the BUSINESS SITUATION

REVISED estimates show that real GNP increased at an annual rate of 4½ percent in the first quarter of 1987; the preliminary estimates had shown about the same rate of increase (table 1).¹ Several components of real GNP registered offsetting revisions, although the broad picture of the economy, as sketched in last month's "Business Situation," changed little. The largest upward revisions were in inventory investment (\$4 billion) and in nonresidential fixed investment (\$4 billion). The largest downward revisions were in personal consumption expenditures (\$4 billion) and in net exports (\$3 billion). In net exports, an upward revision in imports overshadowed an upward revision in exports. The increase in the GNP price index (fixed weights) was revised up, to 4 percent, from the 3½-percent preliminary estimate. The upward revision largely reflected newly available data on export and import prices.

The revision in inventories largely reflected newly available March data for manufacturing and trade. The revision in nonresidential fixed investment largely reflected revised Census construction put-in-place data for January and February. The bulk of the downward revision in personal consumption expenditures, which was spread across major subcomponents, reflected revised retail sales data for February and March. The downward revision in net exports reflected newly available March data on merchandise exports and imports.

Corporate Profits

Profits from current production—profits before tax with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj)—increased \$22½ billion in the first quarter of 1987, following a \$9 billion increase in the fourth quarter of 1986. Domestic profits of nonfinancial corporations accounted for all of the first-quarter increase after accounting for less than one-half of the fourth-quarter increase. Small changes in domestic profits of financial corporations and in profits from the rest of the world were offsetting.

Profits before tax (PBT) increased \$7 billion in the first quarter, following an increase of \$19 billion in the fourth. The much larger increase in profits from current production than in PBT is due to the CCAdj, which increased \$15½ billion. The CCAdj, like the IVA (which changed little in the

first quarter), is reflected in the current production measure but not in PBT.

The CCAdj is the difference between depreciation based largely on tax accounting, on the one hand, and economic depreciation as defined by BEA, on the other. The Tax Reform Act of 1986 (TRA) permitted more accelerated depreciation for tax purposes. An increase in tax-based depreciation, which was not matched by a similar increase in economic depreciation, produced the very large increase in CCAdj in the first quarter.

Profits after tax (PAT) declined \$8 billion in the first quarter. The difference between the \$8 billion decline in PAT and the \$7 billion increase in PBT reflected a \$15 billion increase in corporate profits tax liabilities. The increase in tax liabilities occurred despite a substantial reduction in statutory tax rates under the TRA; the effect of the reduction in statutory

Looking Ahead . . .

- **U.S. Multinational Companies: Operations in 1985.** Data and analysis of the operations in 1985 of U.S. parent companies and their foreign affiliates, by industry and by country of foreign affiliate, will be presented in the June SURVEY. Selected data will be available as of June 22.

- **U.S. International Transactions and Investment Position.** Revised estimates of U.S. international transactions will be presented in the June SURVEY, along with preliminary estimates of the first quarter of 1987. The revisions cover 1982–86. For the first time, the international services accounts will include estimates of expenditures by foreign medical patients in the United States and of commissions on U.S. and foreign securities transactions. The same issue will present preliminary estimates for yearend 1986 of U.S. assets abroad and foreign assets in the United States and the sources of change in the investment position.

- **Annual Revisions in the National Income and Product Accounts.** Revised estimates will be presented in the July SURVEY. The revisions cover the period beginning with the first quarter of 1984 and incorporate new source data and seasonal factors.

- **State Quarterly Personal Income.** Revised estimates for 1969–79, prepared as part of a comprehensive revision of the regional estimates, will be presented in the July SURVEY. Estimates for 1980–85 appeared in the October 1986 SURVEY.

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes in them are differences between these rates. Quarter-to-quarter percent changes are compounded to annual rates. Real, or constant-dollar, estimates are expressed in 1982 dollars.

rates was more than offset by the effect of increases in the tax base. (The interplay of TRA provisions and profits measures will be discussed in next month's "Business Situation.")

Government Sector

The fiscal position of the government sector in the NIPA's improved in the first quarter of 1987, as the combined deficit of the Federal Government and of State and local governments decreased \$6½ billion (table 2). The deficit of the Federal Government declined \$14½ billion, and the surplus of State and local governments declined \$8 billion.

The Federal sector.—The Federal Government deficit declined to \$174½ billion, as receipts increased more than expenditures.

Receipts increased \$19½ billion, compared with \$21½ billion in the fourth quarter. The first-quarter increase was the result of \$7½ billion due to law changes, largely the Tax

Reform Act of 1986 (TRA), and \$11½ billion due to larger tax bases. Two-thirds of the total increase was accounted for by corporate profits tax accruals. The \$13 billion increase in corporate taxes was more than accounted for by an \$18 billion increase due to various provisions of TRA. (For a discussion of the major provisions of TRA, see the March 1987 SURVEY OF CURRENT BUSINESS.)

Most of the remainder of the total increase was accounted for by contributions for social insurance. The increase in contributions included \$2 billion for an increase in the social security tax base—to \$43,800 from \$42,000—and \$1 billion for an increase in the medicare supplementary medical insurance premium—to \$17.90 from \$15.50 per month.

A \$1 billion decline in personal tax and nontax payments was the net result of a \$14 billion decline due to TRA and a \$13 billion increase due to higher incomes. (The revised estimate of first-quarter personal taxes is \$9.9

billion larger than the preliminary estimate issued in April. The revision was largely in nonwithheld income taxes—declarations (estimated tax payments) and net settlements (final tax payments less refunds on the preceding year's taxes)—and resulted from the incorporation of additional collections data from the Treasury Department.)

