### February 2012

#### Goods and Services

The U.S. Census Bureau and the U.S. Bureau of Economic Analysis, through the Department of Commerce, announced today that total February exports of **\$181.2 billion** and imports of **\$227.2 billion** resulted in a goods and services deficit of **\$46.0 billion**, down from \$52.5 billion in January, revised. February exports were \$0.2 billion more than January exports of \$180.9 billion. February imports were \$6.3 billion less than January imports of \$233.4 billion.

In February, the goods deficit decreased \$6.0 billion from January to \$61.4 billion, and the services surplus increased \$0.5 billion from January to \$15.4 billion. Exports of goods decreased \$0.6 billion to \$128.0 billion, and imports of goods decreased \$6.5 billion to \$189.4 billion. Exports of services increased \$0.8 billion to \$53.2 billion, and imports of services increased \$0.2 billion to \$37.8 billion.

The goods and services deficit increased \$0.6 billion from February 2011 to February 2012. Exports were up \$15.4 billion, or 9.3 percent, and imports were up \$16.1 billion, or 7.6 percent.

#### Goods (Census Basis)

The January to February decrease in exports of goods reflected decreases in *automotive vehicles, parts, and engines* (\$0.8 billion); *foods, feeds, and beverages* (\$0.5 billion); and *industrial supplies and materials* (\$0.1 billion). Increases occurred in *other goods* (\$0.5 billion) and *consumer goods* (\$0.3 billion). *Capital goods* were virtually unchanged.

U.S. International Trade in Goods and Services

The January to February decrease in imports of goods reflected decreases in *consumer goods* (\$2.7 billion); *industrial supplies and materials* (\$1.5 billion); *automotive vehicles, parts, and engines* (\$1.0 billion); *foods, feeds, and beverages* (\$0.6 billion); and *capital goods* (\$0.4 billion). An increase occurred in *other goods* (\$0.1 billion).

The February 2011 to February 2012 increase in exports of goods reflected increases in *capital goods* (\$4.3 billion); *industrial supplies and materials* (\$3.3 billion); *automotive vehicles, parts, and engines* (\$2.0 billion); *other goods* (\$0.9 billion); and *consumer goods* (\$0.9 billion). A decrease occurred in *foods, feeds, and beverages* (\$0.6 billion).

NOTE: Total goods data are reported on a balance of payments basis unless otherwise specified. Commodity and country detail data for goods are on a Census basis. Monthly statistics are seasonally adjusted unless otherwise specified. For information on data sources and definitions, see the information section on page A-1 of this release, or at [www.census.gov/ft900](http://www.census.gov/ft900) or [www.bea.gov/newsreleases/international/trade/tradnewsrelease.htm](http://www.bea.gov/newsreleases/international/trade/tradnewsrelease.htm). **The next FT-900 release is May 10, 2012.**

A decrease occurred in *consumer goods* (\$3.3 billion).

## **Services**

Exports of services increased \$0.8 billion from January to February. The increase was mostly accounted for by increases in *travel, other private services* (which includes items such as business, professional, and technical services, insurance services, and financial services), and *royalties and license fees*. Changes in the other categories of services exports were small.

Imports of services increased \$0.2 billion from January to February. The increase was more than accounted for by increases in *travel, other private services*, and *passenger fares*. A decrease in *other transportation* (which includes freight and port services) was partly offsetting. Changes in the other categories of services imports were small.

The February 2011 to February 2012 increase in exports of services was \$4.8 billion. The largest increases were in *royalties and license fees* (\$1.7 billion), *other private services* (\$1.2 billion), and *travel* (\$1.2 billion). Within *other private services*, the largest increases were in financial services and in business, professional, and technical services.

The February 2011 to February 2012 increase in imports of services was \$3.5 billion. The largest increases were in *other private services* (\$2.1 billion) and *travel* (\$0.6 billion). Within *other private services*, the largest increases were in business, professional, and technical services and in insurance services.

## NOTICE

### **Changes to End-Use Commodity Classification**

Effective with the January 2012 statistics, the U.S. Census Bureau and the U.S. Bureau of Economic Analysis (BEA) have revised the classification of several end-use commodities. These changes were made to achieve a consistent classification between exports and imports and to improve the grouping of the commodities based on their end-use characteristics. These changes also reflect the results of work performed by the World Customs Organization (WCO) as part of its long-term program to review the nomenclature of the international Harmonized System from which the end-use commodity classifications are derived. The last WCO modifications to the Harmonized System were introduced in March 2007 with the January 2007 statistics.

