Business Trends

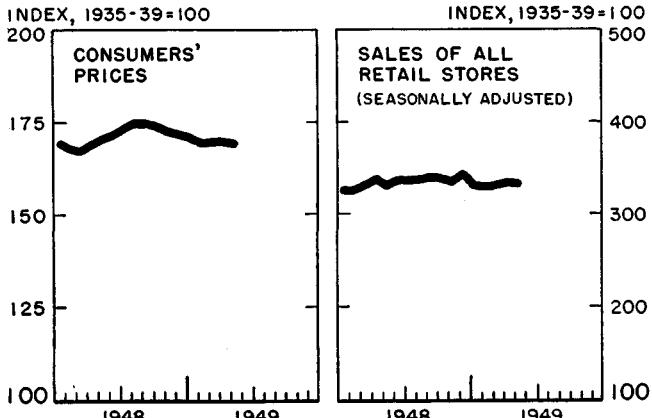

During the first half of 1949 cutbacks in factory employment and a gradual reduction in business inventories were accompanied by

declines in wholesale prices, mainly industrial commodities and in factory sales.....

but, in retail markets, both prices and sales registered little aggregate change.

SOURCES OF DATA: EMPLOYMENT, FEDERAL RESERVE; INVENTORIES AND SALES, U.S. DEPT. OF COMMERCE, O.B.E.; PRICES, U.S. DEPT. OF LABOR, B.L.S.

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS 49-235

THE Business SITUATION

By the Office of Business Economics

ECONOMIC developments in June were marked by a continuation of cautious business purchasing as inventories were further liquidated; by an extension of the decline in industrial output and in industrial prices; by the continued high rate of personal income; and by a high volume of fixed business investment.

Some seasonal increase occurred in employment as activities expanded both in farm and nonfarm areas. The June rise did not lift the level of employment to that reached a year ago and the increase in the labor force with school closings was more than the increase in employment so that unemployment also rose.

The recent OBE-SEC survey of plant and equipment expenditures completed in June, the results of which are detailed in a subsequent section, reveals that the expenditure plans by business have remained firm during the recent period of business adjustment. Expenditures of this character for the second quarter are estimated to have been as large as in the corresponding period of 1948.

Adjustments in business so far this year are mirrored in the changes in the flow of corporate funds which is analyzed in the final section of this review. With fixed capital expenditures continuing high, corporations used a somewhat larger amount of funds for this purpose—about \$8.4 billion—in the first half of the year than in the corresponding period of 1948. However, with the shift in inventory policy from accumulation to liquidation and with lower amounts required for receivables, the need for short-term funds by corporations was substantially reduced. The funds required for these latter purposes dropped from a positive figure of \$4 billion in the initial half of 1948 representing additional financial requirements to a negative figure of \$4 billion in the initial half of the current year representing a flow of funds to corporations resulting from reduced requirements. The result of this and other changes in corporate finance was to enhance the liquid asset position of corporations.

Investment lower—Personal income steady

The outstanding change in the national product accounts during the first half of this year as a result of the above developments was the decline in inventories and the associated reduction in total private capital investment. The dollar expenditures by consumers also declined, but the reduction was less absolutely and much less relatively. Consumer spending remains more selective, however, and price reductions have continued to be necessary in many lines.

The outstanding fact concerning the flow of personal income has been its stability. From February through May there was almost no variation in the annual rate of personal income. Despite the decline which occurred from December to February, the entire movement from June of 1948 through

May of 1949 has been within a range of 2 percent. The only income flows to show quantitatively significant declines this year are manufacturing pay rolls and proprietors' income in agriculture and certain nonfarm industries. In the aggregate these have been partially offset by rising transfer payments and small increases in other types of income.

Seasonal rise in employment

Employment rose seasonally to 59.6 million in June as outdoor work expanded toward the summer peak. This was about 1 million higher than a month earlier, but 1.7 million lower than in June of 1948. Unemployment was also higher in June, rising to 3.8 million. These changes reflected the large seasonal advance in the labor force at the end of the school year as students and youth sought employment.

Most of the decline in employment from a year ago has occurred in manufacturing industries (see the first panel of the chart on page 1), and in addition some reduction has taken place in the length of the workweek. Nonmanufacturing employment continues to show little change with most private groups about the same as, or a little lower than, a year ago and Government employment higher.

The decline which has taken place in manufacturing employment has been accompanied by reductions in the other principal manufacturing indicators—production, sales, and new orders. Industrial production and manufacturers' sales were both lower in May as the decline from the peak rate attained last fall reached a little more than 10 percent in each case; further declines in production are indicated for June.

The most notable change in industrial activity in recent weeks has been the reduced output in some of the heavy goods industries—steel, machinery, and transportation equipment. As is shown in chart 2, the decline in steel production which began in mid-March proceeded at a moderate rate in April and May and then more rapidly in June. Following the sharp drop during the holiday week including July 4, the steel operating rate in the second week in July recovered substantially but was still a little lower than at the end of June.

The automobile industry continues as an outstanding strong spot. Assemblies of passenger cars and trucks in the United States climbed to 600 thousand units in June, a new postwar peak which is only a little below the record volume in the spring of 1929.

Greater than seasonal rise in construction

Construction currently represents another expanding sector of the economy. The dollar value of new construction rose 11 percent between May and June to \$1.76 billion. This was greater than the usual seasonal advance and represents the highest level since last November, after allowance is made for seasonal influences.

All major segments of construction increased over the month; the rise in private activity was greater than seasonal while the increase in public outlays was about in line with the usual summer upswing. Private residential construction increased about 4 percent on an adjusted basis, reflecting the sharp pick-up in housing starts during April and May. In June starts continued the strong upward movement which began this spring and reached 100,000 units. This brought the second quarter total up to 281,000, which is only 17,000 below the peak rate of the second quarter 1948.

