the BUSINESS SITUATION

THE rapid advance in economic activity continued unabated in March, with personal income, retail sales, nonfarm employment, and industrial production all showing increases over February. The March gains rounded out another large quarterly increase in GNP and a still greater rise in final sales, paced by a substantial advance in personal consumption expenditures and sizable increases in fixed investment and defense expenditures. Because of the growing pinch on available resources, the President late in March asked businessmen to reexamine their plant and equipment programs with a view to cutting them down or stretching them out, as one way of reducing aggregate demand and inflationary pressures.

Wholesale prices unchanged in March

Last month's price developments were mixed. With pressures on capacity still heavy, wholesale prices of industrial commodities rose again, but prices of farm products and processed foods combined, which had risen sharply in the preceding 4 months, declined. On an overall basis, wholesale prices were about unchanged from February.

Industrial prices rose 0.2 of 1 percent in March and a little more on a seasonally adjusted basis. The most pronounced price increases (1 percent or more) were in leather, lumber and plywood, cigarettes, nonferrous metals, converted paper and paperboard products, and wastepaper. Increases for the metals and metal products and the machinery and motive products groups were more moderate but were widespread among the subgroups. Prices of fuels declined noticeably, but the drop was mainly seasonal. Changes were small for textiles, chemicals,

rubber, furniture, and nonmetallic mineral products.

Since December, prices of industrial commodities have risen close to 1 percent on a seasonally adjusted basis, or

more than double the quarterly rate of increase from December 1964 to December 1965. As chart 1 shows, the acceleration is evident in all major commodity groups except fuels, chemicals, and furniture.

Personal income and nonfarm employment higher

Personal income rose about \$4 billion in March to a seasonally adjusted annual rate of \$561 billion. Wage and salary disbursements increased \$2½ billion from February with gains in all components; increases in proprietors' incomes and in personal interest income accounted for most of the rest of the total advance.

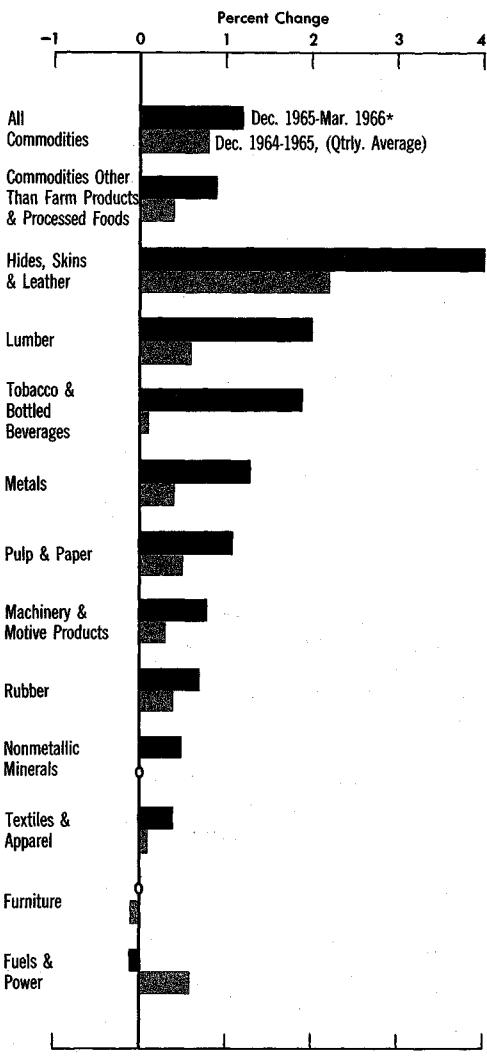

The rise in wage and salary payments reflected a further gain in employment at nonfarm establishments and higher pay rates. Manufacturing payrolls rose \$1 billion over the month, and government payrolls were up about \$¾ billion.

Employment at nonfarm establishments rose by more than 300,000 persons in March, after seasonal adjustment, bringing the increase to almost 1 million since December and to 2 million since September. The February–March employment advance was widespread, with sizable gains in manufacturing, construction, trade, and government. Two industries, electrical machinery and transportation equipment, accounted for two-thirds of the employment increase in durable goods manufacturing; small gains occurred in most other durable and nondurable goods groups.

The unemployment rate in March was 3.8 percent, as compared with 3.7 percent in February. The average monthly decrease from January to March, 0.1 of a percentage point, was about in line with the trend in the second half of 1965.

CHART 1

Changes in Wholesale Prices

* Based on seasonally adjusted data, OBE

U.S. Department of Commerce, Office of Business Economics

Basic Data: BLS

66-4-1

Retail sales buoyant

Retail sales continued to move ahead at a very fast rate. According to advance reports, sales increased again in March, the seventh straight month of increase. Over the past half year, sales have risen almost as much as they did in all of 1965, when they showed a gain of 8½ percent.

Unit sales of new domestically produced cars rose from February to March. The total for the first quarter was 5 percent (seasonally adjusted) above the October-December period and about the same as in the first quarter of 1965, when sales were unusually high as an aftermath of the strikes. New car inventories rose slightly in the final quarter of last year, reaching a seasonally adjusted total of 1.3 million units in December, and then climbed to almost 1.4 million units in March. Based on average monthly sales for the quarter and inventories at the end of

the quarter, the stock-sales ratio in March stood at 1.81, as compared with 1.82 last December and 1.73 in September.

