Technical Note	39

Extended Mass Layoffs in 2010

Introduction

The U.S. Bureau of Labor Statistics (BLS) conducts the Mass Layoff Statistics (MLS) program to provide information on large-scale layoff events and the characteristics of the dislocated workers. This report summarizes data on extended mass layoffs for 2010. The MLS program defines extended mass layoff events as the filing of 50 or more initial claims for unemployment insurance benefits against an employer during a 5-week period, with at least 50 workers separated for more than 30 days. Since 2004, the scope of the layoff data series was redefined to include only the private nonfarm economy. (See the technical note of this report for additional information on the concepts and definitions used.)

In 2010, employers initiated 7,247 extended mass layoff events that resulted in the separation of nearly 1.3 million workers. As indicated in table 1, both layoff events and worker separations in 2010 decreased from the series-high levels recorded in 2009. (BLS began recording annual data for the MLS program in 1996.) Seventeen of 18 major industry sectors registered decreases in the number of separations in 2010 as compared with 2009. In 2009, 15 sectors had reached series highs in terms of worker separations. Manufacturing had the largest over-the-year decline in separated workers among the major industry sectors, decreasing to a near-record low of 224,173 separations in 2010 from a series high of 668,265 in 2009. About half of all private nonfarm employers reporting an extended mass layoff in 2010 indicated they anticipated some recall of dislocated workers, up from a series low of 34 percent recorded a year earlier.

In 2010, the average national unemployment rate was 9.6 percent; a year earlier, it was 9.3 percent. Private nonfarm payroll employment decreased by 1 percent, or 915,000 jobs, from 2009 to 2010.

Highlights

- Manufacturing separations declined by 66 percent from 2009 to 2010, with decreases reported in 20 of 21 manufacturing subsectors. The largest decreases in manufacturing occurred in the transportation equipment, machinery, and computer and electronic products industries. (See tables 2 and 3.)
- In 2010, extended mass layoff separations declined over the year in 16 of the 17 nonmanufacturing industry sectors. The largest over-the-year declines in separations were registered in administrative and waste services, retail trade, and finance and insurance, all of which had reached record levels in 2009.
- At the three-digit North American Industry Classification System (NAICS) industry level, general merchandise stores and accommodation both moved into the top 10 for number of worker separations in 2010, with machinery manufacturing and credit intermediation and related activities dropping from the top 10. (See table 4.) Among the six-digit NAICS industries, fruit and vegetable canning, discount department stores, and motion picture and video production moved into the top 10 in terms of separations, replacing automobile manufacturing, light truck and utility vehicle manufacturing, and radio, TV, and electronic stores. (See table 5.)
- The number of workers separated due to business demand factors declined from 824,834 in 2009 to 384,564 in 2010, the largest decrease among the 7 categories of economic reasons for layoff. Layoffs associated with the completion of seasonal work were the only reason category to register an over-the-year increase in laid-off workers. (See table 6.)
- In 2010, employers reported 229 extended mass layoff events that involved the movement of work, affecting 39,104 separated workers; both of these figures are record lows for the series (with data available back to 1996). These 229 layoff events with movement of work involved 318 identifiable relocations of work actions; employers were able to provide more complete separation information for 201 of these actions. (See table 13.) Among these 201 actions, 86 percent involved moving work within the same company, and 77 percent were related to moving work to another location in the United States. (See table 14. See the technical note for more information on movement of work concepts and questions.)
- The average size of an extended mass layoff in 2010 (as measured by separations per layoff event) was 173 separated workers, registering the smallest average size of any year in the series (with data available back to 1996). (See table 15.)

Extended mass layoff separations, by reason categories,¹ 2001–2010

¹ The chart excludes information on layoffs due to other/miscellaneous reasons.

Source: U.S. Bureau of Labor Statistics.

