

MONTHLY SUPPLEMENT TO COMMERCE REPORTS

UNITED STATES
DEPARTMENT OF COMMERCE
WASHINGTON

SURVEY OF
CURRENT BUSINESS

AS OF
JANUARY 1, 1922

No. 6

COMPILED BY
BUREAU OF THE CENSUS
BUREAU OF FOREIGN AND DOMESTIC COMMERCE
BUREAU OF STANDARDS

Subscription price of the SURVEY OF CURRENT BUSINESS is \$1 a year; single copies, 10 cents. Foreign subscriptions, \$1.50; single copies, including postage, 20 cents. Subscription price of COMMERCE REPORTS is \$3 a year; with the Survey, \$4 a year. Make remittances only to Superintendent of Documents, Washington, D. C., by postal money order, express order, or New York draft. Currency at sender's risk. Postage stamps or foreign money not accepted.

INTRODUCTION.

The January number of the SURVEY is the first regular quarterly issue giving detailed figures for all items. This number is of special interest, because, for the majority of items, it gives the monthly movement for the whole of 1921. The items in the detailed tables have been rearranged and the footnotes have been expanded. In response to requests from several sources, blank lines for the first three months of 1922 have been added to each table. This will enable those who care to do so to enter such new figures as they are interested in as soon as they appear.

The text has been separated into two parts, the first being a preliminary survey for January, 1922, based on reports of current conditions received by the Department of Commerce. The second part is a statistical summary for the month of December, 1921, and points out the trends as shown by the actual statistics reported in this bulletin.

In the large summary table entitled "Trend of Business Movements" (pp. 18 to 31) index numbers are given for the current months instead of percentage changes, as in the preceding issues. These index numbers enable comparisons to be made directly with preceding periods or with other months.

The detailed tables which make up the bulk of this number give, for each item, both numerical data and index numbers covering the last two years by months, and show monthly averages for the nine years, 1913 to 1921, so far as such data are available.

The list of sources of information, pages 144 to 146, has been expanded to indicate the exact source and publication, if any, from which the various data are taken. The usual time of appearance of each set of data is also indicated wherever possible.

The alphabetical index, pages 147 to 149, will enable the reader to find readily the items in which he is interested.

USE OF INDEX NUMBERS.

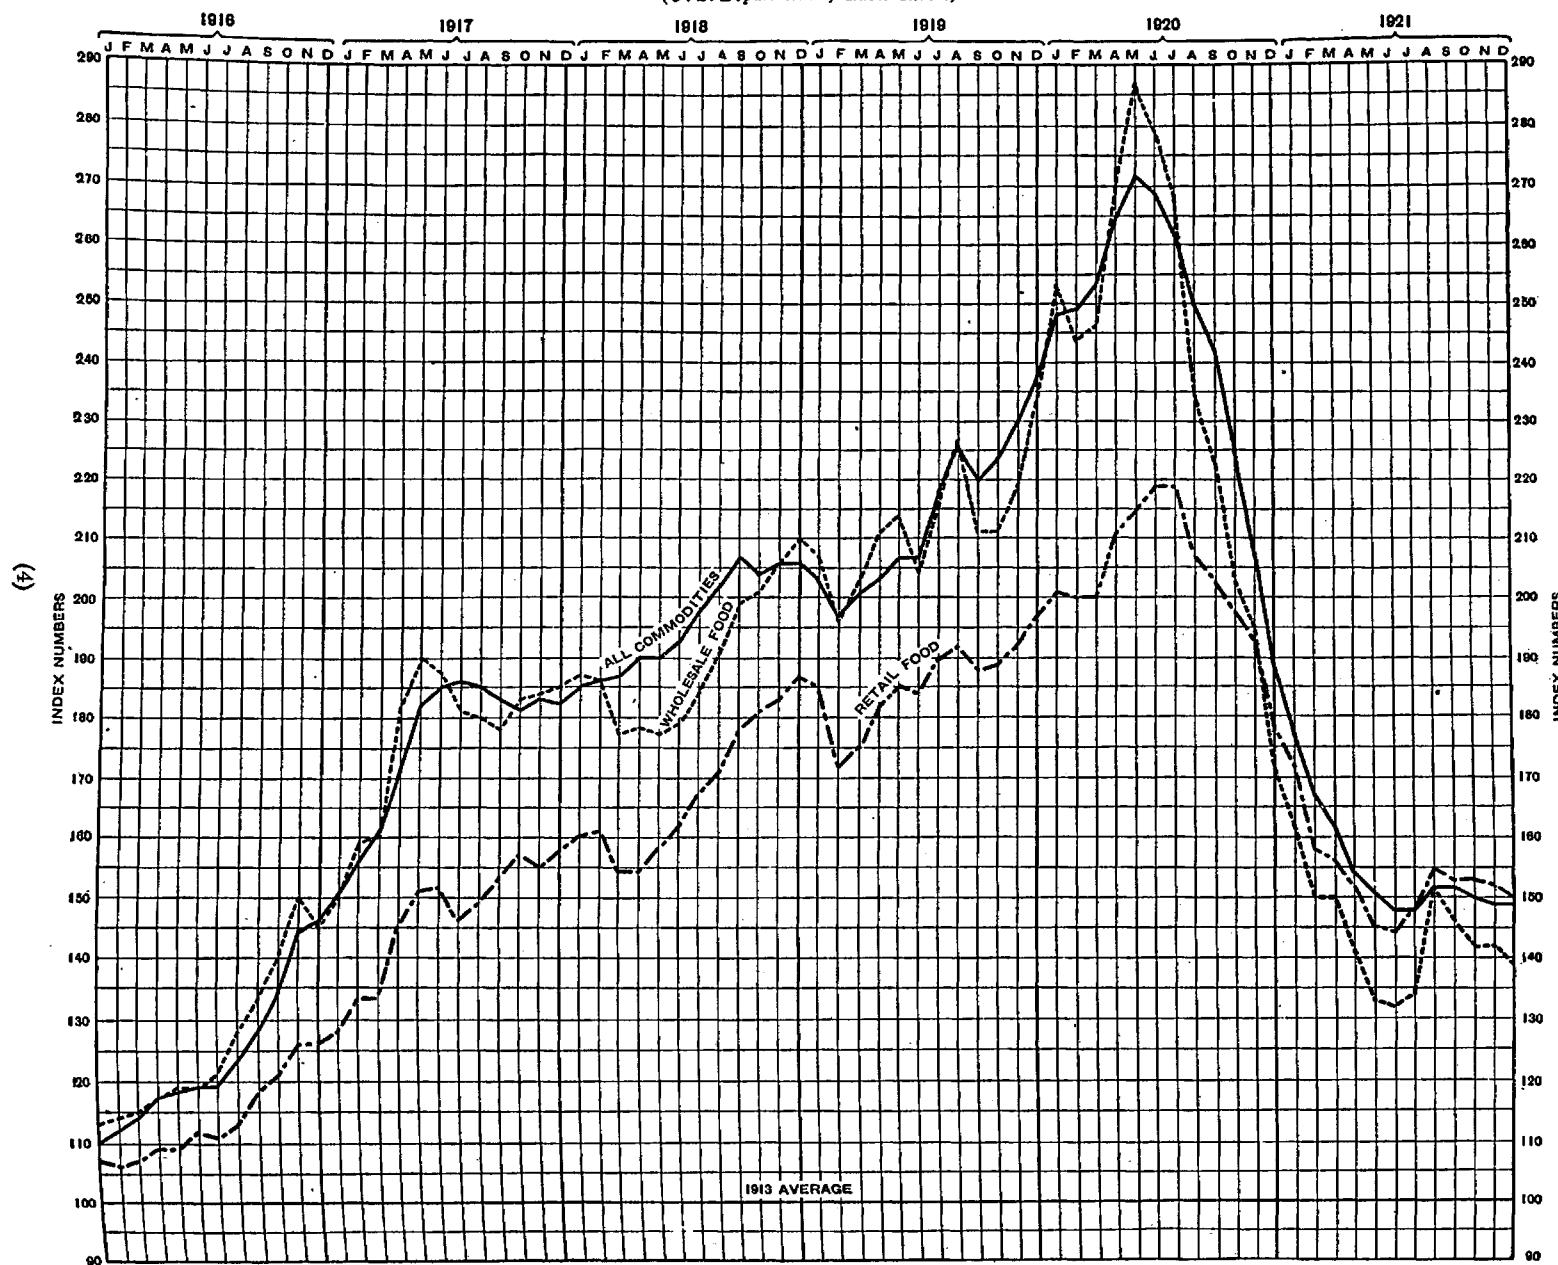

For the benefit of those readers who did not receive the earlier numbers of the SURVEY it may not be out of place to point out the advantage of index numbers as a rapid method of gaining a bird's-eye view of the trend of business. For this purpose reference may be made to the second item in the large table on page 18, viz—the imports of unmanufactured wool. The index number for December, 1921, is 99, which shows at once that imports of this commodity were 1 per cent less in December than the average monthly imports for 1913, the base period.

The index number for November, 1921, was 87, so that there was a considerable increase in the last month over November. The final column of the table shows that this increase amounted to 14.4 per cent. The index number for wool imports in October was only 72. This, together with the index numbers for the two succeeding months (87 and 99, respectively), show that this movement has been increasing, although it is still below the prewar average. The September, 1921, index number was 115, indicating that for that month imports of wool were 15 per cent above the 1913 average. In November and December, 1920, wool imports were 97 and 106, respectively. From a study of these figures it is possible to obtain a clear idea of the trend in each industrial movement.

COMPARISON OF WHOLESALE AND RETAIL FOOD PRICE INDEX NUMBERS.

WITH INDEX OF ALL COMMODITIES AT WHOLESALE.

(U. S. Department of Labor Index.)

PRELIMINARY SUMMARY FOR JANUARY.

Trade reports indicate that, although actual business did not show any great increase in January, there was a continued improvement in fundamental conditions. A spirit of optimism prevails in practically every industry. It is believed in trade channels that, as soon as the period of inventory and tax adjustments has passed, there will be renewed activity. This was already evident toward the end of the month.

In the following paragraphs there is given a brief summary of reports reaching this department on trade conditions during January:

IRON AND STEEL.

The operation of steel plants underwent little change in January from that obtaining at the close of 1921. No definite trend in blast-furnace production has been evident. Pig iron and ferroalloys have been purchased for immediate needs only.

Semifinished and finished steel markets have been relatively dull, with business done in moderate quantities, except in the case of sheets and tin plate, which continue active. Sheet mills in the Pittsburgh district are operating above 70 per cent of capacity, while tin-plate mills are running at about 90 per cent. Pipe demand has been quiet, but Pittsburgh mills are said to have sufficient tonnage on their books to warrant operation at about 75 per cent of normal capacity. Completion of consumers' inventories has not yet run its course, which fact has retarded the boom expected in the early part of this year.

Export trade has continued fairly active, with Japan the leading buyer in the lighter products, such as black sheets, tin plate, and wire products.

TEXTILES.

Very little change has occurred in the textile business. There has been, in general, no improvement in booking new business for mill production in cotton, wool, and silk, though here and there a fair business is being conducted.

Reductions in prices by the American Woolen Co. in its opening of fall lines and the settlement of the New York garment workers' strike lent a tone of encouragement to the trade.

HIDES AND LEATHER.

The opening of the year finds the hide and leather industry stabilized by a return of reasonable confidence. While the early part of January was marked by seasonal quietness, there are indications all along

the line of better trade conditions than during the past year.

Although hide markets have been dull and not much business has been transacted, the tone has been firm, with a general anticipation of higher price levels in the near future. It is the feeling of the trade that both leather buyers and tanners, with few exceptions, are carrying stocks which will be inadequate to meet any reasonable expansion in their orders. By the middle of January the leather market became more active, accompanied by a noticeable increase in inquiry for all classes of leather.

The outlook in the boot and shoe industry reflects greater optimism than has prevailed for many months. A fair volume of orders for staple and medium lines has been received in all districts.

AUTOMOBILES.

Little actual business of importance in the automobile trade is to be expected in January; however, the interest which has been evident at the shows speaks well for the spring trade. Prices have been reduced to approximately prewar values, while manufacturers are competing with each other to bring out better and longer-lived cars.

FUELS.

Bituminous coal production in the second week of January reached the highest point since late in November and was above the level of any week of 1921, except the very beginning of the year and the temporary rise in October, caused by apprehension over a railroad strike. Production of anthracite coal has also increased from the December depression.

Latest statistics at hand on the petroleum industry indicate a steady increase in the daily average production during the first half of January.

BUILDING CONSTRUCTION AND MATERIALS.

The amount of contracts awarded in January, 1922, is running about 20 per cent below December, 1921. This is usual for this season, when building operations are slowed up by weather conditions. In addition, the amount of contracts awarded during the last months of 1921 was fairly large, and uncertainty in regard to prices of certain building materials, and in some cases in regard to wages in the building trades, does not encourage prospective builders to place their orders far ahead of the time when construction can begin.

Building material producers have the capacity to meet a fairly large demand, and are generally prepared to do so, as the need for new construction has been well advertised. In slow-moving commodities, however, there are always likely to be temporary or local shortages accompanied by price flurries.

The building material market during January shows decreases in the price of lime and glass at producing points, and there were further decreases in the price of cement at different points.

Of interest to building-material men were the hearings granted by the Interstate Commerce Commission late in January in regard to railroad rates on lumber, brick, cement, sand, gravel, lime, gypsum, and other building materials. It is not probable that the Interstate Commerce Commission will be able to take any action on these hearings before March.

RUBBER.

Tire production in large and small factories in the last month has shown that the level to which the industry reduced its activities in September and October is as low as will be reached. There have even been distinct signs of recovery from the seasonal declines made in those months. Spring dating orders have been satisfactory. The stocks are low, and, with the continually increasing number of automobiles in operation, the business of the tire manufacturers is expected to increase until the summer maximum is reached.

A better tone is apparent in the mechanical rubber goods end of the industry, due somewhat to the better situation in other manufacturing lines which enables them to buy equipment more freely.

Reduction in rubber footwear prices is encouraging dealers, most of whose stocks are low, to fill out their lines, and, as a result, the situation promises greater activity for the footwear factories.

FOODSTUFFS.

