerous special nuclear materials. DNDO continues to analyze the suitability of various passive radiation detection portals (fixed or mobile) at POEs, including seaports, land border crossings, and airports; or between POEs.

### **Multi-Pathway Systems and Scanning Integration: Domestic Airport Deployment Project**

#### *Description*

Background: The Domestic Airport Deployment project, as part of the Multi-Pathway Systems and Scanning Integration program will develop and field capabilities by optimizing combinations of mobile, fixed, and human portable rad/nuc detection systems for scanning inbound international air cargo. Note: The GNDA addresses four pathways (aviation, maritime, land border, and interior. Air cargo is an important subset of the aviation pathway. These systems may also provide opportunities to enhance international general aviation (IGA) nuclear detection operations. Aside from international mail and express consignment carrier shipments, almost all rad/nuc scanning of cargo and IGA is conducted using human portable systems. With current and anticipated staffing, CBP will only be capable of scanning a small fraction of the daily inbound international air cargo using human portable systems alone. This program will provide systems that allow more rapid scanning of a much greater volume of air cargo, with potential dual use for enhancing IGA operations, reducing the burden of using handheld equipment as primary scanning equipment in those environments.

To date, initial capabilities to fill air cargo rad/nuc scanning gaps using fixed or mobile systems have been established at several Airports of Entry (APOE) to validate operational feasibility. Lessons will be drawn from those deployments and applied, as appropriate, to the future deployments.

Based on an alternatives analysis for deployment of fixed RPM systems to be conducted in FY 2012, the program will acquire and deploy a limited number of fixed systems to APOEs with heavy volumes

of international air cargo where chokepoints of cargo flows exist and fixed systems are operationally feasible.

Concurrently, analysis, selection, design, development, and testing of mobile/re-locatable systems are being conducted from FY 2012 and into FY 2013, with planned acquisition and deployment to follow.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Securing the Cities  
Program Performance Justification  
(Dollars in Thousands)**

**PPA: Securing the Cities**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>3,736</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>22,000</b>
2013 Adjustments-to-Base	-	-	-
<b>2013 Current Services</b>	-	-	<b>22,000</b>
2013 Program Change	-	-	-
<b>2013 Total Requested Budget Authority</b>	-	-	<b>22,000</b>
Total Change 2012 to 2013	-	-	-

The Domestic Nuclear Detection Office (DNDO) requests \$22.0 million in FY 2013 for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Securing the Cities (STC) designs and implements an architecture for coordinated and integrated detection and interdiction of radiological materials out of regulatory control that may be used as a weapon within a large metropolitan area.

**QHSR Strategic Alignment – Securing the Cities**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1, Preventing Terrorism and Enhancing Security
  - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
    - Objective 1.2.3: Control Movement of CBRN
    - Objective 1.2.4: Protection Against Hostile Use of CBRN

**Securing the Cities Program**

*Description*

The objective of the Securing the Cities (STC) initiative is to reduce the risk of a radiological or nuclear (rad/nuc) attack in high-risk metropolitan areas by enhancing regional capabilities to detect and

interdict radiological material out of regulatory control. This initiative was initiated in the New York City (NYC region.)

The STC Initiative in NYC has been funded since FY 2007. First year activities included planning and evaluation activities to determine the city and region's most critical needs. The second and third years followed with phased capability development and implementation, executed largely through financial support for equipment, installation and integration, supportability, training, exercises, and program management. The fourth year continued with training and culminated in a full-scale exercise in April 2011. Throughout STC's implementation, an assessment of the program's effectiveness in building capabilities has been underway. An interim report published in September 2008 described the business model. A second interim report was completed in January 2011 to be followed by a final report in second quarter of FY 2012. These reports will assess Phase I activities in NYC and indicate the STC initiative has developed a credible region-wide Nuclear Detection program focused on preventing a rad/nuc attack on New York City. A continuation of this assessment effort has resumed and will evaluate Phase II in NYC. DNDO is committed to developing a local NYC nuclear detection architecture plan encompassing Phase I activities to date and quantifying DNDO commitments through Phase II. The architectural plan will define end states in the region and required nuclear detection capabilities that, when deployed, will allow transition into Phase III. DNDO will collaborate with NYC regional entities to develop and implement this architectural plan. Other objectives for Phase II include:

- Communication and information sharing linkages to Federal partners;
- Enhancing mobile detection capabilities along statewide pathways; and,
- Defining integration of State and local capabilities with Federal capabilities.