Loan demand heavy

Loans by commercial banks showed a large seasonally adjusted increase in March. The rise was met in part by larger borrowings from Federal Reserve Banks and by a sharp cutback in bank holdings of U.S. Government securities; other security holdings also decreased. For the first quarter as a whole, the rise in total commercial bank credit—loans and investments—was below the average quarterly rise for the full year 1965 and well under the fourth quarter increase.

After 3 months of very sharp increases, interest rates were on the average unchanged in March, as upward pressures eased after mid-month. By early April, rates for a wide variety

of maturities were below average March levels. For the second time in 2 months, the Federal Housing Administration and the Veterans' Administration raised maximum permissible rates on Government-insured or Government-guaranteed home mortgages.

First Quarter 1966 GNP

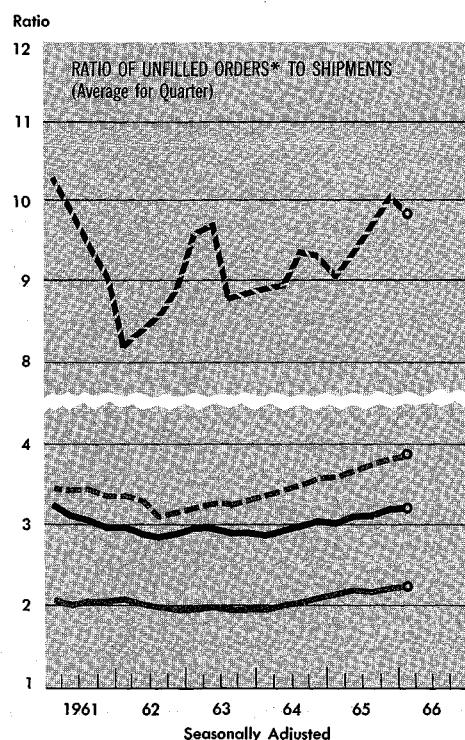

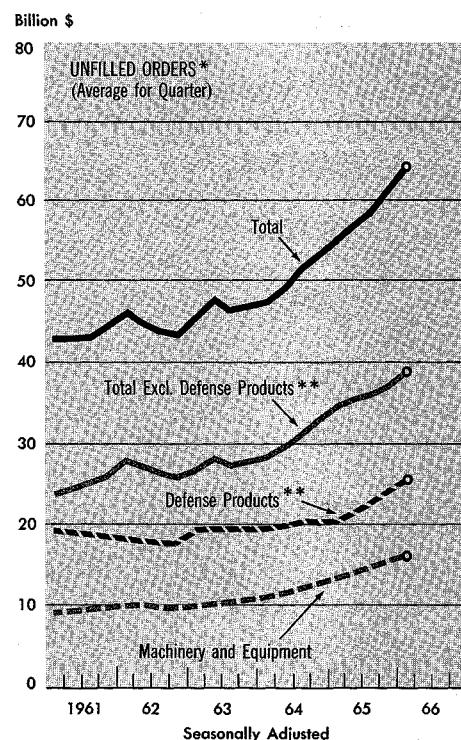

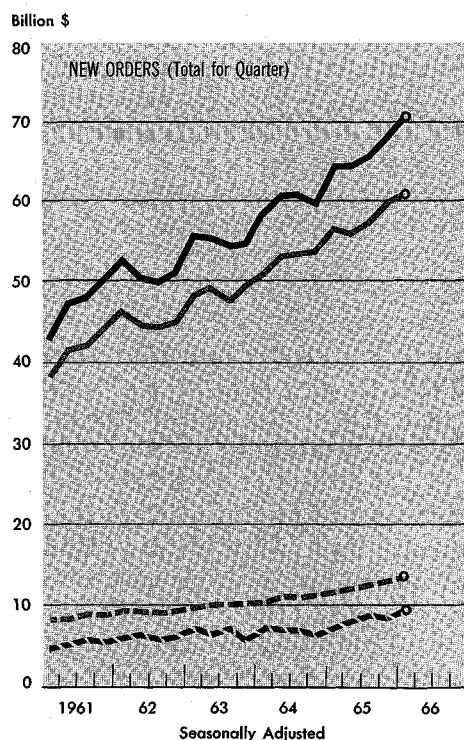

THE first quarter of the new year saw another striking expansion in total production. Gross national product rose \$17 billion or 2½ percent over the fourth quarter of 1965 to a seasonally adjusted annual rate of \$714 billion, according to preliminary estimates.

The large advance, which exceeded the rise in the closing quarter of 1965, was sparked by continuing strong increases in consumer and government demand and in business investment in

CHART 2

Durable Goods Manufacturing

- New and unfilled orders continue sharply upward in early 1966, reflecting strong demand for defense and capital goods
- Ratio of unfilled orders to shipments maintains its slow rise

● Jan. - Feb. at quarterly rate; average of January and February for unfilled orders and ratios.

* Excludes industries with no unfilled orders: wooden containers, glass containers, metal cans, barrels, and drums, and motor vehicle assembly operations.

** Defense products include communication equipment, complete aircraft, aircraft parts, and ordnance.

plant and equipment. Outlays for residential construction also increased. On the basis of figures that are still incomplete, it appears that net exports declined moderately and inventory investment tapered from an unusually high fourth quarter rate. The increase in final sales—\$18½ billion—was the largest on record.

The first quarter rise in the physical volume of production (GNP in constant dollars) came to 1½ percent and moved the economy a little closer to capacity operations. The unemployment rate fell from an average of 4.2

percent in the fourth quarter to 3.8 percent in the first, the lowest quarterly rate in more than 12 years.

