

# Keys in Controlling the Non-native Plant *Sericea Lespedeza (Lespedeza cuneata)*

## SPOT SPRAYING

Light & Moderate Infestations

## BROADCAST SPRAYING

Moderate & Heavy Infestations

### Effective Control

- Early detection and treatment
- Triclopyr (preferred) and or metsulfuron methyl based herbicide
- Seeding disturbed areas with **Native Plants**
- Follow up with herbicide treatments (spot spraying)

### RESULT

*L. Cuneata* controlled in first year

### FOLLOW UP

- Spot spraying
- Exhaust seed bank (with herbicide alone or with prescribed fire)
- Yearly monitoring & retreatment as needed

### TIMELINE