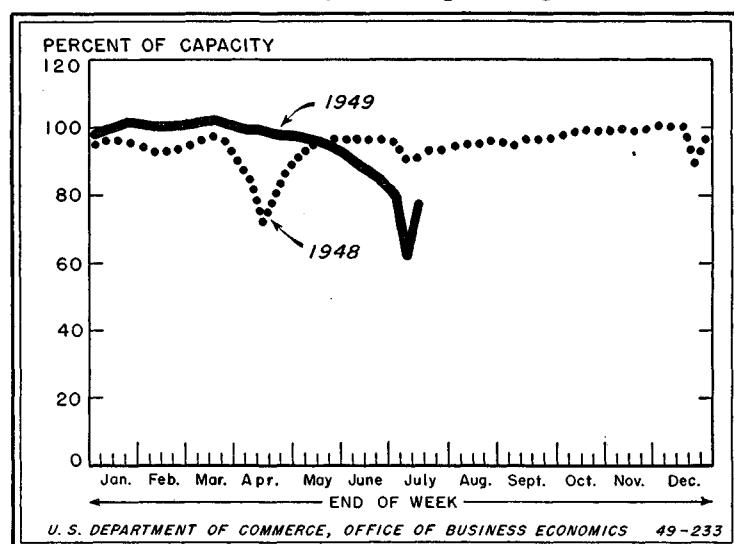

For the first 6 months of the year close to \$8½ billion of work has been put in place, 4 percent more than for the corresponding period a year ago. Public construction activity was 37 percent higher and private 5 percent lower.

Government expenditures rising

The recommendations in the President's Midyear Economic Report would mean an extension of the rising trend of Federal outlays and no major increase in taxation.

In the first half of 1949 Federal cash payments to the public exceeded cash receipts by \$1 billion at an annual rate—in contrast with a cash surplus of \$4 billion at an annual rate in the latter half of 1948. The major factor in the shift to a cash deficit was a \$4 billion increase in the annual rate of Federal cash payments. This rise in cash outlays was about equal to the increase taking place in the second half of 1948. Federal cash receipts declined by only \$1 billion at an annual rate in the first half of 1949 from the rate of the second half of 1948, in contrast with a decline of about \$5 billion from the first to the second half of 1948. The recent decline in receipts was still mainly attributable to the individual income tax reduction enacted in the spring of 1948, rather than to the shrinkage in tax base produced by declining levels of income. However, a further decline in cash receipts is foreshadowed by the recent drop in corporate profits and taxable personal income.

Chart 2.—Weekly Steel Operating Rate¹

¹ Percent of rated capacity is based upon 96.1 million short tons of steel ingots and steel for castings as of January 1, 1949, and upon 94.2 million short tons as of January 1, 1948. Latest data plotted for the week ended July 16, 1949.

Source of data: American Iron and Steel Institute.

The support given to the economy by the shift of the Federal Government from a surplus to a deficit has been augmented moderately by State and local government fiscal operations. Outlays by these government units continue to increase more rapidly than their receipts. During the first half of 1949 the increased outlays were principally for goods and services—largely for construction of public works.

Drop in business inventories

An important part of the reduction in aggregate demand since the end of 1948 is traceable to the curtailment of inventory buying. In the fourth quarter of 1948 nonfarm business inventory accumulation occurred at a seasonally adjusted rate of \$7.1 billion; by the first quarter of 1949 the rate of accumulation declined to \$2.8 billion, and in the second quarter preliminary reports indicate a general inventory liquidation at various stages of production and distribution. Thus, although the absolute change in inventories since the beginning of the year is still small, the extent of the shift from accumulation to liquidation has had a significant influence upon the demand for current output.

and hence on new orders placed and on the scale of business operations.

On a book value basis, adjusted for seasonal variation, the downturn inventories from the peak reached in the last quarter of 1948 was initiated by a moderate decline in retail stocks in the first quarter of 1949. The total volume of business inventories showed little change during that quarter, however, as advances in manufacturers' inventories, particularly finished goods, about offset the decline in retailers' stocks while wholesalers' stocks remained substantially unchanged. Of the \$1.6 billion reduction in total business inventories in April and May, \$0.8 billion consisted of reductions in manufacturers' stocks, while most of the remainder comprised further cuts in retail holdings.

Factors in retail inventory change

Uncertainty with respect to price and sales prospects, leading to a restrictive policy on business inventory commitments, was first evidenced at the retail level late in 1948—even before retail sales receded at the beginning of 1949. Cutbacks in ordering before the turn of the year enabled retailers to reduce inventories in the first quarter of the year in spite of the fact that sales were lower than in the preceding quarter. The decline has continued—during May the book value of all retail inventories adjusted for seasonal variation declined \$0.3 billion to \$13.8 billion, a reduction of 7 percent from the November 1948 peak. This change in retail stocks was greater than the change in retail sales.

The decline of \$800 million in the book value of manufacturers' inventories in April and May from the peak of \$31.8 billion in the first quarter of the year followed the decline in industrial output and in aggregate demand which emerged at the end of 1948. Thus, manufacturers' sales began to recede after September 1948, but manufacturing output continued at or near peak rates during the final quarter of 1948 and resulted in a continued rise in inventories. Manufacturers curtailed output in the first quarter of 1949, but a sharper fall in their sales prevented a decline in inventories. With the risk of carrying inventories increased by falling prices and orders, the drop in manufacturers' holdings in April and May was accomplished by curtailments in inventories of purchased materials and goods-in-process, as manufacturers trimmed their own buying and production. Despite the latter reduction, finished goods inventories held by manufacturers continued to increase through May although the rate of use has been small in recent months.¹

Retail trade steady

Retail trade as a whole has continued to show marked stability in the aggregate, although the trends by lines of business are not uniform and price reductions have been necessary to continue this flow of goods into consumer's hands. In the first 5 months of 1949, the total variation in the adjusted index of retail sales has been but one percent. Furthermore, the average of the seasonally adjusted sales for this period was less than 2 percent below the average for the entire year 1948 and about 4 percent below the fourth quarter high point. In view of the decline in retail prices, moreover, the physical volume of goods sold at retail declined only slightly from the latter part of 1948.