The overall level of prices—as measured by the implicit price deflator for GNP—rose by ½ of 1 percent in the first quarter. It was the sharpest rise in the current business expansion, during which prices have increased an average of ¾ of 1 percent per quarter. The comparatively large price rise in early 1966 was attributable mainly to higher food prices—the result of a supply situation that is expected to improve during the year. Aside from food, there were sharp rises for nonresidential construction and producers' durable equipment; however, prices of consumer goods excluding food rose slightly.

Rising employment, together with higher wage rates and sizable gains in farm and other nonwage incomes, helped push personal income up by \$11 billion, or 2 percent. This increase was achieved despite a sizable \$3 billion step-up in personal deductions for social security.

The first quarter rounded out 5 full years of uninterrupted economic growth, the longest advance ever recorded except for World War II. Since the first quarter of 1961, personal income has increased 37 percent, real GNP has grown 31 percent, total civilian employment has risen 10 percent, and the unemployment rate has been almost halved.

Fixed investment up sharply

A closer approach to capacity operations, expectations of further increases in sales in 1966, and record profits led to another large increase in business expenditures for new plant and equipment in the first quarter. Coupled with higher residential construction outlays, this brought about a \$3½ billion advance in fixed investment, the largest in a year.

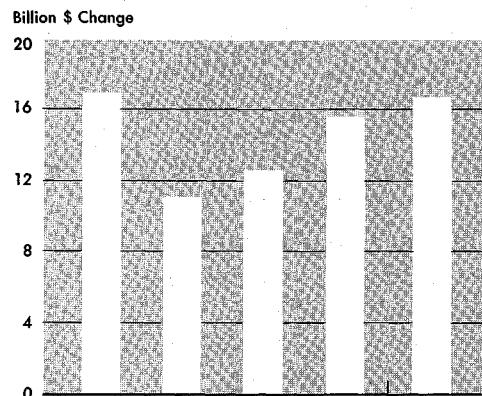

The rise in business fixed investment was \$2½ billion. Expenditures for most major types of private nonresidential construction showed sizable increases over the fourth quarter rate, and there were widespread advances in spending for new machinery and equipment, including trucks and automobiles.

According to the latest OBE-SEC plant and equipment survey, conducted in late January and February, business investment is scheduled to rise throughout the year and for all of 1966 is expected to be more than \$10 billion or 16 percent higher than 1965. By early April, shortly after the President's special appeal to businessmen to re-examine their investment programs, some large companies had publicly announced that they were scaling down their spending plans.

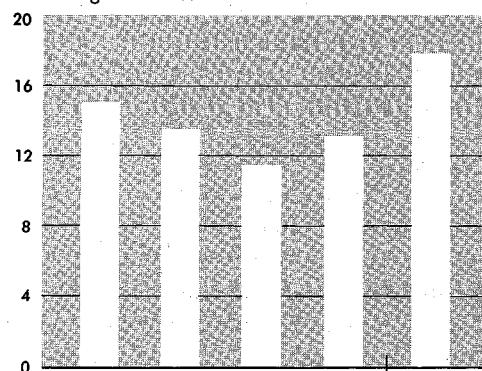

Outlays for residential construction, which have shown no growth for about

2 years, rose \$1 billion in the first quarter, the first gain in 6 months. The advance reflected the increase in housing starts that occurred late last year, apparently the result of unusually favorable weather. The number of both starts and building permits turned downward again in the first quarter of this year, and the level of residential outlays is expected to reflect this decline in the spring months.

Military spending rises further

Paced by a \$3 billion advance in military spending in response to the demands of the war in Vietnam, Federal Government purchases of goods and services increased $\$3\frac{1}{4}$ billion in the first quarter. Military procurement accounted for most of the increase. This was in contrast to the fourth quarter of 1965, when the expansion in payrolls, mainly because of higher pay rates, accounted for the bulk of a \$2½ billion rise in military outlays. Federal civilian purchases increased $\frac{1}{4}$ billion, and State and local government purchases continued to rise at their long-term rate, with an advance of $\$1\frac{1}{4}$ billion.

Consumer spending accelerates

Personal consumption expenditures showed an exceptionally large rise of $\$11\frac{1}{2}$ billion in the first quarter. Spending on all major types of products increased: Durable goods rose $\$2\frac{1}{2}$ billion, nondurable goods \$6 billion, and services \$3 billion.

The rise in durable goods spending was led by autos and parts, which increased $\$1\frac{1}{2}$ billion, after declining slightly in the fourth quarter. In the first 3 months of 1966, dealer sales of new domestically produced cars rose to an annual rate of 9 million, equaling last year's first quarter record sales figure. Among nondurable goods, the rise in food and beverage expenditures was particularly marked, reflecting in large measure the step-up in prices. Spending on services continued its steady upward trend.

Despite the buoyant state of consumer demand, there was little evidence that it was being unduly stimulated

by excessive use of consumer credit. The net monthly increase in consumer installment credit in the first 2 months of the year, although sizable, was somewhat smaller than the average monthly increase in 1965.

Net exports down

Net exports of goods and services declined by $\frac{1}{4}$ billion in the first quarter as exports rose only slightly from the fourth quarter while imports

registered another sizable gain. These results are based on data that are still incomplete. Net exports have now declined since mid-1965. This decrease is partly the result of the unusually rapid expansion of domestic markets that not only attract foreign producers but also tend to discourage American businessmen from increasing their exports.