The grain market, which started under some depression the first week of January, has gradually improved. The principal depressing factors were an increase in the official wheat estimate of 54,000,000 bushels, due to revision of acreage on the basis of census figures, offerings of new Argentina wheat under United States prices, and a rather slow export demand. On the other hand, the poor condition of the winter wheat crop, both in this country and Europe, with continued winter drought, has had a sustaining effect. The taking of corn for Russian relief, while not a large factor, has helped the corn market. Flour production continues low, less than 1,900,000 barrels a week, which is considerably below the normal rate of consumption.

The live-stock market for January has been characterized by receipts 25 to 30 per cent smaller than for

the same period a year ago and a general strengthening of the market. Sheep and mutton have both increased in price since the first of January, while hog prices are also up. Cattle and beef prices have shown a smaller increase.

AGRICULTURAL IMPLEMENTS.

There has been no change in business conditions affecting the implements industry since the depression began, the principal obstacle in the way of a resumption of business being the inability of the farmers as a class to finance their requirements. Little recovery is looked for until there is a readjustment of freight rates and a more equitable relationship between the prices received by the farmer for his product and the prices which he must now pay for commodities required by him. However, the industry has passed through the worst phase of the depression, the hindrances are gradually weakening in their resistance, and from week to week there becomes evident an improvement that is slowly but surely leading back to normal.

ELECTRICAL GOODS.

Sales of electrical goods show a continued slow improvement generally in the Central and the Western states; in the Eastern states business is quite dull, but, taking the country as a whole, conditions indicate an upward trend. Stocks carried over by jobbers are shown by recent inventories to be moderate.

Apparatus lines have probably shown the least activity in the domestic market, though current business is said to compare well with that of recent weeks. Supply lines are moving slowly, with indications pointing to greatly increased activity shortly as new building operations are undertaken. Household appliance lines of all kinds seem to be moving well. Dealers are buying freely to fill up broken lines after the holiday rush. Lamps are selling well in the East with less activity in the West.

On the whole, the trade regards conditions as quite satisfactory for this time of the year.

HARDWARE AND OFFICE APPLIANCES.

Sales of hardware for the whole country are reported as fair for this time of the year, although certain districts state that there is little activity in the wholesale market. In general, however, conditions seem satisfactory. Prices on many lines of goods carried in the hardware trade have declined to the point where no further reduction can be expected, and consumers are, therefore, more willing to buy.

Sales of office furniture and appliances have shown no marked increase during January, although the trade is improving in certain districts. Reports indicate that buyers are in a more receptive mood, though placing orders rather slowly.

SUMMARY FOR DECEMBER.

The month of December, figures for which are now available, showed a further decline in industrial activity, continuing the movement noticed in November after the October spurt. In some lines this slowing down was seasonal, but the wide range covered by the production declines and the evidence of somewhat greater unemployment of labor showed that the country as a whole was facing a reaction from the fall boom.

The big seasonal feature of December business activities that is watched as an indication of purchasing power—the holiday retail trade—showed an increase over 1920 in most lines, but the industrial activity which had produced these goods had already taken place several months before.

PRODUCTION.

Many lines of industry showed a considerable slackening of production during December. The exceptions to this trend were pig iron, zinc, sole leather, by-product coke, oak flooring, silica brick, petroleum, oleomargarine, electric power, mechanical wood pulp, and newsprint paper. As compared with these 11 increases there were 20 decreases from November recorded.

But the picture is not quite so dark when it is realized that, of the commodities for which December 1921, figures are now available, even a smaller number showed an increase in December, 1920. Bituminous and anthracite coal, sole leather, petroleum, electric power, mechanical wood pulp, and newsprint paper were the only ones to gain in that month.

¹ Relative to 1914.

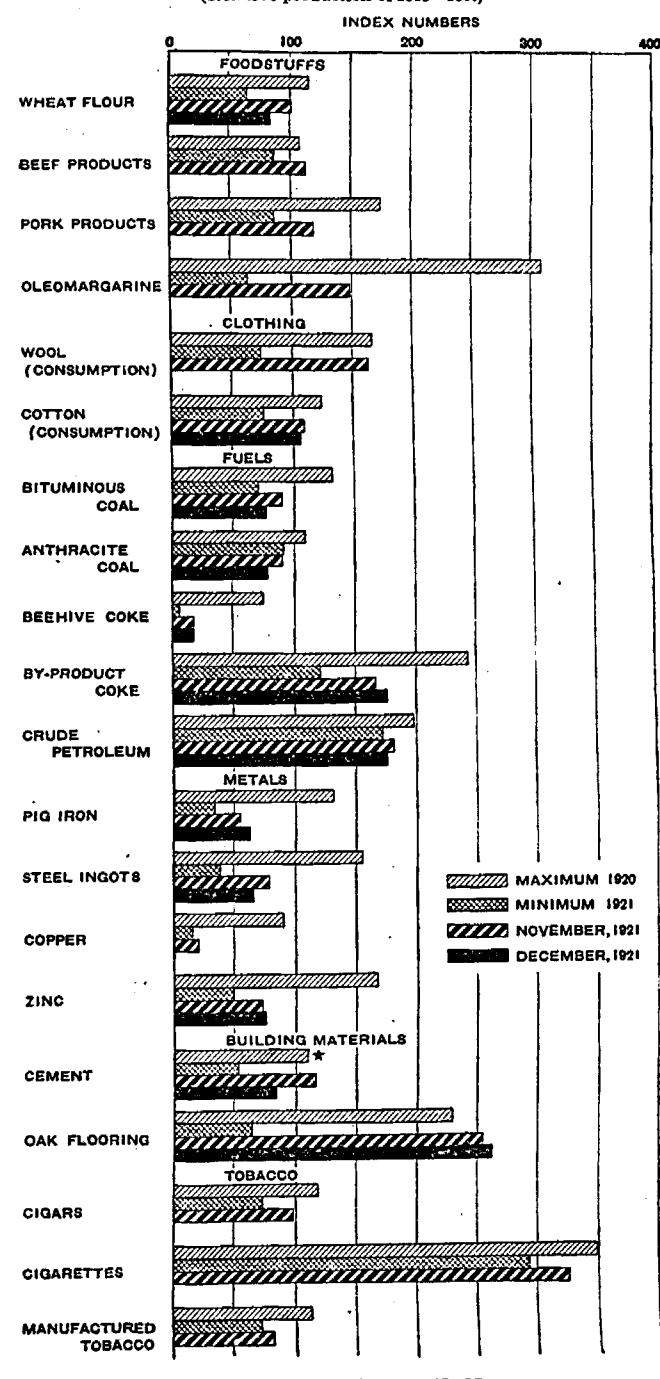

² As represented by tax-paid withdrawals.

Now that the full year's figures are completed for the great majority of industries, it is possible to compare 1921 production with previous years. Out of

32 commodities for which this comparison is available, only seven—wheat flour, cottonseed oil, yellow pine lumber, cigarettes, petroleum, woolens, and oak flooring—gained in production over 1920, and only six—wheat flour, cottonseed oil, cement, petroleum, electric power, and oak flooring—showed a greater production than in 1919, although face brick and anthracite coal equaled the 1919 figures. Also only six commodities—cement, woolens, oleomargarine, petroleum, cigarettes, and oak flooring—were produced in greater quantity in 1921 than in 1913.

* Latest month available, September.

DIAGRAM 2.—COURSE OF PRODUCTION SINCE 1919.

(Relative production of 1919=100.)

MOVING MONTHLY AVERAGE PRODUCTION.

The actual trend of an industrial movement can often be seen more clearly if plotted in the form of a moving average. In Diagram 3, page 9, there are shown the moving monthly average consumption of cotton and wool by textile mills and the moving monthly average of pig-iron production. The curves have been plotted on scales which permit of direct comparison among the three movements. The percentage scale in the diagram represents per cents of the approximate maximum monthly movement of each item.

The figures plotted are 12-month moving monthly averages. The first point plotted on the left represents the monthly average for the period from February 1, 1919, to January 31, 1920. The next point gives the average for the 12 months from March 1, 1919, to February 29, 1920, etc.

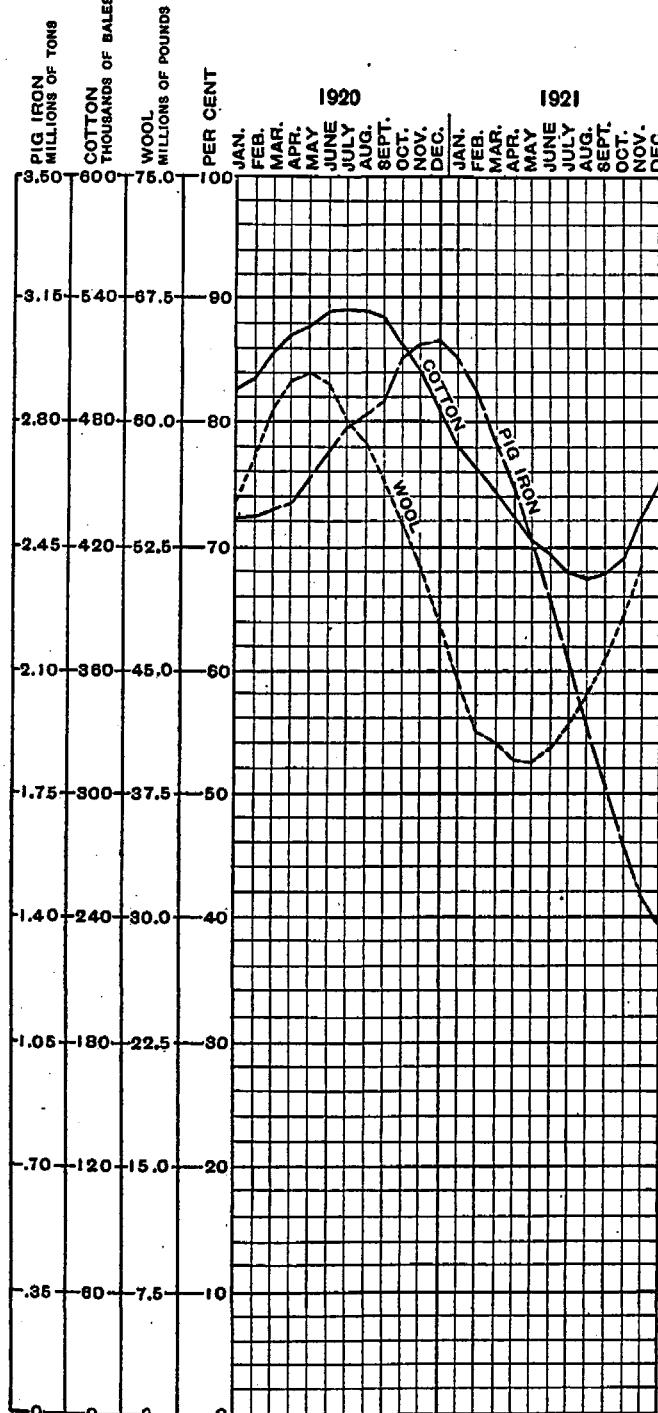

These curves eliminate all seasonal influence, because each average covers all four seasons. From the nature of their computation it follows that, whenever the figures for the current month are less than those for the corresponding month of a year ago, the curve will be downward, and vice versa.

It will be noted that the curves for cotton and wool consumption show a certain similarity. In each instance the moving average reached its maximum in the middle of 1920. The minimum was reached in May, 1921, in the case of wool, and in August for cotton consumption. Since then both curves have shown a rapid upward movement, indicating that the mill consumption in recent months has been greater than in the corresponding months of last year.

Pig-iron production, on the other hand, continued to increase throughout 1920. The moving average

did not reach its maximum until December, 1920, and at the end of 1921 had not yet passed the minimum point. If production continues to increase at the rate shown in recent months, the moving average should begin to turn upward in February; in other words, by that time current production would exceed that of the corresponding month last year.

DIAGRAM 3.—MOVING MONTHLY AVERAGE PRODUCTION OF PIG IRON, AND CONSUMPTION OF WOOL AND COTTON.

STOCKS.

In general, the decreased productive activity in industry during December resulted in an accumula-

tion of stocks of commodities. Outside of declines in six food commodities, most of which are seasonal, the only decreases thus far reported in December were in zinc, oak flooring, and silica brick, while cotton stocks were almost the same as in November. On the other hand, increases occurred in the stocks of 17 commodities.

Of ten commodities whose December reports can be compared with 1913, there were eight increases—four over 100 per cent—and two very slight decreases from the prewar average.

¹ Oct. 1.

² Nov. 1.

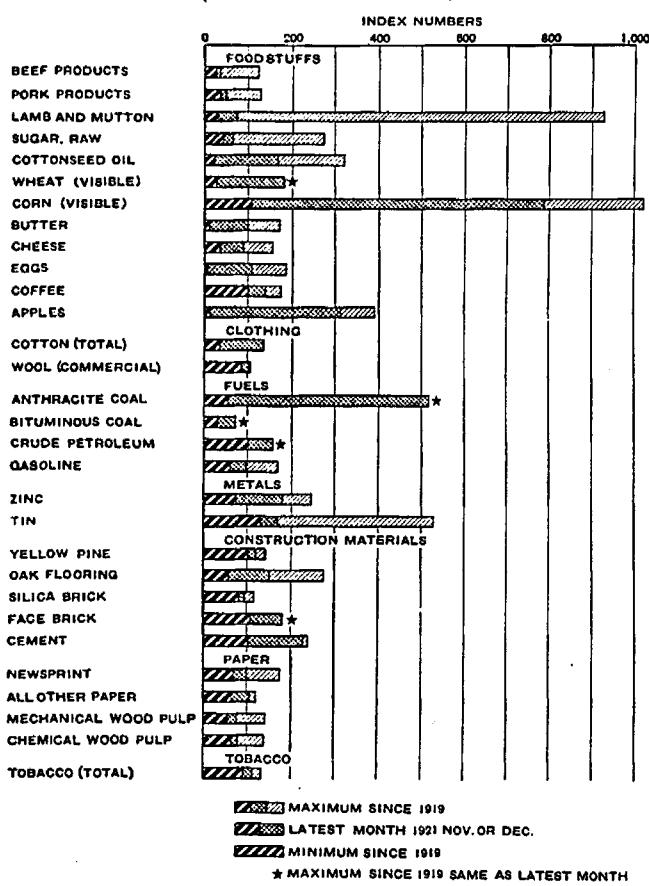

³ Relative to January, 1919.