Expenditures increased \$5 billion, compared to \$13 billion in the fourth quarter. The first-quarter increase reflected several large, partly offsetting changes in the components. One of the large increases was in national defense purchases of goods and services, which had declined in the fourth quarter. The increase was concentrated in purchases of services, which were up \$6 billion and included \$2 billion for a 3-percent military and civilian pay raise, effective January 1, 1987. Subsidies less the current surplus of government enterprises also recorded a large increase, the net result of a \$13 billion increase in subsidies to farmers and a \$5 billion decrease in the deficit of the Commodity Credit Corporation (CCC). Transfer payments to persons increased \$4½ billion, including \$3½ billion for a 1.3 percent cost-of-living adjustment for a number of programs; the largest—\$2½ billion—was for social security benefits.

Of the declines, the largest was in nondefense purchases of goods and services. The \$12 billion decline was accounted for by purchases of agricultural commodities by the CCC. The nondefense pay raise—\$1 billion—was offset by declines in other purchases. Transfer payments to foreigners declined \$4 billion; the decline was in both economic and military aid. Grants-in-aid to State and local governments declined \$1½ billion from a fourth-quarter level that had included a one-time payment (\$2½ billion at an annual rate) to Louisiana in settlement of disputed outer continental shelf oil revenues. All other grants, on balance, increased \$1 billion; the largest increase was for highways (\$1½ billion), and the largest decreases were for education and for food and nutrition (\$½ billion each).

Table 1.—Revisions in Selected Component Series of the NIPA's, First Quarter of 1987

	Seasonally adjusted at annual rates			Percent change from preceding quarter at annual rates

1. Not at annual rates.

Notes.—For the first quarter of 1987, the following revised or additional major source data were incorporated: For *personal consumption expenditures*, revised retail sales for February and March; for *nonresidential fixed investment*, manufacturers' shipments of equipment for February (revised) and March, construction put in place for January and February (revised) and March, and partial information on actual plant and equipment expenditures for the quarter; for *residential investment*, construction put in place for February (revised) and March; for *change in business inventories*, book values for manufacturing and trade for February (revised) and March; for *net exports of goods and services*, merchandise exports and merchandise imports for March; for *government purchases of goods and services*, Federal unified budget outlays for March, and State and local construction put in place for February (revised) and March; for *wages and salaries*, revised employment, average hourly earnings, and average weekly hours for February and March; for *corporate profits*, domestic book profits for the quarter; for *GNP prices*, the Consumer Price Index for March, merchandise export and import price indexes for March (these indexes are prepared only for the last month of each quarter), unit-value indexes for petroleum imports for March and for merchandise exports and nonpetroleum merchandise imports for January and February, and residential housing prices for the quarter.

Cyclically adjusted surplus or deficit.—When measured using cyclical adjustments based on middle-expansion trend GNP, the Federal deficit on the national income and product

account basis declined from \$196.6 in the fourth quarter to \$189.3 in the first. The cyclically adjusted deficit as a percentage of middle-expansion trend GNP decreased from 4.6 percent in the fourth to 4.4 percent in the first.

State and local sector.—State and local government surplus declined \$8 billion in the first quarter to \$51½ billion, as expenditures increased more than receipts. The decline in the surplus was concentrated in other funds, which swung from a small surplus in the fourth quarter to a \$5½ billion deficit in the first; the social insurance funds surplus declined \$1 billion to \$57 billion.

Receipts increased \$3½ billion, compared with \$5½ billion in the fourth quarter. Indirect business tax and nontax accruals—including \$1½ billion for sales tax increases in Nebraska, Texas, and Virginia—and corporate profits tax accruals increased. Partly offsetting these increases were declines in Federal grants-in-aid, contributions for social insurance, and personal tax and nontax receipts. The decline in contributions was from a fourth-quarter level that included a one-time employer contribution (\$1.8 billion at an annual rate) to the Los Angeles County retirement system. The decline in personal taxes was due to the indirect effects of TRA on State and local income taxes.

Expenditures increased \$11½ billion, compared with \$10½ billion in the fourth quarter. Most of the increase was in purchases of goods and services, which increased at about the same pace as in the fourth quarter. Excluding the Los Angeles County retirement contribution, which was in-

cluded in compensation in the fourth quarter, purchases increased \$11 billion, compared with \$6½ billion in the fourth quarter. That step-up was

largely due to purchases of structures; construction of highways had declined in the fourth quarter but resumed an upward trend in the first.

Table 2.—Government Sector Receipts and Expenditures

[Billions of dollars, seasonally adjusted at annual rates]

NOTE.—Dollar levels are found in the National Income and Product Accounts Tables, tables 3.2 and 3.3.

National Income and Product Accounts Tables

New estimates in this issue: First quarter 1987, revised (").

Estimates for 1929-82 are in *The National Income and Product Accounts, 1929-82: Statistical Tables* (GPO Stock No. 003-010-00174-7, price \$23.00). Estimates for 1983-85 are in the July 1986 SURVEY. These publications are available from the Superintendent of Documents and Commerce Department District Offices; see addresses inside front cover.

The full set of national income and product accounts estimates shown regularly in this part of the SURVEY are now available on diskette for \$240 per year (12 updates). For more information, write to the Bureau of Economic Analysis (BE-54), U.S. Department of Commerce, Washington, DC 20230.

1. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (first-in, first-out; last-in, first-out; etc.) underlying book value inventories derived primarily from Census Bureau statistics. This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics. Prior to 1973, the two IVA's are the same because information required for separate estimates is not available.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GNP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates.

