**SUBJECT: SOUTH TEXAS PROJECT ELECTRIC GENERATING STATION - NRC
INSPECTION REPORT 50-498/03-09 AND 50-499/03-09**

Dear Mr. Sheppard:

On June 12, 2003, the US Nuclear Regulatory Commission (NRC) completed an inspection at your South Texas Project Electric Generating Station, Units 1 and 2 (STP). The enclosed inspection report documents the inspection findings which were discussed on June 12, 2003, with you and other members of your staff.

On June 9, 1998, the NRC issued a Confirmatory Order Modifying License - EA-97-341 (Order) to confirm your commitments to enhance STP's process for addressing employee protection and safety concerns. The Order required you to perform several activities including comprehensive cultural assessments, use of a leadership assessment tool for managers, and continuing training for supervisors and managers.

On April 7, 2003, your letter to the NRC stated that you had met all of the requirements of the Order. On June 3, 2003, you briefed the NRC on the results of your 2003 comprehensive cultural assessment in a public meeting at NRC's Region IV office. In this meeting, you stated STP's continuing commitment to maintain a strong safety conscious work environment.

As documented in this inspection report, NRC has confirmed that you have met all of the requirements of the Order. The inspection concluded that a safety conscious work environment was in place at STP. Therefore, the Order dated June 9, 1998, is closed.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter, its enclosure, and your response will be made available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of

NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

Sincerely,

/RA/

Thomas P. Gwynn
Acting Regional Administrator

T. Hoeg, Senior Resident Inspector, Project Branch A

Approved By: W. Johnson, Chief
Branch A
Division of Reactor Projects

SUMMARY OF FINDINGS

IR 05000498/03-09, 05000499/03-09; on June 6-12, 2003; South Texas Project Electric Generating Station, Units 1 & 2; inspection of the identification and resolution of problems associated with a safety conscious work environment and licensee response to the Order.

The inspection was conducted by the Region IV Senior Allegations Coordinator and the Senior Resident Inspector from Grand Gulf Nuclear Station. No findings of significance were identified.

Identification and Resolution of Problems

The licensee's actions to enhance employee protection and reporting of safety concerns were determined to be in compliance with the terms and conditions of the Order. Licensee audits, surveys, and assessments were found to be adequate. A safety conscious work environment at STP was found to be in place, maintained, and accepted by licensee personnel. The inspectors found workers at the site felt free to identify concerns to their supervision and to input safety findings into their corrective action program or Employee Concerns Program without fear of retaliation. The licensee's compliance with the terms and conditions of the Order were verified through direct inspection and documentation reviews.

Report Details

4 OTHER ACTIVITIES (OA)

4OA2 Problem Identification and Resolution

1. Background

The NRC Office of Investigations had previously concluded that the licensee had subjected four employees to a hostile work environment in retaliation for the employees' having engaged in protected activities (i.e., raising safety concerns). On June 9, 1998, the NRC issued the Order and Exercise of Discretion to the South Texas Project Nuclear Operating Company (STPNOC). The Order was issued to confirm STP's commitments to enhance STP's process for addressing employee protection and safety concerns. As a result, the licensee committed to conduct comprehensive and mini-cultural assessments, perform employee ratings of supervisors via a "Leadership Assessment Tool," and implement a mandatory continuing training program for all supervisors and managers.

By letter dated April 7, 2003, the STPNOC notified the Region IV Regional Administrator of their completion of actions to meet the requirements of the Order. On June 3, 2003, STPNOC management met with Region IV management to review actions taken by STPNOC to demonstrate compliance with the Order.

2. Assessment of Safety-Conscious Work Environment

a. Inspection Scope

The inspection team verified and validated licensee actions taken to comply with the Order. The specific commitments reviewed were Item No. 1, "Comprehensive Cultural Assessment Program," Item No. 2, "Leadership Assessment Tool Implementation," Item No. 3, "Continuing Training Program for Supervisors and Managers," and Item No. 4, "Site Wide Publication of the Confirmatory Order and Rights to Raise Safety Concerns." The team evaluated the licensee's 1998, 1999, 2000, 2001, 2002, and 2003 Action Plans against the requirements set forth in the Order. The Action Plans included but were not limited to condition reports, NRC correspondence, comprehensive cultural assessments, surveys, training lesson plans, training attendance records, and various statistical scoring documentation related to cultural assessments.