- Of the 1.4 million initial claimants for unemployment insurance associated with extended mass layoff events in 2010, 40 percent were women, 33 percent were between the ages of 30 and 44, and 20 percent were 55 years or older. (See tables 17–19.) In the total civilian labor force in 2010, 47 percent were women, 43 percent were between the ages of 30 and 44, and 20 percent were 55 or older.
- The national average duration of insured unemployment associated with extended mass layoffs was 2.3 months (as measured by the average number of continued claims for unemployment insurance filed for the weeks that followed the initial claim and included the 12th day of the month). Among the 18 major industry sectors, the longest average jobless duration was experienced by claimants laid off from finance and insurance and from management of companies and enterprises (continued claims lasting an average of 2.9 months). Claimants laid off from transportation and warehousing experienced the shortest period of insured joblessness (1.6 months). Of the seven economic reasons for layoffs, claimants who were laid off because of financial issues reported the longest jobless duration (2.9 months). The shortest jobless duration occurred in seasonal layoffs (1.7 months). (See table 21.)
- Compared with 2009, all Census regions and divisions, and 45 states reported decreased numbers of laid-off workers in 2010. Among the states, the largest decreases of laid-off workers were reported by Michigan, California, and Ohio. (See tables 24 and 25.)
- Eighty-two percent of the initial claimants associated with extended mass layoff events in 2010 resided within metropolitan areas, up slightly from 80 percent a year earlier. Among the 372 metropolitan areas, Los Angeles-Long Beach-Santa Ana, CA, reported the highest number of resident initial claimants (147,478). Over the year, Detroit-Warren-Livonia, MI, recorded the largest decline in the number of claimants, from 88,678 to 9,794. (See table 26.)
- About half of the private nonfarm employers reporting an extended mass layoff in 2010 indicated that they anticipated recalling some dislocated workers, up from a series low 34 percent a year earlier. Of those employers expecting to recall laid-off workers, 36 percent indicated that the offer would be extended to all displaced employees. (See table 27.)
- Eight percent of extended mass layoff events in 2010 were permanent worksite closures, affecting 119,233

workers, or 9 percent of all separated workers, the lowest proportions of events and separations due to closure in the series (with data available back to 1996). Closure-related separations were due mostly to financial issues (52,737) and business demand reasons (33,412). (See table 30.)

- In 2010, food and beverage stores, rental and leasing services, hospitals, and food services and drinking places moved into the top 10 three-digit NAICS industries in terms of the number of workers laid off due to permanent closures. These industries replaced wood product manufacturing, machinery manufacturing, electronics and appliance stores, and clothing and clothing accessories stores in the top 10. (See table 32.)
- The total number of business functions reported by employers in nonseasonal layoff events in 2010 was 8,088, a decrease from 18,861 in 2009. (See the technical

note for more information on business functions and business processes.) The 57-percent decrease in business functions was larger than the 50-percent decrease in nonseasonal extended events, suggesting that employers targeted fewer functions in nonseasonal layoffs. In 2010, construction activities, followed by producing goods, and by administrative and clerical services, were targeted most often by employers in extended mass layoffs. (See table 35.)

- Business processes affected by extended mass layoffs during 2010 numbered 8,624, down from 14,820 a year earlier. The number of reports decreased over the year for all five core processes that have data available in 2010, with the largest percentage decrease occurring in marketing, sales, and account management. (Data for strategic management began in 2010.) All three support process involved in layoffs also decreased, with technology and process development having the largest percentage decrease. (See table 36.)

¹ The Mass Layoff Statistics (MLS) program tracks continued claim activity for initial claimants associated with extended mass layoffs once a month during the Current Population Survey (CPS) reference week, which is usually the week including the 12th day of the month. Continued claims with earnings are excluded because individuals who make such claims are classified as employed in the CPS. Final payment information for MLS claimants is collected weekly. (See the technical note for additional information.)

² Data on layoffs were reported by employers in all states and the District of Columbia.

¹ The Mass Layoff Statistics (MLS) program tracks continued claim activity for initial claimants associated with extended mass layoffs once a month during the Current Population Survey (CPS) reference week, which is usually the week including the 12th day of the month. Continued claims with earnings are excluded because individuals who make such claims are classified as employed in the CPS. Final payment information for MLS claimants is collected weekly. (See the technical note for additional information.)

² Data on layoffs were reported by employers in all states and the District of Columbia.

NOTE: Dash represents zero.

¹ Business functions reported in this table were the most frequently cited functions in 2007. Functions are grouped by business process without regard to the industry of the establishment. Therefore, the process "operations" does not appear.