2. Quarterly totals at monthly rates. Business final sales equals final sales less gross product of households and institutions, government, and rest of the world, and includes a small amount of final sales by farms.

Note.—The fixed-weighted price index and the chain price index, both of which are weighted averages of the detailed prices used in the deflation of GNP, are measures of price change. In calculating changes in these indexes, the composition of GNP is held constant. Consequently these changes reflect only changes in prices. The fixed-weighted price index measures price change over any period, using as weights the composition of GNP in 1982. The chain price index measures price change over two consecutive periods, using as weights the composition of

GNP in the first period. The implicit price deflator is a byproduct of the deflation of GNP. It is derived as the ratio of current- to constant-dollar GNP (multiplied by 100). It is the average of the detailed prices used in the deflation of GNP, but the prices are weighted by the composition of GNP in each period. Consequently, the implicit price deflator reflects not only changes in prices but also changes in the composition of GNP, and its use as a measure of price change should be avoided.

Reconciliation and Other Special Tables

Relationship Between Personal Income and Adjusted Gross Income, 1983-85

THE reconciliation of the Bureau of Economic Analysis (BEA) measure of personal income with the Internal Revenue Service (IRS) measure of adjusted gross income (AGI) by type of income for 1983 is revised and extended to 1984-85 in this article.¹ The reconciliation incorporates personal income estimates for 1983-85 published in the July 1986 national

income and product accounts revision, final estimates of AGI for 1983-84, and a preliminary estimate of AGI for 1985. The personal income estimates for 1984 and 1985 will be subject to further revisions.

The reconciliation items (lines 3-9 and 11-15) in tables 1-3 allow the construction from personal income (line 1) of a BEA-derived AGI (line 22) that conforms to the IRS definition of AGI (line 23). The difference between the BEA-derived AGI and the IRS measure of AGI is called the AGI gap (line 29). The AGI gap can be viewed

as evidence of noncompliance with the tax code, but with the following caveats: The AGI gap includes income earned by low-income individuals who are not required to file income tax returns, unreported income identified by IRS audit programs that is included in personal income, gross errors and omissions in the estimate of reconciliation items, and the net effect of errors in personal income and AGI of IRS.²

2. For a discussion of why the AGI gap is not a measure of the size of the underground economy, see Carol S. Carson, "The Underground Economy: An Introduction," SURVEY 64 (July 1984): 107.

See footnotes at the end of table 3.

For 1984 and 1985 a new type of income is shown. The addition results from provisions of the 1983 Social Security Amendments and Railroad Retirement Solvency Act, which—beginning in tax year 1984—made portions of old-age, survivors, and disability insurance (OASDI) benefits and railroad retirement benefits subject to income tax. In 1984 and 1985 personal income includes \$177.6 billion and \$188.0 billion of these benefits, respectively, of which BEA estimated that the taxable portion was \$26.8 billion and

\$27.9 billion. (These amounts are shown in tables 2 and 3 in line 1 of the newly added column called "taxable social security benefits.") In both of those years, however, taxpayers reported \$51.8 billion and \$65.6 billion, respectively, in total benefit payments on tax returns, of which \$7.9 billion and \$9.7 billion were included in AGI. Consequently, the AGI gap for taxable social security and railroad retirement benefits as a percentage of the corresponding BEA-derived benefits is large—70.6 percent and 65.1

percent for 1984 and 1985, respectively. A recent IRS study indicates that the gap is mostly accounted for by nonreporting of benefits by recipients who are not required to file a tax return.³ In addition, it is likely that many recipients did not report the benefits because they were unaware of the law change.

^{*} Less than \$0.05 billion.^{**} Division by a negative number.

1. With inventory valuation and capital consumption adjustments.

2. With capital consumption adjustment.

3. Taxable social security benefits for 1984 and 1985 also include a small amount of taxable railroad retirement benefits.

4. Consists of taxable portion of government transfer payments to persons included in personal income—nondisability military retirement pay and Federal civilian and State and local government employee retirement benefits in excess of employee contributions.

5. Consists of other labor income, nontaxable portion of government transfer payments to persons, business transfer payments, less personal contributions for social insurance.

6. Statutory adjustments.

7. Consists of partnership income retained by fiduciaries.

8. Taxable private pensions represent the portion of nongovernment pension benefits received by individuals from annuity and pension plans in excess of the "investment in contract."

9. Consists of partnership and estate or trust net incomes.

Pollution Abatement and Control Expenditures, 1982-85

REAL expenditures for pollution abatement and control (PAC) increased 4.0 percent in 1985, about one-half the 1984 rate of increase and the same as the 1983 rate. PAC expenditures had declined in the preceding 3 years.

These expenditures are for goods and services that U.S. residents use to produce cleaner air and water and to dispose of solid waste; they consist of expenditures for pollution abatement, regulation and monitoring, and research and development.¹ Pollution abatement (PA) directly reduces pollutant emissions by preventing the generation of pollutants, recycling them, or treating them prior to discharge. Regulation and monitoring is a government activity that stimulates and guides action to reduce pollutant emissions. Research and development not only supports abatement, but also helps increase the efficiency of regulation and monitoring. PA expenditures—which account for over nine-tenths of PAC expenditures—increased 4.4 percent in 1985. Spending for regulation and monitoring declined 7.9 percent, and spending for research and development declined 1.1 percent.

The first section of this article discusses real PAC spending in 1985,

price change for PAC goods and services in 1985, and likely 1986 real spending. The next section describes patterns of real PAC spending in 1983-85. The final section provides an overview of trends in real PAC spending in 1972-85.