⁴ Relative to stocks at end of 1919.

Comparing the 1921 yearly average of these same 26 commodities, it is seen that in only six cases—all foodstuffs, except chemical wood pulp—were the aver-

age stocks less than the 1919 average, and only five foodstuffs and tin—an imported commodity—showed a decline from 1920. However, the condition at the end of the year was quite different. Only 12 increases over December, 1920, occurred in these 26 commodities, no change in two, and 12 declines.

DIAGRAM 4.—COURSE OF COMMODITY STOCKS SINCE 1919.
(Relative stocks of 1919=100.)

PRICES.

The retail food index declined two points in December and stood at exactly 50 per cent above the 1913 average. Other items in the cost of living also declined in December, except shelter and sundries, which remained stationary. The total cost of living index of the National Industrial Conference Board declined two points.

The wholesale price index compiled by the Department of Labor showed no change in December. Increases in building materials and sundries offset slight declines in other groups. A similar change was evident in the sharp increase in forest products in the Federal Reserve Board's grouping of this index, while consumers' goods declined. The Federal Reserve Board's index for international price comparisons declined two points, although an increase of three points occurred in exported goods. Bradstreet's index number showed no change in December.

Prices in England and France declined more than 2 per cent each in December; those in Italy remained

unchanged, while in Germany the continued inflation of monetary standards drove prices up nearly 6 per cent during the month. Canadian wholesale prices increased in December, the first gain since the beginning of the decline from peak prices in May, 1920.

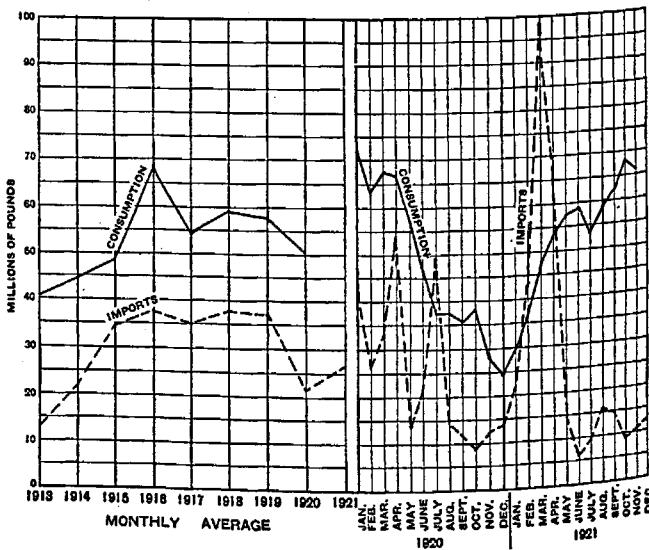

In the list of individual wholesale prices, given in the table and chart on pages 32 and 33, farm prices to the producer increased in five cases and declined in four. Market prices of farm products advanced for seven commodities and only 3 declined—hogs, cattle and barley. Only one increase—cotton-seed oil—occurred among the food products, while clothing items showed five increases and three decreases. Fuels had two declines against one gain, but three metals increased, while one pig-iron quotation declined. In the building material group there was one increase and three declines. Rubber declined.

The principal percentage increases in December were the advances of 37 and 21 per cent, respectively, in the market prices of ewes and lambs, while tin increased 14 per cent. The chief declines were in raw sugar and steel beams, each declining 9 per cent. Of the 57 prices listed, 14 are below the 1913 average; one more than in November. During December cattle and steel beams each went below the 1913 average, while wool went above it. Anthracite coal finally came down from the maximum price, the last commodity to do so.

TEXTILES.

Activity of woolen mills, measured by hourly activity of machinery, declined somewhat in December. Imports of raw wool continued to increase. Prices in this industry tended toward equalization, the prices of raw wool and yarns increased, but dress goods and suitings exhibited no change.

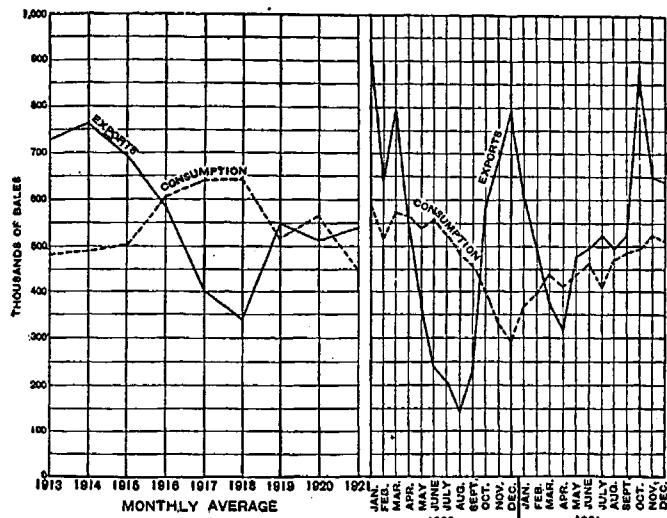

DIAGRAM 5.—CONSUMPTION BY MILLS, AND IMPORTS OF WOOL.

Cotton ginnings up to January 16 were close to 8,000,000 bales, far below corresponding returns in previous years. Total stocks of cotton in the United States at the end of December were about the same as

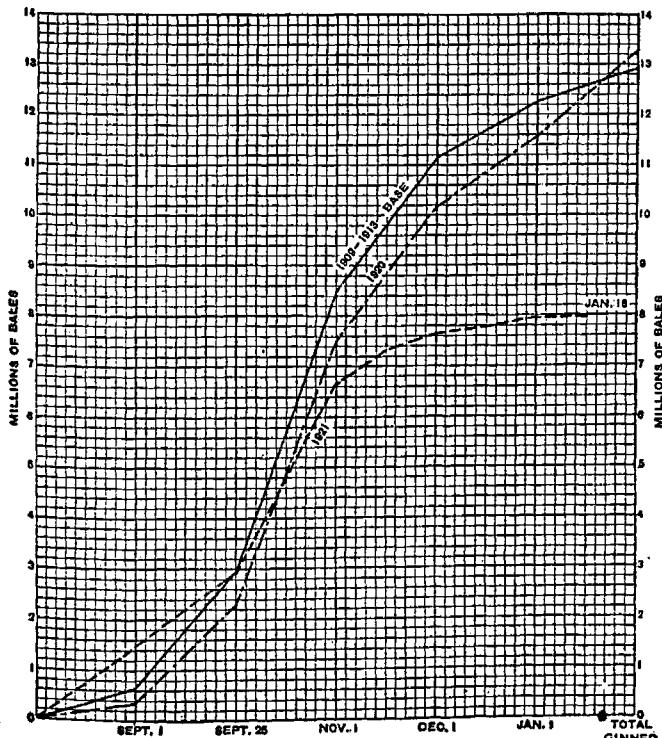

in November, 1921, or December, 1920. Imports of cotton continued to grow while exports again declined.

DIAGRAM 6.—EXPORTS AND CONSUMPTION OF COTTON.

Consumption by mills also declined, and for the complete year 1921, it was $7\frac{1}{2}$ per cent less than for 1920. Exports of cotton cloth underwent a sudden decline of 25 per cent from November. Spindle activity in December was the same as in November. Elastic-webbing sales declined slightly. Orders and production of knit goods declined in December; but shipments increased, and cancellations were much smaller than in November.

DIAGRAM 7.—COTTON GINNED TO SPECIFIED DATES.

Prices in the cotton industry also reached levels much closer to their prewar relation. Raw cotton

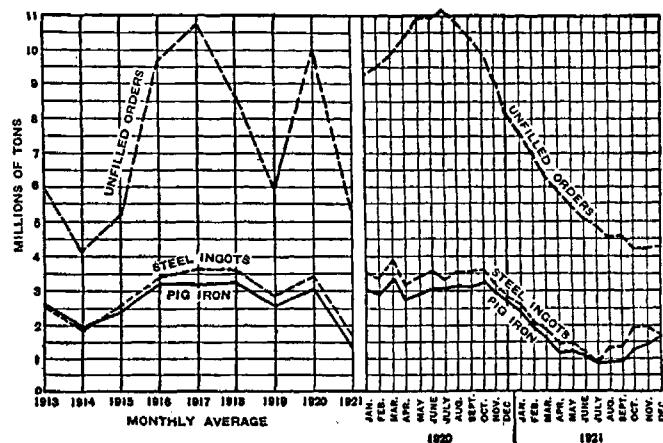

advanced slightly, yarns and print cloths declined, and sheetings advanced.

Imports of raw silk in December were very large. Withdrawals of silk from the warehouses continued to decline. For the year 1921, however, both imports and consumption were over 50 per cent larger than in 1920. Stocks of silk began to accumulate during December, and prices rose.

METALS.

Iron-ore movement from Lake Superior ended the 1921 season with total shipments less than half as large as in 1920. Pig-iron production increased again in December, but the output of steel ingots declined. There was little change either in our foreign trade in iron and steel during December, or in the unfilled orders of the United States Steel Corporation. Slight declines occurred in iron and steel prices.

DIAGRAM 8.—PRODUCTION OF PIG IRON AND STEEL INGOTS, AND U. S. STEEL CORPORATION'S UNFILLED ORDERS.

Sales of structural steel were 28 per cent less in December than in November, and production of sheets declined, stocks of sheets being also slightly less than in November. Foundry-iron production in Ohio continued its decline, with a drop of 14 per cent during the month.

Copper production turned upward in November, and exports of copper did likewise, but December exports fell off again. The price of electrolytic copper made a slight advance.

Zinc production increased slightly in December, and there was an almost imperceptible decline in stocks. Imports increased but were still negligible. Movement of zinc through St. Louis increased considerably, and a slight advance was made in prices.

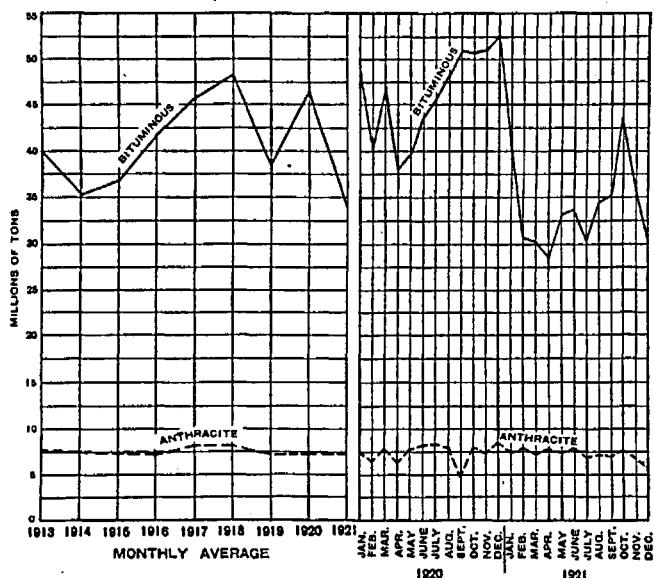

Imports and stocks of tin both increased about 29 per cent in December and were only slightly below the 1913 average. An advance of 13 per cent occurred in the price of tin.

The movement of lead showed an increase of over 50 per cent as regards receipts at St. Louis and of 13 per cent in shipments. No change occurred in the price of lead.

FUELS.

December production of both bituminous and anthracite coal declined to only three-fourths of normal, as against a better than normal production two months previous. Slight increases occurred in the output of beehive and by-product coke. Exports of coal and coke declined. Electric power production increased in December and reached the highest point attained since January, 1920.

DIAGRAM 9.—PRODUCTION OF BITUMINOUS AND ANTHRACITE COAL.

The production of crude petroleum increased almost 11 per cent in December and made the highest monthly figure for the year outside of May, 1921. Consumption and imports increased slightly and stocks rose to the highest point since the Armistice.

Shipments of crude oil from Mexico were very large in December. The price of crude petroleum increased slightly. Gasoline production declined in November, and domestic consumption was greatly curtailed. Stocks increased at the end of November. December exports of gasoline showed a decline of over 20 per cent from November.

AUTOMOBILES.

Production of passenger cars declined one-third in December, and trucks declined 21 per cent. Shipments of automobiles in December were also very much less than in November. Conditions in the accessory field showed purchases, outstanding notes, and past-due accounts all smaller than in November.

PAPER AND PRINTING.

Production and shipments of mechanical wood pulp increased in December but those of chemical pulp declined. Imports of mechanical pulp declined while chemical showed a large increase. Stocks of both kinds increased. Newsprint production and shipments increased, but other classes declined.

Stocks and exports increased. Prices of domestic paper, especially spot prices, declined, while Canadian prices increased slightly.

Printing activity increased somewhat in December but purchases of paper and sales declined.

HIDES AND LEATHER.

Imports of hides and skins increased slightly in December, the chief gains being in calfskins. Stocks of hides at the end of November were smaller than a month previous and also very much smaller than a year ago, when packer hides were held in much larger quantities than at present. Prices of packer hides advanced in December, but calfskins declined.

Leather production increased in December. Census reports showed greater sole-leather production in November than in October, but a smaller output of upper leather. Stocks declined very slightly. December exports of sole leather were very small, but upper leather held its own. No change occurred in leather prices.

BOOT AND SHOE PRODUCTION.

Exports of boots and shoes increased considerably in December, but no change occurred in prices. The preliminary figures on the production of boots and shoes in December, 1921, totaled 24,096,965 pairs, as compared to 23,592,610 reported in November. Of the total for December 9,801,628 pairs, or 41 per cent, were manufactured in the New England states.

Through a clerical error the total production of shoes reported by the 1919 Census of Manufactures in the December SURVEY (No. 5) did not include slippers, athletic, and all other shoes. The correct total production of all kinds of footwear in 1919, comparable with the present monthly classification, was 330,593,964 pairs. This makes a monthly average production for 1919 of 27,549,497 pairs, of which 48 per cent were made in the New England states. The detailed figures, by kinds of shoes, are shown on page 60.

CHEMICALS.

Imports of potash increased in December, but very much less nitrate of soda was imported. Considerable decreases were shown in exports of all chemicals. The wholesale price index numbers of the various groups all rose during the month,

BUILDING AND CONSTRUCTION.

