

<p>Have some sort of vision of success from the beginning – easy to get overwhelmed by details, keep in mind what goal of program is. Develop self-definition of being conservationist, recreationist. Important to conserve the areas that we love. As population, not as inclined to go there if not comfortable with it in our backyard.</p>	2
<p>Policy where within every 2 miles there's access to a park, if that's the vision seems like an amazing opportunity because then other programs are trying to get people out to places. Effort to reach out to generation in 20s and 30s?</p>	3
<p>Goco - dedicated funding, as agencies do grants, should be requirements and funding given so receiving agencies would participate in education programs to let public know that offshore drilling royalties funded programs.</p>	3
<p>Using landscapes to teach across American West – easy in east, only way to learn about landscape is to be on it, landscapes are ultimate classroom, history, culture, biology, geology, powerful tool build respect for culture, need new landscapes set aside, NLCS provides vehicle for teaching about lands as entire ecosystem. Improved access to lands through government funding that provides classrooms. Provide competent and diverse teachers, need standards for outdoor education from Department of Education – crucial role. HHS needs to be eminently involved in obesity awareness, Department of Agriculture needs to undertake education for relationship food and natural systems, Interior. Outdoor-based curricula, comprehensive inventory of lands, public and private, which can function as classrooms, inventory teaching resources that are available, competent teachers, and link. Do away with public attitude of fear toward access to difficult places. People need to be encouraged to swim rivers, climb mountains, without having every piece of equipment from REI to do it. Teach how land forms and water shape human history. National Trust for Historical Preservation involved in campaign to do what</p>	3

<p>wilderness society did with creation of NLCS, set aside cultural landscapes. Know and be able to teach how people at Sand Creek used landscape to save selves, grasslands shaped history of Santa Fe Trail, etc. Teach about landscapes from landscapes – will get people out, make them healthier, engender tremendous appreciation for entire planet.</p>	
<p>Federal government focuses on the land we manage, need to place more investment on stepwise progression from urban areas to lands. Need places where families can take them first, then to state parks and federal lands.</p>	3
<p>Spending time thinking about kinds of outcomes want to promote, putting notions out there as challenges with certain characteristics (highly leveraged, encourage youth, have educational component), create competition and let best ideas percolate to top. Foster rich competition of ideas. Road less rule for national parks in Colorado, frequent mention of impacts of beetle kill but more forest health problems, won't be effectively addressed unless true collaboration. Need dollars in Colorado to address that issue. Think Colorado is candidate for another national park. Have landscapes that need protection. Encourage continued review and evaluation of a range of possibilities – grasslands are underrepresented portion of national acreage among national protected landscape. Private lands conservation programs through USDA need to be continued, well-coordinated, needs to be an optimization or rationalization of federal funding sources so as user-friendly as possible. Whether pursued by private land owner or NGO, need to be presented and leveraged effectively. Federal government can be somewhat unwieldy deliverer of results.</p>	2

<p>Bring people to areas of water, especially where don't have oceans, it's central to have clean water to do that. Restore Clean Water Act. Connect experiences from childhood to places, really stick.</p>	3
<p>Issues that come w/ playing in water/liability - legal issues.</p>	1
<p>Non-vehicular access i.e. Clear Creek fm Loveland Pass to the flat; has a lot of bike path. Pedestrian path and funding needed for natl grid for bicycles to get off road due to vehicles - keeping it safe. Create a segregated pass for bicyclists.</p>	1
<p>Mentoring Academic Program/Educating Families - access to paths via bicycle - have to ride to destination.</p>	1
<p>Big barrier is funding - for kids. Competitive resources. Get funding to reconnect families for Conservation. Technological experience to complete grants -</p>	1
<p>Conflict between public supports for species. Issue with Govt allowing wolves to be shot.</p>	1
<p>W/in conservation often exclusive due to access, program may not be relevant to specific issue.</p>	1

