

August 29, 2012

The fall drawdown schedule for Tulloch Reservoir is provided below. The schedule complies with the Army Corps of Engineers flood control requirements, and elevations are projected to lie between the low and high bands. Actual elevations may vary temporarily due to rainfall events or unforeseen operational constraints. This schedule incorporates an additional drawdown below the normal floor in order to permit required inspections and testing at Tulloch Reservoir in early January 2013. The exact duration of the inspection/testing is unknown at this time, but will probably be several weeks, weather permitting. At the conclusion of this work (currently anticipated to be late January or early February), a revised schedule will be issued and Tulloch will be allowed to refill to the normal winter elevation of 501.6 ft. For additional Tulloch information, please see the Tri-Dam Project website at <http://tridamproject.com/tulloch.aspx> .

Elevation Range			
From	To	From	To
5/29/2012	9/12/2012	506.5	509.5
9/13/2012	9/19/2012	505.8	508.8
9/20/2012	9/26/2012	504.7	507.7
9/27/2012	10/3/2012	503.5	506.5
10/4/2012	10/10/2012	502.3	505.3
10/11/2012	10/17/2012	501.1	504.1
10/18/2012	10/24/2012	499.9	502.9
10/25/2012	10/31/2012	498.8	501.8
10/31/2012	11/1/2012	498.6	501.6