Inventory investment lower

According to preliminary estimates, inventory accumulation moderated somewhat in the first quarter. Business inventories rose $\$8\frac{1}{4}$ billion at an annual rate, less than the \$10 billion accumulation in the fourth quarter of 1965. The decline in the rate of inventory investment was most marked in durable manufacturing and in nondurable retail trade; in the latter, increases in stocks had been unusually large in the closing months of last year. The slowdown in accumulation in these industries more than offset a step-up in the rate at which retailers of durable goods added to their inventories.

Personal income up

Personal income rose \$11 billion to an annual rate of \$557 billion in the first quarter. The gain in personal income was held down, however, by a \$3 billion increase in personal contributions for social insurance, which are treated as a subtraction item in the personal income total. The rise in personal contributions, effective January 1, resulted from the broadening of the taxable wage base from \$4,800 to \$6,600 and the increase in the effective tax rate from 3.625 to 4.2 percent.

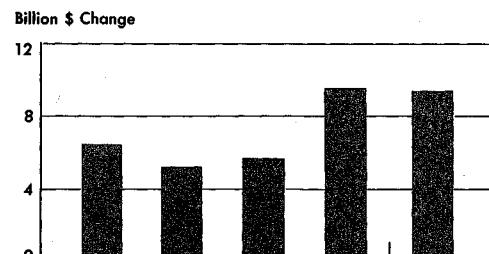

Personal income taxes also rose sharply in the first quarter—by $\$2\frac{1}{2}$ billion at an annual rate—as the substantial rise in employment boosted the number of taxpayers, and final settlements on 1965 tax liabilities spurred. Disposable personal income rose $\$8\frac{1}{2}$ billion. With consumer outlays rising considerably more than disposable income, personal saving as a percent of disposable income declined from 5½ to the relatively low rate of 4¾ percent.

The gain in personal income was led by a \$9 billion rise in payrolls, which reflected mainly the large in-

Total and Per Capita Personal Income, 1965— Record High in All States and Regions

PERSONAL income was at a record level in every State in 1965 as the national total rose \$35 billion over 1964 to reach \$528 billion. State per capita incomes also attained new peaks throughout the country and for the Nation as a whole averaged \$2,724.

There was more uniformity than usual in the rate of income gain among the regions in 1965. Only in the Plains area did the percentage increase differ from the national average (7 percent) by more than 1 percentage point. There, an upsurge of two-fifths in farm income raised total income 9 percent.

With gains in manufacturing providing the main impetus to the expansion, aggregate income in the Great Lakes and Southeastern States increased 8 percent. New England and the Southwest matched the national rise as most major industries in these two regions showed advances that were fairly close to their national counterparts. Total income in the Mideast, Rocky Mountain, and Far West regions rose 6 percent. These slightly smaller increases reflected generally less-than-average growth rates in most industries of the Mideast, a limited increase in manufacturing activity in the Rocky Mountain States, and less-than-average gains in farm income and manufacturing earnings in the Far West.

The uniformity of income change among States from 1964 to 1965 is emphasized by the comparative absence of extreme changes. The largest relative gain last year occurred in Idaho, where personal income rose 11 percent. In Vermont, Delaware, Mich-

igan, Indiana, Iowa, South Dakota, and South Carolina, the rise was 10 percent. These eight top-ranking States, it should be noted, are scattered widely throughout the country, with only the Southwest and the Far West unrepresented. No State lagged very much. Indeed, in only one—Wyoming—was the percentage rise in total income from 1964 to 1965 less than 5 percent.

Each successive year of the Nation's current 5-year economic expansion has witnessed a decline in the variation in rates of income change among the States. From 1964 to 1965, the coefficient of variation in relative changes in total income dropped fully one-third below that for 1963-64.¹

Changes by Industry

Changes in farm income and manufacturing activity were the most important factors causing variations in the income distribution among the States last year and each had roughly equal impact. Although State changes were much more varied for farm income than for earnings of persons in manufacturing, the latter has a greater weight than agriculture in most States.

Nationally, income from agriculture rose 15 percent in 1965. Changes varied considerably by State—from an increase of two-thirds in Colorado to a decline of nearly one-fifth in North Carolina. Underlying this range of variation, two broad influences are evident.

With prices sharply higher for hogs and moderately higher for cattle, those States where meat animal production

predominated generally showed the largest gains in farm income last year. This is strikingly illustrated in the Plains area, where State increases in farm income ranged from one-fifth to almost one-half. Livestock-producing States in the Great Lakes, Southwest, and Rocky Mountain regions also showed sizable gains.

In contrast, income from most crop production in 1965 changed little from 1964. In a few States, however, particular crops were responsible for sharp changes in the farm income total. Income from cotton and tobacco was off from the previous year and accounted for declines in farm income in several Southeastern States. In the three West Coast States, declines in specialty crops such as fruits and berries were mainly responsible for the smaller volume of farm income; lower receipts for wheat and cotton also contributed to the reduction in Washington and California respectively. In the Northeastern States of Maine, New Hampshire, Rhode Island, and Delaware, gains in income from potatoes, dairy and poultry products, and greenhouse and nursery plants brought about improvements in farm income.

Manufacturing and other changes

Earnings of individuals employed in the manufacturing industry rose \$9.5 billion in 1965—by far the largest dollar increase among industries. Although the 1964-65 rise was distributed among States in broad proportion to the distribution of 1964 manufacturing earnings, there were important deviations.

Increased earnings of individuals in factory production were a major influence in five of the eight States with the largest gains in total income last

Note.—The preliminary estimates of personal income in 1965 were prepared by Mrs. Edith Burton and James G. Welsh. The revised estimates for 1948-64 are from the staff of the Measurement Section, Regional Economics Division. Both sets of estimates were supervised by Edwin J. Coleman, Chief of the Measurement Section.