For both exports and imports, the most significant reclassifications involved various semiconductor media, such as “smart cards” and flash memory cards, which have been reassigned from *consumer goods* and *industrial supplies and materials* to semiconductors and related devices within *capital goods*. In addition, for imports, electronic book devices and batteries used to power vehicles have been reassigned from *capital goods* to *consumer goods* and *automotive vehicles, parts, and engines*, respectively.

### **Upcoming Revisions to Goods and Services**

On June 8, 2012, the U.S. Census Bureau and BEA will release “U.S. International Trade in Goods and Services: April 2012” and “U.S. International Trade in Goods and Services: Annual Revision for 2011.” With these releases, statistics on trade in goods, on both a Census basis and a balance of payments (BOP) basis, and statistics on trade in services will be revised beginning with 2009. The revised statistics on trade in goods will reflect reclassifications of several end-use commodities (see above), as well as recalculated seasonal and trading-day adjustments. The revised statistics on goods on a BOP basis and on services will also appear in “U.S. International Transactions: First Quarter 2012” and in the annual revision of the [U.S. international transactions accounts](#) (ITA’s), both to be released by BEA on June 14, 2012. In addition to the changes mentioned above, BEA’s annual revision of the ITAs will reflect newly available and more complete source data and minor improvements to estimation methodologies.

### **Profile of U.S. Importing and Exporting Companies, 2009 – 2010**

On April 12, 2012 the U.S. Census Bureau, Foreign Trade Division will release the report, “[A Profile of U.S. Importing and Exporting Companies 2009-2010](#)”. The Profile is created from import and export merchandise trade data and company characteristics contained in the Census Bureau’s Business Register. The Profile provides government and private sector data users with information on the characteristics of companies involved in trade including employment size, type of company, and major foreign markets.

This year, the report contains two new export exhibits:

- Exhibit 7a - 2010 Exports by 3-Digit North American Industry Classification System (NAICS) code for Small and Medium Sized Companies
- Exhibit 7b - 2009 Exports by 3-Digit NAICS code for Small and Medium Sized Companies

(1) Data are presented on a BOP basis.

NOTES:

\* The three-month moving averages shown in this exhibit are computed by summing the subject month, the two prior months, dividing by three and showing the average at the end month of the period. A moving average is useful in smoothing the volatile trade data so that trends can better be discerned.

\* For information on data sources and methodology, see the information section on page A-1 of this release, or at [www.census.gov/ft900](http://www.census.gov/ft900) or [www.bea.gov/newsreleases/international/trade/tradnewsrelease.htm](http://www.bea.gov/newsreleases/international/trade/tradnewsrelease.htm).

## INFORMATION ON GOODS AND SERVICES

### GOODS (CENSUS BASIS)

The Census basis goods data are compiled from the documents collected by the U.S. Customs and Border Protection and reflect the movement of goods between foreign countries and the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and U.S. Foreign Trade Zones. They include government and non-government shipments of goods and exclude shipments between the United States and its territories and possessions, transactions with U.S. military, diplomatic and consular installations abroad, U.S. goods returned to the United States by its Armed Forces, personal and household effects of travelers, and in-transit shipments. The General Imports value reflects the total arrival of merchandise from foreign countries that immediately enters consumption channels, warehouses, or Foreign Trade Zones.

For imports, the value reported is the U.S. Customs and Border Protection appraised value of merchandise; generally, the price paid for merchandise for export to the United States. Import duties, freight, insurance, and other charges incurred in bringing merchandise to the United States are excluded.

Exports are valued at the f.a.s. (free alongside ship) value of merchandise at the U.S. port of export, based on the transaction price including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation.