Durable-goods sales support total

Sales of all nondurable-goods stores, after seasonal adjustment, dropped off somewhat from their position at the end of 1948, but have flattened out in the last 3 months. Durable-

goods sales, however, after falling sharply from December to January, resumed their upward climb thereafter and by May had almost returned to the peak reached in August 1948.

The rising trend in durables was due in large part to the continued strength of automotive store sales (see table 1). The volume of new passenger car sales—the major item in this line—still remains to a considerable extent a function of supply, although for the higher priced cars purchasing power and prices are now important factors. The 11-percent drop in automotive store sales from December to January was attributable to model change-overs in several major plants, and in subsequent months activity has been rising—although the upward movement was halted temporarily in May when the operations of one of the largest producers were interrupted.

Other durable-goods stores, however, have not kept pace with the automotive group. Building materials and hardware stores and house furnishing stores both reached their postwar peaks in the third quarter of 1948, and in the first 5 months of 1949, sales were off more than 10 percent from this high. However, in both cases the downward movement appears to have been halted in the second quarter.

Jewelry stores have reported steadily declining sales for the past 3 years, and now are about 25 percent below the peak reached in April 1946 (see table 1).

Source: U. S. Department of Commerce, Office of Business Economics.

Nondurable sales somewhat weaker

For several of the nondurable groups, such as drug stores, eating and drinking places, and shoe stores, sales have been characterized by relative stability over a period of about 3 years. Except possibly for eating and drinking places, where sales have tended slightly downward since the beginning of the year, this stability has been maintained in the early months of 1949. Sales of filling stations have had a somewhat different postwar pattern, rising rapidly after the end of the war until the middle of 1948, and remaining fairly steady since then.

Food-store sales continue high, showing little variation over the past year. The average in adjusted sales in the first 5 months was less than 1 percent below the 1948 average. The slight decline in the dollar value of sales is a reflection of lower prices rather than of physical volume. Actually, the volume of food moving in retail channels appears to have risen slightly.

¹ In some cases the finished goods of one firm are further processed by a firm in another industry; e. g. leather is classified as finished goods in the leather industry although it may be further processed by the shoe manufacturers.

Plant and Equipment Expenditures

EXPENDITURES on new plant and equipment by non-agricultural business continued through the first 6 months of this year at the peak rate prevailing with but minor interruption since the end of 1947, after approximate adjustment for price changes and seasonal factors. First quarter 1949 expenditures on new plant and equipment, as reported by business in the regular joint quarterly survey by the Office of Business Economics and the Securities and Exchange Commission, amounted to \$4.5 billion compared with \$4.2 billion in the same period of last year. The preliminary estimate for the second quarter is \$4.8 billion, the same as in the corresponding period of 1948. The continuation of such high expenditures in the face of weakening tendencies in some parts of the economy reflects the firm character of the programs under way.

According to these reports, a moderate decline may be expected in the third quarter of this year with planned expenditures on new plant and equipment fixed at \$4.6 billion—about 4 percent below the preceding quarter and about the same amount below the corresponding quarter in 1948.

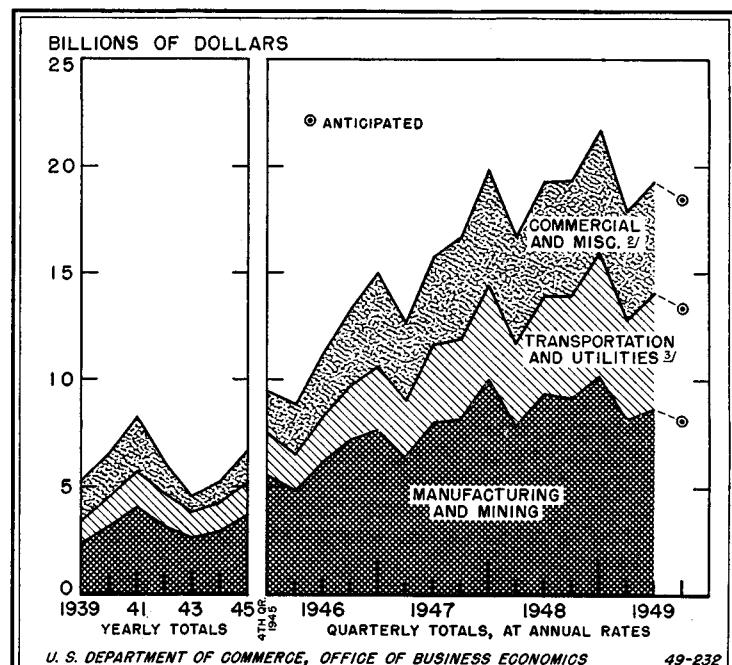

It is significant that these plans evidence no deterioration when comparison is made with the results of a preceding survey conducted in mid-February. In the earlier survey business anticipated a decline of 14 percent in capital outlays from the second half of 1948 to the second half of 1949. If expenditures now planned for the third quarter are actually realized, however, so large a decline in the last 6 months of the year seems improbable—particularly since it would imply a very sharp drop in the fourth quarter, when the typical seasonal movement in that period has been upward. Hence, the reduction in capital investment indicated for the months ahead would appear to reflect the gradual completion of postwar plans for expansion, especially in the manufacturing segment, rather than a sudden contraction in investment intentions induced by the signs of declining demand for final products of the economy from last year's peak levels.

Investment postponed

That the total of fixed capital investment planned for the remainder of this year appears to have been expanded between the two surveys—despite the fact that the general level of business activity declined between February and May—is probably attributable to two factors. In the first place, as noted in the report on the previous survey, there has been a consistent tendency for business to underestimate its longer-term programs as opposed to its short-run com-

mitments.¹ Accordingly, in February business was able to foresee only in part its investment needs for the latter half of the year.

Chart 3.—Business Expenditures for New Plant and Equipment¹

U. S. DEPARTMENT OF COMMERCE, OFFICE OF BUSINESS ECONOMICS

49-232

² Includes trade, service, communications, and finance.