¹ The coefficient of variation is measured as the standard deviation of State changes in total income from the national rate of change expressed as a percent of the national rate of change.

year. However, in three States, manufacturing dampened the rise in total income significantly.

Manufacturing was especially buoyant in the Southeast, where eight of the twelve States exceeded the national rate of gain, and only one—West Virginia—lagged behind it. Gains of 11 to 13 percent occurred in the Carolinas, Georgia, Alabama, and Florida. In the Carolinas, increased weekly earnings caused most of the above-average rise in income from manufacturing, although employment rose significantly in textile, apparel, and machinery pro-

duction. Furniture production also contributed in North Carolina. In the other States, employment increases were mainly responsible for the better-than-average showing. In Florida, Alabama, and Georgia, expanded activity in transportation equipment manufacturing was the principal factor; in Georgia, textiles and apparel also showed major gains.

In Michigan, the continuation of the auto boom pushed manufacturing ahead at a pace well above that of the Nation. Above-average increases were widespread throughout Indiana's durable

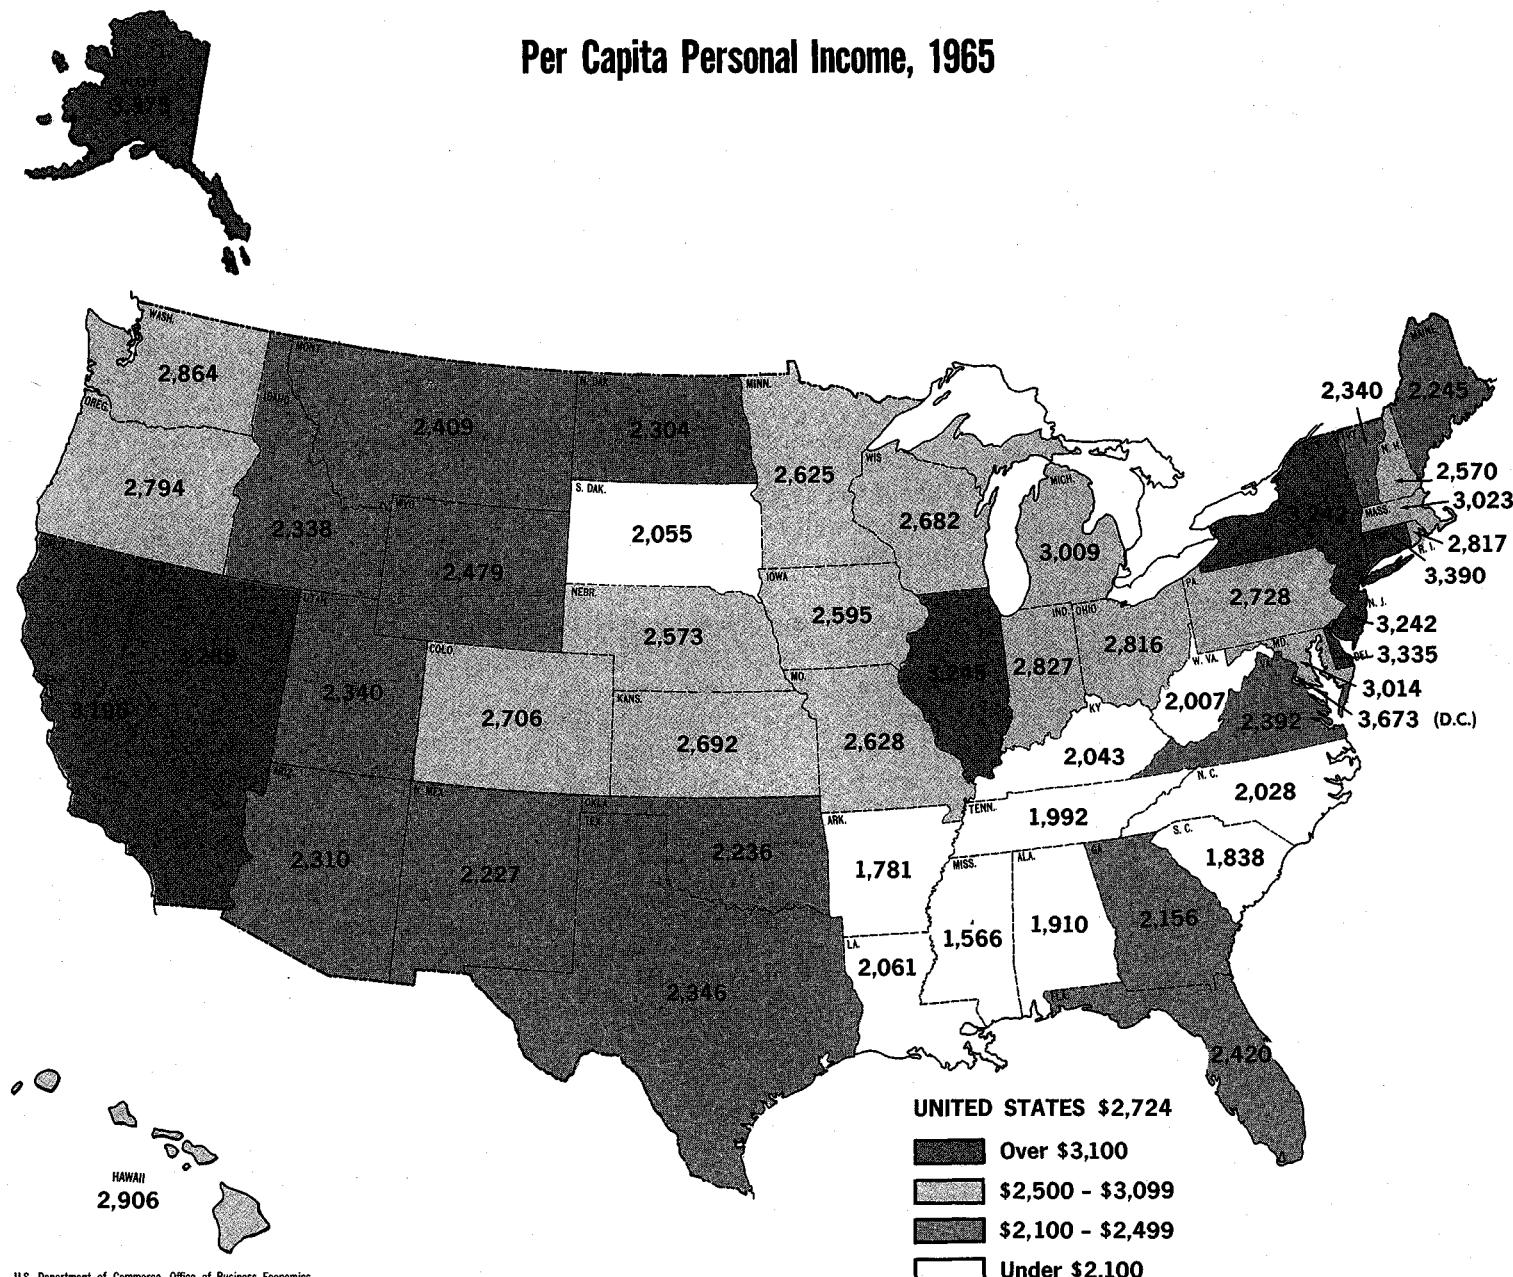

goods industries, with the major gain concentrated in the State's large radio and television equipment manufacturing industry.

In the Southwest, increases in machinery production accounted for most of Arizona's unusually large gain in manufacturing.

In Vermont, the step-up in factory earnings centered in machinery production. In Delaware, the chemical industry—which accounts for about 40 percent of manufacturing—played its usual expansionary role in the State's economic advance, but more signifi-

CHART 6

Per Capita Personal Income, 1965

SURVEY OF CURRENT BUSINESS

cantly, employment in all other manufacturing industries combined increased at an even faster rate.

In Kansas, declines in aircraft production and food manufacturing held total manufacturing in 1965 close to

1964 levels; Utah's reduction centered in smaller production of ordnance and transportation equipment; in Wyoming, the decline occurred in durable goods industries.

Table 1, which shows income changes

by industry, provides the basis for identifying States where special situations influenced economic activity in 1965. Detailed data on these developments and their impacts are not yet available. However, one pattern of

1. Consists of net income of farm proprietors, farm wages, and farm "other" labor income, less personal contributions under the OASI program.

2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employee contributions for social insurance), other labor income, interest, and transfer payments.