The team met with 62 randomly chosen licensee and contractor employees from departments representing union and management personnel. Included in the interviews were personnel who had been in the division that was the focus of the Order. The interviews discussed the safety conscious work environment using a fixed set of questions focused on management actions, personal experience with reporting safety concerns and worker protection, freedom to voice safety concerns to plant management, training of supervisors and managers, and management communication of survey results.

b. Findings and Observations

Comprehensive Cultural Assessment Program

The inspectors determined that STPNOC established a comprehensive cultural assessment program with the use of written surveys and confidential interviews of selected individuals. Licensee employees, contractors, supervisors, and managers participated in the process. The first comprehensive cultural assessment survey was performed in June 1998 followed by 3 additional comprehensive surveys performed in June 2000, December 2001, and January 2003.

The June 1998 survey identified 6 organizations which scored lower than most and were given a mini-survey in December 1999 which showed improvement in 5 out of 6 organizations. Overall, the nuclear safety culture was determined to be strong. The general culture and work environment ranged from acceptable to good. The inspectors determined that during the period from 1998 through 2003, the survey results showed improvement and indicated an acceptable safety conscious work environment.

The final comprehensive cultural assessment performed in January 2003 was reviewed by the inspectors and found to be timely, comprehensive, well documented, and well communicated. The survey indicated that the workforce at the South Texas Project Electric Generating Station was willing to take the appropriate actions to raise safety concerns without the fear of retaliation and felt that the Employee Concerns Program was an acceptable alternative path to report concerns.

Leadership Assessment Tool Implementation

The inspectors determined that STPNOC developed a Leadership Assessment Tool to measure performance of individual supervisors and managers during the period of 1998 through 2003. The tool utilized an annual survey taken by employees to rate their supervisors and managers relating to their communication styles, leadership styles, recognition abilities, and coaching abilities. The inspectors determined the survey information to be well documented and utilized. Those individual supervisors and managers who scored low were given action plans, developmental training, and feedback sessions to improve their leadership capabilities.

Continuing Training Program for Supervisors and Managers

The inspectors determined that STPNOC developed and implemented mandatory training for supervisors and managers designed to build positive working relationships, a safety conscious work environment, and reinforce the requirements set forth in 10 CFR 50.7, "Employee Protection." The inspectors reviewed training attendance sheets and training course lesson plans to verify employee participation and the quality of the training materials. The inspectors determined that all STPNOC employees were trained annually. However, contractor personnel were considered exempt from this continuing training and did not receive it on an annual basis.

Site-Wide Publication of the Confirmatory Order and Rights to Raise Safety Concerns

The inspectors determined that STPNOC issued a site-wide publication on bulletin boards and via the internal electronic mail from the President and CEO to all employees and contractors. The publication informed the site staff of the Order and employee rights to raise safety concerns without the fear of retaliation.

Random Interviews and Discussions

The inspectors interviewed 62 South Texas Project Generating Station employees to discuss their experience and knowledge of the Order and their willingness to raise safety concerns without fear of retaliation. The inspectors questioned the employees to gain a general understanding of their individual perceptions of the safety conscious work environment at the South Texas Project Generating Station. The inspectors chose the employees at random as they walked around the site covering easily accessible areas of the plant. The employees selected included company employees, contractors, union members, supervisors, and managers. The employees represented a large cross section of departments including operations, maintenance, engineering, plant support, and security.

During interviews with the NRC, employees stated they understood they were free to contact the NRC and most indicated they had received training that encouraged contact with the NRC should they want to report safety issues and chose not to use the internal processes. Some stated that they had been provided the 800 number for contacting the NRC when they believed the licensee had not addressed their concerns or if they had additional questions they wanted to be answered. Overall, the inspectors received positive responses from the employees related to the safety conscious work environment at the station. In general, the employees were aware of the 1998 Order; participated in and received feedback on cultural surveys and supervisor assessments; felt free to express safety concerns without fear of retaliation; and possessed confidence in the Employee Concerns Program. The inspectors concluded that a safety conscious work environment at the South Texas Project Generating Station was in place and employees felt free to express their safety concerns openly and deliberately without fear of retaliation or a lack of response from their management.

40A6 Meetings, including Exit

On June 12, 2003, the inspectors presented the inspection results to Mr. J. Sheppard, President and CEO, and other members of his staff. The inspectors confirmed that one proprietary document, Management Insight Technologies STP Focused Culture Assessment - October 2002, was reviewed by the inspectors and was not documented in this report.