³ Includes railroad and other transportation, and electric and gas utilities.

Sources of data: Beginning with 1945, U. S. Department of Commerce, Office of Business Economics and Securities and Exchange Commission; prior to 1945, Board of Governors of the Federal Reserve System.

Second, there may have been some tendency—in the light of declining prices—for business to postpone investments originally scheduled for the early spring of this year until autumn. This may have been the case in the first quarter of this year, when actual expenditures on plant and equipment, as reported in mid-May, were some 5 percent less than the preliminary estimate of capital outlays for that quarter reported in mid-February. The apparently higher outlays now anticipated for the third quarter suggest that this cut represented a postponement rather than a cancellation.

¹ See "Plant and Equipment Programs and Sales Expectations in 1949," SURVEY OF CURRENT BUSINESS, April 1949.

Counterbalancing industry trends

As shown in the accompanying chart and table, the relative stability in total capital outlays during the first half of 1949, when compared with the same period of last year, was largely the result of counterbalancing trends among industries. In general, a downward movement in the plant and equipment expenditures of manufacturing concerns (which is expected to continue in the third quarter) has been offset by the rising expenditures of the electric and gas utilities and the railroads.

In the second quarter of 1949 the capital outlays of manufacturers were 8 percent below the corresponding quarter of last year. Outlays of the electric and gas utilities, on the other hand, were up by 27 percent and those of the railroads by 32 percent. Expenditures of the mining and commercial and miscellaneous groups were relatively stable.

In the third quarter of the year, however, only electric and gas utilities are expected to maintain capital outlays well

above those of 1948. In other segments, where considerably greater progress has been made in the completion of postwar expansion and modernization projects, planned outlays are lower by substantial amounts. An exception is the "other transportation" group, whose capital outlays are expected to rise to the rate reached in the third quarter of last year. In manufacturing the drop from the corresponding quarter of last year, according to plans in mid-May, will amount to 12 percent.

It is, of course, in the manufacturing segment in particular that reduced demand has been most apparent in recent months, with significant declines in output in such important industries as textiles, paper, shoes and other leather goods, chemicals and steel. With demand no longer pressing capacity in these sectors, the incentive for expanding facilities has noticeably eased. Nevertheless, for the economy as a whole, the decline in capital outlays now programmed for the third quarter is moderate.

Corporate Financing in the First 6 Months of 1949

THE economic readjustments which occurred in the first 6 months of the year were clearly reflected in the financing operations of corporate business. The demand for funds to finance long-term plant and equipment needs remained high in the first half of 1949. In contrast, the working capital requirements were cut considerably as inventories and customer credit were reduced. The net result was a substantial reduction in total demand for funds by corporate business.

There was a corresponding drop in the flow of funds to corporations, mainly in the form of reduced short-term bank and commercial credit. The volume of long-term capital funds raised in the securities market in the first half of the year was about as large as a year ago. As in 1947 and 1948, the bulk of the money raised came from the sale of debt issues.

In general, the liquidity position of business was somewhat improved on an over-all basis from 1948 to 1949 with current liabilities as well as sales being reduced to a greater extent than current assets. There has been very little change in corporate liquid assets, that is, cash and Government securities. In contrast to many previous periods of readjustment there has been little apparent tendency on the part of banks and other suppliers of credit toward more restrictive lending policies. Interest costs of borrowing in 1949 remained low by almost any peacetime standards, and the major credit institutions for the most part made their funds available on relatively favorable terms. Within the framework of the general credit conditions which have prevailed for a number of years, the ability of banks to lend has not been in question. Moreover, the Federal Reserve monetary authorities have in recent months taken steps to increase the availability of credit to business by reducing the legal reserve requirements of banks and by facilitating some reduction in interest rates through its open market policy.

Expansion of facilities continues high

In the first half of 1949 nonfinancial business corporations spent \$8.4 billion on plant and equipment. This total is somewhat lower than the peak expenditures in the last half of 1948, but it is about one-half billion dollars above the corresponding period of 1948.

As has been the case in the past, the major part of the funds needed for this expansion was obtained from internal sources, primarily retained earnings and depreciation reserves, which totaled about \$7 billion in the first 6 months

of the year. The availability of funds from these sources was reduced to some extent in 1949 as a fall in profits was reflected in lower retained earnings. However, it may be noted that capital requirements were reduced to a much greater extent so that the proportion financed from internal sources actually increased.

Over \$3 billion of net new securities

Nonfinancial corporations have continued to sell new securities to meet a considerable portion of their long-term financial needs. Proceeds of net issues of stocks and bonds (new issues less retirements) amounted to \$3.3 billion in the first 6 months of 1949. As may be seen from chart 4 on page 32, this inflow of funds equaled the volume of proceeds in the first half of 1948. Bond sales have constituted about 80 percent of total net new issues in 1949, a somewhat larger proportion than in 1947 or the comparable period of 1948 when net debt issues accounted for about three-quarters of the total. Compared with the second half of 1948, the proportion of new bond issues went down relative to proceeds from stock issues.

Relatively low cost of borrowing long-term funds

A factor in the continued dependence on debt issues has been the relatively more favorable terms of debt as compared with equity-stock-financing. While there was a small rise in long-term interest rates toward the close of 1948, the cost of borrowing has been somewhat lower in 1949 and the rate of interest has been maintained close to the very low level prevailing throughout most of the war and postwar periods. In contrast, the terms of stock financing have remained comparatively high in the last 2 years. Stock prices in 1947 and 1948 tended downward while earnings and dividends rose sharply. Hence, the ratio of earnings and dividends to prices rose sharply. With these developments business continued the issuance of bonds at low interest rates in preference to the issuance of new equity issues.

During 1949, the earnings-price relationship for stocks was not basically altered but the dividend-price ratio increased further. Though stock prices have recently firmed, prices and earnings are both lower this year and the ratio of earnings to prices has generally been maintained at a level close to the postwar peak.