**Revision policy for goods on a Census basis:** Monthly data include actual month's transactions as well as a small number of transactions for previous months. Each month the U.S. Census Bureau revises the aggregate seasonally adjusted (current and chain-weighted dollar) and unadjusted export, import, and trade balance figures, as well as the end-use totals for the prior month. SITC and country detail data are not revised monthly. The timing adjustment shown in Exhibit 14 is the difference between monthly data as originally reported and as recompiled. Quarterly revisions are made to the chain-weighted dollar series. In the last month of each quarter, the current and previous quarters are revised to incorporate the Bureau of Labor Statistics' monthly revisions to price indexes, which are used to produce the chained-dollar series and to align Census data with data published by the U.S. Bureau of Economic Analysis in the National Income and Product Accounts. Annual revisions for the months are made in June to reflect corrections received subsequent to the monthly revisions. These revisions are reflected in totals, end-use, SITC, and country summary data. The monthly end-use, commodity, and country and area data presented in Exhibits 6-18 in this release are on a Census basis.

### *U.S./CANADA DATA EXCHANGE AND SUBSTITUTION*

The data for U.S. exports to Canada are derived from import data compiled by Canada. The use of Canada's import data to produce U.S. export data requires several alignments in order to compare the two series.

1. *Coverage* - Canadian imports are based on country of origin. U.S. goods shipped from a third country are included. U.S. exports exclude these foreign shipments. For February 2012, these shipments totaled \$199.9 million. U.S. export coverage also excludes U.S. postal shipments to Canada. For February 2012, these shipments totaled \$23.5 million.

U.S. import coverage includes shipments of railcars and locomotives from Canada. Effective with January 2004 statistics, Canada excludes these shipments from its goods exports to the United States, therefore creating coverage differences between the two countries for these goods.

2. *Valuation* - Canadian imports are valued at the point of origin in the United States. However, U.S. exports are valued at the port of exit in the United States and include inland freight charges, making the U.S. export value slightly larger than the Canadian import value. Canada requires inland freight to be reported separately from the value of the goods. Combining the inland freight and the Canadian reported import value provides a consistent valuation for all U.S. exports. Inland freight charges for February 2012 accounted for 2.4 percent of the value of U.S. exports to Canada.
3. *Reexports* - Unlike Canadian imports, which are based on country of origin, U.S. exports include reexports of foreign goods. Therefore, the aggregate U.S. export figure is slightly larger than the Canadian import figure. For February 2012, reexports to Canada were \$3,811.1 million.
4. *Exchange Rate* - Average monthly exchange rates are applied to convert the published data to U.S. currency. For February 2012, the average exchange rate was 0.9967 Canadian dollars per U.S. dollar.
5. *Other* - There are other minor differences, which are statistically insignificant, such as rounding error.

**Canadian Estimates**

Effective with January 2001 statistics, the current month data for exports to Canada contain an estimate for late arrivals and corrections. The following month, this estimate is replaced, in the press release tables only, with the actual value of late receipts and corrections. This estimate improves the current month data for exports to Canada and treats late receipts for exports to Canada in a manner more consistent with the treatment of late receipts for exports to other countries.

***Nonsampling errors***

The goods data are a complete enumeration of documents collected by the U.S. Customs and Border Protection and are not subject to sampling errors. Quality assurance procedures are performed at every stage of collection, processing and tabulation; however, the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and errors in the estimation of low-valued transactions.

**Reporting Errors:** Reporting errors are mistakes or omissions made by importers, exporters or their agents in their import or export declarations. Most errors involve missing or invalid commodity classification codes and missing or incorrect quantities or shipping weights. They have a negligible effect on aggregate import, export and balance of trade statistics. However, they can affect the detailed commodity statistics.

**Undocumented Shipments:** Federal regulations require importers, exporters or their agents to report all merchandise shipments above established exemption levels. The U.S. Census Bureau has determined that not all required documents are filed, particularly for exports.

**Timeliness and Data Capture Errors:** The U.S. Census Bureau captures import and export information from administrative documents and through various automated collection programs. Documents may be lost, and data may be incorrectly keyed, coded or recorded. Transactions may be included in a subsequent month's statistics if received late.

**Low-valued Transactions:** The total values of transactions valued as much as or below \$2,500 for exports and \$2,000 (\$250 for certain quota items) for imports are estimated for each country, using factors based on the ratios of low-valued shipments to individual country totals for past periods.