² Data on layoffs were reported by employers in all states and the District of Columbia.

³ Data collection for this business function began with first-quarter 2010 data.

⁴ Excludes events in which the employer refused to participate in any part of the employer interview.

⁵ Excludes events in which contact with the employer was not possible.

NOTE: Dash represents zero.

SOURCE: Bureau of Labor Statistics, Mass Layoff Statistics Program

Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance (UI) database. Employers that have at least 50 initial claims for unemployment insurance filed against them during a consecutive 5-week period are contacted by the state agency to determine whether these separations are of at least 31 days duration, and, if so, information is obtained on the total number of persons separated and the reasons for these separations. Employers are identified according to industry classification and location; unemployment insurance claimants are identified by such demographic factors as age, race, sex, ethnic group, and place of residence. The MLS program yields information on an individual's entire spell of unemployment, to the point at which regular unemployment insurance benefits are exhausted.

Beginning with data for 2004, the scope of extended mass layoffs and plant closings was redefined to cover only the private nonfarm economy. Therefore, extended mass layoff information for agriculture and government are no longer collected. With the release of the extended mass layoff data from the first quarter of 2007, the U.S. Bureau of Labor Statistics (BLS) introduced improvements to the presentation of data on economic reasons for extended mass layoffs. Thus, reason data beginning with the first quarter of 2007 are not strictly comparable to data from previous quarters. This report uses the new metropolitan area definitions as published in the Office of Management and Budget Bulletin 10-02 and the 2007 North American Industry Classification System (NAICS) definitions.

Definitions

Business functions. Those specific activities that a firm performs in order to produce products, provide service, or otherwise achieve objectives.

Business processes. Broad-based categories, consisting of business functions, which cover the full range of activities a firm engages in to conduct business. Currently the MLS program codes functions into nine business processes: strategic management; procurement, logistics, and distribution; operations; product development; marketing, sales, and account management; customer and after-sales service; general management and firm infrastructure; human resource management; and technology and process development.

Clothing manufacturing and distribution. Industries involved in the production and distribution of clothing. These industries include textile mills, apparel manufacturing, footwear manufacturing, apparel and piece goods merchant wholesalers, clothing stores, shoe stores, department stores, and formal wear and costume rental.

Continued claim. A claim filed after the initial claim, by mail, telephone, or in person, for a waiting-period credit or payment for a certified week of unemployment. The MLS program collects continued claims for 1 week each month—generally the calendar week that includes the 12th day of the month and is referred to as the reference week because of its use in the Current Population Survey (CPS) as the basis for monthly unemployment.

Employer. A firm covered by state unemployment insurance laws at which one predominant type of economic activity is conducted.

Extended mass layoff event. A layoff defined by the filing of 50 or more initial claims for unemployment insurance benefits from an employer during a 5-week period, with at least 50 workers separated for more than 30 days. Such layoffs involve both people subject to recall and those who are terminated.

Final payment. The last payment received by a person who has exhausted all of his or her regular unemployment insurance benefits.

Food processing and distribution. Industries that are involved in the production and distribution of food. These industries include food manufacturing, beverage manufacturing, grocery and related product wholesalers, farm product raw material merchant wholesalers, alcoholic beverage merchant wholesalers, farm supplies merchant wholesalers, food and beverage stores, food (health) supplement stores, refrigerated warehousing and storage, farm product warehousing and storage, veterinary services, and food services and drinking places.

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Layoff. The separation of people from an employer as part of a mass layoff event. Such layoffs involve both people who are subject to recall and those who are terminated.

Mass layoff. Fifty or more initial claims for unemployment insurance benefits filed against an employer during a 5-week period, regardless of the duration of the layoff.

Movement-of-work action. Employer-confirmed relocation of work within the same company or to other companies, domestically or outside the United States. Because employers may cite more than one location to which work is moving, a layoff event may have more than one action associated with it.

Movement-of-work. The work activities performed at a worksite by the company's employees are reassigned in one of the following ways: 1) to another worksite within the company; 2) to another company under formal arrangements at the same worksite; or 3) to another company under formal arrangements at another worksite.