Tables 1-5 summarize the major features of the PAC estimates. Table 1 provides an overview of 1985 real spending. Tables 2 and 3 highlight changes in spending and prices by type of PAC and changes in spending by sector, respectively. Table 4 provides more information by type of PAC; it organizes estimates according to definitions from PAC legislation. Table 5, organized in the same way, shows average annual growth rates in real PAC spending for 1972-85 and subperiods. The underlying detailed PAC estimates, prepared in a framework consistent with the national economic accounts, are in tables 6 and 7 for 1982-85. In table 6, the functions of purchases (PA, regulation and monitoring, and research and development), the purchasing sectors (persons, business, and government), and accounting distinctions (capital account, current account) are in the rows, and types of PAC (air, water, solid waste, and other) are the columns. In table 7, additional detail for business and government purchases is given for air and water pollution abatement. (Estimates for years prior

1. PAC spending covers most, but not all, PAC activities, which are defined as those resulting from rules and regulations restricting the release of pollutants into common-property media such as the air and water; PAC spending excludes (1) PAC activities that do not use productive resources (e.g., plant closings due to PAC, delays in plant construction, or curtailments in the use of chemicals in manufacturing and agriculture) and (2) PAC activities that, although resource-using, are nonmarket activities (e.g., volunteer litter removal).

Estimates of PAC spending are based directly or indirectly on surveys. About three-fifths of the total estimate is based directly on surveys of PAC spending. The remainder is based on more general survey information and assumptions necessary to utilize this information. For further information, see "Pollution Abatement and Control Expenditures, Revised Estimates for 1972-83 and Estimates for 1984," SURVEY OF CURRENT BUSINESS 66 (July 1986).

NOTE.—Gary L. Rutledge, Chief of the Environmental Economics Division, supervised the preparation of the estimates. Kit D. Farber planned and coordinated the compilation and analysis of estimates. Preparation of estimates involved the entire staff: Personal consumption—Frederick G. Kappler; business—Frederick J. Dreiling, Kit D. Farber, Frederick G. Kappler, Richard R. Speigel, Nikolaos A. Stergioulas, and Howard J. White; and government—Frederick J. Dreiling, Kit D. Farber, Richard R. Speigel, and Howard J. White. Brenda G. Davis and Shirley D. Tisdale provided secretarial and statistical assistant services, respectively.

to 1982 are in the July 1986 SURVEY article on PAC spending.)

Recent estimates

Real PAC spending in 1985.—Total PAC spending in 1985 increased \$2.6 billion to \$67.3 billion in 1982 dollars (table 1). PA spending increased \$2.7 billion to \$64.0 billion; the rest of PAC—regulation, monitoring, research, and development—declined \$0.1 billion to \$3.3 billion.

Business, government, and persons all contributed to the 1985 increase in PA spending. Business PA spending increased \$1.3 billion (3.4 percent) to \$40.8 billion. Capital spending increased \$0.4 billion to \$14.9 billion, mainly reflecting spending on motor vehicle emission abatement devices as unit sales of vehicles increased. Spending on current account, i.e., to

operate and maintain capital (and reported net of the value of reclaimed materials from pollution abatement, referred to as costs recovered), increased \$1.0 billion to \$25.9 billion. About \$0.3 billion of the increase was due to a reduction in the amount of costs recovered, mainly in manufacturing operations. Spending to operate public sewer systems, classified as a business activity in the national economic accounts, also increased substantially. Spending to operate plant and equipment increased \$0.2 billion.

Government PA spending increased \$0.6 billion (5.3 percent) to \$11.9 billion. One-half of the increase was by State and local governments for the construction of public sewer systems, classified as a government activity in the national economic accounts. In addition, State and local government spending for solid waste collection and disposal increased \$0.2 billion. Federal PA spending increased slightly.

Personal consumption spending for PA, all of which is for the purchase and operation of motor vehicle emission abatement devices, increased \$0.8 billion (7.3 percent) to \$11.4 billion in 1985. Purchases of these devices increased \$0.6 billion; operating costs increased \$0.2 billion, mainly for the additional cost of unleaded gasoline (gallons multiplied by the cost difference between unleaded and leaded gasoline).

Spending for PAC regulation and monitoring continued a decline from 1980. A decline in Federal spending overshadowed a small increase in State and local government spending.

Spending for PAC research and development declined for the second consecutive year. Government spending for research and development declined in 1985; business spending increased slightly.

Of the major types of PAC spending, air PAC spending increased \$1.0 billion (3.3 percent) to \$31.3 billion, water PAC spending increased \$1.2 billion (4.8 percent) to \$25.1 billion, and solid waste collection and disposal spending increased \$0.3 billion (3.1 percent) to \$11.3 billion (table 2).

Prices in 1985.—Prices of PAC goods and services increased 3.1 percent in 1985 (table 2). PAC prices had increased 3.4 percent in 1984. Air PAC prices increased 2.1 percent in 1985, water PAC prices increased 3.5 percent, and solid waste collection

^p Preliminary.

NOTE.—Based on table 6.

and disposal prices increased 4.1 percent. The lower rate of price increase for air PAC than for the other PAC categories is mainly the result of declining energy prices (e.g., for unleaded gasoline) in 1985. Energy purchases, about one-third of total air PAC purchases, are a very small portion of purchases for the other categories.