Youth activities - mentoring them; need more support w/family programs due to both parents working.	1
Introduce the good ethics of four wheeling - problems with insurance coverage. Boys N Girls Club participated in four wheeling in mtn's - help kids recreate - educate kids/outreach.	1
Funding - wildlife grants. Creativity - place to work	1
Lookout Mtn Nature Ctr - funds availability for transportation	1
Access to websites/communications to find information; create a website consistent with all the agencies and keeping them updated.	1
Mom 2 & 4yrs age - programs for kids to participate in. Guidelines written as rules. Be inclusive and cut the red tape.	1
Full and dedicated funding for Wildlife. Implementing /waking with state & local agencies. Living in Boulder and having the rtd, railways	1
Camping Equipment - It is hard to buy these items when you are living day to day	1
Appreciates the conditions of campsites in CO area. No outhouses, area in Natl Forest was not kept up; was not clean. Need funding for keeping up the campsites/ toilet/ water will be beneficial for families camping/hiking.	1

<p>Public Land Management - for camping overcrowded. Indians Peak Wilderness too crowded natl campsites are over booked. Managing it for private ranchers not good always.</p>	1
<p>Age limit for younger kids- encouraging Girl Scouts, ELK, finding time/research on outdoor activities. Advertising/encouraging for kids and parents.</p>	1
<p>Urban Gardens are awesome - in town and keep supporting them. Local/State funding/process.</p>	2
<p>One strategy that has worked huge network of volunteers. Take care of the people that help agency. Saves \$\$ /County money - They in turn also share their experience to the public.</p>	2
<p>Environmental Education - there are lots of agencies - no coordinated strategy with those agencies - Envi Literacy in process of creating. Oregon, Maryland have this going on.</p>	2
<p>More exposure for groups; more volunteers that love what they do; more planning/funding/dedication.</p>	2
<p>Encourage Land Trusts that are working on private lands/ farms; Collaborating with agencies but also private lands so we get educated in ranching/farming</p>	2

Promote Public Transportation - get kids bus passes; teach kids to take other alternatives rtd, etc. Vice driving.	2
Agencies are under staffed - put \$\$ for positions for staffing. Educate kids and get them outdoors but need funding fm hunting and fishing licenses. Currently no money available.	2
Funding mechanisms - sales taxes over Jefferson Cty; pretty cool that CO has to offer	2
Youth core Program - get kids connected to the outdoors. More funding for Americore to help out low income families.	2
Co is blessed; partnership base. Need all user groups at the table/waking together.	2
What has worked is a coalition put together ie. Www.outdoor.net - have great info on website on how to volunteer – what’s going on in your neighborhood, trails, etc..	2
Great Outdoors - Americore important for CO.	2
Funding for Land & Water - 703B contribution to outdoor. Praise federal agencies due to advertising on outdoor activities.	2
Using outdoor classroom time for our kids today - as well is indoors. Educators are doing well on passing info to kids in school.	2

Education - fed dept of education needs to get involved and partner with them/outside agencies.	3
Fed Govt has standards for highway; need to expand for pedestrian and bicycles that is realistic.	3
Exclusions	3
Getting the word out - making it cool to be outside. Have govt to help w/ public service announcement in theatres, schools, etc... Assistance in funding the marketing aspect	3
Let public know why ELK does what they do - wildlife belongs to the people and our future children.	3
Conservation CRP – what’s protecting our native grasslands. Allocate about 2MM acres - land that farmers get to farm - encourage on a Farm Bill; 60% sits East 2nd largest area. Wind Energy is the doom of our prairie crops; not the answer unless its put in the right place. No regulation on wind energy except for State of WY.	3
Take a deeper look at recreation plans - take reports, group them together and highlight accomplishments and collaboration needed on state & fed level.	3
Reaffirm that BLM establish acreage - BLM wilderness has been leased to oil n gas. Impact of going after oil shell (land, water)	3
Leadership role in helping wildlife survive. Praise for Natl Park Service - staff people/partner liaisons working together and need more of. Funding for these types of volunteers or planning.	3