National Income and Product Statistics of the United States 1942-48

This report contains summary national income and product statistics for the years 1929 through 1948; detailed annual tables for the years 1942 through 1948; all available quarterly estimates of national income and product (covering the period beginning with 1939); and revised monthly estimates of personal income beginning with 1942.

DETAILED statistics of the national income, national product, and related series for the year 1948 and revised estimates for certain prior years are presented in the following pages. This issue of the SURVEY and the special *National Income Supplement* to the July 1947 SURVEY OF CURRENT BUSINESS together contain in their entirety the comprehensive set of national income and product estimates prepared by the Office of Business Economics for the period since 1929.

In addition to the first detailed estimates for 1948, this report incorporates revisions of many of the series for certain prior years. It was noted in the *National Income Supplement* that such revisions would occur as further source material became available. The estimates presented here, for example, incorporate such newly-available basic data as *Statistics of Income* tabulations for sole proprietorships and partnerships for 1945 and for corporations for 1946; data collected in surveys of the legal, dental, and medical professions for late years; final 1947 tabulations of wages and employment covered by state unemployment insurance laws; partial results of the 1947 *Census of Manufactures*; and financial statistics of state and local governments for 1947. In addition revised information was obtained on the business population, agricultural income, construction activity, inventories, and retail sales.

NOTE.—This report was prepared by the National Income Division, Office of Business Economics.

The present report is intended to be used in conjunction with the *National Income Supplement* to the July 1947 SURVEY OF CURRENT BUSINESS. Jointly, these two publications contain the complete set of national income and product statistics prepared by the Office of Business Economics for the period 1929-48. Quarterly and monthly estimates for 1949 are shown on pages S-1 and S-7 of this issue of the SURVEY. Statistics for the second quarter of this year will be presented and analyzed in the August issue. The present issue of the SURVEY supersedes last year's report on "National Income and Product Statistics of the United States, 1944-47," published in the July 1948 issue of the SURVEY, as well as all series on national income, product and related items subsequently published in the SURVEY.

Revised series incorporated in the present report extend back through 1939 and replace corresponding series originally published in the *National Income Supplement* (as brought up to date in the July 1948 and subsequent issues of the SURVEY). Owing to the extensive nature of the revisions back to 1942, all regular annual tables contained in the *Supplement* are shown in this report for the entire period 1942-48. The only revisions of annual data for years prior to 1942 are those of new private construction, which is discussed below, and of the number of active proprietors. Annual tables affected by the revisions in new private construction are presented beginning with the year 1939, while those for active proprietors begin in 1940. The summary tables on national income, gross national product, personal income, and their relation are shown for the entire period 1929 to 1948 for the sake of convenience.

All quarterly tables are shown for the years 1939-48, the full period for which quarterly estimates are available. In addition to the changes required by revised annual totals, these tables incorporate certain revisions in the quarterly data and in the seasonal adjustment of certain of the component series. The monthly series on personal income has been revised back to 1942.

The income and expenditure accounts for the various sectors of the economy, shown in the *National Income Supplement* for the year 1939, are here presented for 1948 in tables I to VI. They can be constructed for any year since 1929 from the tabular data contained in this issue and the *Supplement*.

The numbering and stubs of the various tables correspond to those used in the *Supplement* in order to facilitate use.

of the two sources to obtain continuous series covering the period since 1929.

Descriptions and definitions of the various series contained in the *Supplement* have not been repeated. For economy of space the many footnotes accompanying the tables in the *Supplement* have also been omitted, but it should be understood that these footnotes apply equally to the current estimates. Use of the present tables without reference to the *Supplement* may, therefore, lead to misunderstanding or misuse of the data.

Some aspects of the estimates published in this report should be noted. Adoption of the new Standard Industrial Classification for manufacturing industries by the Social Security Administration, effective with its 1947 tabulations, has in a number of the industry groups impaired the comparability of current social security statistics with those for earlier years. The estimates of pay rolls and employment in manufacturing for 1947 and 1948 presented here have been adjusted to conform to the National Income Division classification, and therefore to the data for earlier years, by the use of collateral information. Detailed data from the *Census of Manufactures* and special tabulations of the Social Security Administration have permitted adjustment for 1947 which is believed to be highly accurate. The 1948 estimate for certain of the manufacturing industries is subject to a somewhat larger margin of error.

Attention should also be drawn to the revision of the construction estimates incorporated in this report. These include revisions in the published series of new private construction activity prepared jointly by the Office of Domestic Commerce and the Bureau of Labor Statistics. These revisions have been incorporated for the period 1939-48.

In addition, it has been known for some time that for definitional as well as statistical reasons the estimates of new private construction activity were not sufficiently inclusive for the purposes of national product measurement. For most years, however, the magnitudes involved were thought to be small, and no adjustment was attempted in view of the fact that the extreme paucity of data made it impossible to prepare accurate estimates.

With the high level of construction in recent years the items omitted from the statistics of new private construction

activity that should properly be counted as components of national product have increased in magnitude. Their omission from national product seems no longer advisable even though lack of basic data continues to prevent a precise estimate. Accordingly, for the purposes of the present report a set of interim estimates of the major omitted items was prepared for the period 1939-48 and included in gross national product under new private construction. The items covered include major additions and alterations to residential buildings, profit margins of residential builders, residential land development costs, settlement and allied charges, engineering and architectural fees, and the value of construction of a few minor types of nonresidential structures. The annual magnitudes involved, in billions of dollars, are as follows: 1939: 0.7, 1940: 0.8, 1941: 0.9, 1942: 0.6, 1943: 0.5, 1944: 0.5, 1945: 0.6, 1946: 1.4, 1947: 1.9, 1948: 2.3. While it is believed that the estimates reflect the order of magnitude of the omitted items, it should be emphasized that they are interim estimates subject to further revision and refinement.

The revisions of the construction estimates have been carried back only to 1939. This should be taken into account when comparisons that involve construction are made with prior years.