3. Equals total personal income less farm income and government income disbursements.

4. Consists of wage and salary disbursements, other labor income, and proprietors' income.

Source: U.S. Department of Commerce, Office of Business Economics.

change seems clear and noteworthy. Outstanding rates of economic growth over the past 5 years—represented by personal income increases of one-third or more—have characterized 10 States. The factors underlying this rapid growth are varied, ranging from automobiles in Michigan to agriculture in North Dakota. In eight of these States, the influence of such special factors was so pervasive that income

gains last year were of above-average proportions in all major industries.

Per Capita Income

Per capita income as seen from the map on page 8, varies widely by States. In seven—Alaska, Connecticut, New York, New Jersey, Delaware, Illinois, and Nevada—average incomes in 1965 amounted to \$3,240 or more. In

contrast, per capita incomes were less than \$2,000 in five States—Mississippi, Arkansas, South Carolina, Alabama, and Tennessee.

Most noticeable is the concentration of low income States in the Southeast. Of the 11 States with lowest per capita incomes, all but South Dakota are in the Southeast. Of the 12 Southeastern States, only Florida and Virginia, which rank 29th and 31st in the Nation, are

SURVEY OF CURRENT BUSINESS

appreciably above the lowest income group.

Although long-run changes do occur, marked year-to-year stability is an outstanding characteristic of State per capita incomes when they are expressed as a percent of the national average (per capita income relatives). Hence, the 1964-65 reduction of 2 percent in the coefficient of variation in State per capita income relatives represents a

significant narrowing of the spread in per capita incomes.

This reduction in inequality reflects in part the sharp rise of agricultural income in several parts of the Nation, but particularly in the Plains States. Because it was mainly a result of higher prices to farmers, the full effect of last year's very large increase in agricultural income was translated directly into higher per capita incomes.

Per capita income changes in other States also contributed to the reduction in income differences. In several Southeastern States, per capita incomes rose faster than in the Nation generally, mainly as a result of above-average increases in weekly earnings in manufacturing and substantial relative declines in insured unemployment. The below-average gains in per capita income in California and Nevada, re-

sulting from the combination of small increases in total income and large increases in population, also contributed to the decrease in average income inequality.

