Section 3: Infrastructure Maps – Awardees & Pending Applications 12

Section 1: Awards & Pending Applications

Following is a list of awarded and pending Round 1 BTOP Sustainable Broadband Adoption, Public Computer Center, and Middle Mile Infrastructure applications. This information is made available for informational purposes only to assist Round 2 applicants to determine where projects have been and/or may be awarded.

Sustainable Broadband Adoption and Public Computer Center applications do not have associated maps delineating the areas they cover. For Middle Mile Infrastructure applications, the service areas are delineated as geographic maps. These maps were produced by the applicants and may not exactly match the service area approved by NTIA for those applications that are granted.

This list does not include Last Mile Infrastructure projects pending with BTOP. Additional information regarding Round 1 BTOP Last Mile applications will be made available in the near future. In the meantime, the status of BTOP Last Mile applications, and all other BTOP applications, is available on www.BroadbandUSA.gov.

Applicants on this list who have not received a formal notice of grant remain pending and may or may not receive an award from NTIA.

Please note that NTIA recently received requests to extend the March 15, 2010 Round 2 BTOP application filing deadline based on lack of full information on Round 1 awards. The information being made available provides adequate information for Round 2 applications about possible overlaps with Round 1 grants. Accordingly, NTIA denies the pending extension requests.

Section 2: Q&A

Q: Why does this information matter?

A: To maximize the impact of Recovery Act investments, NTIA will not fund specific facilities in specific locations that duplicate facilities in specific locations funded by BIP or BTOP in Round 1.

In light of the March 15, 2010 deadline for Round 2 applications, NTIA is posting this information to advise Round 2 applicants of the service areas of Round 1 applications that have already been granted as well as Round 1 applications that remain pending.

Round 2 applicants should utilize this information in developing their project service areas.

Note that the prohibition on funding duplicate facilities does not mean that a project proposed for a service area that is within a service area of a Round 1 award is automatically disqualified. NTIA will consider infrastructure projects that seek to provide service in a proposed funded service area that overlaps with part of a funded service area of a granted project, so long as the proposal would not duplicate specific facilities at specific locations. For example, even though West Virginia received a very broad infrastructure grant in Round 1, NTIA will consider Round 2 infrastructure applications related to West Virginia that do not duplicate specific facilities in specific locations.

In addition, NTIA may grant a Sustainable Broadband Adoption application in an area to be served by a previously granted infrastructure project. Similarly, NTIA may grant two separate Public Computing Centers in a single city, as long as the projects are separate and do not propose duplicative spending.

Q: What if my proposed project involves areas contained in the granted or pending list?

A: If your potential Round 2 BTOP application contains a geographic area potentially covered by a Round 1 award or still pending application, you may wish to consider the following actions to ensure that you do not seek funding for facilities that are funded in Round 1:

1. Review the Round 1 project's executive summary available in the Applications Database on BroadbandUSA.gov.
2. Contact the Round 1 applicant or awardee using the information available on BroadbandUSA.gov to get more detail on the specific facilities and locations contained in its planned or proposed project.
3. Draft your Round 2 application to remove any portion thereof that substantially duplicates the construction of facilities in specific locations previously or potentially funded by NTIA or RUS.

Please note that if a Round 2 application contains duplication of facilities ultimately funded in Round 1, NTIA reserves the right to discuss with the applicant specific modifications to the application to resolve any differences that may exist between the applicant's request and NTIA's determination of eligible costs and funding priorities. However, applicants should craft their Round 2 applications carefully and should not assume that any post-filing modifications will be available.

Q: Should I use this spreadsheet if I am planning to file a BIP Round 2 application?

A: The information contained in this spreadsheet may help inform potential Round 2 BIP applicants, especially to the extent their applications involve Middle Mile infrastructure.

Q: If my application is not on the granted or pending list, does it mean it has been denied?

A: The list contains all granted and pending applications for Sustainable Broadband Adoption, Public Computing Center, and Middle Mile Infrastructure projects. If your application falls in one of these categories and is not on the granted or pending list, it has been denied.