Real PAC spending in 1986.—The limited data available as of mid-May indicate an increase in real PAC spending in 1986 somewhat less than that in 1985. The increase was mainly for construction of public sewer systems and for business and govern-

ment solid waste collection and disposal. Total spending for motor vehicle emission abatement devices and their operation remained about the same as in 1985. Business PA capital spending probably fell slightly, as indicated by plans reported by business in the 1986 BEA survey of business PA capital spending.

Patterns in real PAC spending, 1983-85

As noted earlier, total PAC spending increased in each of the last 3 years—the 4.0-percent increase in 1985 followed a 7.8-percent increase in 1984 and a 4.0-percent increase in 1983. In 1983, when economic activity was reviving, the increase in total PAC spending was largely traceable to the complementary relationship between pollution abatement and conventional production. In 1984, the increase was not only due to the continued upswing in economic activity but also a surge in environmental regulatory activity. Increased concern about environmental issues, which stimulates environmental regulatory activity and PAC spending, had emerged in 1983 but intensified during the 1984 election year, as evidenced by the passage of the first major environmental legislation in 4 years—the 1984 Resource Conservation and Recovery Act Amendments. In 1984, increases in PAC spending were spread widely across all major sectors and all types of PAC. In 1985, increases in PAC spending continued to be widespread,

^p Preliminary.

^{*} Less than 0.1 percent.

1. Spending to operate public sewer systems is classified in the national income and product accounts as business spending. Construction of public sewer systems is classified in the national income and product accounts as government spending.

2. For this table, private purchases for research and development are included with business pollution abatement spending on current account.

3. For this table, spending for government regulation and monitoring and for research and development are included with government pollution abatement spending.

NOTE.—Based on table 6.

but they moderated along with economic activity and environmental regulatory activity.

Real spending by sector.—Spending by business for PAC, which accounts for almost two-thirds of total PAC spending, showed a pattern similar to that of total spending, although in 1985, as in 1984 and 1983, the rate of increase was slightly lower than that in the total (table 3). The 3.3-percent increase in business spending in 1985 followed increases of 7.6 percent in 1984 and 3.7 percent in 1983. Spending to operate industrial plant and equipment and public sewer systems, about one-half of total business spending, accounted for much of the increase in business spending in recent years. Such spending increased 2.1 percent in 1985, 6.6 percent in 1984, and 6.4 percent in 1983. Spending to purchase industrial plant and equipment, about one-third of total business spending, was more volatile; it

SURVEY OF CURRENT BUSINESS

increased only slightly in 1985, following a moderate increase in 1984 and a sharp decline in 1983.

The 3.3-percent increase in government spending for PAC in 1985 followed a 7.5-percent increase in 1984 and a 3.6-percent decline in 1983. Spending for construction of public sewer systems, the largest single component of government PAC spending, accounted for about one-half of the increase in 1985, about three-fourths of the increase in 1984, and almost all of the decline in 1983.

The rates of increase in personal consumption spending were higher than those in the total each year. The 7.3-percent increase in spending in 1985 followed increases of 9.0 percent in 1984 and 17.0 percent in 1983. Spending for purchases of motor vehicle emission abatement devices, about two-thirds of total personal spending, accounted for most of the increase in personal spending in recent years.

Real spending by type.—Table 4 organizes estimates of PAC spending according to definitions emphasized in PAC legislation. For air PA, the Clean Air Act classifies sources of pollutants as mobile (e.g., cars) or stationary (e.g., factories). For water PA, the Federal Water Pollution Control Act classifies sources as point (e.g., factories) or nonpoint (e.g., highway construction projects).

Spending for air PA, which accounts for over two-fifths of total PAC spending, showed a pattern generally similar to that of total spending, although the rate of increase was lower in 1985 and higher in earlier years than for the total. The 3.3-percent increase in air PA spending in 1985 followed increases of 8.4 percent in 1984 and 5.6 percent in 1983. Spending for mobile sources, which in recent years increased to about three-fifths of total air PA spending, accounted for all of the increase in 1985 and 1983 and most of the increase in 1984. Such spending increased 6.5 percent in 1985, 12.6 percent in 1984, and 15.7 percent in 1983. Spending for stationary sources declined 1.9 percent in 1985, increased 2.3 percent in 1984, and declined 6.2 percent in 1983. This pattern is traceable to changes in spending for purchases of industrial facilities; spending for operation of industrial facilities increased each year.

The 5.0-percent increase in water PA spending in 1985 followed increases of 8.0 percent in 1984 and 1.6 percent in 1983, reflecting increases for point sources, almost all of total water PA spending. Increases in spending for operation of facilities accounted for part of the increase in 1985 and 1984 and all of the increase in 1983. Such spending increased 6.0 percent in 1985, 4.7 percent in 1984, and 10.5 percent in 1983. Spending for facilities, dominated by construction of public sewer systems, increased 4.3 percent in 1985 and 11.9 percent in 1984 after having declined 5.4 percent in 1983.

The 2.8-percent increase in spending for solid waste disposal followed increases of 10.5 percent in 1984 and 1.5 percent in 1983. Industrial spending increased slightly in 1985 and 1983, but sharply in 1984, accounting for the fluctuation in the total. Other spending, almost all for the collection and disposal of solid waste by local governments, increased moderately each year.

^r Revised.

^p Preliminary.

1. The Clean Air Act classifies sources of pollutants as either mobile, such as passenger cars, or stationary, such as factories.

2. Excludes spending to reduce emissions from mobile sources other than cars and trucks.

3. Consists of new plant and equipment expenditures for pollution abatement according to results from the plant and equipment expenditures survey by BEA.

4. Consists of spending for fixed capital of government enterprises such as the Tennessee Valley Authority.

5. Consists of spending to operate government enterprises and all spending by government; separate data on spending to acquire and operate government pollution abatement facilities are not available.