Renewable Energy on Public Lands - getting help fm Fed. - Incentives when energy plan passes. Royalties that we get fm oil n gas	3
Fed Govt partnering with Lands Trusts - 2008-2009 level would be nice to get back to - tax deductions would be nice. Natl Inst of Health - get people encouraged to exercise due to them using our parks, natl forests, etc.	3
Let's Move Outside - First Lady. Congress allocations for conservation budget. Enable Congress and Fed agencies for more funding on Conservation, etc.	3
More fed state dialogue. With the local govt's working the best way.	3
Fossil fuel - renewable issue; Americans waste energy - the wasting makes it a either/or. If you get standards for retro fitting - homes i.e. Carbon negative it is a powerplant then we don't have to worry about windmills /renewable energy. Govt needs to push for new homes, deep weatherization. Standards for new homes/ have glass that overhangs. We can do all this and not use the windmills.	3
Solar panels & flat roofs? Something needs to be done.	3
Program incentives on roads being worked on/Wildlife bridges for animals that need to cross.	3
More funding, websites, public service announcements,	4

Translate the science to people to understand - more user friendly.	4
The President himself a great tool - to educate kids. Use the President & First Lady to promote these values.	4
Get natl comprehensive survey on education programs, parks, wooded areas, identify areas for greatest need whether urban, city	4
So many agencies working on same issue - create a clearing house i.e. Dept of Interior for education - put something together more user friendly. Updated info.	4
Energy competitive with wind mills - wells; if the tool that govt puts out to educate - on amt energy savings. Looking for people to put in 10% but need to push 100%. US Govt has no goals to set high goals.	4
As far as fed govt to be a conduit in conservation - the connection between the great outdoors and home is critical to our job. When you think of nature people think scary, faraway places. How can we market the Great outdoors?	4
Under the guise of what works, with motorized recreation, the money is allocated formally, but partnerships with land management agencies - they don't have the capabilities to deal with us and our monies	2, 3
Also really disappointed we didn't show the 7.5 minute video - but it is wonderful and can see online. However, motorized recreation is not included anywhere in the video, though	3

<p>Has a 14 year old daughter - Am concerned with a "youth need" for us to direct and talk to children about the opportunity and future of land, air, and other important ecological and social issues. It is important to me and my daughter to reflect to: 1.: The Winter Park (north central Colorado) issue need to get out. We need educational projects in Winter Park to get kids outdoors in the summertime, and other times. Less fortunate kids should have opportunity. We need to find ways to partner, for education, and to get kids outside.</p>	2
<p>We need to get kids out with the ski industry, and also year round. Ski areas would be very supportive for camp situations in summer - lodges, parking spots, and other amenities are in place. We have also provided such summer activities for decades, but now there's a bill in congress trying to formalize this. Use of ski areas to shift kids to outdoor recreation year-round.</p>	2, 4
<p>I'm a common man living in Denver. Have lived here over 30 years. I very much hope this policy will integrate the non-profit community, GOCO, etc. Into helping non-profits to help kids get outdoors. 2nd - I fully endorse initiatives to get kids outdoors. Growing up, our folks used to kick us outdoors, but that has changed and we need to help get kids outdoors. River programs are a good idea. Mission programs on weekends and off-school days help to get kids out. Lastly, the elk example seen today helps get kids out. We need to train kids to be future environmental educators. We should create a whole new "Force" (both adults and youth) with love for the outdoors.</p>	1, 4
<p>I have lots of ski experience and outdoor experience. Our Denver area Founders understood the relationship between front range and mountain uses. Winter Park endeavors to get kids out. We approached Denver, but this outreach is stalled. No growth in getting kids to ski areas. Cost of winter sports has created minimal participation efforts. We need to look at President Obama's own upbringing and fostering of value to him for parks and the outdoors. Need to work with families to help them understand these values. Funding is finite, so you need to motivate families and kids. Work with emerging populations to get them to feel more welcome and getting outdoor use. Legacy of public lands is needed.</p>	2, 3

