

# COST RECOVERY STATUS

The Department of Defense (DoD) seeks to recover response costs for contamination caused by the actions of other parties. According to DoD policy, as stated in a February 27, 1998, memorandum, each Component is required to identify all opportunities for recovering environmental restoration costs from, or sharing such costs with, DoD contractors and other parties, public and private, that may have contributed to environmental contamination at DoD sites. Components must also investigate each activity in which cost recovery or cost sharing may be possible, to determine whether the likelihood of recovering or sharing costs outweighs the expense associated with pursuing such an action. Finally, if cost-recovery and cost-sharing activities appear to be potentially cost-effective, Components must pursue such activities to the extent practicable by—

- ◆ Obtaining all relevant data
- ◆ Identifying any defense contractor negligence or other misconduct that may limit or negate DoD's obligation to

indemnify or reimburse the contractor for the costs of environmental restoration at a DoD site

- ◆ Initiating actions, where appropriate, to recover environmental restoration costs incurred, or to be incurred, by the Department.

The Defense Environmental Restoration Program Management Guidance states, "As a matter of policy, Components should pursue recovery of response costs of \$50,000 or more." Components are authorized to credit the amount recovered for response costs to their Environmental Restoration Accounts (ERAs). The status of the Components' cost-recovery actions is provided in Table F-1.