Although less in floor space than in November, building contracted for in December was greater in value. The difference was due to the large increase in the value of residential buildings contracted for, in spite of a small decline in volume. Total building in December was almost double a year ago in value and almost triple in volume. The building volume index increased 17 per cent over November. The indices of

building costs indicated a stabilization of prices in December. Fire losses increased somewhat, but were much less than a year ago.

DIAGRAM 10.—VOLUME OF BUILDING CONTRACTS AWARDED, BY CLASSES.

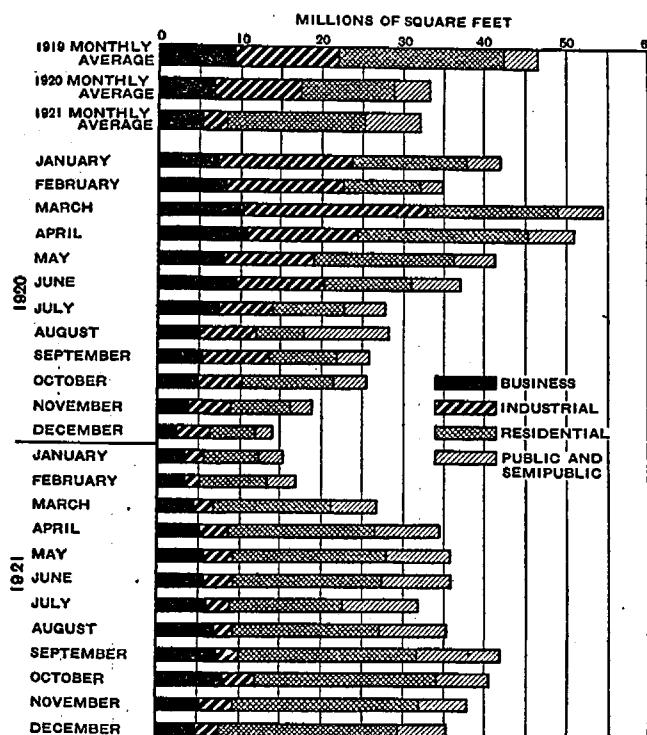

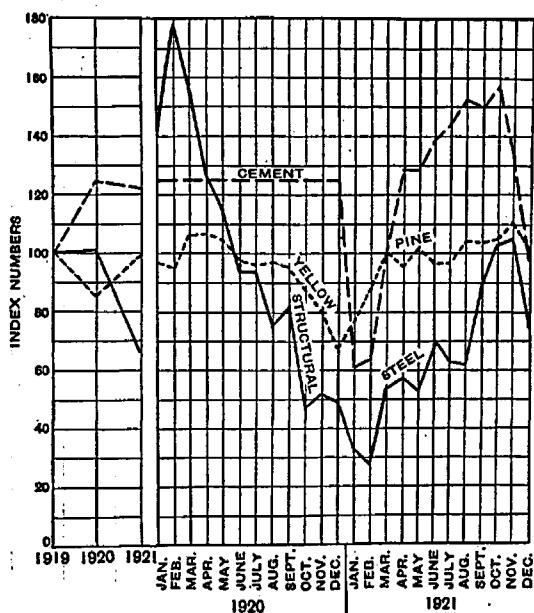

DIAGRAM 11.—RELATIVE PRODUCTION OF CEMENT AND LUMBER AND SALES OF STRUCTURAL STEEL.

(Relative to 1919=100.)

Production in all classes of lumber except oak flooring declined during December. The decline was especially violent in western pine. Shipments of all classes declined and stocks, where reported, increased. Exports of lumber increased considerably. Prices of

southern pine declined, but no change occurred in Douglas fir.

Production and shipments of fire-clay and silica brick increased in December, but face brick declined. Increased stocks occurred in fire-clay and face brick, but stocks of silica brick declined. Face-brick orders were slightly less than in November. Prices were irregular.

The production and shipments of cement declined, as was to be expected at this season, and stocks increased. Total cement production for 1921 was only 2 per cent less than for 1920, the record production year.

CEREALS.

The final crop reports for 1921 showed that both the winter and spring crops of wheat were below those of 1920, the total decline amounting to almost 40,000,000 bushels, or nearly 5 per cent. Exports of wheat flour during December declined, and the visible supply increased slightly. The movement of wheat at the terminal markets was less than in November, 1921, or December, 1920. Wheat-flour production also declined from the previous month. The price of wheat increased slightly, but flour declined.

The corn crop, as estimated in December, showed a reduction of 150,000,000 bushels from the previous year. December exports of corn were more than double the November exports, and the visible supply increased almost 50 per cent. Receipts and shipments regained the volume lost in November. Prices of corn remained unchanged.

Production of oats, barley, and rye declined from 1920 in each case. December exports of oats and rye were materially greater than those for November, but a slump occurred in barley exports. Price increases also occurred in oats and rye, while barley declined.

Total grain production for 1921 was some 660,000,000 bushels less than in 1920. Exports of all grain in December were slightly larger than in November, but almost one-third less than a year ago. Loadings of grain in December were greater than either November, 1921, or December, 1920. For the year 1921 both exports and loadings of grain increased 26 per cent over 1920.

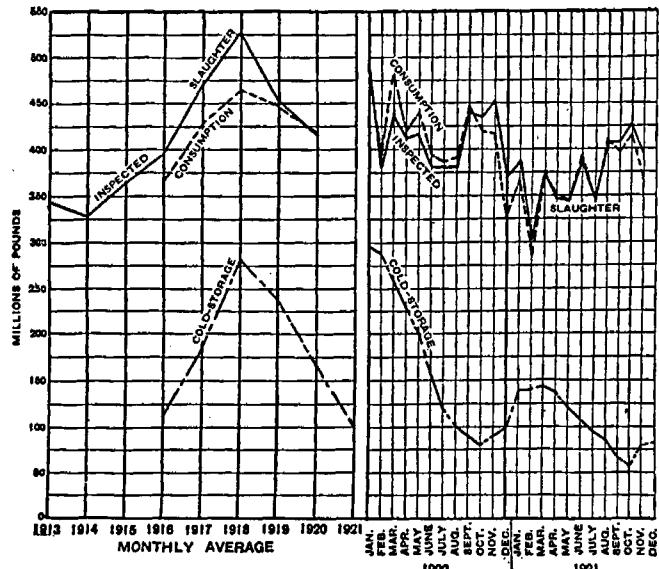

MEATS AND LIVE STOCK.

December movement of cattle exhibited the regular seasonal decline, the receipts, shipments, and slaughter being very close to the previous December's figures. The steady decline in exports of beef products continued, and cold-storage holdings continued their gradual rise. Production under Federal inspection as well as consumption declined in November. Cattle prices decreased again in December.

Receipts and shipments of hogs increased in December, but slaughter declined. Exports increased somewhat, but were far below December, 1920. Slaughter

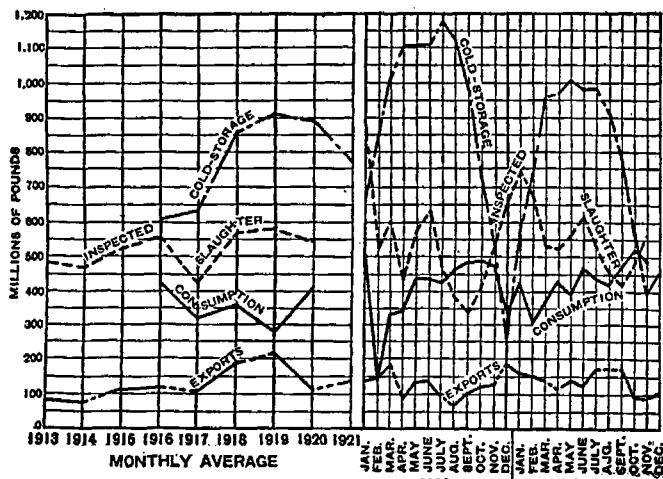

under inspection in November increased, but consumption declined. December prices declined slightly.

DIAGRAM 12.—INSPECTED SLAUGHTER, CONSUMPTION, AND COLD-STORAGE HOLDINGS OF BEEF PRODUCTS.

Declines took place in every phase of the movement of sheep and lambs in December, but not as great as occurred a year ago. Storage holdings of lamb and mutton declined, as contrasted with a rise to abnormal heights a year ago. The prices of sheep rose sharply during the month.

DIAGRAM 13.—INSPECTED SLAUGHTER, CONSUMPTION, EXPORTS, AND COLD-STORAGE HOLDINGS OF PORK PRODUCTS.

OTHER FOODSTUFFS.

Exports of condensed milk increased about 23 per cent in December. Market receipts of cheese declined, butter remained about stationary, but receipts of eggs increased. Cold-storage holdings of all three products, especially eggs, showed seasonal declines. Wholesale prices of butter and cheese dropped.

Imports of raw sugar declined considerably in December, but meltings showed only a slight decrease. Stocks of raw sugar were also less, but exports of the refined product were very large. Slight declines occurred in prices, the declines becoming smaller as the sugar approached the consumer.

The importation of coffee increased 22 per cent during December; and the visible supply in the United States rose, practically equaling the supply on hand a year ago. Receipts of coffee in Brazil were larger, but clearances were less. Imports of tea into the United States continued to increase.

DIAGRAM 14.—SEASONAL MOVEMENT OF COLD-STORAGE EGGS.

(Five-year monthly average 1916-1920 = 100.)

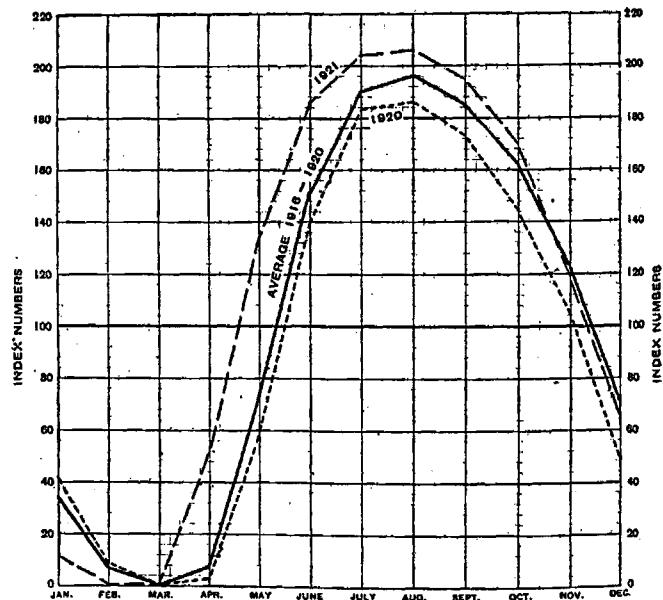

DIAGRAM 15.—SEASONAL MOVEMENT OF COLD-STORAGE CREAMERY BUTTER.

(Five-year monthly average 1916-1920 = 100.)

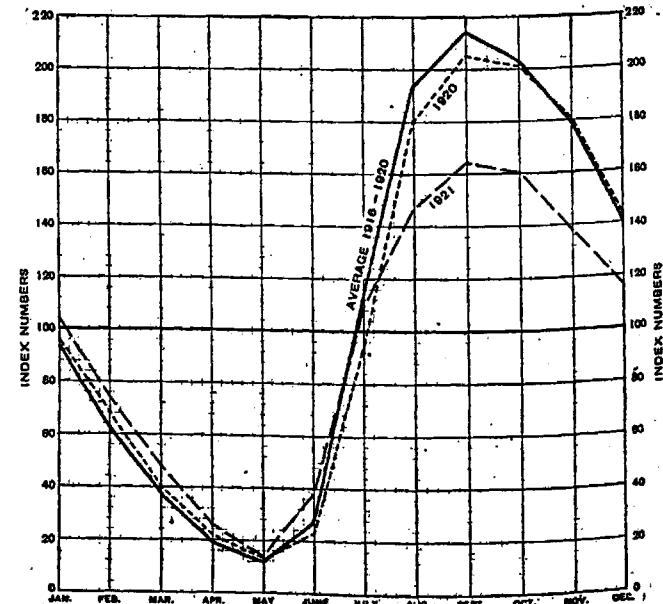

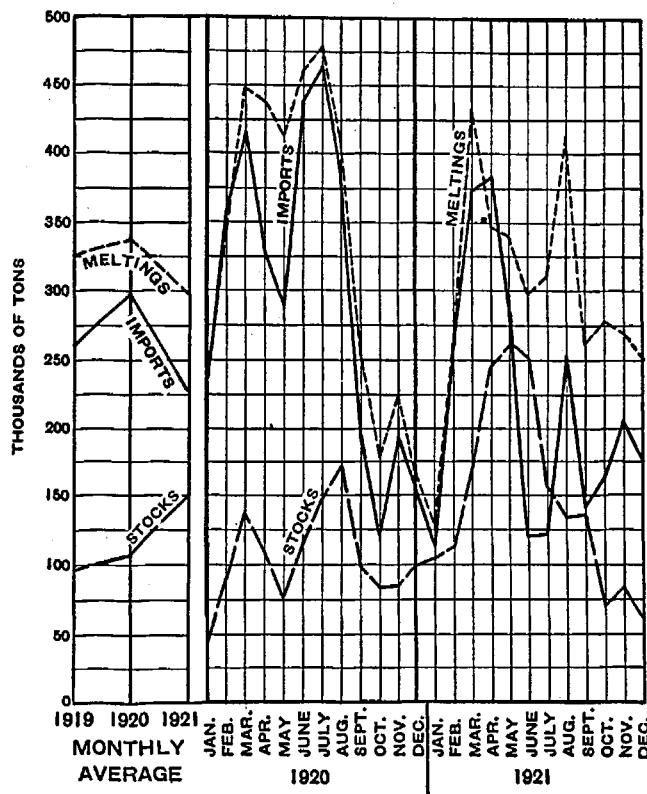

DIAGRAM 16.—IMPORTS, MELTINGS AND STOCKS OF RAW SUGAR.

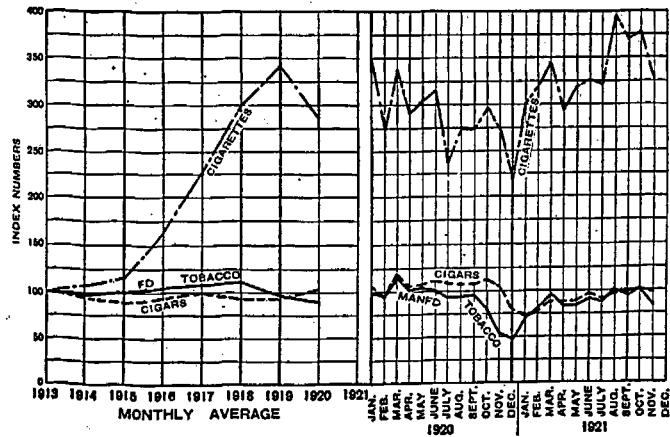

TOBACCO.

