

# APPENDIX A

## ENVIRONMENTAL MANAGEMENT SYSTEMS

An Environmental Management System (EMS) is a formal framework for integrating the management of environmental issues into the overall management structure at Department of Defense (DoD) installations and ranges. When properly implemented, EMSs identify the environmental aspects of the mission, highlight and prioritize areas of risk, promote pollution prevention, and track progress toward environmental goals. DoD uses EMSs to improve operational efficiency while reducing environmental risk and associated costs.

Executive Order (E.O.) 13148, “Greening the Government through Leadership in Environmental Management,” requires each Federal agency, including DoD, to integrate environmental accountability across all missions, activities, and functions and into day-to-day decision making, long-term planning, and processes. At a minimum, E.O. 13148 requires that each DoD Component implement a documented EMS at all appropriate facilities by December 31, 2005.

The Under Secretary of Defense (Acquisition, Technology, and Logistics) (USD(AT&L)) issued the Department of Defense Environmental Management System policy memorandum, recognizing the different missions among DoD Components and providing support for each Component to implement an EMS that best fits its mission needs.

### Compliance with Executive Order 13148

In 2004, each DoD Component maintained a list of appropriate facilities that are required to implement an EMS. A consolidated list of these facilities is located at the end of this appendix. The Department also continued to track facility-level progress using the following EMS implementation metrics:

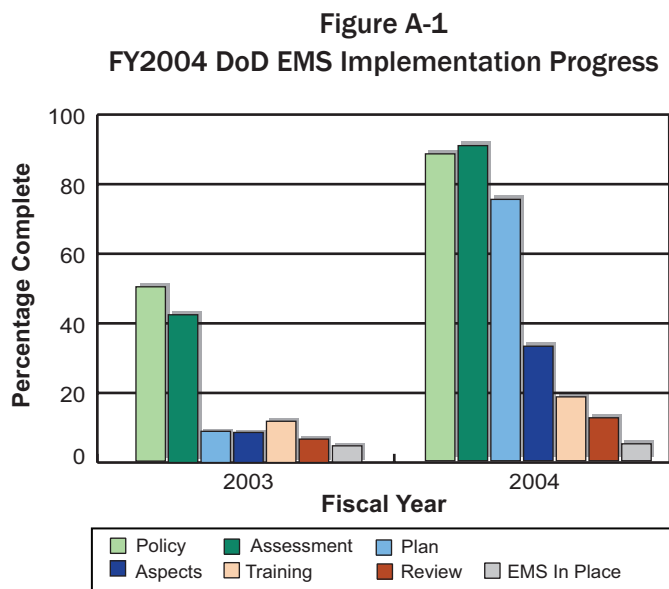

- Policy – Facilities issue an EMS policy statement
- Self Assessment – Components perform a gap analysis against an accepted EMS framework
- Plan – Components prepare an EMS implementation plan, including dates, resources, and responsibilities
- Aspects – DoD Components identify, document, and prioritize their environmental aspects
- Training – Facilities conduct awareness-level EMS training
- Review – Facilities perform at least one management review in accordance with the installation’s documented procedure for recurring EMS management reviews

On January 27, 2004, the Office of the Federal Environmental Executive (OFEE) formally issued the Environmental Management System Agency Self-Declaration Protocol for Appropriate Federal Facilities (Protocol). The Protocol, which was developed by the E.O. 13148 Interagency Environmental Management Workgroup, requires Federal agencies and bureaus to establish their own procedures for EMS self-declaration by December 31, 2004.

To meet this requirement, the Department issued the DoD Environmental Management System Self-Declaration Policy on July 16, 2004, through the USD(AT&L). DoD Components are developing and finalizing their specific self-declaration procedures. Installation commanders must use the Component-specific self-declaration procedures to determine whether they have fully conformed to requirements for implementing an EMS and can credibly state that they have an EMS in place.

## EMS Implementation Progress by DoD Component

The DoD Components are developing and issuing EMS guidance to assist appropriate facilities in implementing EMSs that will efficiently meet their needs and mission requirements. Figure A-1 shows the collective progress DoD Components have made towards implementing EMSs at appropriate facilities.

### Army

The Army's EMS program continues to evolve as installations progress towards meeting the DoD implementation goal. The Army employs a phased approach to EMS implementation, with milestones set for 2003, 2004, and 2005. The Army established these interim milestones to set clear goals for installations and to track EMS implementation progress at appropriate facilities.

As of Fiscal Year (FY) 2004, 98 percent of Army installations have an approved policy in place, 94 percent have completed an installation-wide EMS self assessment, and 76 percent have completed EMS implementation plans. Army leadership is committed to

ensuring that these requirements are met. The Army also maintains a strong and ongoing leadership focus on EMS by incorporating rigorous implementation metrics into its Strategic Readiness System and by conducting frequent senior leadership in-process reviews.