<p>Preparing for the "Heritage Area" - this pulls the history and land together in South Park, Colorado. There's reality and authenticity. Outside mentoring with kids on the range and Platte River. Heritage Area connects volunteers, grass roots, and others, ranchers, ranch experience, miners panning, miners with engineering thinking, partnering with other groups and offering Heritage Area resources. Include this with what's happening with the land. Visit an old miners cabin, ranch, one room schoolhouse, and see and feel what it would have been like for a kid to live there. We have a museum with 35 buildings in South Park, to visit history. Partnering with other places and other resources. Huge ranches in South Park, but putting in easements for the future. We need to ask ourselves, what can I do, how can people appreciate this as much as I do?</p>	1, 4
<p>Vignettes of education are needed. We need to mentor young people in the outdoors.</p>	2, 3
<p>With horses and back country horsemen, volunteers develop a sense of outdoor ownership. How to do this within budget and without volunteers is impossible. Used to be trail groups. Need to set money aside for trails that doesn't get siphoned off. Enviro studies for trails takes too long. Volunteers need quicker action. Hard to keep momentum if enviro studies stretched out too long. 4-H groups get people outdoors. Helps in urban entities supporting 4-H. National problems (Forest Service has budget issues).</p>	1, 2, 3, 4
<p>Now there's the bark beetle damage, and most Denver kids don't get west of Weat Ridge. We've done a terrible job in getting kids out.</p>	2
<p>Families need to understand fundamental value of getting outdoors.</p>	2, 3
<p>Support leaders of outdoors in kids and others being in even just their backyards. Support initiatives - getting people out, revitalizing cities. North of Denver is working farms - I love to see these. Important to see areas outdoors is not exclusive, and you don't have to travel far. You can even just plant flowers on your doorstep, or you can just stay close to home sitting under a tree. All this is really getting outdoors, too.</p>	1, 3, 4

<p>Recently, Colorado was awarded for their outdoor rec. Plan. This needs to be recognized across the country! We work as 65 people who meet downtown at the REI store monthly, and this successful grassroots volunteer work can be replicated nationally. Available is Water Land and "Conservation funding for staffing, with initiatives, to continue partnering with many non-profits. We have a successful Landscape approach with our recreation issues (Gave out handout).</p>	1, 2, 4
<p>I work with over 10,000 kids annually on public lands. Initiatives from Washington DC are not understood and they don't understand how very many grassroots orgs are working with kids. Many hand-to-mouth kids groups have too much competition already for scarce dollars. There are complex urban demographics of this country, and we are losing what knowledge there is about public lands and that is available out there. We need more public message spots on radio and tv saying over and over again this is what we do, and these lands are out there for you.</p>	1, 2, 3, 4
<p>I come from a 4th generation San Luis family interested in conservation and waterways. Waterways are the arteries and veins of the system to take care of the land. We need to educate our children and get them involved outdoors. A good segment of the urban population has no interest in this. "We need to get people to recreate and enjoy. Then they will spend money, time, and interest in supporting these outdoor efforts. Urbanites may not give a toot about consumption of resources."</p>	2
<p>We need healthy watersheds and sharing knowledge of lands. Finding how to connect the dots, win, win, win, win. Sustainable funding - GOCO is successful. We need to find out how to create this for rivers and lands throughout the nation. We have an economist working on this for throughout the west and the world. Higher power revenues are the Key to success.</p>	2, 4