The manufacture of tobacco products declined in December to the minimum mark of the year. Exports of leaf tobacco were 33 per cent larger than in November. No changes occurred in prices.

DIAGRAM 17.—RELATIVE PRODUCTION OF CIGARS, CIGARETTES, AND MANUFACTURED TOBACCO.

(Relative production 1913=100.)

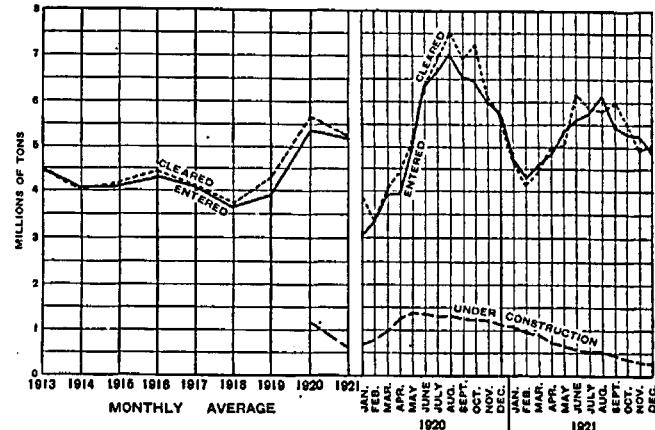

WATER TRANSPORTATION.

A considerable decline took place in November in the traffic through the Panama Canal, especially in British vessels. Traffic through the Sault Ste. Marie Canal was very small in December on account of the closing of navigation for the winter. Foreign trade in United States ports declined, although a small in-

crease took place in clearances. Both entrances and clearances of American vessels declined over 11 per cent and were chiefly responsible for the lessened trade. Ship construction continued on the down grade.

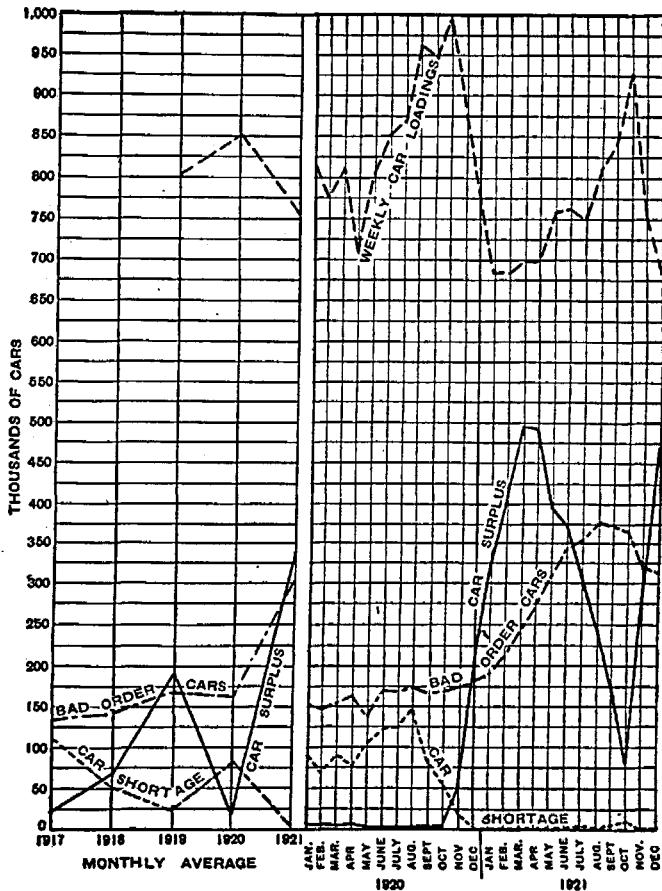

DIAGRAM 18.—ENTRANCES AND CLEARANCES OF VESSELS IN U. S. FOREIGN TRADE, AND SHIPS UNDER CONSTRUCTION.

RAIL TRANSPORTATION.

Surplus of freight cars at the end of December increased almost to the peak point reached last March, the increase being two-thirds of the November surplus. Shortage of cars has been reduced to almost nothing. The number of bad-order cars continued to be reduced.

DIAGRAM 19.—SHORTAGE, SURPLUS, BAD-ORDER, AND TOTAL LOADINGS OF FREIGHT CARS.

Car loadings declined 10 per cent and were equal to the 1921 minimum reached last February and March. November freight showed a marked decline in ton-mileage.

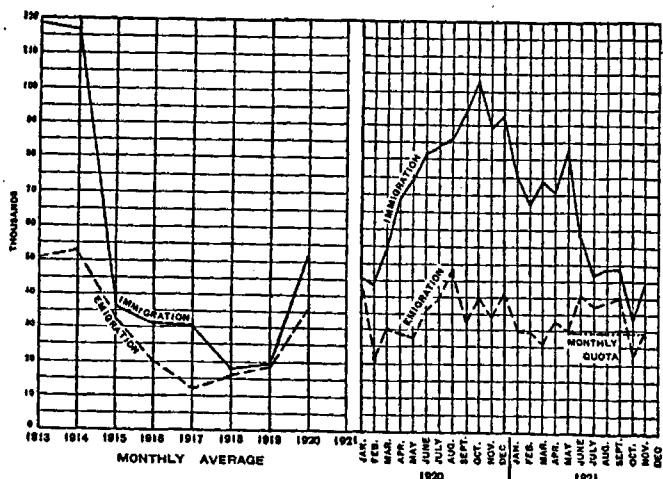

November revenues of the railroads showed declines below both September and October. Operating expenses also declined, but the net income was still considerably less than in either of the previous two months.

LABOR.

The reduction in industrial activity during December naturally resulted in a decline in the number of workers employed. The United States employment index number for December fell to 8 per cent below January, 1921, and was the lowest mark of the year. More favorable reports came from New York and Wisconsin, however, with no change in employment in either state. Total pay roll in both states increased in December, and the average weekly earnings in Wisconsin gained for the first time since August.

Immigration continued to decline slowly in November, while emigration was very much less. Postal savings deposits continued in December the steady decline in process throughout the year 1921.

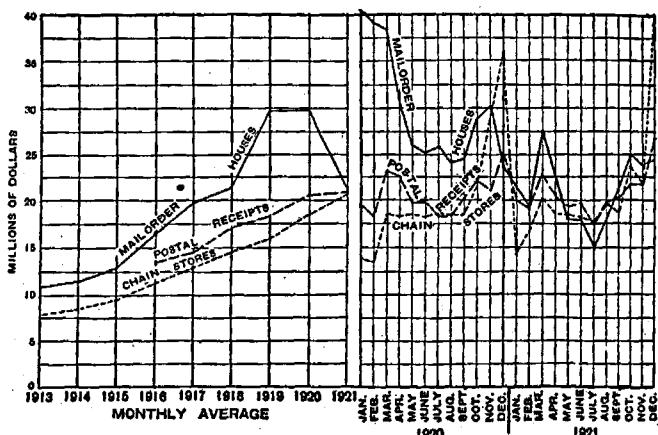

DIAGRAM 20.—IMMIGRATION, EMIGRATION, AND IMMIGRATION QUOTA.

DISTRIBUTION MOVEMENT.

Sales of mail-order houses and chain stores, more especially the latter, increased in December on account of the holiday trade. The holiday traffic was also responsible for the rise of 23 per cent in postal receipts. In all three of the above groups the volume of sales was greater in December, 1921, than in December, 1920. Magazine advertising, however, showed a slump of 22 per cent from November.

DIAGRAM 21.—SALES OF MAIL-ORDER HOUSES AND CHAIN STORES, AND POSTAL RECEIPTS.

PUBLIC FINANCE.

The month of December saw a decline of almost 1 per cent in the United States interest-bearing debt, part of which occurred in Liberty and Victory bonds. Customs receipts were large and Government expenditures continued to increase. Total ordinary receipts were very large on account of the income-tax installment. Money in circulation declined somewhat in November.

BANKING AND FINANCE.

The bank indicators of volume of business—debits to individual accounts and bank clearings—made perceptible increases during December, especially the former, due in large measure to the holiday trade. Federal Reserve Bank discounts continued to decline, but note circulation increased slightly; reserves and deposits showed slight increases also. The condition of member banks of the Federal Reserve System showed a slight expansion in loans and discounts, but a decline in deposits. Interest rates were almost unchanged.

The December business failures made a high record of several years for both number and liabilities. Dividend and interest payments were larger than a year ago, and an especially large increase occurred in the issuance of new securities, both public and private. New incorporations were the largest since last June. November earnings of telephone companies declined somewhat. Orders, indebtedness, and payments reported for credit information all increased slightly in December.

Prices of industrial stocks rose more than three points on the average for December and approached the prices prevailing a year ago. Railroad stocks

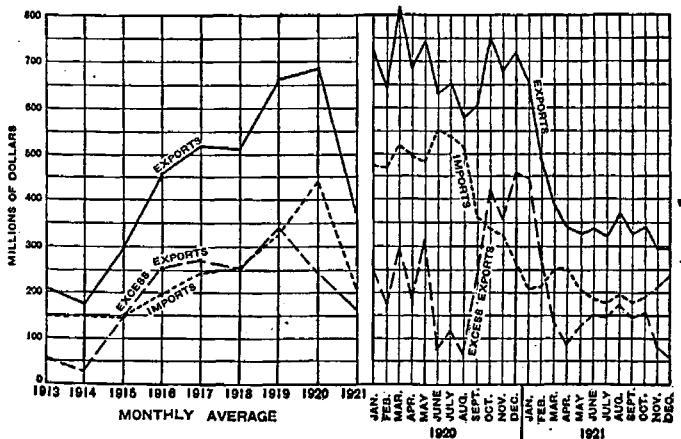

advanced slightly. Volume of sales of both stocks and bonds increased, and bond prices rose two points, industrials lagging behind the other groups. Municipal bond yields were reduced still further, to 4½ per cent.

A decline of 39 per cent in gold imports featured the movement in this commodity. Exports of silver increased 49 per cent and exceeded imports for the first time since September. The price of silver declined in both this country and England.

FOREIGN EXCHANGE.

Considerable increases occurred in the foreign exchange rates in December. Most of the European currencies made substantial gains, ranging from 3 to almost 9 per cent, while the German mark increased 25 per cent, but was still only 2 per cent of its par value. Swiss francs rose above par and became the only currency selling at a premium in the United States.

DIAGRAM 22.—IMPORTS AND EXPORTS OF THE UNITED STATES.

84796°—22—2

FOREIGN TRADE.

The December foreign trade of the United States exhibited a further contraction of the excess of exports over imports. An almost imperceptible increase in exports accompanied an increase of 13 per cent in imports. The chief increase in imports came from Asia, mostly from Japan, but imports from Germany were 25 per cent above November. The gains in the export trade were to Asia and South America.

TRADE AND INDUSTRY OF FOREIGN COUNTRIES.

The import trade of the United Kingdom decreased 4 per cent in December, while the export trade declined 6 per cent. The ratio between the two is now almost the prewar relation, both being about one-third in excess of the 1913 average. The only gain in imports was in manufactured articles, while raw material was the only export group to gain. Coal exports increased 20 per cent, iron and steel and woolens increased about 5 per cent, while cotton goods declined. Production of steel ingots declined 13 per cent in December, while pig-iron production remained stationary.

French foreign trade made a considerable gain in December, both in exports and imports. All groups showed good gains.

Canadian trade in December exhibited a decline of almost 7 per cent in imports and less than 1 per cent in exports. Large declines took place in the exportation of canned salmon and cheese, but substantial increases occurred in wheat and paper.

Japanese trade in December showed a 20 per cent increase in exports and a 5 per cent increase in imports. The total trade for the year was approximately one-third less than in 1920—31 per cent less in imports and 36 per cent less in exports.

TREND OF BUSINESS MOVEMENTS.

The following table contains a summary of the monthly figures designed to show the trend in important industrial and commercial movements. The numerical data for the latest months are given and in addition index numbers for the last four months and for two corresponding months of a year ago. In many lines the figures do not lend themselves readily to statistical uniformity, due to lateness of their publication or publication at other than monthly intervals; therefore the following explanations of the various headings are offered to make clear such distinctions and in general to facilitate the use of the table:

November, 1921.—This column gives the November figures corresponding to those for December shown in the "December, 1921," column—in other words, cover the previous month, and in some cases, where indicated by a footnote, refer to the previous quarter; that is, ending October 1, 1921.

December, 1921.—In this column are given the figures covering the month of December, or, as in the case of stocks, etc., the situation on December 31, or January 1. In a few cases (usually where returns are reported quarterly only) the figures are for the quarter ending December 31 or the condition on that date. Where this column is left blank, no figures for December were available at the time of going to press (Jan. 31).

Corresponding month, 1920, November or December.—The figures in this column present the situation exactly a year previous to those in the "December, 1921," column (that is, generally, December, 1920), but where no figures were available for December, 1921, the November, 1920, figures have been inserted in this column for comparison with the November, 1921, figures. In the case of quarterly figures, this column shows the corresponding quarter of 1920.

Cumulative total through latest month.—These columns set forth, for those items that can properly be cumulated, the cumulative total for the calendar years 1920 and 1921, respectively, except where December, 1921, figures are lacking, in which case these columns contain the cumulative figures for 11 months only.

Percentage increase (+) or decrease (-) cumulative 1921 from 1920.—This column shows the per cent by which the cumulated total for the calendar year 1921 (11 months in some cases), is greater (+) or less (-) than the total for the same period of 1920.

Base year or period.—For purposes of comparison with a previous more or less normal period, all items, so far as possible, are related to such a period by index numbers. The period taken for each item, called the base, is the monthly average of the year or period stated in this column. Wherever possible, the year 1913 is taken as a base, and if no prewar figures are available, 1919 is usually taken to avoid using a war year as a basis. In some cases it will be noted that figures were not available prior to 1920 or even 1921, and that sometimes a month, or an average of a few months, has to be used rather than a year's average. Also, for some industries, 1919 would not be a proper base on account of extraordinary conditions in the industry and therefore some more representative year has been chosen.