Movement-of-work separations. The number of separations specifically associated with movement-of-work actions.

Relocation-of-work action. A movement-of-work action in which the employer provides information on the new location of work and/or the number of workers affected by the movement. Layoff events may involve more than one action per employer if work moved to more than one location.

Separations. The number of people who have become displaced during an extended mass layoff event according to the employer, regardless of whether they file for unemployment insurance or not.

Worksite closure. The complete closure of an employer or the partial closure of an employer with multiple locations where entire worksites affected by layoffs are closed.

Movement-of-work concepts and questions

Because of the employer interview, BLS decided to use the MLS program as a vehicle for collecting additional information on offshoring and outsourcing associated with job loss, by adding questions that address movement of work. (Prior to 2004, "overseas relocation" and "domestic relocation" were economic reasons for layoffs and were used in extended mass layoff news releases. These reasons were eliminated with the collection of movement-of-work data; therefore, the current data are not comparable to the data from this earlier period.)

Questions on movement of work and location are asked for all identified layoff events when the reason for separation is other than "seasonal work" or "vacation period." Seasonal and vacation layoff events are unlikely to result in work relocation.

Before questions on movement of work are asked, an analyst must verify that a layoff has in fact occurred, and has

lasted for more than 30 days. An analyst must also obtain the total number of workers separated from jobs, the date the layoff began, and the economic reason for layoff. If the reason for layoff is other than seasonal work or vacation period, the employer is asked the following:

- (1) "Did this layoff include your company moving work from this location(s) to a different geographic location(s) within your company?"
- (2) "Did this layoff include your company moving work that was performed in-house by your employees to a different company, through contractual arrangements?"

A "yes" response to either question is followed by two questions: "Is the location inside or outside of the United States?" and "How many of the layoffs were a result of this relocation?"

Layoff actions are classified as "overseas relocation" if the employer responds "yes" to questions 1 and/or 2, and indicates that the location(s) was outside of the United States. Domestic relocation is determined if the employer responds "yes" to questions 1 and/or 2 and indicates that the location(s) was within the United States.

After asking the movement-of-work questions, the employer interview continues and responses are obtained for questions on recall expectations and open/closed status of the worksite.

Business functions and business processes

Business functions are the specific activities that a firm performs in order to produce its products or provide its services. During the MLS interview, employers are asked to identify all the functions performed by the workers who were laid off. Thus, the collection of business functions allows for a broader assessment of the impact of the layoffs than the industry classification alone.

Many different business functions have been reported by employers. In order to better understand how these functions are involved in the firm's operations, a set of nine business processes (strategic management; procurement, logistics, and distribution; operations; product development; marketing, sales, and account management; customer and after-sales service; general management and firm infrastructure; human resources management; technology and process development) was identified to define the full range of activities a firm engages in to conduct its business. All functions can be assigned to a process, depending upon the industry of the establishment. The nine processes are grouped into core business processes and support business processes. Thus, it is possible to report both the number of business functions and business processes affected by extended mass layoffs over time and cross tabulate the data using other information, such as reason for layoff and industry. For a more complete description of the collection and definition of business functions and processes in the MLS program, see the article "Business

Processes and Business Functions: a new way of looking at employment” from the December 2008 issue of the *Monthly Labor Review* (<http://www.bls.gov/opub/mlr/2008/12/art-3full.pdf>).

Reliability of the data

The identification of employers, layoff events, and characteristics of claimants in the MLS program is based on administrative data for employers and workers covered by unemployment insurance. Therefore, these data are not subject to issues associated with sampling error. Nonsampling errors such as typographical errors may occur but are not likely to be significant. Although the employers and layoff events in the MLS program are not subject to sampling error, and all such private nonfarm employers are asked the same employer interview questions, the employer responses are subject to nonsampling error. A nonsampling error can occur for many reasons, including the inability to obtain

information for all respondents, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data. For 2010, outright refusal to participate in the employer interview accounted for 4.4 percent of all private nonfarm events. Although included in the total number of instances involving the movement of work, employers in 117 relocations were unable to provide the number of separations specifically associated with the movement of work, 20 of which involved out-of-country moves.