<p>The outcome of our work should be a reasonable number of visions. We must celebrate or nurture the collaborative successes that have celebrated great outcomes, across multiple jurisdictions, with healthy forest initiatives and youth. Inspiring a new outdoor use paradigm would be a crowning achievement of your administration.</p>	<p>1, 3, 4</p>
<p>We have a shared vision, a request for administration on how funding can work, with more collaborative partnerships. Dollars follow objectives. Dollars flow to joint contributions.</p>	<p>1, 3, 4</p>
<p>RTP - Recreation Trails Program is out of the Department of Transportation. RTP is on life support now. Like the Federal budget, they keep upping it, but still a number of people benefit from this and work with youth corps. This funding needs to be re-upped or RTP is underutilized. Need to do like GOCO - redirect lottery and take income stream to create an amazing program. The Snow Mobile ruling was the first funded by GOCO.</p>	<p>2, 3</p>
<p>At the end of the day, we need constituency willing to support our efforts, or this outdoors issue is moot.</p>	<p>2</p>

<p>Example - 750 environmental education teachers who could be empowered by giving them lift tickets. Lots of skiers.</p>	2, 4
<p>I've raised two kids in school systems - public and private. Unfortunately, neither have any more physical education nor outdoor programs. We need to bring these back in our schools to get kids outside.</p>	2, 3
<p>There is no need for more 5th graders program to ski for free at resorts. We are at capacity now at ski resorts in teaching kids how to ski. Check numbers on this for accuracy. Kids are now turned away due to full rosters at ski school. Ski areas expose millions of kids to the National Forest. We are a portal to bring kids to the National Forest.</p>	2, 4
<p>Disagree that many kids do not have the funding to go skiing.</p>	2
<p>Challenge cost share - national historic and scenic trails that are funded are important to have. There are over 100 communities with large populations which are encouraged to get out and make use of these. Inner City kids can get on a bus and go there. Costumed trail guides and history are available at several. Walking where their ancestors had walked is an important notion. Trails connect everything. Historic landscapes, land, animals, etc. It's important to get kids out on these. Lewis and Clark Trail System - is a great example of where visually impaired kids are using trails successfully.</p>	1, 4
<p>We have a great vision - differing habitats to see, and the need to drive special folks to use these.</p>	1, 2
<p>Parks and recreation are big in the City of Denver and in Lakewood. We should continue to try and reach kids, families, all demographics, and don't need to take kids off on grand adventures, but to give them local outdoor experiences close to home. Important to work into parks programs. Walk a trail.</p>	1, 2, 4

<p>Psychology of going on a hike diminishes stress, diminishes pain, and connects us spiritually. Need to create desire. Look at advertisers and food. Only create a positive vision. How great you feel when you move!</p>	<p>1, 4</p>
<p>How to get the money out to outdoor programs? Need to play significant roles in applying, etc. Urge Administration to see who they are getting the money to and if they are accomplishing the goal.</p>	<p>2, 3</p>
<p>Have the agencies work together. Private land owners and gov't agencies can be helped together with a catalyst agency like Trout Unlimited. Partnerships work with mediator group. Hundreds of successful examples are out there to help more partnerships forward. Keep inspired.</p>	<p>1, 3, 4</p>
<p>Transportation, potential visitor don't have a way to get out to rec sites</p>	<p>1</p>
<p>Funding to provide opportunities for kids, even nonprofits need funding to operate</p>	<p>1</p>

Lack of mentoring young people, mentoring provides better education than booked based curriculum, we need to bring kids into environment of learning	1
Focal point need to also be on adults not just youth, parent base is also important, too much funding just for youth, when introduce "parents" get kicked out of the funding mix, shooting, one of the most interesting activities to those participating, has very few facilities close to be used for their program and their most interesting activities to their participants, shooting sports brings many into the program	1
More incentives for private land owners to provide conservations easements and other similar private land conservation programs	1
Awareness, where do we target these kids, school, having outdoor youth organizations available in school, mentors, makes it easier to get to the kids	1
It's equally as important for State Historic Fund to be fully funded, Historic Corps, education, mentoring, integrating historic and environmental education is just as important	1
Getting agencies to work together in a landscape way	1
Outdoor education integrated with sports in school, hiking, mtn climbing, etc, not as competitive as team sports and some respond better to individual sports, and learn about the environment as part of the sport	2