In FY 2011, DNDO began Phase II deployment in the NYC region based on the work completed over the past four years. The completion of Phase II will mark the transition from direct support from DNDO to the region utilizing local funding or other Federal grants to maintain and further build out the program over time. Direct financial support will no longer be necessary for the NYC region with the funding requested for FY 2013. To date, \$93.25 million of acquisition funding has been specifically obligated for the NYC region. In FY 2012, STC will begin expansion to one additional Urban Area Security Initiative (UASI) jurisdiction by engaging in Phase I activities as detailed above. The phased strategy will enable DNDO to provide Federal assistance to multiple regions at a time expanding capabilities in and further development of the domestic layer of the nuclear detection architecture.

The FY 2013 budget request for STC will focus on maturing a second UASI region in phase I and will conclude STC financial support within the Newark/New York City (NYC) regions at the end of FY 2013. The model built in the region is a successful architecture and the knowledge gained in this endeavor has allowed DNDO to realize significant efficiencies for future metropolitan areas. In transitioning from the Pilot in the NYC region to a phased program, DNDO has set programmatic controls with specific timeframes with a 5-year cap of DNDO funding through the first two phases. . The phased approach provides life cycle costs specifically detailing State and local resource requirements as the program expands to other regions.

Acquisition funds will be utilized to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction nuclear detection and reporting architecture for the region. Funds were also allocated to ensure that detection capabilities are integrated with Federal, State, and local command, control, and communication systems. State and local partners provided in-kind resources by bearing operational costs. Funds were also used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct operational exercises. State and local partners are provided with the information they need to appropriately budget for the long-term sustainability of capabilities implemented under this initiative.

DNDO Systems Acquisition funds are dispersed under the STC program through competitively awarded Cooperative Agreements to the State and local agencies participating in the STC program.

DNDO tools to assist STC implementation include:

- Nuclear Detection Community of Interest (COI);
- Preventive Radiological/Nuclear Detection and Adjudication Capability Development Framework and Calculator; and,
- Nuclear Detection National Incident Management System (NIMS) Resource Typing.
- FY 2013 planned activities include: Maintain a dedicated regional STC presence in NYC to facilitate continued growth, program sustainment, and the capture of lessons learned. STC funding in the NYC region will end at the conclusion of FY 2013; and continue Phase I activities in second STC implementation site.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Human Portal Radiation Detection Systems  
Program Performance Justification**  
(Dollars in Thousands)

**PPA: Human Portal Radiation Detection Systems**

	<b>Perm. Pos</b>	<b>FTE</b>	<b>Amount</b>
<b>2011 Actual Obligations</b>	-	-	<b>10,579</b>
<b>2012 Enacted Budget Authority</b>	-	-	<b>8,000</b>
2013 Adjustments-to-Base	-	-	-
<b>2013 Current Services</b>	-	-	<b>8,000</b>
2013 Program Change	-	-	20,100
<b>2013 Total Requested Budget Authority</b>	-	-	<b>28,100</b>
Total Change 2012 to 2013	-	-	20,100

The Domestic Nuclear Detection Office (DNDO) requests \$28.1 million in FY 2013 for this activity.