6. The Federal Water Pollution Control Act defines point sources as facilities that discharge to a body of water through a pipe or ditch.

7. Consists of spending for private connectors to public sewer systems, capital spending by owners of feedlots, and spending for fixed capital of government enterprises such as the Tennessee Valley Authority.

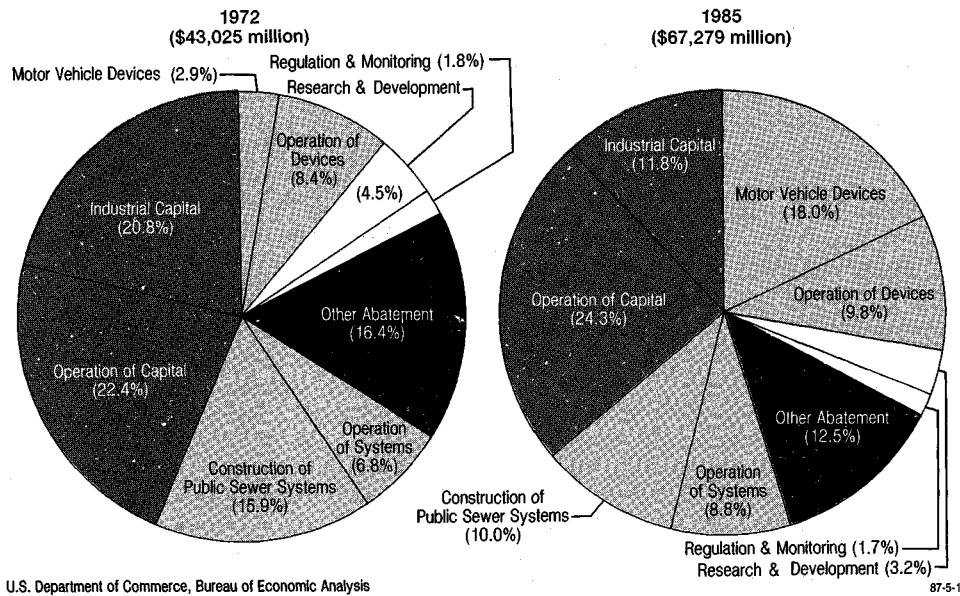

8. Consists of spending by Federal, State, and local governments for the collection and disposal of solid waste and of spending by households for collection and disposal of solid waste by business.

9. Consists of "other and unallocated" spending from table 6.

Distribution of Constant-Dollar Pollution Abatement and Control Spending by Major Component, 1972 and 1985

Trends in real PAC spending, 1972–85

PAC spending trended upward over the 1972–85 period for which data are available, at an average annual rate of 3.5 percent (table 5). After a downturn in 1979–82, PAC spending continued up at nearly the same rate as before. The increases in 1972–79 and, to a lesser extent, in 1982–85 were broadly based. The downturn in total spending in 1979–82 was mainly due to reduced funding for public sewer system construction, although several other categories contributed.

The 5.5-percent increase in air PA spending in 1972–85—the largest increase by type—was primarily due to large increases in each subperiod in spending for purchases of devices to abate air pollution from mobile sources. Operation of industrial facilities to abate air pollution from stationary sources increased overall, but declined in 1979–82. Purchases of such facilities declined overall, having increased only moderately in 1972–79.

The 1.7-percent increase in water PA spending in 1972–85 was attributable to the overall increase in operation of facilities to abate water pollution from point sources. Purchases of facilities declined overall; the moderate recovery in 1982–85 did not offset the large decline in 1979–82, when government spending for the construction of public sewer systems declined sharply (14.3 percent).

The 3.5-percent increase in spending for solid waste disposal in 1972–85 was primarily due to increases in industrial spending, which is mostly for operation of facilities. A decline in industrial spending in 1979–82 contributed to the decline in total PAC spending in that subperiod.

Less than one-tenth of total PAC has typically been spent on regulation, monitoring, research, and development. Regulation and monitoring increased 2.9 percent in 1972–85; it declined only in 1982–85. Research and development increased slightly in

1972–85; it contributed to the decline in total PAC spending in 1979–82.

Abstracting from the fluctuations in the subperiods, the distribution of PAC spending in 1985 summarizes the effect of trends in PAC spending (chart 1). The distribution in 1985 was very different from that in 1972. As a share of total PAC spending, spending for motor vehicle emission abatement devices rose from 2.9 percent in 1972 to 18.0 percent in 1985, reflecting the far higher than average rate of growth for the period. Industrial capital spending as a share fell from 20.8 percent in 1972 to 11.8 percent in 1985, reflecting an overall negative growth rate. Public sewer construction spending also fell as a share, also reflecting a negative growth rate. Due to augmented stocks of facilities of all types—motor vehicles, industrial capital, and public sewer systems—spending for operation of facilities rose as a share from 37.6 percent in 1972 to 42.9 percent in 1985.

^r Revised.^p Preliminary.^{*} Less than \$500,000.

1. Consists of air and water pollution abatement expenditures only.

2. Line numbers correspond to those in table 6.

3. Consists of manufacturing, private and cooperatively owned electric utilities, and other non-manufacturing companies.

4. Consists of private septic systems and sewer connections linking household plumbing to street sewers.

5. Feedlot operations only, see footnote 1 to table 6.

6. Public sewer systems consists of treatment plants, collection sewers, interceptor sewers, pumping stations, and dry waste disposal plants.