<p>LWCF is very successful and needs to be fully funded, but focused on "wilderness", funding should include programs "in the city" to reduce the transportation cost, focus on local city parks</p>	2
<p>Outreach in Schools really helps, it started me, raised me to be a role model for younger kid, working for ELK in outreach for young kids</p>	2
<p>Historic education is part of our heritage and important to our education and environment, many of these sites are local and easy to get to, historic properties are in the grasp of many of us, encourage us to think and promote History, need full funding, all are in the outdoors and</p>	2
<p>ELK is an inspiration, do you do more outreach in other schools</p>	2
<p>Plan trails using GIS to make sure they lay lightly on the land, "bundle" trails for different uses but yet separate.</p>	2
<p>Ranchers are indeed incredible stewards of land, endangered species important in S Co yet they have to fight the takeover of land by the Fed Govt', (DOD) Need to keep small family farmers on the land to continue the protection of those important lands</p>	2
<p>Biking community passionate environment, bundling of trails works well</p>	2

Scenic Byways a great way to get people out and educate them about the environment	3
BLM needs legal authorities to establish wsas	3
Federal agency coordination, low hanging fruit, empower employees to think beyond their agencies, need to drop barriers to agency employees working outside their own silos	3
Forest Service Planning rule, asking for public feedback on the new rule, use data FS is accumulating can be used as part of the AGO effort, conserving water sheds etc will help preserve land and wildlife for more than just people	3
Question for you. On Public Lands Day i've seen agencies work very well together. How is it one day a year the agencies can work very well together and, yet we hear they can't the rest of the year. We have to take care of what we have. CCC's long time ago. Those of us who like to hike will just hike further from the developed areas.	3
How do we get the kids and parents out on the public lands yet protect those lands with today's funding. Mining Law of 1872 needs to be repealed. One of the biggest problems, we are losing money because of this law. Money used because of this law could be used for other needs.	4
Mentoring a great idea but US Dept of Education needs to be involved sooner than later	4
LNT.org, simple resource for everyone with curriculum already available	4

Involving the young people today needs to be the trend, because there has been a huge disconnect between young people and the outdoors.	1
It would be beneficial for us to have programs that don't need people to sign up, and don't cost money, and help people enjoy the outdoors safely. It costs too much money to get into a national park, which excludes a large group of people.	1
I work for a non-profit, and all of our funding comes from grants. We also have a program for disadvantaged kids, but we don't have funding for it. If there was money, more children would be able to take part in the activities. Funnel the money through the non-profits!	1
Since most of us live in urban environments, the government should focus improving city projects.	1
Encourage the federal government to get young people to work on the land, and invest in existing programs instead of creating new programs.	1
We need more cost-effective ways to introduce people to the outdoors	1
It is important to positively influence people to value public lands and resources. It is our support system! We need to raise awareness about what wilderness is all about, and promote the designation of new wilderness areas.	1
We need to focus on partnerships to get kids outdoors. Funding opportunities for counties who do not have the resources to get the youth involved. It is important to market and promote projects, and mobile marketing is the way to go!	1
Bring disparate groups together under one umbrella, and let's start working together. We made many recommendations, but there is no way to get those recommendations going because of funding and other challenges. There is a lack of awareness about the benefits of getting outside. The government should provide answers to questions: What is there to do? Where will I find it? And how do I do it?	1
It is important to have a vision of success from the beginning. It is easy to become overwhelmed with all the details. It is important to conserve the areas that we love. As a population, we will not be comfortable with public lands if we are unfamiliar with them. It is important to get nature areas (parks, rec) close to home so everyone can be involved!	1
We need improved access to lands, and provide competent and diverse teachers, and raise the standards for teaching about outdoor recreation. We need public lands that can also be used as classrooms for the youth. We also need to do away with the public attitude of fear towards accessing difficult places.	1