If your application concerns a Last Mile Infrastructure project, it may still be pending. The status of these applications, and all other applications, is maintained on the Applications Database on BroadbandUSA.gov and is updated regularly.

For BTOP, application status on BroadbandUSA.gov generally lags a few business days after mailing of letters to applicants.

Q: Are the pending applications going to be awarded?

A: The applications listed as pending are currently in BTOP due diligence review. NTIA will not determine whether to fund these applications until that review is completed.

Q: Why are some last mile applications still listed as “Application Received” in the database but are not on the list?

A: As stated in the Second BTOP NOFA, in Round 2 NTIA will be focusing on Comprehensive Community Infrastructure (CCI) applications as opposed to Last Mile Infrastructure and Middle Mile Infrastructure applications. CCI applications feature middle mile infrastructure components and connections to anchor institutions. Accordingly, information regarding Middle Mile service areas is most time-sensitive to potential Round 2 BTOP CCI applicants.

NTIA has not listed pending BTOP Last Mile Infrastructure applications at this time but will provide additional information via regular updates to project status available on BroadbandUSA.gov.

Q: Why aren't geographic areas provided for Sustainable Broadband Adoption and Public Computer Centers applications?

A: Sustainable Broadband Adoption and Public Computer Center applicants were not required to provide proposed funded service area maps with their Round 1 applications. Nonetheless we want to avoid funding SBA or PCC projects that are duplicative of Round 1 awards.

Accordingly, potential Sustainable Broadband Adoption or Public Computer Centers Round 2 applicants should read a project's executive summary to obtain more information about the area(s) covered by pending and awarded Round 1 SBA and PCC applications. These executive summaries are contained in the Applications Database on BroadbandUSA.gov.

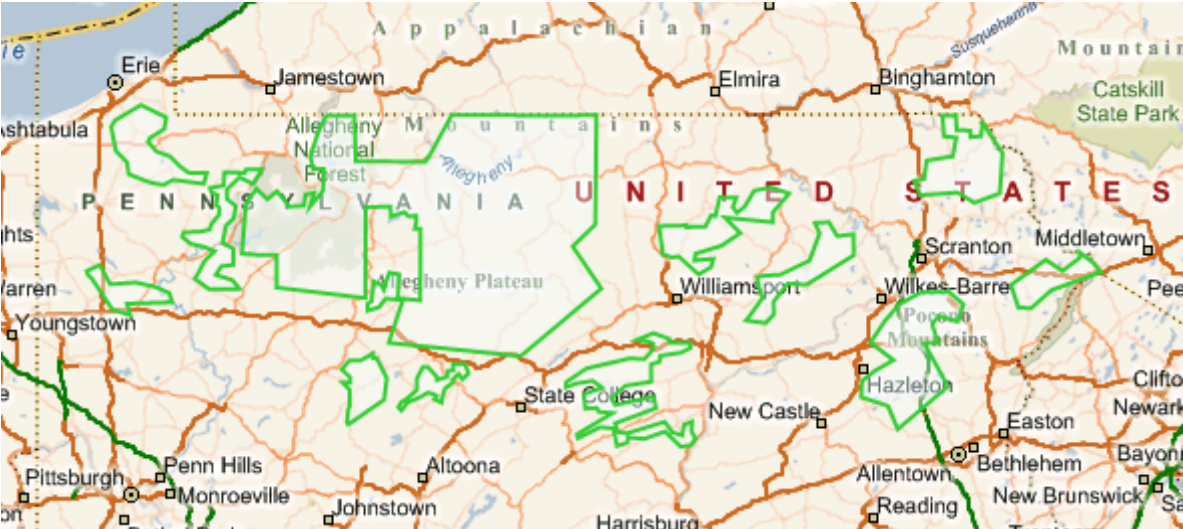

Q: Since NTIA has not finished its Round 1 awards, will the March 15 Round 2 filing deadline be extended?

A: The information supplied here responds to the concerns raised in the extension requests and accordingly, NTIA denies those requests to extend the BTOP March 15 Round 2 filing deadline.