U.S. Business Enterprises Acquired or Established by Foreign Direct Investors in 1986

OUTLAYS by foreign direct investors to acquire or establish U.S. business enterprises increased to a record \$31.5 billion (preliminary) in 1986, up sharply from \$23.1 billion in 1985 and continuing the increase that began in 1984 (table 1).¹ U.S. tax reform legislation, passed by Congress on September 27, 1986 and signed by the President on October 22, 1986, contributed to the surge of fourth-quarter investments; investors stepped up outlays to take advantage of existing tax provisions before yearend. Also, corporate restructuring in the United States, continued U.S. real economic growth, fears of U.S. protectionist measures, and dollar depreciation contributed to the 1986 increase in foreign direct investments.

NOTE.—James L. Bomkamp, Chief, Direct Investment in the United States Branch, International Investment Division, supervised the survey from which these data are drawn. Joseph F. Cherry III was project leader for editing and processing the forms. D. Richard Mauery designed the computer programs for data retrieval and analysis.

1. These data are from a BEA survey of new foreign direct investment in the United States that covers (1) existing U.S. business enterprises in which foreign investors acquired, directly or through their U.S. affiliates, at least a 10-percent ownership interest, and (2) new U.S. business enterprises established by foreign investors or their U.S. affiliates. Acquisitions of additional equity or voting interest in existing U.S. affiliates are not covered.

The data presented in the article are limited to acquired or established U.S. enterprises that had total assets of over \$1 million or that owned at least 200 acres of U.S. land. Although partial reports, primarily for identification purposes, were required to be filed for investments not meeting these criteria, the data from them are not included in the accompanying tables. For 1986, 463 partial reports were filed; total assets of the U.S. business enterprises that filed partial reports were \$75.2 million.

In addition to the data on new foreign direct investment presented here, BEA also publishes quarterly balance of payments flows and the annual direct investment position for both new and existing investments. The position estimates first appear in the June issue of the *SURVEY OF CURRENT BUSINESS*; more detailed estimates follow in the August issue. Estimates covering the range of operations of U.S. affiliates of foreign companies are available from BEA's annual sample survey of foreign direct investment in the United States; the latest estimates, covering 1985, appear in a related article in this issue of the *SURVEY*.

^r Revised.^p Preliminary.

The substantially higher outlays in 1984–86 are marked by a sharp increase in the number of large investments. Nearly all of the 1986 increase was accounted for by a record number of investments of \$1 billion or more each (table 2). The number of investments in 1986 was 659, compared to 753 in 1985. Total assets of the U.S. companies acquired or established were \$52.0 billion, compared to \$36.0 billion in 1985.

Because the data for 1986 will be revised to include late reports, the revised data may not show a decline from 1985 in the number of investments as large as indicated in these preliminary data or may show an increase. Revisions for investment outlays (the cost to investors of the ownership interests acquired or estab-

^r Revised.^p Preliminary.

lished) and total assets of the affiliates acquired or established, however, will not be as large because the late reports are expected to cover primarily investments that were less than \$10 million. For 1985, preliminary data were revised up 48 percent for the number of investments, 18 percent for outlays, and 30 percent for total assets. Revised data for 1986 and preliminary data for 1987 will be published at this time next year.

Total 1986 outlays were boosted substantially by a surge in outlays in the fourth quarter, as shown in the accompanying tabulation:

[Millions of dollars]

	1985	1986
Total	23,106	31,472
I.....	9,120	4,347
II.....	3,917	3,464
III.....	5,352	7,393
IV.....	4,717	16,269

Only summary data are published in this article. A set of 21 supplementary tables containing additional detail for 1985 and 1986 on the number of investments and investors, investment outlays, and selected operating data for the U.S. business enterprises acquired or established is available for \$5.00 from Economic and Statistical Analysis/BEA, U.S. Department of Commerce, Citizens and Southern National Bank, 222 Mitchell St., P.O. Box 100606, Atlanta, Georgia 30384. When ordering, refer to the "BE-13 Supplementary Tables for the May 1987 SURVEY article, Accession No. BEA IID 87-103" and make check payable to Economic and Statistical Analysis/BEA.

The Tax Reform Act of 1986 was a key factor in this fourth-quarter surge. Buyers and sellers accelerated investment transactions—i.e., shifted outlays from 1987 into the fourth quarter of 1986—in order to take advantage of certain tax provisions that were changed effective January 1, 1987, by the Tax Reform Act. Under the new law, capital gains income is taxed at the same rate as ordinary income rather than at 40 percent of the ordinary income tax rate as under the previous law. As a result, sellers of assets had the incentive of earning higher after-tax profits by completing their transactions in 1986. Purchasers had the incentive to complete transactions before the end of 1986 so that

acquired real assets would be subject to the more advantageous 1986 depreciation rules. The law also repealed certain rules applicable specifically to merger and acquisition activity. The most widely used of these was the "General Utilities rule," which permitted the exchange of assets in acquisitions without any tax consequences. The new law repeals that rule and requires that taxes be paid on the appreciated value of the assets exchanged.

Continued favorable economic conditions in the United States also contributed to the increase in 1986 outlays for new foreign investments. Moderate inflation, low interest rates relative to several other developed

countries, growth in production, and strong consumer demand all reinforced foreigners' incentive to invest here.