The U.S. Census Bureau recommends that data users incorporate this information into their analyses, as nonsampling errors could impact the conclusion drawn from the results. For a detailed discussion of errors affecting the goods data, see "U.S. Merchandise Trade Statistics: A Quality Profile" available on the internet at [www.census.gov/foreign-trade/aip/index.html#infopapers](http://www.census.gov/foreign-trade/aip/index.html#infopapers) or from the Foreign Trade Division, U.S. Census Bureau.

### *Adjustments for Seasonal and Working-Day Variations*

Goods are initially classified under the Harmonized System, which describes and measures the characteristics of goods traded. Combining trade into approximately 140 export and 140 import end-use categories makes it possible to examine goods according to their principal uses (See Exhibits 7 and 8). These categories are used as the basis for computing the seasonal and working-day adjusted data. These adjusted data are then summed to the six end-use aggregates for publication (Exhibit 6). These data are provided to the U.S. Bureau of Economic Analysis, from the U.S. Census Bureau, for use in the Balance of Payments and the National Income and Product Accounts.

The seasonal adjustment procedure is based on a model that estimates the monthly movements as percentages above or below the general level of each end-use commodity series (unlike other methods that redistribute the actual series values over the calendar year). Because of the extremely variable movements of the data series for aircraft, users studying data trends may wish to analyze aircraft separately from other trade.

### *Adjustments for Price Change*

Data adjusted for seasonal variation on a chained-dollar basis (2005 base year) are presented in Exhibits 10 and 11. This adjustment for price change is done using the Fisher chain-weighted methodology. The deflators are primarily based upon the monthly price indexes published by the Bureau of Labor Statistics using techniques developed for the National Income and Product Accounts by the U.S. Bureau of Economic Analysis.

### *SITC Data*

Goods data appearing in Exhibit 15 are classified in terms of the Standard International Trade Classification (SITC) Revision 3. Agricultural goods consist of non-marine food products and other products of agriculture which have not passed through complex processes of manufacture, such as raw hides and skins, fats and oils, and wine. A few goods such as essential oils, starches, casein, and albumin, considered to be agricultural by the U.S. Department of Agriculture, have been excluded from agricultural goods and are included in manufactured goods where they are classified in the SITC.

Manufactured goods conform to the SITC sections that include chemicals and related products; manufactured goods classified chiefly by material; machinery and transport equipment; miscellaneous manufactured articles; and goods and transactions not classified elsewhere.

Reexports are foreign merchandise entering the country as imports, and at the time of exportation are in substantially the same condition as when imported. Reexports, included in overall export totals, appear as separate line items in Exhibit 15.

### *Advanced Technology Products (ATP)*

About 500 of some 22,000 commodity classification codes used in reporting U.S. merchandise trade are identified as "advanced technology" codes and they meet the following criteria:

1. The code contains products whose technology is from a recognized high technology field (e.g., biotechnology).
2. These products represent leading edge technology in that field.
3. Such products constitute a significant part of all items covered in the selected classification code.

The aggregation of the goods results in a measure of advanced technology trade which appears in Exhibits 16 and 16A. This product and commodity-based measure of advanced technology differs from broader NAICS industry-based measures which include all goods produced by a particular industry group, regardless of the level of technology embodied in the goods.

### **GOODS (BALANCE OF PAYMENTS BASIS)**

Goods on a Census basis are adjusted by the U.S. Bureau of Economic Analysis (BEA) to a balance of payments basis to align the data with the concepts and definitions used to prepare the international and national economic accounts. These adjustments, which are applied separately to exports and imports, are necessary to supplement coverage of the Census data, to eliminate duplication of transactions recorded elsewhere in the international accounts, and to value transactions according to a standard definition. They include both *additions* to and *deductions* from goods on a Census basis and are presented in this release as "Net Adjustments." Adjustments that exhibit significant seasonal patterns are seasonally adjusted. BEA also publishes more detailed quarterly and annual statistics for Net Adjustments in a standard table of the U.S. international transactions accounts, Table 2. U.S. Trade in Goods. See the BEA Web site at [http://www.bea.gov/international/bp\\_web](http://www.bea.gov/international/bp_web) or the January, April, July, and October issues of the *Survey of Current Business*.