Revised Estimates

In 1965, the Office of Business Economics completed a comprehensive revision of the national income and product accounts of the United States. With this article, the relevant changes

are introduced into the annual State series on personal income. The revisions cover the span 1948-64; preliminary estimates for 1965 conform to the revised figures for earlier years. This report contains summary figures on total and per capita income. Subsequent articles will extend the estimates back to 1929 and present the usual detail on sources of income.

The revisions are of three general categories. The first two refer only to national totals; the third is con-

cerned with geographical series used to allocate national totals.

Revised national totals

Last year's revisions in the national accounts incorporated changes in definition, as well as additions to the source data by which the income flow is measured.

The reasons for the definitional changes in personal income were given in the August 1965 SURVEY and will not be repeated here. On balance, definitional changes reduced personal income by \$3.4 billion in 1964. Four changes account for most of the revision.

The largest definitional revision affecting total income—\$1.8 billion—stemmed from the shifting of earnings of certain financial intermediaries from imputed interest, which is included in personal income, to corporate profits, which are excluded. Prior to the 1965 revisions, property income received by stock life insurance companies and all mutual institutions—savings banks, savings and loan associations, credit unions, and insurance companies—was classified as imputed interest. In the revised estimates, the “net gain from operations” of life insurance companies and the “retained net operating earnings” of the other institutions are included in corporate profits and deducted from property income received when computing imputed interest.

The second largest revision due to a shift in definition reflected a change in the treatment of federally sponsored research and development in private nonprofit organizations. Formerly, such payments were handled as Federal transfers—a practice adopted when the amount involved was quite small. Now, these payments are considered Federal purchases of services from business, and transfer payments and personal income are reduced accordingly—\$1.4 billion in 1964.

The definitional revisions also reduced dividend payments to persons. A reduction of \$0.6 billion resulted from the exclusion of the capital gains of investment companies from the dividend component, while a further reduction of \$0.3 billion was occasioned by the transfer of the earnings of mutual companies from the personal to the corporate sector of the accounts.

Table 4.—Extent of Personal Income Revisions

The only major definitional change that revised personal income upward resulted from the capitalizing of real estate commissions; previously, these commissions were treated as current expense. The new treatment raised proprietors' incomes in 1964 by \$0.8 billion.

The second type of revision in the national totals relates to statistical revisions in the personal income aggregate. In 1964, these more than offset the definitional revisions—\$5.0 billion as compared to \$3.4 billion—leaving a net upward revision of \$1.6 billion in total personal income. Statistical updating centered mainly in two components. Rental income of persons was increased by nearly \$6 billion, with the major change due to new data with which to estimate imputed rents of owner-occupied nonfarm dwellings. Estimates of other labor income rose about \$2½ billion on the basis of additional information with which to measure employer contributions to employee group insurance. Other major statistical changes included downward revisions of \$1¼ billion in both proprietors' income and dividends.

New geographic distributions

The statistical revisions also involved the use of new source material affecting the geographic distribution of income components.

For several industries not covered by State unemployment insurance programs, data from the 1960 Decennial Census were used to construct a wage and salary benchmark for 1959—the first since 1949. Industries for which new benchmarks were made are railroads, nonprofit organizations, private households, educational services, and agricultural services, forestry, and fisheries.

The 1960 Decennial Census of Population gave information on commuting by workers between State of residence and State of work. This made possible a significant improvement in the adjustment by which wages and salaries are shifted from a State-of-work to a State-of-residence basis. Not only were the adjustments improved in 10 States, but adjustments were made in 23 additional States for the first time.

Finally, a more accurate measure was made of nonfarm proprietors' incomes.

Previously, the only direct data for this type of income consisted of a special study for 1951–52 furnished by the Bureau of Old-Age and Survivors Insurance. The 1951–52 estimates had been moved forward by indirectly related indexes. For 1962–63, the Internal Revenue Service provided State tabulations of nonfarm proprietors' incomes as reported on Federal income tax returns. These data provide a second and more recent benchmark for measuring proprietors' incomes.

Effect of revisions

The impact of the revisions may be gauged in two ways: their effect on the relative level of income at a point in time and their effect in altering previously calculated trends in income.

As seen from table 4, both effects were moderate. In most States, income in 1964, as measured in the revised series, came within 2 percent of the share as measured before revision. The revision was substantial in only three States. In Kansas and Delaware, the introduction of an adjustment for persons commuting to work was the major factor. In Hawaii, the earlier estimates had developed a small but cumulatively significant downward bias over the past decade.

Since population was not involved in the revisions, changes in the share of total income and in the relative level of per capita income were proportionately the same. It may be noted, however, that the revisions reduced the average deviation of State per capita income from the national average by 4 percent.

Table 4 shows that in the relative trend of income from 1948 to 1964, the differences between the revised and unrevised series are quite small.

First Quarter 1966, GNP

(Continued from page 4)

crease in employment. Hourly earnings increased moderately, and the workweek continued to lengthen in manufacturing while remaining about the same in the rest of industry. The \$7 billion or 2½ percent increase in private payrolls was the largest reported for any quarter of the current business expansion. Personal interest income rose at a somewhat faster pace than during 1965 as interest rates increased.

Farm proprietors' income moved up for the third straight quarter, mainly because of the continued rise in farm prices.

Comparison with Korean buildup

The accompanying table compares the rise in total output and prices over the first three quarters of the Korean war—the last two quarters of 1950 and the first of 1951—with the rise that has occurred over the past three quarters since the expansion of the war in Vietnam.