**CURRENT SERVICES PROGRAM DESCRIPTION:**

Under the Human Portal Radiation Detection Systems PPA, DNDO procures multiple types of equipment for DHS Components and, in some cases, equipment for used by other State and local law enforcement. Solutions are acquired for detecting, localizing, and identifying radiological/nuclear (rad/nuc) materials. The equipment is relatively light, easy to use, and of sufficiently low cost to support widespread deployment. The objectives of Human Portable Radiation Detection Systems (HPRDS) include expanding the range of detection activities and addressing different types of conveyances and cargo to be scanned for rad/nuc material. Projects include all human portable radiation detection devices that can be worn, carried, or moved by an individual; as well as nuclear detection equipment for boat-to-boat scanning. The devices procured are fully developed and most are commercially available.

**QHSR Strategic Alignment – Human Portable Radiation Detection Systems (HPRDS)**

- Department of Homeland Security (DHS) Quadrennial Homeland Security Review (QHSR) Mission 1, Preventing Terrorism and Enhancing Security
  - Goal 1.2: Prevent the Unauthorized Acquisition or Use of Chemical, Biological, Radiological, and Nuclear (CBRN) Materials and Capabilities
    - Objective 1.2.3: Control Movement of CBRN
    - Objective 1.2.4: Protection Against Hostile Use of CBRN

## Human Portable Rad/Nuc Systems Acquisition

### *Description*

DNDO procures multiple types of equipment for DHS Components, such as Customs and Border Protection (CBP), United States Coast Guard (USCG), and Transportation Security Administration (TSA). This equipment includes handheld Advanced Radio-Isotope Identification Devices (RIIDs), Basic Handheld RIIDs, Personal Radiation Detectors used in operations as rad/nuc detection devices, and rad/nuc detection backpacks.

CBP: DNDO coordinates with CBP for the deployment of human portable systems for CBP officers and agents to scan people, cargo, and privately owned vehicles at and between ports of entry. DNDO anticipates transition to next generation basic and advanced RIIDs in FY 2012 and initiating an acquisition program in FY 2013. Commercial off-the-Shelf (COTS) procurement of Personal Radiation Detectors (PRDs) will continue pending other solution development efforts (e.g., Human Portable Tripwire (HPT)).

USCG: In accordance with the cooperatively developed Joint Acquisition Strategy (JAS), DNDO recapitalizes current USCG rad/nuc detection systems and procures new systems to satisfy USCG requirements, which include hundreds of PRDs, RIIDs, and backpack systems. DNDO anticipates limited procurement of next-generation Basic and Advanced RIIDs in FY 2012. Procurement of other components of the HPRDS suite (PRDs and Backpacks) will continue pending other solution development efforts related to those components (e.g., HPT and Wide Area Search (WAS)).

TSA: DNDO supports the needs of TSA Visible Intermodal Prevention and Response (VIPR) Teams for rad/nuc detection equipment, through the HPRDS Interior Capability Development programs by providing teams with PRD pagers, handheld RIIDs, and radiation detection backpacks. Additionally, HPRDS funds are used to sustain in terms of lifecycle replenishment for the equipment of 25 VIPR Teams with the necessary complement of training and exercise support. However, in 2013, there is no funding planned for acquisition of systems for TSA.

HPRDS Improvements project will implement improvements required by DHS Components, to the Advanced Operations RIID and Basic RIID. The Advanced Operations and Basic RIIDs will be initially fielded in FY 2011 and FY 2012. In FY 2013-2017, there will be improvement efforts based on:

- Requirements developed from information collected from users during initial fielding;
- The initial P3I list of potential improvements;
- New findings from Transformational and Applied Research (TAR) studies, such as the Advanced Radiation Detection Materials (ARMD) project; and,
- Improving performance to achieve objective measures.