The export adjustments include:

**Exports under U.S. military sales contracts** - This adjustment reflects the net amount of two separate adjustments. BEA first *deducts* goods identified in the Census data as exports under the U.S. Foreign Military Sales program. BEA then *adds* primary source data for these exports, which are reported to BEA by the U.S. Department of Defense.

**Gold exports, nonmonetary** - This *addition* is made for gold that is purchased by foreign official agencies from private dealers in the United States and held at the Federal Reserve Bank of New York. The Census data only include gold that leaves the U.S. customs territory.

**Goods procured in U.S. ports by foreign carriers** - This *addition* is made for foreign air and ocean carriers' fuel purchases in U.S. ports.

**Low-value transactions** - This *addition* is made to phase in a revised Census Bureau methodology for low-value goods for statistics prior to 2010. The revised Census methodology was implemented for goods on a Census basis beginning with statistics for 2010.

Other adjustments to exports include:

*Deductions* for equipment repairs (parts and labor), developed motion picture film, and military grant-aid. *Additions* for sales of fish caught in U.S. territorial waters, exports of electricity to Mexico, private gift parcels, and vessels and oil rigs for which ownership changes.

The import adjustments include:

**Gold imports, nonmonetary** - This *addition* is made for gold sold by foreign official agencies to private purchasers out of stock held at the Federal Reserve Bank of New York. The Census data only include gold that enters the U.S. customs territory.

**Goods procured in foreign ports by U.S. carriers** - This *addition* is made for U.S. air and ocean carriers' fuel purchases in foreign ports.

**Imports by U.S. military agencies** - This adjustment reflects the net amount of two separate adjustments. BEA first *deducts* goods (petroleum and non-petroleum) identified in the Census data as imports by U.S. military agencies. BEA then *adds* primary source data for purchases of petroleum abroad by U.S. military agencies, which are reported to BEA by the U.S. Department of Defense. Non-petroleum imports are included, along with imports of services by U.S. military agencies, in the services category *direct defense expenditures*.

**Inland freight in Canada and Mexico** - This *addition* is made for inland freight in Canada and Mexico. Imports of goods from all countries should be valued at the customs value—the value at the foreign port of export including inland freight charges. For imports from Canada and Mexico, this should be the cost of the goods at the U.S. border. However, the customs value for imports for certain Canadian and Mexican goods is the point of origin in Canada or Mexico. BEA makes an *addition* for the inland freight charges of transporting these goods to the U.S. border to make the value comparable to the customs value reported for imports from other countries.

**Low-value transactions** - This *addition* is made to phase in a revised Census Bureau methodology for low-value goods for statistics prior to 2010. The revised Census methodology was implemented for goods on a Census basis beginning with statistics for 2010.

Other adjustments to imports include:

*Deductions* for equipment repairs (parts and labor), repairs to U.S. vessels abroad, and developed motion picture film. *Additions* for non-reported imports of locomotives and railcars, imports of electricity from Mexico, conversion of vessels for commercial use, and valuation of software imports at market value.

## **SERVICES**

The services statistics cover transactions between foreign countries and the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and other U.S. territories and possessions. Transactions with U.S. military, diplomatic, and consular installations abroad are excluded because these installations are considered to be part of the U.S. economy.

Services statistics are based on quarterly, annual, and benchmark surveys and information obtained from monthly government and industry reports. Services are seasonally adjusted when statistically significant seasonal patterns are present. No monthly country or area detail is available due to the lack of adequate source data.

Services are shown in seven broad categories. The types of services for exports and imports are the same for six of the categories. For the seventh, the export category is *transfers under U.S. military sales contracts* and the import category is *direct defense expenditures*. The following is a brief description of the types of services included in each category:

**Travel** - Purchases of services and goods by U.S. travelers abroad and by foreign visitors to the United States. A traveler is defined as a person who stays for a period of less than 1 year in a country of which the person is not a resident. Includes cruise fares and expenditures for food, lodging, recreation, gifts, and other items incidental to a foreign visit.

**Passenger fares** - Fares paid by residents of one country to transportation carriers of other countries. Receipts consist of fares received by U.S. carriers from foreign residents for travel between the United States and foreign countries and between two foreign points. Payments consist of fares paid by U.S. residents to foreign carriers for travel between the United States and foreign countries. Excludes cruise fares, which are included in *travel*.