One of the greatest difficulties that had to be dealt with in preparing the current revisions was to measure the substantial effects of the shift from the unincorporated to the incorporated form of legal organization that began in 1946 and appears to have extended into 1948. This shift affected particularly the income of unincorporated enterprises and corporate profits, but had implications also for personal saving and many other components of the product and income flow. So far only incomplete information is available on the legal shift that occurred in 1946, and information on further shifts in 1947 and 1948 is even less satisfactory. Moreover, such information as exists became available only shortly before the estimates contained in this report had to be completed. The utmost effort was made to utilize the available data in the most effective manner, but, because of the difficulties of measuring the shift, the estimates for the product and income components that are most affected are subject to more than the usual margin of error, especially with respect to their detailed industrial breakdown.

National Income and Gross National Product Series, 1929-48

THE JULY 1949 issue of the SURVEY OF CURRENT BUSINESS provides the latest National Income and Product data covering the years 1942-48. This presentation gives to subscribers the currently official figures on fundamental measures of the national economy.

For completely revised series back to 1929, with detail for all component segments, reference should be made to the previously published NATIONAL INCOME SUPPLEMENT to the SURVEY OF CURRENT BUSINESS.

The SUPPLEMENT contains, in addition to extensive statistical tables, an explanation of fundamental concepts and procedures underlying the data. That publication furnishes to business managers and analysts, economists, and students the basic data to

which all subsequently published national income and gross national product figures are related.

¹ Corporate income before and after taxes is measured net of capital gains and losses, dividends received, renegotiation refunds, and accelerated emergency amortization charges, but before deduction of depletion charges. The definition with respect to depletion charges has an important effect on the data for the mining industries. A complete reconciliation of the all-industry totals for these income series with Bureau of Internal Revenue figures for "compiled net profit" is presented in table 38.

Corporate Financing in the First 6 Months of 1949

(Continued from p. 5)

Short-term financing lower

The reduction in total uses of business funds which occurred in 1949 is almost entirely accounted for by the reversal of the earlier postwar upsurge in inventories and short-term credit granted by corporations to other business and to consumers. The large and expanding inventory requirements over most of the postwar period in part reflected the expanding flow of goods into inventories, and in part resulted from sharply rising prices which served to inflate the book value of these inventories. For the first time since the reconversion upswing got under way, the rise in inventories was halted and subsequently reversed in the first 6 months of this year, as the book value of corporate inventories fell by about \$1.6 billion. Again, the decline was due to some reduction of goods in stock as well as to the lower prices at which inventories were replaced.

Chart 4.—Changes in Corporate Bank Loans and Security Issues

¹ Changes represent the difference between the levels of loans outstanding at the beginning and end of each 6-month period. Changes in mortgage loans are not included.

² Preliminary estimates.

Source of data: Estimates of the U. S. Department of Commerce, Office of Business Economics, based upon Securities and Exchange Commission and other financial data.

The recent reduction of sales and prices permitted corporations to lower their receivables by about \$2.4 billion in the first half of 1949. This decline in short-term credit extended by corporations was, it may be noted, accompanied by an equal decline in trade payables in the same period.

Bank loans reduced

The lower level of working capital requirement in 1949 has permitted corporations to reduce their bank debt. As may be seen from chart 4, the \$2 billion decline in the first 6 months of this year is in sharp contrast to the trends in 1947 and 1948. While part of the reduction reflects seasonal influences, the bulk of the decline appears to have been made possible by a greater-than-seasonal fall in inventories and other working capital requirements.

Table 3.—Sources and Uses of Corporate Funds, 1947-49¹

[Billions of dollars]

Item	Annual		First half	
	1947	1948	1948	1949 ²

Discrepancy	-.7	-1.8	-.8	-.6

¹ Excluding banks and insurance companies.

² All data for the first half of 1949 are partly estimated.

³ Less than \$50 million.

⁴ Including depletion. No data are available on retained earnings in the second quarter of 1949. Above estimate assumes a moderate reduction from the first quarter.

Source: U. S. Department of Commerce estimates based on Securities and Exchange Commission and other financial data.

There appears to have been little change in terms of short-term lending by banks in 1949. With the general profitability of business either leveling off or declining, banks have tended to be somewhat more selective in their lending activity. On an over-all basis, however, short-term bank loan facilities have been available to corporations on relatively favorable terms.

Liquidity of business

In summary, it appears that the 1949 reduction in the flow of funds to corporations was primarily the result of reduced business requirements. This reduction in financial requirements reflected a drop in working rather than in fixed capital. The net change in total capital requirements has resulted in an improved liquidity position for business. Long-term indebtedness has increased steadily over the postwar period but total interest payments are still much lower relative to profits than was true before the war. This is due not only to the profits which flowed from the high volume of postwar business but to the lower rate of interest payments on corporate debt outstanding.

Monthly BUSINESS STATISTICS

THE DATA here are a continuation of the statistics published in the 1947 Statistical Supplement to the SURVEY OF CURRENT BUSINESS. That volume contains monthly data for the years 1941 to 1946, and monthly averages for earlier years back to 1935 insofar as available; it also provides a description of each series and references to sources of monthly figures prior to 1941. Series added or revised since publication of the 1947 Supplement are indicated by an asterisk (*) and a dagger (†), respectively, the accompanying footnote indicating where historical data and a descriptive note may be found. The terms "unadjusted" and "adjusted" used to designate index numbers refer to adjustment of monthly figures for seasonal variation.

Data subsequent to May for selected series will be found in the Weekly Supplement to the Survey.

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey	1948								1949

*Revised. ^aPreliminary. ^bData include some contracts awarded in prior months but not reported. ^cData now reported quarterly.

^dData for April, July, September, and December 1948 and March 1949 are for 5 weeks; other months, 4 weeks.

^eData for June, September, and December 1948 and March 1949 are for 5 weeks; other months, 4 weeks.

^fThe series under building authorized were formerly shown as "urban dwelling units scheduled to be started" and "indexes of building construction based on building permits;" see also note in July 1948 Survey. Minor revisions in figures for number of dwelling units beginning January 1946 are available upon request.