Get more kids involved in outdoor programs, like ELK	1
It doesn't work for young adults to volunteer their time. We need to create jobs for young people, in which they do good work for outdoor awareness.	2
There are many problems with the forest, other than the bark pine beetle, that need to be addressed. I think Colorado is a candidate for another national park! The landscapes here need more protection.	2
In Colorado, we don't have access to large bodies of water. It is important to protect our clean water sources.	2
It costs too much money to get into a national park, which excludes a large group of people. Transportation has become so expensive to bring inner-city youth outside, that it has become too hard to afford it. Getting people in to schools is not beneficial, because it is still not getting kids outside! Another problem has to do with the permits that national forest service's charge for admission. Why can't the forests get together, and charge 1 annual fee for people to enjoy ALL the forests, instead of having to pay for use each time people would like to get out.	2
If there was money, more children would be able to take part in the activities. Funnel the money through the non-profits!	2
There is a link with getting outside + preventative health care! Our insurance companies are facing obesity and mental stresses (war trauma), so they should also get together with the government	2
There is a lack of awareness about the benefits of getting outside. The government should provide answers to questions: What is there to do? Where will I find it? And how do I do it?	2
My parents are from Mexico, so they are very uninformed about what to bring when camping or fishing. Kids like me need programs to help get us informed.	2
There should be full-funding for the Land and Water Conservation fund. We think there is a need for projects that concern the big picture, and will be beneficial for years to come. The CCC effort in the depression has been a great help for many people. Let's get more young adults involved in helping children get outdoors by creating jobs for these 20-30 year olds.	3
Reduce barriers (fiscal) to partnership, and increase funding for organizations that get people outdoors. Consider youth as assets that improve public lands and solve problems.	3

To improve the lands, we need more funding. It is important for all organizations to work together, with the same goal.	3
Is there an opportunity to model after the "This is your brain on drugs" program? The urban parks and recreation recovery programs are failing, because of no funding. They haven't had funding for years	3
Many goco trails are full of signs that recognize who takes care of them. It is important for agencies to also participate in education programs when structures are built.	3
Set aside cultural landscapes, in order to teach people about how our land has shaped our history. This will help connect children to the great outdoors, which will create greater health and appreciation. How about getting entertainment (bands, actors) that peaks youth interest out into nature and talking about it?	3
There needs to be a rationalization for all various government funding programs in order for this money to be spent as wisely as possible. It is important to acknowledge that government programs do not always produce results. This idea needs to be planned out thoroughly, and all the best ideas need to be gathered. Let's create competition of ideas in order to have a well thought out program. There are many problems with the forest, other than the bark pine beetle, that need to be addressed. I think Colorado is a candidate for another national park! The landscapes here need more protection.	3
They need to address water issues more aggressively. Initiatives protect land.	2
Only has set amount of time to spend outdoors and it would be nice if maps were made public.	2
REI has a booth of information available.	2
Non-Motorized trails are available online; www.fs.fed.us	2
Challenge Corp of Engineers to fix problem they created with South Platte. There should be a new way of looking at restoration.	2
Us vs. Them (motorized vs. Other users) all come to table to find solutions, we can all coexist. Every group wants something good and healthy for the trails	2
She loves the mountains. Agrees with David that trails are so lengthy and hard for children and disabled, handicap area does not get them where they used to go	2