## **Maritime Small Vessel Standoff Detection Program**

### *Description*

The Small Vessel Standoff Detection (SVSD) program will develop and field a capability to provide standoff rad/nuc detection systems for scanning small vessels (less than 300 gross-tons). Currently, rad/nuc scanning of small vessels is accomplished by boarding the vessel and conducting an inspection with human portable systems. The USCG conducts approximately 75,000 boardings per year of which 86% involve small vessels; however, there are 13 million registered small vessels with 130,000 underway at any given time. DHS estimates that over 80 million people participate in recreational boating, many of whom use boats that are neither registered nor inspected, and there are 110,000 additional commercial fishing vessels classified as small vessels. With current and future force levels, USCG, CBP, and other Federal, State, and local partners are only capable of boarding a small fraction of the daily U.S. small vessel traffic. SVSD addresses a significant vulnerability and will allow Federal, State, and local maritime enforcement officers to increase the rad/nuc scanning capability of small vessels by reducing the need to board each encountered vessel.

SVSD funding in FY 2013 will allow DNDO to begin procurement and fielding of boat-to-boat detection systems to the USCG and CBP. At some ports, during elevated risk conditions, these capabilities will facilitate 100% of small vessels being scanned before entering a port area.

## IV. Program Justification Changes

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Increase 1:** Human Portable Radiation Detection Systems  
PPA: Human Portal Radiation Detection Systems  
Program Increase: Positions 0, FTE 0, Dollars \$20,100

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	8,000
Program Increase							-	-	20,100
<b>Total Request</b>	-	-	<b>10,579</b>	-	-	<b>8,000</b>	-	-	<b>28,100</b>

**Description of Item**

The funding increase of \$20.1 million in the Human Portable Radiation Detection Systems (HPRDS) PPA supports the acquisition of next generation of handheld nuclear detection equipment to DHS Front-Line operations that began in FY 2011 as well as supporting the Small Vessel Standoff Detection (SVSD) program to field capability to provide standoff rad/nuc detection systems for scanning small vessels.

**Justification**

The FY 2013 request supports acquisition of boat-mounted standoff radiation detection systems (Coast Guard's (USCG) requirement for 15 units and approximately 5 units for Customs and Border Protection (CBP)) which will begin to close the largest maritime gap in the Global Nuclear Detection Architecture (GNDA), allowing USCG and CBP to detect threats without boarding vessels and increasing the likelihood of encountering a radiological and nuclear threat before it reaches U.S. population centers or critical infrastructure. Most major U.S. population centers are located on or near the coastline and inland navigable waterways. As a result, much of the U.S. population remains vulnerable to a terrorist attack employing nuclear weapons, improvised nuclear devices, or radiological dispersal devices smuggled aboard small maritime vessels.

The next generation handheld Radiation Isotope Identification Device (RIID), the RadSeeker, developed under a formal acquisition program under DNDO, addresses this gap and other issues with

the legacy GR-135, with overall identification performance at the 97% level as opposed to GR-135 at approximately 50%; identification results provided to the officers in less than 30 seconds (100% improvement) and with a reliable system that has built in calibration, built in diagnostics and a projected annual maintenance cost savings of upwards of \$1,300 per system (\$393 for the RadSeeker versus \$1,693 for the GR-135).

**Impact on Performance (Relationship of Increase to Strategic Goals)**

Based on current cost estimates, this funding will support USCG's requirement for 15 units and 5 units for CBP in FY 2013. The number of small vessels scanned will be significantly increased relative to the numbers currently boarded. At some ports during elevated risk conditions, these capabilities will facilitate 100% of small vessels being scanned before entering a port area.

The funding will also begin to roll out the next generation of basic handheld nuclear detection equipment to CBP. This equipment will enable CBP to maintain current scanning rates while delivering improved operational capability.

**Department of Homeland Security  
Domestic Nuclear Detection Office  
Systems Acquisition:  
Justification of Program Changes**  
(Dollars in Thousands)

**Program Decrease 1:**                    Radiation Portal Monitor Program  
PPA:                                        Radiation Portal Monitor Program  
Program Decrease:                    Positions 0, FTE 0, Dollars \$(5,645)

Funding Profile

	FY 2011 Actual Obligations			FY 2012 Enacted Budget Authority			FY 2013 Requested Budget Authority		
	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)	Pos	FTE	Dollars (\$000)
Current Services Level							-	-	7,000
Program Decrease							-	-	(5,645)
<b>Total Request</b>	-	-	<b>26,274</b>	-	-	<b>7,000</b>	-	-	<b>1,355</b>