^gNew series. The new series for new permanent nonfarm dwelling units started has been substituted beginning January 1941 for the series on "total nonfarm dwelling units scheduled to be started" shown in the 1947 Supplement; see note marked "*" on p. S-5 of the July 1948 Survey for a brief description of the series; data for January 1941-April 1947 are available upon request;

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey	1948								1949

Other Info

^a Revised.
^b Data beginning January 1948 for magazine advertising include advertising in farm magazines and some other magazines which is not included in earlier data and there have been changes effective January 1948 in the classifications of electric household equipment, housefurnishings, etc., soap, cleaners, etc., and toilet goods in both the radio and magazine series. Inclusion of advertising in farm magazines in the 1948 data for magazines materially affected the comparability of the figures.

[†] Revised series. The index of nonfarm foreclosures has been revised beginning 1938 because of discovery of certain errors in reporting; revisions through April 1947 will be shown later; revisions for January–April 1948 are available upon request. There have been minor revisions in Printers' Ink index of magazine advertising beginning 1947 to include advertising in farm magazines formerly shown as one of the five major components of the advertising index; annual data for this index and the combined index have been further revised beginning 1935. These revisions are incorporated in monthly data beginning February 1948. The Tide advertising index has been completely revised and is now based on dollar costs for all media—newspapers, magazines, farm papers, business papers, radio (network and spot) and outdoor advertising; revised data beginning 1936 will be shown later. Estimates of personal consumption expenditures have been revised beginning 1939; revised figures for the grand total and for total durable and nondurable goods and services are shown as a component of gross national product on p. 28 of this issue; revised figures through the first quarter of 1948 for the subgroups will be shown later.

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey

[†] Revised.[‡] Less than \$500,000.[†] Revisions for January-August 1947 are available upon request.[§] Sales figures include bonds of the International Bank for Reconstruction and Development not shown separately; these bonds are included also in computing average price of all listed bonds.

Revised series. The price series for high grade bonds is based on average yield of 12 bonds through August 1948 and 11 bonds thereafter, converted to a price basis by assuming a 234 percent bond with 30 years to maturity. The series for medium grade bonds is converted from yields of 14 bonds through August 1948 and 12 bonds thereafter (number of industrial and railroad bonds each reduced to 4 in September 1948), assuming a 3-percent coupon with 30 years to maturity; this series replaces the series for medium and lower grade bonds shown in the Survey through the August 1948 issue. Both series are averages of daily figures.

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey

¹ Revised ² December 1 estimate ³ June 1 estimate

^a Includes old crop only; new grain not reported in stock figures until crop year begins in July for barley, oats, and wheat and October for corn. ^b No notation.

The total includes wheat owned by the Commodity Credit Corporation and stored off farms in its own steel and wooden bins, and grain not reported in stock figures until crop year begins.

[§]Beginning in the April 1948 Survey, export figures include Army civilian supply exports.
[†]Data are partly estimated; see note marked "f" on p. S-28 of the October 1948 Survey.

^fRevised series. Data included for wheat flour, corn meal, malt, and oatmeal have been revised using new conversion factors supplied by the U. S. Department of Agriculture, which take account changes in milling practices. The revisions have been carried back in each case to the earliest year for which the new information is available as follows: Exports of principal grains and oat exports, 1943; wheat and barley exports, 1944; corn exports, 1946. The new conversion factors are given in the note for grain exports at the bottom of S-29. Revised figures for 1944-46 barley and through August 1947 for other series will be published later. The new factor for malt has been used in data for barley exports beginning January 1947 published in previous issues.

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey

* Revised. ¹ December 1 estimate.

† January–March 1949 total, including corrections for months prior to March 1949, 172,712 tons; corrected monthly figures are not available.

‡ Not strictly comparable with data prior to September 1947; see note in November 1948 issue.

§ Beginning in the April 1948 Survey, export figures include Army civilian supply shipments; see note marked "†" on p. S-21.

** New series. Data on entries of raw and refined sugar (raw basis) from Puerto Rico and Hawaii, compiled by the U. S. Department of Agriculture, have been substituted for receipts of raw and refined sugar from these areas compiled by the U. S. Department of Commerce; collection of data for Hawaii has been discontinued by the latter agency.

† Data for January–June 1947 are shown on p. S-30 of the January 1949 Survey.

• Revised

[†]Revised series. Beginning in the July 1948 Survey, data for 1948 for orders, production, shipments, and stocks of Western pine and west coast woods have been revised because of changes in commodity classification; excludes exports of box shooks which averaged 1,244,000 board feet per month in 1948.

Revised series. Beginning in the July 1948 Survey, data for 1948 for orders, production, shipments, and stocks of Western pine and west coast woods have been revised because of changes in the regions covered. The revised figures for Western pine include all production in Wyoming, Utah and Colorado (formerly only parts of these States were included) and only pine production instead of total production as formerly, in two counties of Oregon which now produce largely Douglas fir; data for west coast woods have been revised to include fir in these two counties.

The figures include a comparatively small number of "other footwear" which is not shown separately from shoes, sandals, etc., in the distribution by type of uppers; there are further small differences between the sum of the figures and the totals for shoes, sandals, and play shoes, because the latter, and also the distribution by kinds, include (except for the latest month), small revisions not available by type of uppers.

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey

* Revised.

* Preliminary.

¹ See note marked "O".

The number of companies reporting beginning 1947 is as follows: Direct current—first quarter 1947, 28; second and third quarters 1947, 36; fourth quarter 1947, 35; thereafter, 29; polyphase induction—first quarter 1947, 34; second and third quarters 1947, 36; fourth quarter 1947, 35; thereafter, 33.

[○]Data revised to exclude figures for water heating units; comparable data for January to August 1947 are shown on p. S-34 of the November 1948 Survey. Revised figures for 1945 and 1946 will be shown later; previous to 1945 water heating units were not called for on the schedule but were largely reported in data for residential burners shipped separately. Collection of data on new orders has been discontinued.

● Data for January-June 1947 for refrigerators sales index are shown on p. S-34 of the November 1948 Survey.