Index numbers.—In order to visualize the trend of each movement, index or relative numbers are given for the last four months and for two corresponding months of a year ago. These index numbers are computed by allowing the monthly average for the base period, usually 1913 or 1919, to equal 100. If the movement for a current month is greater than the base the index number will be greater than 100. If the converse is true the index number will be less than 100. The difference between 100 and any index number gives at once the per cent increase or decrease compared with the base period. Index numbers may also be used to compute the approximate per cent increase or decrease from one month to the next.

Percentage increase (+) or decrease (-) December from November.—The last column shows the per cent increase or decrease of the figures for the last month compared with the preceding month.

All items shown in this table will also be found in the detailed tables in this bulletin. See index.

DIAGRAM 23.—COMPARISON OF WHOLESALE PRICES AT PRESENT WITH 1920 AND PREWAR.

WHOLESALE PRICE COMPARISONS.

MAXIMUM PRICE COMPARED TO PRICE IN RECENT MONTHS.

NOTE.—Prices to the producer on farm products are from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. All other prices are from U. S. Department of Labor, Bureau of Labor Statistics. As far as possible all quotations represent prices to the producer or at the mill. See diagram on opposite page.

COMMODITIES.	Date and maximum relative price.	Octo-	Novem-	Decem-	Per cent in-	
		ber, 1921, relative price.	ber, 1921, relative price.	ber, 1920, relative price.	crease (+) or decrease (-) in December over November.	
(1913 average = 100.)						
Farm products—Average price to producer:						
Wheat.....	June, 1920	326	119	117	118	+ 0.9
Corn.....	July, 1920	300	67	69	70	+ 1.4
Potatoes.....	June, 1920	706	207	186	182	- 2.2
Cotton.....	July, 1920	312	147	136	136	0.0
Cotton seed.....	May, 1920	321	142	134	132	- 1.5
Wool.....	July, 1918	344	95	93	101	+ 8.6
Cattle, beef.....	May, 1919	183	82	79	78	- 1.3
Hogs.....	July, 1919	256	97	89	87	- 2.2
Lambs.....	Apr., 1920	239	98	100	108	+ 8.0
Farm products—Market price:						
Wheat, No. 1, northern, spring (Chicago).....	May, 1920	354	142	124	137	+ 2.2
Wheat, No. 2, red, winter (Chicago).....	May, 1920	302	121	119	119	0.0
Corn, contract grades, No. 2, cash (Chicago).....	Sept., 1917	331	75	77	77	0.0
Oats, contract grades, cash (Chicago).....	June, 1920	296	92	94	97	+ 3.2
Barley, fair to good, malting (Chicago).....	Mar., 1918	325	89	89	88	- 1.1
Rye, No. 2, cash (Chicago).....	Mar., 1918	451	139	126	135	+ 7.1
Tobacco, burley, good leaf, dark red (Louisville).....	Mar., 1919	352	208	208	208	0.0
Cotton, middling upland (New York).....	Apr., 1920	331	154	142	143	+ 0.7
Wool, Ohio, $\frac{1}{2}$ and $\frac{3}{4}$ grades, unwashed (Boston).....	Jan., 1918	304	99	107	110	+ 2.8
Cattle, steers, good to choice, corn fed (Chicago).....	Mar., 1919	218	104	101	97	- 4.0
Hogs, heavy (Chicago).....	July, 1919	266	95	82	81	- 1.2
Sheep, ewes (Chicago).....	Apr., 1918	319	62	59	81	+37.3
Sheep, lambs (Chicago).....	Feb., 1920	263	109	112	135	+20.5
Food:						
Flour, standard patents (Minneapolis).....	May, 1920	328	162	156	150	- 3.8
Flour, winter straight (Kansas City).....	May, 1917	363	164	153	152	- 0.7
Sugar, 96° centrifugal (New York).....	May, 1920	598	119	117	106	- 9.4
Sugar, granulated, in barrels (New York).....	May, 1920	526	121	121	117	- 3.3
Cottonseed oil, prime summer yellow (New York).....	July, 1919	374	122	114	115	+ 0.9
Clothing:						
Cotton yarns, carded, white, northern, mule spun, 22-1 cones (Boston).....	May, 1920	348	170	160	154	- 3.8
Cotton, print cloth, 27 inches, 64 x 60-7.60 yards to pound (Boston).....	Apr., 1920	478	186	174	168	- 3.4
Cotton, sheeting, brown, 4/4 Ware Shoals L. L. (New York).....	May, 1920	427	168	172	174	+ 1.2
Worsted yarns: 2/32's crossbred stock, white, in skein (Philadelphia).....	Jan., 1920	289	148	148	161	+ 8.8
Women's dress goods, storm serge, all-white, double warp, 50 inches (N. Y.).....	Oct., 1918	292	147	145	145	0.0
Suitings, wool, dyed blue, 55-56 inches, 16-ounce, Middlesex (Boston).....	July, 1920	291	183	183	184	+ 0.5
Silk, raw Japanese, Kansai No. 1 (New York).....	Jan., 1920	466	166	197	209	+ 6.1
Hides, green salted, packer's, heavy native steers (Chicago).....	Aug., 1919	283	80	86	90	+ 4.7
Hides, calfskins, No. 1, country, 8 to 15 pounds (Chicago).....	Aug., 1919	490	82	77	74	- 3.9
Leather, sole, hemlock, middle, No. 1 (Boston).....	Mar., 1917	211	121	121	121	0.0
Leather, chrome calf, dull or bright, "B" grades (Boston).....	Nov., 1919	473	195	186	186	0.0
Boots and shoes, men's black calf, blucher-Campella (Massachusetts).....	Mar., 1920	308	217	217	217	0.0
Fuels:						
Coal, bituminous, Pittsburgh, mine run—Kanawha (Cincinnati).....	Sept., 1920	323	186	186	175	- 5.9
Coal, anthracite, chestnut (New York tidewater).....	Oct., 1921	201	201	201	201	0.0
Coke, Connellsburg (range of prompt and future) furnace—at ovens.....	Aug., 1920	637	134	122	113	- 7.4
Petroleum, crude, Kansas-Oklahoma—at wells.....	Mar., 1920	375	166	228	241	+ 5.7
Metals:						
Pig iron, foundry No. 2, northern (Pittsburgh).....	July, 1917	346	143	142	137	- 3.5
Pig iron, bessemer (Pittsburgh).....	July, 1917	335	128	128	128	0.0
Steel billets, bessemer (Pittsburgh).....	July, 1917	388	113	113	113	0.0
Copper ingots, electrolytic, early delivery (New York).....	Mar., 1917	230	81	83	86	+ 3.6
Lead, pig, desilverized, for early delivery (New York).....	June, 1917	261	107	107	107	0.0
Tin, pig, for early delivery (New York).....	May, 1918	224	61	64	73	+14.1
Zinc, pig (spelter), western, early delivery (New York).....	June, 1915	386	88	89	90	+ 1.1
Building materials:						
Lumber, pine, southern, yellow flooring 1 x 4, "B" and better (Hattiesburg).....	Feb., 1920	455	185	206	189	- 8.3
Lumber, Douglas fir, No. 1, common, s 1 s, 1 x 8 x 10 (State of Washington).....	Jan., 1920	407	114	125	125	0.0
Brick, common red, domestic building (New York).....	Feb., 1920	381	229	229	221	- 3.5
Brick, common building, salmon, run of kiln (Chicago).....	Oct., 1920	251	174	175	181	+ 3.5
Cement, Portland, net without bags to trade, f. o. b. plant (Buffington, Ind.).....	Sept., 1920	195	148	148	148	0.0
Steel beams, mill (Pittsburgh).....	June, 1917	331	116	109	99	- 9.2
Rubber, crude:						
Rubber, Para island, fine (New York).....	Jan., 1913	124	26	27	26	- 3.7

¹ Except visible supply of cotton from the *Commercial and Financial Chronicle* and sales of elastic webbing from the *Webbing Manufacturers' Exchange*. Other sources are as follows: Wool (consumption and quarterly stocks) and Cotton production from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; Wool (imports), Cotton cloth, and Cotton (exports and imports), from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Cotton (consumed and on hand), from the U. S. Department of Commerce, Bureau of the Census.

² These figures are for fiscal years; those following are for calendar years.

³ Includes duck and other cloth, bleached, unbleached, and colored.

⁴ Figures for 1918, 1919, 1920, and 1921 compiled from monthly reports on consumption by mills; preceding years compiled from production and net imports.

⁵ Running bales counting round as half bales; linters are included.

⁶ 500-pound bales.

⁷ Figures listed for years 1913 through 1920 represent monthly averages of cotton consumed and on hand at end of month during crop years (beginning Aug. 1 of the preceding year and ending July 31 of the year to which the figure is credited). Figures are in running bales, counting round as half bales, and do not include linters.

⁸ These figures represent world visible supply of American cotton.

¹ Except imports of raw silk, from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce. The figures for knit underwear are secured from the Knit-Goods Manufacturers of America; and those relating to raw silk from the Silk Association of America. Data for finished cotton goods are supplied by the National Association of Finishers of Cotton Fabrics and are compiled from statistics furnished by 34 out of 58 members of the association, estimated to cover approximately the following percentages of the entire industry: White goods, 72 per cent; dyed goods, 62 per cent; printed goods, 30 per cent.

² The preliminary report from the Bureau of the Census shows that, in 1919, the total production of knit underwear in the United States amounted to 26,517,000 dozens compared with 28,032,000 dozens in 1914. In terms of monthly averages, the 1919 output was at the rate of 2,209,000 dozens, which, by comparison, indicates that the normal production of the mills reporting above comprises about 40 per cent of the industry.

³ Consumption figures represent withdrawals from warehouses.

¹ Data from U. S. Department of Commerce, Bureau of the Census.

² As the cumulative ginning is the important factor, relatives here shown are based on the *average cumulative ginnings* prior to the respective dates instead of on a simple monthly average.

³ Amount ginned prior to January 16, 1922. The total amount ginned to the same date last year was 12,014,742 bales.

¹ Figures for Pig-iron production (anthracite and coke, not including charcoal iron) furnished by the *Iron Age*; Steel-ingot production, *American Iron and Steel Institute*; Unfilled orders, end of month, and earnings, *U. S. Steel Corporation*; Composite finished steel prices, *Iron Age*; Iron and steel prices, *Iron Trade Review*; Composite pig iron and steel, *American Metal Market*; Iron and steel production in Great Britain, *British Federation of Iron and Steel Manufacturers*.

² Yearly figures represent the monthly averages of total production of all companies as compiled annually by the *American Iron and Steel Institute*. The institute reports monthly production figures for 30 companies which, in 1920, produced 84.2 per cent of the total output of the country. In order to make the monthly figures comparable, they have been calculated to a 100 per cent production on the basis of the above percentage.

³ Average of weekly prices compiled by the *Iron Trade Review* on the following 14 products: Pig iron, billets, slabs, sheet bars, wire rods, steel bars, plates, structural shapes, black galvanized and blue annealed sheets, tin plate, wire nails, and black pipe. Pig iron average in turn is average of 13 different quotations.

⁴ The composite pig iron price compiled by the *American Metal Market* is the average price of 10 tons of iron distributed as follows: One ton each of Bessemer valley; No. 2 foundry valley; No. 2 X foundry at Philadelphia and at Buffalo; No. 2 foundry at Cleveland and at Chicago; two tons each of basic valley and No. 2 Southern foundry Cincinnati.

⁵ The figures for composite steel compiled by the *American Metal Market* represent the average price per pound of steel products weighted as follows: 2½ pounds bars, 1½ pounds plates, 1½ pounds shapes, 1½ pounds pipe, 1½ pounds wire nails, 1 pound galvanized sheets, and ½ pound tin plate.

⁶ Composite price of finished steel products compiled by the *Iron Age* includes: Steel bars, beams, tank plates, plain wire, open-hearth rails, black pipe, and black sheets. These products, according to the *Iron Age*, constitute 88 per cent of the United States output of finished steel.

⁷ Index number less than 1 per cent. Small output in this and preceding months due to the coal strike.

¹ Sheets, blue, black, and galvanized, reported by the National Association of Sheet and Tin Plate Manufacturers; Bolts, nuts, and rivets by the Bolt, Nut, and Rivet Institute; Bar iron by the Eastern Bar Iron Institute; Steel barrels and drums by the Steel Barrel Manufacturers' Association; Fabricated structural steel by the Bridge Builders and Structural Society; Ohio foundry iron by Ohio State Foundrymen's Association.

² Includes carriage bolts, large and small; machine bolts, large and small; lag screws; stove bolts; wire bolts; semifinished nuts and miscellaneous, reported by number of pieces.

³ Includes hot and cold pressed nuts; rivets, large and small; track bolts and miscellaneous, reported by weight.

⁴ These percentages compare the monthly totals reported with the actual reports of the same companies for the years 1918 and 1919.

⁵ The Bridge Builders and Structural Society state that reports in the earlier years were not as complete as during the last six or seven years. The total tonnages are probably 10 to 15 per cent less than they should be. These figures are believed to represent the total business in the United States.

⁶ Represents reports from 19 identical manufacturers for each period.

⁷ Represents percentage of actual to normal melt of grey iron foundries in Ohio. Prior to September, reports represent the month beginning with the 15th day of the calendar month. September figures are for the period Sept. 15 to 30 only. Subsequent figures are for calendar months.

⁸ Figures represent almost all the independent sheet manufacturers.

¹ Except shipments of crude petroleum from Mexico. Crude petroleum production, stocks, imports, and consumption, from U. S. Department of the Interior, Geological Survey; Wholesale price of crude petroleum, average for the month, from U. S. Department of Labor, Bureau of Labor Statistics; Data on gasoline from U. S. Department of the Interior, Bureau of Mines.

² Figures for earlier years adjusted to represent approximate net stocks to conform with data for current months.

³ Mexican petroleum shipments from the three ports, Tampico, Port Lobos, and Tuxpan, form the best current measure of Mexican oil production. These figures are compiled from those published in the *Oil Trade Journal*. Current month is approximate from *Oil, Paint, and Drug Reporter*.

⁴ Yearly figures for "stocks at end of month" are averages of monthly figures.