**Description of Item**

The funding decrease in the RPMP PPA is a result of a reprioritization of resources to focus on ensuring robust funding for the Maritime Small Vessel Stand-off Detection (SVSD) program in HPRDS. The RPMP FY 2013 budget request exclusively supports the Domestic Airport Deployment project which will develop and field capabilities by optimizing combinations of mobile, fixed, and human portable radiological and nuclear (rad/nuc) detection systems for scanning inbound international air cargo. The focus of acquisition resources for this project in FY 2013 will be the deployment of fixed solutions to aviation Ports of Entry where natural chokepoints facilitate scanning.

**Justification**

With current and anticipated staffing, Customs and Border Protection (CBP) will only be capable of scanning a small fraction of the daily inbound international air cargo using only hand-held nuclear detectors. DNDO’s risk analysis indicates that air cargo is a high risk pathway, relative to other points of entry where fixed detection systems can be deployed.

**Impact on Performance (Relationship of Increase to Strategic Goals)**

An investment of \$1.355M will begin the deployment of fixed systems to significantly increase CBP’s ability to continuously scan inbound international air cargo for rad/nuc threats. By deploying to 11 airports where fixed detectors provide effective coverage, the project will enable CBP to improve scanning operations and increase the effectiveness of scanning inbound international air cargo.

## **V. Exhibits and Other Supporting Material**

### **A. Justification of Proposed Legislative Language**

For expenses for the Domestic Nuclear Detection Office acquisition and deployment of detection systems in accordance with the global nuclear detection architecture, **\$51,455,000**, to remain available until September 30, 2015.

#### **Explanation of Changes:**

No substantive changes included.

### Radiation Portal Monitor Program Mission Statement

The Radiation Portal Monitor (RPM) Program was established at CBP in January 2002 with the objective of deploying RPMs at ports of entry (POEs) and providing the scientific and technical expertise to design, acquire, deploy, operate and maintain these systems. In 2005, DNDO assumed the responsibility of designing, acquiring and deploying the systems, and it has established a Ports of Entry program to work with CBP to bring the latest technology to bear on the threat of illicit nuclear materials crossing our borders. This program procures equipment to meet the needs of end-users, in accordance with the Global Nuclear Detection Architecture (GNDA). The RPMP was established with the objectives of deploying RPMs at United States ports of entry (POEs), and providing the scientific and technical expertise to design, acquire, and deploy these systems. As the Department of Homeland Security (DHS) works to keep the major seaports and northern and southwest land borders safe using radiological/nuclear (rad/nuc) detection capabilities, the Domestic Nuclear Detection Office (DNDO) continues to address the vulnerabilities in other locations and pathways.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>21.0 Travel</b>	23	6	24	18

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request is \$24,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	600	160	269	109

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request is \$269,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.7 Operation and maintenance of equipment</b>	62	16	0	(16)

The FY 2013 request is \$0.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	20,602	6,818	1,062	(5,756)

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2013 request is \$1,062,000. This funding will support acquisition of a limited number of fixed air cargo radiation detection systems to specified high-volume international air cargo chokepoints at APOEs.

**Securing the Cities Mission Statement**

The objective of the Securing the Cities (STC) initiative is to reduce the risk of a radiological or nuclear attack in high-risk metropolitan areas by enhancing regional capabilities to detect and interdict radiological material out of regulatory control. This initiative was initiated in the New York City (NYC region.) Acquisition funds were utilized to procure, integrate, deploy, test, evaluate, train, and exercise a multi-layer, multi-pathway, multi-jurisdiction nuclear detection and reporting architecture for the region. Funds were also allocated to ensure that detection capabilities are integrated with Federal, State, and local command, control, and communication systems. State and local partners provided in-kind resources by bearing operational costs. Funds were also used for logistics, maintenance, and calibration costs as well as personnel costs to support the training necessary to operate detection equipment and conduct operational exercises. DNDO Systems Acquisition funds are dispersed under the STC program through competitively awarded Cooperative Agreements to the State and local agencies participating in the STC program.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
21.0 Travel	8	18	10	(8)