### Navy

The Navy issued its EMS policy on December 6, 2001, in accordance with E.O. 13148 to ensure Navy EMS compliance at appropriate facilities. Navy currently has 111 appropriate facilities, five of which have an EMS in place. Two of these Navy facilities participate in the U.S. Environmental Protection Agency (EPA) Performance Track Program.

The Navy EMS recommendations are based on the Interational Organization for Standardization (ISO) 14001 model, employing a cycle of policy, planning, implementation and operation, evaluation and corrective actions, and management review. Navy's EMS goal is to continually improve environmental performance as the cycle repeats.

The Navy tasked the Commander, Navy Installations (CNI) to ensure that all appropriate installations implement EMSs in compliance with E.O. 13148. The Commander, Naval Facilities Engineering

---

Command provides technical support and manpower to assist CNI in this effort. CNI endorses EMS as a means to improve environmental performance and enhance mission focus. The Navy directs installation and regional commanders to begin EMS implementation by addressing activities critical to mission execution and making determinations on how to best manage the related environmental aspects to sustain operational readiness. CNI is fully committed to making the best use of EMS as a business practice to improve uniformity, efficiency, and shore installation management.

The Navy provides installations and regions with tools, templates, and training to assist with EMS implementation efforts. The Navy established a web site to facilitate sharing of these tools and templates at <http://p2library.nfesc.navy.mil>. The Civil Engineer Corps Officers School offers EMS implementation training, including an Environmental Management Systems 101 course, an Environmental Management Systems Implementation workshop, and a course in conducting EMS reviews. In addition, CNI developed a 15-minute executive-level EMS awareness video. The video provides a short senior-level EMS overview and testimonials from Commanding Officers on the value of EMS at three activities with successfully implemented EMSs.

## **Marine Corps**

Headquarters Marine Corps (HQMC) issued policy on March 3, 2004, that defined the Marine Corps EMS applicability, implementation criteria, and reporting requirements. HQMC subsequently published additional policy on conformance with the Marine Corps EMS on December 29, 2004. This policy requires all Marine Corps installations and Marine Forces Reserve (MARFORRES) to fully conform to the Marine Corps EMS by December 31, 2007, and for all active and reserve tenant commands to fully support their host facility in attaining and maintaining conformance with their EMS. The Marine Corps policy also provides guidance in the form of an “EMS Conformance Guide” for evaluating, certifying, self-declaring, and reporting conformance with the Marine Corps EMS. Beginning in 2005, the policy also requires installations to use the well-established Marine Corps Environmental Compliance Evaluation Program to evaluate conformance.

The Marine Corps developed and fielded an EMS awareness training module via the MarineNet training web site and CD-ROM. The Marine Corps is also working on an EMS portal for day-to-day, installation-level EMS management that should be fielded by the end of 2005. HQMC, the active installations, and MARFORRES held a semi-annual EMS meeting in August 2004 to discuss EMS implementation status, next steps, and associated endeavors such as training tools and the EMS portal.

## **Air Force**

The Air Force issued the Planning Element and the Implementation and Operations Element guidance documents to detail the steps involved in completing the initial phases of EMS implementation. Each guide provides instructions, checklists, templates, and examples to assist installations with the tasks involved in each of these phases. The Air Force is developing a third guidance document to address the checking, monitoring, and management review elements of EMS. The Air Force conducted EMS pilot projects at Robins Air Force Base (AFB) and at Eglin AFB, both of which have fully functional EMSs in place. Both installations use the internationally-recognized standard for EMS, ISO 14001 framework. There are 178 appropriate facilities in the Air Force, 12 of which have an EMS in place. The Air Force has set milestones to meet the December 31, 2005 deadline, and as of FY2004, achieved approximately 40 percent completion.

## Defense Logistics Agency

Defense Logistics Agency (DLA) Director, Vice Admiral Keith W. Lippert, signed a mission-focused EMS policy statement adopting ISO 14001. This statement reinforced the DLA Corporate Board's inclusion of implementing EMS at all 154 DLA appropriate facilities by December 31, 2005 as a formal objective in the DLA Strategic Plan. To meet this goal, DLA set executive-level requirements for the first three DoD EMS metrics. As of September 31, 2004, 100 percent of DLA's appropriate facilities signed EMS policies, completed EMS self assessments, and developed implementation plans. DLA set further goals of completing all six DoD EMS metrics by December 31, 2004. There are currently eight DLA activities with validated EMSs in place.