⁵ "Exports of gasoline," as used by the Bureau of Mines, includes the items "gasoline" and "all other naphtha, etc.," as reported by the U. S. Department of Commerce, less exports to the Philippine Islands.

⁶ Represents production transported from field of production, does not include oil consumed at locality of production.

PAPER AND PRINTING.

¹ Except printing activity, from *United Typothetac of America* and printing purchases and sales from *American Writing Paper Company*. Data for paper, except exports, are furnished by the *Federal Trade Commission*; exports from the *U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce*.

² Printing activity based on productive hours reported by plants in 52 cities in 30 states, each department being weighted for the combined index number.

³ Purchases of printing paper and sales of printed product by about 350 concerns, doing from 20 to 25 per cent of the total commercial printing business of the country. As the paper industry was in a great boom in 1919, index numbers based on that year would not be true indices; therefore 1918 was taken as a base.

¹ Data furnished by the Rubber Association of America. The number of firms has increased from 36 in November, 1920, to a maximum of 64 in August, 1921. It is stated by the Rubber Association that this variation in the number of firms does not change the totals to any great degree, except for the omission of the Firestone Tire Company beginning in September, 1921.

¹ Compiled by the National Automobile Chamber of Commerce. Represents shipments from factories covering almost the entire automobile production of the United States.

² Total of membership of the National Automobile Chamber of Commerce and chief outside manufacturers, representing practically complete passenger car production and slightly less complete truck production. Annual figures represent complete production as compiled by National Automobile Chamber of Commerce.

³ Compiled by the Motor and Accessory Manufacturers' Association and based on the purchase of parts, units, equipments, etc., by automobile passenger and truck makers from 300 parts and accessory manufacturers, including some tire manufacturers.

¹ From reports by the *Tanners' Council*; sole leather figures include estimates for firms outside the *Tanners' Council* so as to represent the total for the country. Figures for skivers and harness do not include estimates of outside firms and are believed to represent 80 per cent of the total production.

² Data from the *Leather Belting Exchange*, and is estimated to represent from 65 to 75 per cent of the industry.

³ Beginning December, 1919, these statistics cover amount of harness leather "stuffed" rather than that produced, but it is stated that the variation between these items is small.

⁴ Includes estimated production of firms outside *Tanners' Council*.

¹ Based on figures compiled by the U. S. Department of Commerce, Bureau of the Census. The data embrace returns from packers, tanners, dealers, importers, and manufacturers. As given in the monthly reports by the Bureau of the Census, the returns for hides and skins are expressed in numbers of hides and skins. For the above summary these have been reduced to pounds on the basis of the average weights of each class. Similarly data on leather have been converted to pounds or square feet from reports in skins, sides, backs, butts, pounds, etc.

² Includes skins with and without wool, but does not include weight of wool.

¹ Data from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² Data from U. S. Department of Labor, Bureau of Labor Statistics: Represent average monthly prices.³ Includes calf and kip, goat and kid, grain and finished splits.⁴ Represent five-year (1909-1913) monthly average imports for total hides and skins, total goat skins and total sheepskins. Calfskins and cattle hides based on four-year average, 1910-1913.⁵ See p. 60 for production of boots and shoes.

¹ Data compiled by the *F. W. Dodge Co.*, covering small towns and rural districts as well as large cities. Prior to May, 1921, these figures covered 25 northeastern states and the District of Columbia. The States are those north and east of, and including, North Dakota, South Dakota, Iowa, Missouri, Tennessee, and Virginia, together with portions of eastern Kansas and Nebraska. Beginning May, 1921, North Carolina and South Carolina were added to the list, but this addition is stated to have little effect upon the total.

* Estimates made by the *F. W. Dodge Co.*

¹ Data compiled by the *F. W. Dodge Co.*, covering small towns and rural districts as well as large cities, except fire losses in the United States and Canada, included here for convenience, compiled by the *New York Journal of Commerce*. Prior to May, 1921, the building figures covered 25 northeastern states and the District of Columbia. The states are those north and east of, and including, North Dakota, South Dakota, Iowa, Missouri, Tennessee and Virginia, together with portions of eastern Kansas and Nebraska. Beginning May, 1921, North Carolina and South Carolina were added to the list, but this addition is stated to have little effect upon the total.

² Grand total includes military and naval buildings and miscellaneous, in addition to the groups listed in this and the preceding table (p. 67).

¹ The figures given for production and stocks of yellow pine are computed from data furnished by the *Southern Pine Association*. The method of computing is first to find the per cent which the actual production of the mills reporting is to the normal production of these same mills. This per cent is then applied to the normal production of 192 mills. Assuming that the mills reporting are a good sample of the industry the resulting figure in each month is equivalent to the actual production of the 192 identical mills and hence shows the trend of the industry. The same procedure is followed in the case of stocks. The normal monthly production of the 192 mills is given as 484,065,392 feet and the normal stocks of the same mills as 1,262,450,326 feet. By normal production the *Southern Pine Association* means the average output for the first 4 months of 1916 and normal stocks refer to the average stocks during the 16 months ending with April, 1916.

² The *Western Pine Manufacturers' Association* has supplied figures showing the actual and normal production for the mills reporting in each of the periods shown. From these figures the per cent of normal production is obtained in each case, and this per cent is applied to the normal production of 54 identical mills. The normal monthly production of these 54 mills is given as 148,000,000 board feet and is estimated to represent 70 per cent of the output of the western pine territory.

³ Actual figures reported by about 20 mills each month to the *California White and Sugar Pine Association*; the number of mills varies from 13 to 26.

⁴ The figures given in these columns were obtained by applying the percentage figures of actual production and shipments to normal production of reporting mills as supplied by the *West Coast Lumbermen's Association* to the actual production of 124 mills for May, 1920. The production in that month was 447,674,540 board feet.

⁵ The *California Redwood Association* has furnished to the Bureau of the Census the figures on the actual production, shipments, and orders received by 7 identical mills for each month of 1918, 1919, and 1920. These 7 mills represent 40 per cent of the capacity of all listed mills for these years. For the first 4 months of 1921 reports were furnished from 10 mills representing 56½ per cent of the capacity of all listed mills. For the remaining months of 1921 reports are available from 11 mills representing 71 per cent of the total listed capacity. The actual average monthly production of the 7 reporting mills for 1918 was 14,984,000 feet. On the basis of 40 per cent capacity of the 1918 average monthly production of all mills is computed as 37,460,000 feet. Regarding this as normal production, there has been computed the probable production of the total redwood capacity based on the relation between actual and normal production of the mills reporting. The columns on shipments and orders received represent a similar relationship between the actual reported figures and the normal production of all mills.

⁶ Actual figures reported by about 40 mills each month to the *Michigan Hardwood Manufacturing Association*; the number of mills varies from 36 to 58, but 48 is the highest number reporting in any month since the beginning of 1919.

¹ Data from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² The Oak Flooring Manufacturer's Association states that these figures represent reports from 25 mills, and constitute about 90 per cent of the total oak flooring industry.³ Data compiled by the Abrasive Paper and Cloth Manufacturers' Exchange estimated to represent 90 per cent of the industry. The totals given include the sales of garnet, emery, flint, and artificial (silicon, carbide, and aluminous oxide) paper, cloth, and combinations. Figures are stated in equivalent reams 9 by 11 inches in size. The data submitted show that in 1919 the total domestic sales were made up of the following approximate percentages: Garnet 39, emery 8, flint 32, and artificial 20 per cent.⁴ Data from the U. S. Department of Labor, Bureau of Labor Statistics, and represent average of weekly prices for the month.⁵ Compiled by the Engineering News-Record, on the basis of contracts let as reported by this publication and its construction cost index number, based on 1913 costs.

¹ Except data on cement reported by the U. S. Department of the Interior, Geological Survey, and placed here for convenience. The sources of the other data in this table are: Fire clay and silica brick from the Refractories Manufacturers' Association and face brick from the American Face Brick Association.

² The Refractories Manufacturers' Association estimates that the capacity reporting represents between 68 and 70 per cent of the total fire-clay brick producing capacity of the United States.

³ Figures for 1921 are from reports of 15 identical mills with a monthly capacity of 27,305,500 bricks, which is estimated by the association to represent from 78 to 80 per cent of the total silica brick producing capacity of the United States. Figures for earlier years are computed to this capacity from reports of 12 identical mills with a monthly capacity of 25,448,833 bricks.

⁴ The figures on face brick include data from all firms reporting to the American Face Brick Association each month. The variation in the number of firms reporting does not materially affect the comparison, as it has been checked on a small number of identical firms.

⁵ Figures prior to 1921 are taken from the yearly reports of the U. S. Department of the Interior, Geological Survey. The compilation of monthly reports begins with January of this year.

⁶ Ten months' average.

⁷ This index number, furnished through the courtesy of the Aberthau Construction Co., is designed to show the relative changes in the cost of constructing a standard concrete factory building. The company believes that the year 1914 gives a normal base and that July, 1920, represents the peak of building costs.

⁸ The Construction cost index, computed by the Engineering News Record, is based upon the costs of steel (structural shapes, Pittsburgh base), cement (f. o. b. Chicago, exclusive of bags), lumber (southern pine, New York base), and the rates paid common labor in the steel industry. The prices are weighted on the basis of the total production of steel, cement, and lumber, and the total supply of common labor.

⁹ Yearly figures represent stocks at end of year, not an average of monthly stocks.

¹ Exports reported by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; cold-storage holdings from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; production of beef and pork from animals slaughtered under Federal inspection reported by the U. S. Department of Agriculture, Bureau of Animal Industry. Recent figures published in the *Market Reporter*. Apparent consumption has been computed from the inspected slaughter less exports and the change in storage holdings.

² Cold-storage holdings are distinctly seasonal. No allowance for this has been made in calculating index numbers. Figures represent storage holdings on the first day of each month.

³ Includes bacon, ham, shoulders, lard, neutral lard, and canned, fresh, and pickled pork.

⁴ Includes fresh, canned, pickled, and cured beef, and oleo oil and tallow.

⁵ Includes beef, frozen, cured, and in process of cure.

⁶ Includes pork, frozen, dry salt, and pickled, both cured and in process of cure, and lard.

⁷ Frozen lamb and mutton.

⁸ Total dressed weight slaughtered under Federal inspection, including veal with beef. The slaughter under Federal inspection, according to census figures in 1910, amounted to 68 per cent of the total number of animals slaughtered in the United States in the case of hogs and 82 per cent in the case of beef.

¹ Import and export statistics from U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; all other data from U. S. Department of Agriculture, Bureau of Markets and Crop Estimates.

² Boston, New York, Philadelphia, Chicago, and San Francisco. Total of weekly figures with first and last weeks of month prorated.

³ Includes butter, cheese, and condensed and evaporated milk.

⁴ One case of eggs equals 30 dozen, or about 45 pounds net.

⁵ Production compiled by months but issued quarterly; figures not available at time of going to press.

⁶ Holdings on first day of month.

⁷ Average of weekly prices of creamery butter, 92 score, at Boston, New York, Philadelphia, Chicago, and San Francisco.

⁸ Average of weekly prices of American cheese, No. 1 fresh twins, at Boston, New York, Wisconsin, Chicago, and San Francisco.

⁹ Index number less than 1.

SUGAR AND VEGETABLE OILS.

¹ With the exception of sugar stocks and meltings reported by the *Statistical Sugar Trade Journal*. The sources of the other data are: Imports and exports of raw sugar, imports and exports of vegetable oils, from the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Cottonseed and cottonseed oil data from the U. S. Department of Commerce, Bureau of the Census; Wholesale and retail sugar prices from the U. S. Department of Labor, Bureau of Labor Statistics; and Oleomargarine consumption from the U. S. Treasury Department, Bureau of Internal Revenue.

² Figures include reports from seven ports: Boston, New York, Philadelphia, Savannah, New Orleans, Galveston, and San Francisco. Meltings are calculated from weekly reports, the odd days being prorated. Stocks represent the amount of raw sugar in the hands of refiners on the dates nearest the end of the month as reported for each port.

³ These figures are for fiscal years beginning July 1.

⁴ Includes cottonseed, corn, and linseed oils.

⁵ The following oils are included: Chinese nut, cocoa butter, coconut, cottonseed, olive (inedible), olive (edible), palm, palm kernel, peanut, rapeseed, soya bean. Where certain of these are reported in gallons, they have been converted into pounds, allowing 7½ pounds per gallon.

⁶ Colored and uncolored, as represented by tax-paid withdrawals.

COFFEE AND TEA.

¹ Stocks held by manufacturers and dealers reported by the U. S. Department of Commerce, Bureau of the Census; Production of manufactured tobacco and snuff, cigars and cigarettes by the U. S. Treasury Department, Bureau of Internal Revenue; Crop production by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates; Exports of leaf tobacco by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.

² Held by manufacturers and dealers on first day of each quarter. Yearly figures are quarterly averages.

³ Represents the total of plug, twist, fine-cut, smoking tobacco, and snuff.

⁴ The Internal Revenue reports the number of large cigars, i. e., those weighing over three pounds per thousand, and the number of small cigars weighing less than the above amount. Likewise they report the number of large and small cigarettes, the former weighing more than three pounds per thousand. Large cigars and small cigarettes represent more than 90 per cent of the total number manufactured in each case and are the only ones given in this table.

⁵ Yearly figures on crop production represent the latest estimates as reported by the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates. The monthly figures for 1920 and 1921 are the current monthly estimates of total production.

¹ Compiled by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, and represent imports of merchandise only. Up to and including May, 1921, import values represented "actual market value or wholesale price at the time of exportation to the United States, in the principal markets of the country from whence exported, including the value of all containers and coverings, whether holding liquids or solids, and all other costs, charges, and expenses incident to placing the merchandise in condition, packed ready for shipment to the United States." (Tariff act of 1913.) Beginning with June, 1921, the import values are either the actual foreign market value, as defined above, or "the export value, including any export tax imposed by the country of exportation," whichever is higher. (Emergency tariff act of May 27, 1921.)