*New series. Data on shipments of cooking stoves and ranges, heating stoves, range boilers, and water heaters have been substituted for production data, collection of which has been discontinued. It should be noted that for range boilers and water heaters, shipments data have been shown beginning with the March 1947 issue of the Survey; however, production data were substituted in the 1947 Supplement because available for a longer period than shipments. Monthly shipments for September 1943-June 1947 for stoves and ranges and September-December 1945 for range boilers and water heaters are available upon request. The index of machine tool shipments, computed by the National Machine Tool Builders Association beginning January 1937, has been substituted for estimates of total shipments which have been discontinued by the association; the index is based on reports estimated to account for about 90 percent of industry shipments.

NOTE FOR METAL CANS SHIPMENTS AND TIN ORE IMPORTS, p. S-33.—Revisions for metal cans shipments for January-April 1948 are as follows (short tons): Total—216,44; 202,460; 207,589; 208,500; food—134,582; 125,705; 134,311; 143,096; for sale—182,356; 170,825; 170,289; 165,749. Revised data for tin ore imports for January-April 1948 (long tons): 2,086; 3,572; 3,6662; 2,003.

Unless otherwise stated, statistics through
1946 and descriptive notes may be found in
the 1947 Supplement to the Survey

* Revised. † Preliminary. ¶ Beginning in the April 1948 Survey, export figures include Army civilian supply shipments; see note marked "¶" on p. S-21.

¶ Data beginning August 1948 are for wool sold on the open market instead of the Commodity Credit Corporation selling price; August price for the territory wool comparable with earlier series, \$1.480 per pound; for the bright fleece series, the Commodity Credit Corporation and the open market price were the same in August and September.

Quotations beginning January 1949 are for a substituted series of the same description, but represent a composite price; the December 1948 price for the new series is \$2.57 per pound.

• Included in data for broad and narrow looms prior to April 1947. ¶ Data for June, September, and December 1948 and March 1949 are for 5 weeks; other months, 4 weeks.

* New series. The new series for cotton spindle activity and the revised series for operations as a percent of capacity relate to all cotton system spindles, including data for spindles spinning synthetic and blended fibers as well as those consuming 100 percent cotton. The series designated "100 percent cotton" continue the data on active spindles and spindle hours shown in the 1947 Supplement and in previous issues of the monthly Survey. The figures for average spindle hours per spindle in place and operations as a percent of capacity for cotton consuming spindles for August 1945-January 1948, as shown in the Supplement and in previous issues of the monthly Survey, are not strictly comparable with earlier data because the figures for spindles in place collected beginning August 1945 and used in the computations include all cotton system spindles while the "in place" figures used in earlier computations related to spindles used exclusively for spinning cotton. Data for August 1945-June 1947 for the revised series on operations as a percent of capacity and for the new series on spindles and spindle hours are available in the May and August 1948 issues, p. S-39, and the note for cotton spindle activity at the bottom of p. S-34 in each of those issues. Beginning with the March 1949 Survey, the new price series for worsted yarn (Bradford weaving system) 2/32s, 64s (white) replaces the former price which has been discontinued; monthly data beginning 1947 will be shown later.

†Revised series. See note marked "¶".

Unless otherwise stated, statistics through 1946 and descriptive notes may be found in the 1947 Supplement to the Survey

* Revised. 1 Not available for publication.

New series. See note marked “” on p. S-40 of the September 1948 Survey for January-June 1947 figures for passenger car shipments. The series for flannel dress goods, 8 ounce, 54-55 inch, f. o. b. mill, which is compiled by the U. S. Department of Labor, has been substituted for the 7-7½-ounce series shown in the September 1948 Survey and earlier issues which has been discontinued by the compiling agency; comparable figures beginning April 1948 will be published later.

†Revised series. See note on woolen and worsted apparel fabrics in the May 1948 Survey or in the 1947 Supplement to the Survey for explanation of changes in the classifications in the second quarter of 1947. A further change was made in the last quarter of 1947. Beginning that quarter the unclassified item consists entirely of fabrics containing 25 percent or more wool reported by cotton and rayon weavers, and all apparel fabrics produced by woolen and worsted manufacturers are distributed to the separate classifications for men's and boys' and women's and children's fabrics; for the second and third quarters of 1947, the unclassified item includes also 3,340,000 and 1,489,000 linear yards, respectively, which were reported by woolen and worsted manufacturers as “all other apparel fabrics.” Apparel fabrics produced for Government orders were combined with other production prior to 1947. Blankets produced for Government orders are not available separately. • Not including railroad-owned private refrigerator cars.

Basic Data

ON THE NATIONAL ECONOMY

National Income and Gross National Product Series 1929-1948

STILL available is the SURVEY's separate NATIONAL INCOME SUPPLEMENT, which provides a complete annotated record of the National Income and Product series back to 1929. Comprehensive statistical tables incorporating an explanation of fundamental concepts and procedures are there assembled for handy reference. The NATIONAL INCOME SUPPLEMENT is essential as a base-book for use in connection with the later statistics presented in the July 1949 issue of the SURVEY OF CURRENT BUSINESS.

★ ★ ★

National Income statistics as provided in the SUPPLEMENT are designed to form an interrelated system of national economic accounting. They constitute the background data to which the more recent—and current—national income and gross national product series are keyed.

★ ★ ★

Business managers and analysts, economists and students will find the SUPPLEMENT a basic compendium—a necessary statistical tool in the determination and evaluation of long-term business and financial trends.

The SUPPLEMENT was prepared by the National Income Division in the Office of Business Economics, which compiles the official national income and gross national product figures for the United States.

★ ★ ★

For a composite picture of the Nation's economy in terms of national income and gross national product—beginning in 1929 and together with the July 1949 SURVEY establishing a detailed and authoritative record through 1948—order a copy of the

National Income Supplement

TO THE SURVEY OF CURRENT BUSINESS

"... the most comprehensive kit of statistical tools ever assembled in this or any other country."