Travel includes all costs of transportation of persons, subsistence of travelers, an incidental travel expenses in accordance with Federal travel regulations. The FY 2013 request is \$10,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>24.0 Printing</b>	<b>80</b>	<b>36</b>	<b>20</b>	<b>(16)</b>

Printing includes all costs for printing and reproduction obtained from the private sector or from other Federal agencies. The FY 2013 request is \$20,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.1 Advisory and assistance services</b>	<b>3,223</b>	<b>4,180</b>	<b>2,100</b>	<b>(2,080)</b>

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request is \$2,100,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.3 Purchases from Gov't accts.</b>	<b>425</b>	<b>700</b>	<b>365</b>	<b>(335)</b>

Purchases from government accounts include costs for purchases from other Federal government agencies or accounts that are not otherwise classified. Funds will be used for installation, integration, and deployment activities at ports of entry and other domestic locations, as outlined in the current services section. The FY 2013 request is \$365,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>41.0 Grants/Subsidies/Contributions</b>	<b>0</b>	<b>35,052</b>	<b>19,505</b>	<b>(15,547)</b>

Grants/Subsidies/Contributions includes cash payments to States, other political subdivisions, corporations, associations, individuals, and contributions to foreign countries, international societies, commissions, proceedings, or projects. The FY 2013 request is \$19,505,000.

**Human Portal Radiation Detection Systems Mission Statement**

DNDO procures multiple types of equipment that provide Department of Homeland Security (DHS) components, and in some cases, law enforcement and first responders with effective human portable systems for radiological/nuclear (rad/nuc) detection and identification. These solutions are used for detecting, localizing, and identifying rad/nuc materials, and they are relatively light, easy to use, and of sufficiently low cost to support widespread deployment. The objectives of the HPRDS project are to expand the range of activities and address different types of conveyances and cargo to be scanned for rad/nuc material. Projects include all human portable radiation detection devices that can be worn, carried, or moved by an individual. The devices are fully developed and most are commercially available.

**Summary Justification and Explanation of Changes**

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
25.1 Advisory and assistance services	159	124	586	462

Advisory and assistance services include services acquired by contract from non-Federal sources (that is the private sector, foreign governments, State and local governments, tribes, etc.) as well as from other units within the Federal Government. The FY 2013 request is \$586,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>25.3 Purchases from Gov't accts.</b>	140	3	821	818

Purchases from Government Accounts include costs for purchases from other Federal Government agencies or accounts that are not otherwise classified. The FY 2013 request is \$821,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>26.0 Supplies and materials</b>	100	77	265	188

Supplies and materials are defined as commodities that are (a) ordinarily consumed or expended within one year after they are put into use, (b) converted in the process of construction or manufacture, (c) used to form a minor part of equipment or property, or (d) other property of little monetary value that does not meet any of the three criteria listed above, at the option of the agency. The FY 2013 request is \$265,000.

	FY 2011 Actual Obligations	FY 2012 Enacted Budget Authority	FY 2013 Requested Budget Authority	FY 2012 to FY 2013 Change
<b>31.0 Equipment</b>	10,180	8,034	26,428	18,394

Equipment includes all costs for the purchases of personal property of a durable nature or the initial installation of equipment when performed under contract. The FY 2013 request is \$26,428,000. The funding increase of the Human Portable Radiation Detection Systems (HPRDS) PPA supports DHS's mandate to recapitalize 100% of Customs and Border Protection Basic Radio-Isotope Identification Devices to Next Generation devices by FY 2014. The presently-deployed have known technical limitations and are approaching or past their anticipated shelf lives. HPRDS funding also provides for human portable nuclear detectors for the Transportation Security Administration and the U.S. Coast Guard.