To support these efforts, DLA's EMS Initiative developed a comprehensive EMS Implementation Guide and conducted hands-on implementation training at four regional locations. DLA trained senior leaders and commanders worldwide on EMS via the Director's monthly video teleconference. DLA produced a video and brochure, "EMS Awareness Training for Senior Leaders." A second EMS awareness training video included remarks by seven DLA Senior Leaders and Commanders. In addition, DLA developed a comprehensive EMS Implementation Guide, an EMS web site, and a "DLA Protocol for EMS Recognition." DLA collaborated with the General Services Administration (GSA) and OFEE to establish the first interagency EMS. DLA signed a Memorandum of Understanding with GSA, implementing a joint EMS at the Hart-Dole-Inouye Federal Center in Battle Creek, Michigan.

## Installations with an EMS in Place

The following installations have EMSs in place as of October 1, 2004<sup>1</sup>.

- Anniston Army Depot
- Scranton Army Ammunition Plant (AAP)
- Tobyhanna Army Depot
- Picatinny Arsenal
- Riverbank AAP
- Naval Air Engineering Station Lakehurst
- Naval Air Depot North Island
- Naval Undersea Warfare Center, Newport
- Naval Undersea Warfare Center, Keyport
- Naval Air Depot Cherry Point
- Barksdale AFB
- Beale AFB
- Holloman AFB
- Nellis AFB
- Malmstrom AFB
- Eglin AFB
- Robins AFB
- Fresno Air National Guard Base (ANGB)
- Fort Wayne ANGB
- Tucson ANGB
- Des Moines ANGB
- 173 Fighter Wing, Klamath Falls ANGB
- Defense Supply Center Richmond  
Installation Support and Services
- Defense National Stockpile Center  
(DNSC) New Haven Depot
- DNSC Point Pleasant Depot
- DNSC Binghamton Depot
- DNSC Hammond Depot
- DNSC Scotia Depot
- DNSC Somerville
- DNSC Warren Depot

<sup>1</sup> Increased understanding of EMS requirements, consolidation, and closure of some facilities led to fewer installations having EMSs in place in FY2004 compared to FY2003.

---

## **EMS Funding**

Each DoD Component identified resources for EMS implementation consistent with EMS policy requirements. DoD's general approach to EMS implementation involves programming funding for training and EMS implementation for FY2005 and beyond. EMS training and implementation resources have been programmed as part of the DoD Components' overall training and management budgets. Each Component has identified an EMS program manager at the headquarters or secretarial level. With this structure, the Department plans to have EMSs in place at all appropriate facilities by December 31, 2005.

## **EMS Guidance**

The Department of Defense provided EMS implementation guidance to the DoD Components in the DoD EMS policy memo dated April 5, 2002. The DoD Policy requires compliance with E.O. 13148 as well as specific minimum elements:

- Shall adopt an EMS that best suits its needs and integrate it in all core business areas
- May adopt ISO 14001
- Should pursue third party registration only when it provides a clear and documented benefit
- DoD Components are encouraged to implement a complementary management system for safety and occupational health

Providing additional EMS implementation guidance beyond these minimum requirements is explicitly the responsibility of the DoD Components, as indicated in the following statement from the DoD policy, "Recognizing the diversity of our missions, each DoD Component shall implement an environmental management system that best suits its mission needs." In January 2003, DoD also issued EMS implementation metrics to track progress on EMS implementation across the Department. The Office of the Deputy Under Secretary of Defense for Installations and Environment and DoD Components have adopted these metrics.

## **EMS Training**

Leadership within the Office of the Secretary of Defense consistently and actively communicates and reinforces key elements of EMS policy and its impact on DoD's mission. This active communication effectively spreads the message of the strong correlation between EMS, sound environmental stewardship, and mission performance. DoD teamed with EPA to provide EMS implementation courses for audiences including Federal interagency groups, DoD groups, and the U.S. Department of Agriculture. DoD, through the Inter-Service Environmental Education Review Board, initiated a review of common EMS training requirements, available training courses, and materials. Each Component makes training materials available in various formats that suit the target audience, including senior leadership. Examples of training materials include fact sheets, web-based training modules, and videos.

## **DoD-State Partnerships**

DoD recognizes the importance of sustaining solid partnerships with the states to maintain public confidence in military environmental stewardship and streamline day-to-day operations. The Department considers EMS implementation to be a unique opportunity to establish and improve these partnerships.

During FY2004, DoD continued its involvement in the OFEE-led Federal-state initiative to advocate EMS as a tool to improve environmental performance. DoD is also leading the E.O. 13148 EMS Sub-Work Group Task Force on Collaboration with States and External Groups, which coordinates with the Multi-State Working Group and the Environmental Council of the States to advance the use of EMSs.

\*\*\*\*\*

DoD will continue to use EMSs as a framework for organizing the elements of its environmental programs to better support the mission and integrate environmental management into core mission activities. DoD can use EMSs to protect and preserve the resources the Department manages, sustain public support, and reduce program costs over the long term.

## DoD EMS Appropriate Facilities

Component	Number of Appropriate Facilities			Number of Appropriate Facilities with EMS In-Place			Percentage of Appropriate Facilities With EMS In-Place