Has worked for a wheel-chair camp for children; wilderness on wheels	2
Believes it would help to have leaders on handicapped trails.	2
Would like to see everyone in Govt actually doing something and listening to the public and being accountable. Need to see that the public is taken care of ... doesn't see decisions being implemented. Work for the public, not do what they want	2
One thing that is a common theme is a funding problem... one thing that hinders me from enjoying outdoors is not being able to support my family.. Carbon footprint tax should be implemented on goods that are imported and put a tax on exported jobs... we need to reduce the amount of jobs we export	2
40 acres, landlocked by the USFS, abuses and lies from USFS to cut trail in his land. Respect for private and public property. No permission to create trails	2
River issue, water resources. Having access to water. Dolores River and Pewter. Access issue with Forrest Service. Keep gates locked until July 1. Would like gate opened a month earlier.. Local district office wants to follow proper channels ; Dolores, managing spills issue with FS, looking for new alternatives for the way the reservoir is managed... impacts are down-sizing.. Losing usable water days	2
Must outline these basic principles: respecting property rights, budget allowing to be good stewards, trail management issues, trash – empowers local govt	2
Conservation- Wise use, not just protection; conservation is key, conservation is the new protection, good responsible wise use of land. Getting more ppl outdoors, when you develop a partnership, all voices are at the table (voices from one end of spectrum to the other). Opposing ideas get pushed to side, must work best for everybody. Forest Health Issues, giant fences around our land may mean less protection, President to reach out to broad community.	2
Stuck in a perpetual state of dynamic tension when there is unlimited demand with limited funding... particularly with so many different interests. Only patchwork things being done.. Need revolutionary changes like funding wildlife management. Need adequate funding. Have too many priorities that are not being fully addressed.	2
All agencies are competing for the same dollar, choose priorities. Do all half way or chose the ones important to us and do them fully	2
Rafting issue bill generated more public participation than any other.. Packed supreme court with thousands of people... this is something that creates a lot of passion	2
Works with a program that is seeing Federal funds, and feels supported.	2
Nice lie!	2
Just wanted to point out that there are programs with support.	2

In Colorado had good success building on partnerships.. The focus is on jobs, but also noting that private businesses are evil.. However, it's the partnerships between private businesses with the non-profits that are making things happen. President needs to embrace every opportunity to get private funding.	1
Need to focus on undeveloped lands. Ability of President to establish national monuments. Through antiquities act. Govt has ability to protect wildlife, air, water. More pressure for development. As energy sources get more scarce. We need to use this mechanism to take this action	1
Was on school board, requiring performance bonds along with a permit	1
We get money from gov to buy on water rights, donate those to state, funded through Federal Dollars, State Dollars and sometimes GOCO, private individuals donate- somewhat of a partnership	1
People should be encouraged to write a conservancy trust in their wills; a donation of strategically placed land	1
And there should be a Federal match.	1
Water quality, what can be accomplished with legislation	1
How much money does this region get. Accountability, for mineral and oil extraction	1
Mineral impact funds, most distributed to local governments.	1
It goes to infrastructure, not watershed.	1
Problem solving for trails, she found there is not enough room to go around each other; some areas with a diversion	1
IF there is a way that President can work with admin to give local forest ability to work outside the box. Instead of one big forest policy. Dealing with san juans that you're not gonna see somewhere else... put a directive to enforce existing mous	1
In this area, we actually work on a one-to-one basis with BLM and forest service; work around federal government because their rules don't work. Allow more control locally	3
Push down and empower local agencies with decision making	3
Opposite point of view, federal lands belong to every American, putting them in local hands lends itself to manipulation, fears endangerment of lands, nations treasures, federal policies there for a reason	3

Not saying to ignore national monuments. Just how we work with federal service	3
Some county commissioners would love to control their lands, bad idea	3
Takes different perspective as well. Good opportunity for agencies; Opportunities for more guidance from Federal Gov. Help with navigability, help with rivers	3
Administration needs to come back to center again. Some leeway. Need to find a balance between Federal and local levels	3
I agree, no one cares most about local areas than natives.	3
There is not an enforced national policy about keeping land as it is	4
Cultural competency ... face of America changing and forest service needs to maintain relevance. Administration looking to involve more ethnic groups	4
Education, other ways of helping trails, give people probational time to help with trails, more programs and volunteer efforts be put in place; reach out to organizations	4
President not jumping on executive orders, can't be dynamic enough to meet needs at local level	4
Some matter of legislation needs to dedicate funding of sources. Need to get a handle on petroleum, protecting urban watersheds	4
Increase land and water conservation funding	4