It is apparent that the Vietnam war has so far had much less of an impact on defense spending than the Korean war had over a similar time period. The more limited scale of combat action in Vietnam is partly responsible for this difference. In addition, the war in Vietnam followed a long period in which a strong defense establishment was maintained, while the Korean war spurred an extensive defense buildup.

The rate of increase in the overall level of prices since the spring of 1965 has been only about one-fourth as large as that recorded during the early stages of the Korean war. Among the many factors contributing to this difference in price behavior have been the substantial growth in the capacity of the American economy since the early post-war period, the absence of large-scale anticipatory buying by consumers and business in the current period, and the more modest scale of the defense expansion this time.

^p Preliminary.

This issue of the SURVEY presents for the first time interindustry sales and purchases data for the detailed components of three industries included in the 1958 input-output tables published in the SURVEY for September 1965. These new data are statistically and conceptually consistent with those shown in the input-output transactions table (table 1) in the September publication.

The three industries and the categories into which they have been divided are shown in the accompanying table.

Table 1A shows for each subindustry its purchases from every other industry and subindustry, and also its value-added. Table 1B shows the distribution of the output of each subindustry to each of the industries and subindustries of the economy and to final markets.

¹ Less than \$500,000.² Not applicable.

NOTE.—Detail may not add to total because of rounding.

1. For this table, industry 80 is split into two rows. Row 80A shows the direct allocation to consuming industry of imported goods and services which are not substitutable for domestically produced goods and services. Row 80B classifies transferred imports according to the industry producing the domestic goods and services for which these imports are substitutes.

2. The volume of secondary product transfers is related to the level of industrial detail.

Transfers between subindustries net out on an industry level since they are the primary products of the industry as a whole. As a result, the grand total of transfers summing across all subindustries exceeds total transfers on an industry basis. The output totals and the intra-industry flows will be affected to the same extent. Transfers among food subindustries amounted to \$929 million and to \$679 million among nonferrous metals manufacturing. There were no transfers among subindustries in the utilities.

3. Entries represent the sum of the value of transferred imports at domestic port value and the secondary output of other industries which has been transferred to the primary producing industry.

Table 1B.—Interindustry Transactions,
[In millions of dollars]

For the distribution of the output of an industry, read the row for that industry.

*Less than \$500,000.

z Not applicable

NOTE.—Detail may not add to total because of rounding.

1. Entries include secondary output of subindustries which has been

1958—Distribution of Output

transferred to the primary producing industry. Intraindustry transfers are affected by disaggregation, as explained in footnote 2 of table 1A.

MANUFACTURING AND TRADE TOTAL AND RETAIL SALES

Table A.—Manufacturing and Trade Total and Retail Sales—Seasonally Adjusted

[Millions of dollars]

| | Manufacturing and trade | Retail trade, total | Durable goods stores, total | Automotive group | | | Furniture and appliance group | Lumber, building materials, hardware group | | | Non- durable goods stores, total | Apparel group | | | | Food group | |
|-------------|-------------------------------|---------------------------|--------------------------------------|------------------|---|---|--|---|---|--------------------|--|---------------|---|--|----------------|------------|-------------------|

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1965 edition of **BUSINESS STATISTICS**, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.00) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1961 through 1964 (1954-64 for major quarterly series), annually, 1939-64; for selected series, monthly or quarterly, 1947-64 (where available). Series added or significantly revised after the 1965 **BUSINESS STATISTICS** went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1964 issued too late for inclusion in the 1965 volume appear in the monthly SURVEY beginning with the September 1965 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

Statistics originating in Government agencies are not copyrighted and may be reprinted freely. Data from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

¹ Revised. ² Advance estimate. ³ Data for total and components (incl. market categories) are based on new orders not seasonally adjusted.

⁹ Includes data for items not shown separately. ⁺ Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; un-

filled orders for other nondurable goods industries are zero.

⁴ For these industries (food and kindred products, tobacco products, apparel and related products, petroleum and coal products, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

^a Revised ^b Preliminary ^c Number of carriers filing complete reports for 1964

¹ Revised. ² Preliminary. ³ Number of cases.
² Reflects New York City 13-day transit strike.

² Includes New York City 13-day train.

* Unfilled data not shown separately.

[§]Excludes "special category" shipments and all commodities exported under foreign-aid programs as Department of Defense controlled cargo.

Unless otherwise stated, statistics through 1964
and descriptive notes are shown in the 1965
edition of BUSINESS STATISTICS

¹ Revised. ² Preliminary. ³ Beginning Jan. 1966, monthly data are 4-week averages for period ending Saturday nearest the end of the month. Annual data for new orders are 52-week averages; those for unfilled orders are as of Dec. 31. ⁴ Annual total includes re-

visions not distributed to the months. ⁵ See note "O" for p. S-21. ⁶ As reported by publishers accounting for about 75 percent of total newsprint consumption. ⁷ Corrected.

BUSINESS STATISTICS 1965 Biennial Edition

THE FIFTEENTH VOLUME in a series of statistical supplements to the monthly SURVEY OF CURRENT BUSINESS, the new edition provides, for the past quarter century, historical data for more than 2,500 series.

For most series, annual data are presented back to 1939. Quarterly statistics back to 1954 are shown for those series ordinarily published on a quarterly basis, and monthly data back to 1961 are given for monthly series. A feature new to this volume is an appendix providing monthly or quarterly data back to 1947 for 350 of the more important economic series. Color keyed explanatory notes to the time series define terms, give sources of data, and describe the methods of compilation used.

Price, \$2.00 Orders may be placed with the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402, or with any Field Office of the

U.S. DEPARTMENT OF COMMERCE