¹ Daily averages of noon rates for cable transfers reported to the Treasury daily by the *New York Federal Reserve Bank*. Average figures for the years 1914 to 1918, inclusive, where given, are weekly averages of commercial quotations from the *Annalist*.² Parity established October, 1920. Prior to that, par value of the rupee was 32.44 cents.³ The foreign exchange index number recently computed by the *Federal Reserve Board* is based upon the average rates of exchange for 18 countries. The index represents the weighted geometric average of cable transfer rates on these countries. The weights used are based on the total volume of imports and exports of merchandise, gold, and silver from and to each country for the preceding month. The countries used in computing the index are Belgium, Denmark, England, France, Germany, Italy, Netherlands, Norway, Spain, Sweden, Switzerland, Canada, Argentina, Brazil, Chile, China, India, and Japan.⁴ Average value of the paper peso in 1913.

¹ Panama Canal traffic reported by *The Panama Canal*; Tonnage entered and cleared in foreign trade, U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce; Vessels under construction and vessels completed, U. S. Department of Commerce, Bureau of Navigation; Sault Ste. Marie Canal traffic, U. S. War Department, Engineers Corps.

² Represents tonnage of cargo carried by commercial vessels. Yearly figures refer to fiscal years ending June 30.

³ Figures for 1913 to 1920 represent monthly averages for eight months during which the canals are open.

⁴ Tonnage under construction refers to the gross tons of shipping, building or under contract to build for private owners. Does not include Government ships or ships building or contracted for by U. S. Shipping Board.

⁵ Includes ocean-going, lake and river vessels built and officially numbered by the U. S. Department of Commerce, Bureau of Navigation. Includes vessels of the U. S. Shipping Board and private American owners, but not vessels built for foreign owners.

⁶ Net ton represents 100 cubic feet internal carrying capacity after prescribed allowances for crew and engine space.

⁷ Gross ton represents in units of 100 cubic feet the entire cubical capacity of the vessel, including crew and engine space.

¹ Data from the American Railway Association.² At end of month, exclusive of Canadian roads. The Association reports the number of freight cars which are idle (surplus) and also the number of requests for cars which can not be filled (shortage). The difference between these two figures represents the net freight car situation for the country as a whole. The car shortages can not ordinarily be filled from the idle cars because of the uneven geographical distribution of the latter.³ Includes other classes than groups listed.⁴ Total includes coke shipments in addition to commodity groups listed.⁵ Index number less than 1.⁶ Number of railroad freight cars in need of repairs on first day of each month. Note that 1913 is the base year, having a monthly average of 150,909 cars in need of repairs.

¹ Data on revenues and expenses, from the *Interstate Commerce Commission*, represent Class I roads, those having annual operating revenues in excess of \$1,000,000; data on ton-mile operation, from the *Bureau of Railway Economics*, are placed here for convenience.² Deficit.³ Net railway operating income includes net operating revenue (equal to the difference between total operating revenue and total operating expenses) from which there have been deducted railway tax accruals, uncollectible railway revenues, equipment and joint facility rents.⁴ These figures are from *Interstate Commerce Commission* reports.

¹ Reported for first day of month by identical firms to U. S. Department of Commerce, Bureau of the Census, in cooperation with U. S. Geological Survey. The total bituminous reported is estimated to be roughly half of the bituminous stocks in the country; the total for the United States on Nov. 1, 1921, being placed at 47,400,000 tons. In the future it is proposed to obtain similar reports at intervals of 60 days.

² Largely estimated.

³ No data available; estimate included in total figure.

⁴ Data not entirely comparable with others.

¹ Except postal receipts in 51 selected cities reported by the U. S. Post Office Department. Mail-order and chain-store sales are reported directly by the companies or compiled from the *Commercial and Financial Chronicle*; magazine advertising as reported by *Printers' Ink*; newspaper advertising compiled by *New York Evening Post*.

² Includes Sears, Roebuck & Co. and Montgomery, Ward & Co. (details for each store shown on page 107).

³ Includes F. W. Woolworth & Co., S. S. Kresge Co., McCrory, and S. H. Kress & Co. (details for each store shown on page 107).

⁴ These figures represent the number of lines of advertising carried by the leading magazines.

⁵ Compiled from 22 identical cities: New York, Chicago, Philadelphia, Detroit, Cleveland, St. Louis, Boston, Baltimore, Los Angeles, Buffalo, San Francisco, Milwaukee, Washington, Cincinnati, New Orleans, Minneapolis, Indianapolis, Columbus, Louisville, St. Paul, Birmingham, and Houston. For the years 1916 to 1918, no reports were available for Boston, Louisville, Houston, and Columbus. The totals for those years were computed from the actual reports of the 18 other cities, allowing 13.5 per cent of the total to the four missing cities, the average ratio of those cities to the total in the subsequent years.

¹ This table is submitted in response to a demand for publication of the figures of sales of individual stores, which have been compiled from published reports. These figures represent money values of sales. On account of the tremendous increase in J. C. Penney Co. sales, this store is not included in our total of 10-cent store sales given on page 105. The index numbers of sales of 145 department stores and of 10 grocery chains were furnished by the National Retail Dry Goods Association. Data on American Wholesale Corp. placed here for convenience.

* Separate monthly figures not available.

¹ Index numbers calculated from data collected by the *Federal Reserve Board* in cooperation with the *National Retail Dry Goods Association* from about 300 department stores, showing percentage changes from month to month. The *Federal Reserve Board* states that the original material was in dollar amounts, except in districts 3, 4, 8, and 10, where only percentages were received, and the averages for the districts were computed by weighting according to the volume of business done during 1920. The percentage changes reported by the *Federal Reserve Board* have been converted into index numbers which show the same corresponding percentage increase or decrease.

Data on New York state factories furnished by the New York State Department of Labor; Wisconsin factories by the Wisconsin Industrial Commission; Number on pay roll, U. S. factories, from U. S. Department of Labor, Employment Service; Immigration and emigration statistics from U. S. Department of Labor, Bureau of Immigration; Postal Savings from U. S. Post Office Department.

² Figures represent reports from 1,648 firms in New York state employing more than one-third of the factory workers in the state.

³ Data not available prior to January, 1921; this month used as base for index numbers. Information is from 1,428 factories, usually employing over 500 workers each.

⁴ Includes total admitted, both immigrants and nonimmigrants.

⁵ Includes total departed, both emigrants and nonimmigrants.

⁶ Average for preceding 3 months.

¹ Reports compiled by the U. S. Department of Labor, Bureau of Labor Statistics. Prices represent averages for the month in 32 cities; food prices reported by 15 to 25 dealers in each city, fuel and light by 10 to 15 firms, including public utilities, in each city; other quotations secured directly from records. Rentals are based on 250 to 950 houses and apartments in each city and for each item of clothing, furniture and miscellaneous, four quotations are secured in each city (five in New York City).

WAGES, COMMON LABOR.¹

¹ Compiled by the National Industrial Conference Board, and represent retail prices on the first day of the month, except food, which is the retail food index of the U. S. Bureau of Labor Statistics for the 15th of the preceding month. The index is weighted according to the estimated consumption of average wage earners before the war, on the following basis: Food 43.1 per cent, shelter 17.7 per cent, clothing 13.2 per cent, fuel and light 5.6 per cent, sundries 20.4 per cent.

¹ Wholesale prices and retail food prices from the U. S. Department of Labor, Bureau of Labor Statistics; farm prices from the U. S. Department of Agriculture, Bureau of Markets and Crop Estimates.² The wholesale price index number of the U. S. Department of Labor, Bureau of Labor Statistics, is based on quotations of 328 commodities. These commodities are arranged in 9 groups as given in the table. In computing this index, the price of each commodity is weighted by multiplying it by the estimated quantity of that article marketed in the census year 1909.³ The retail food price index compiled by the Bureau of Labor Statistics represents the changes in the price of 22 articles of foods as reported by retail dealers in 51 of the larger cities as of the 15th of the month.⁴ Farm prices of crops represent the relative average prices to farmers of the 10 leading crops on the first of each month. The live stock farm price index is computed as of the 15th of each month.

¹ First eight columns comprise data composing wholesale price index numbers of the U. S. Department of Labor, Bureau of Labor Statistics, as reclassified by the Federal Reserve Board into the groupings as shown. The weights are the same as those used by the Bureau of Labor Statistics and the total of all commodities is, therefore, the same. Data in the last three columns are original compilations of the Federal Reserve Board constructed for the purpose of international price comparisons; basic prices are obtained from trade journals and private firms and weighted according to the 1913 volume imported and exported, respectively, for "imported goods" and "exported goods." The total index number includes also goods produced, weighted by production in 1913, and goods consumed, weighted by consumption in 1913.

¹ Dun's and Bradstreet's index numbers are calculated as of the first of each month, but really refer to prices in the preceding month. The index numbers have been calculated to a 1913 base from the actual figures published in these journals. Bradstreet's index number is the sum of the prices per pound of 106 commodities. Dun's index number covers about 300 commodities and is weighted on the basis of the amount "annually consumed by each inhabitant."

² Compiled by the London *Economist*; quotations on 44 commodities, mostly raw materials, unweighted.

³ Compiled by *Bulletin de la Statistique Generale* of the French Ministry of Labor and Social Welfare; quotations on 45 commodities, mostly raw materials, unweighted.

⁴ Compiled by Prof. Bachi; quotations on 38 commodities until 1920, thereafter 76 commodities.

⁵ Compiled by the *Frankfurter Zeitung*; quotations on 70 commodities, unweighted. Prices are for 1st of the month.

⁶ Compiled by the Canadian Department of Labor; quotations on 272 commodities, unweighted.

⁷ Compiled by the Bank of Japan; quotations on 56 commodities, unweighted.

⁸ Compiled by the Australian Commonwealth's Bureau of Census and Statistics; quotations on 92 commodities, weighted by consumption.

⁹ Compiled by the Indian Department of Statistics; quotations on 75 commodities.

¹ Figures for Debits to individual accounts, Condition of Federal Reserve Banks, and Condition of reporting member banks are from the *Federal Reserve Board*; imports and exports of gold and silver from the *U.S. Department of Commerce, Bureau of Foreign and Domestic Commerce*; silver prices, average for the month, from the *Engineering and Mining Journal*.

² Debits of banks in about 150 of the larger clearing-house centers, covering weekly totals, the first and last weeks of the month being pro-rated.

³ Condition as of last Wednesday of the month.

⁴ Includes reports from more than 800 banks in the leading cities in the United States on condition at last Wednesday of month.

¹ Compiled by the *Credit Clearing House* from reports to it by manufacturers and wholesalers on items of credit facts from their ledgers concerning merchants or jobbers to whom they sell. The numerical data given above show the percentage which the number of payment items reported bears to the total number of transactions reported. The commodities covered by these transactions are largely textiles. The year 1916 is taken as a base, as payments were abnormally high in 1919.

² California, Oregon, and Washington.

³ Arizona, New Mexico, Colorado, Utah, Nevada, Idaho, and Wyoming.

⁴ Montana, North and South Dakota, Minnesota, and Wisconsin.

⁵ Kansas, Nebraska, Iowa, Missouri, Illinois, Indiana, Kentucky, and Ohio.

⁶ Texas, Oklahoma, Arkansas, Louisiana, Mississippi, Alabama, Tennessee, Georgia, Florida, North and South Carolina.

⁷ States east of and including Pennsylvania, West Virginia, and Virginia.

¹ Compiled by the *Credit Clearing House* from reports to it by manufacturers and wholesalers on items of credit facts from their ledgers concerning merchants, or jobbers to whom they sell. The numerical data given above show the percentage which the number of items reported relating to orders or to creation of indebtedness bears to the total number of transactions reported. As one transaction may cover both an order and an indebtedness or a payment, the sum of the percentages of orders, indebtedness and payments will usually exceed 100 per cent. The commodities covered are largely textiles, and the individual orders are stated to average from \$250 to \$600, depending on trade conditions. The year 1916 is taken as a base, as it is believed to be more nearly normal than 1919, in which orders and payments were unusually large and indebtedness unusually small.

For boundaries of districts see page 123.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² See p. 97 for exchange rates on French francs.³ One metric ton is equal to 10 quintals, or 1,000 kilograms, and is equivalent to 2,204.6 pounds avoirdupois.⁴ Includes parcel post shipments.⁵ Figures for months of 1921 are based on 1919 valuation, which will later be revised to a 1921 valuation.⁶ Monthly average of first five months of the year. Data not available by months on account of change to final 1920 valuation.

¹ Compiled by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, from official reports.² Average for first six months only.³ See p. 97 for exchange rates on these countries. The Danish crown is now worth from 16 to 18 cents compared to a par value of 26.8 cents.⁴ 1 metric ton equals 1,000 kilograms and is equivalent to 2,204.6 pounds avoirdupois. A cubic meter equals 1.308 cubic yards.⁵ Figures not available for separate months of 1921. These represent monthly averages for quarters, ending at these dates.⁶ Merchandise only, exclusive of coin and bullion: 1920 averages have been calculated on final revised annual figures and are somewhat higher than the unrevised monthly figures.

FOREIGN TRADE OF GERMANY AND SWITZERLAND.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² The Spanish peseta at present exchange rates is worth about 15 cents.³ One quintal contains 100 kilograms and is equivalent to 220.46 pounds. One metric ton equals 10 quintals or 2,204.6 pounds. One hectoliter equals 26.4 gallons.⁴ Less than one.

FOREIGN TRADE OF THE AMERICAS.

¹ Compiled from reports of the respective governments by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² No actual figures available for 1921. Official estimate for first 6 months gives a monthly average import of 71,000,000 pesos, and exports of 84,000,000 pesos.³ Yearly figures represent the monthly averages for the Canadian fiscal year which ends March 31. Hence the 1921 average.⁴ Figures by months not available for 1920. Official estimate by Argentine Minister of Finance.⁵ Monthly average for quarter ended this month.⁶ Import values are official; export values are real.

FOREIGN TRADE OF THE AMERICAS.

¹ Compiled from official reports by the U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce.² One Egyptian kantar is equal to 99.05 pounds.³ Includes ox, cow, sheep, goat, and seal.⁴ The monthly averages for 1920 are obtained from the yearly totals. In some cases they do not check exactly with the preliminary figures reported each month.

Savings, postal	110

INDEX—Continued.

Page numbers refer to data in the detailed tables (pp. 33 to 145) only. Items in the table on "Trend of Business Movements" (pp. 18 to 31) and in the text are arranged in groups which should make reference easy without the necessity of an index. Note that only the page containing index number tables is given here. Where the numerical data for these items are in a separate table, they will always be found on the page opposite the index numbers.