As in 1984 and 1985, corporate restructuring was a key factor contributing to the increase in outlays for new foreign investments. The willingness of U.S. companies to sell operations provided many candidates for acquisition by foreign investors. The restructuring occurred for several reasons. Takeover threats by foreign as well as domestic investors led many companies to restructure in order to enhance shareholder values and thwart the potential takeover. The recession of the early 1980's and increased competition from abroad also

contributed to the restructuring by inducing companies to streamline their operations. The recession helped to uncover inefficient lines of business and induced companies to reduce costs by consolidating operations and selling unprofitable units. Increased competition prompted a change in some companies' production strategy; many that previously sought to be as integrated as possible in the manufacturing process—from producing the raw materials to servicing the end product—narrowed their focus.

Several other factors may have contributed to the 1986 increase. First, the trade surpluses of several major developed countries provided those foreigners with the funds to invest in the United States. Second, fears of U.S. trade protectionism in the face of these surpluses may have encouraged foreign companies to produce in, rather than export to, the United States. Finally, dollar depreciation may have had a net positive effect on 1986 foreign investment by inducing firms to shift operations to the United States so that their expenses as well as their sales were denominated in dollars. Dollar depreciation lowers both the foreign currency cost of U.S. assets and the foreign currency value of income from investments in the United States. When the dollar first began to depreciate in 1985, some foreign businesses may have adjusted to the dollar's fall by lowering profit margins on exports to the United States, rather than raising prices, which could decrease their U.S. market share. As the dollar fell further, however, these businesses may have been induced to acquire U.S. assets and produce within the United States.

The next section of this article discusses investment transactions by industry and country; the last section presents selected data on the operations of the U.S. businesses acquired or established. Information from outside sources, mainly press reports, has been used to supplement BEA's survey data.

Investment Transactions

As in the past, most outlays in 1986 were for the acquisition of existing U.S. businesses rather than for the establishment of new ones. Foreign investors spent \$25.5 billion to acquire 338 existing U.S. businesses and \$6.0 billion to establish 321 new U.S. businesses (table 3). By type of investor, \$25.2 billion of total outlays were by

existing foreign-owned U.S. affiliates and \$6.3 billion were by foreign direct investors themselves.

As noted earlier, outlays were again dominated by large investments. The 46 investments of \$100 million or more accounted for 75 percent of total outlays, but only 8 percent of the number of investments. A record number of new investments of \$1 billion or more accounted for 34 percent of total outlays, but only 1 percent of the number of investments.

Industry

By industry of the U.S. business acquired or established, outlays in manufacturing, at \$13.7 billion, were largest (table 4). Within manufacturing, the largest investment outlays were in chemicals, at \$6.5 billion. Outlays in chemicals increased substantially in 1985 and 1986. Following the recession years of the early 1980's, a

number of U.S. chemical companies have sought to restructure by selling off unprofitable units or units unrelated to their main lines of business. The restructuring coincided with the strategies of several European chemical companies to increase their market share in the United States, obtain U.S. technological expertise, and fill gaps in their global marketing system. Most of the outlays in chemicals in 1985 and 1986 were accounted for by European investors.

A large share of total outlays in chemicals was accounted for by the acquisition of a Connecticut-based manufacturer of chemical, cosmetic, and health-care products by the U.S. affiliate of a large Netherlands manufacturer of consumer products and packaged goods. The foreign company's goal in the takeover was to gain a foothold in the U.S. market and increase its world market share in the

* Less than \$500,000.

skincare products industry. It plans to sell a significant part of the acquired chemical operations.

In another transaction, the U.S. affiliate of a French industrial gas producer acquired a Houston-based industrial gas producer, making the French-owned company one of the largest U.S. companies in that industry. The Federal Trade Commission had required both companies to divest themselves of several plants and other assets before it approved the acquisition on grounds that, without the divestitures, the acquisition could unduly reduce competition in the production and sale of certain industrial gas products.

The prescription drug unit of a large U.S. chemical company was acquired by a British pharmaceutical concern to boost its direct sales in the U.S. prescription drug market. The U.S. company sold this unit and others in order to concentrate on its hospital supply business.

Outlays were also large in machinery, at \$1.9 billion, and in "other manufacturing," at \$3.7 billion. The largest outlay in machinery involved the acquisition of a manufacturer of household appliances by the New York-based subsidiary of a large Swedish appliance manufacturer. The acquisition gave the Swedish company the opportunity to produce and market a full line of appliances in the U.S. market.

In "other manufacturing," outlays mostly reflected two large acquisitions, one in paper products and the other in scientific instruments. The paperboard packaging unit of a large U.S. oil company was acquired by a holding company jointly owned by a large Netherlands paper company and a U.S. limited partnership fund. The acquisition was made in anticipation of expected growth in the paperboard industry. The U.S. oil company that sold the unit planned to use the sale proceeds to reduce the heavy debt it incurred through an earlier acquisition of another oil company. In scientific instruments, a U.S. producer of temperature controls and industrial equipment was acquired by a British company that manufactures similar products. The acquisition complements and strengthens the foreign company's operations here and abroad.

Outlays in retail trade were \$5.1 billion, up from \$1.2 billion in 1985. In the single largest investment in

1986, the U.S. affiliate of a Canadian real estate development concern acquired a department and specialty store chain. The U.S. company was an attractive takeover target because of its extensive network of profitable retail businesses and real estate holdings. After an initial rejection of its tender offer by the U.S. company, the Canadian company purchased shares of the U.S. company on the open market in an attempt to obtain majority ownership. Ultimately, the U.S. company agreed to a merger for a share price greater than that in the original tender offer.

In real estate, outlays were \$4.0 billion, up from \$1.9 billion in 1985. Outlays in 1986 were mainly accounted for by Japanese investors. Details are given in the next section of this article.

Outlays in "other industries," at \$3.5 billion, were largely in services. One-third of the outlays in services were accounted for by British acquisitions of advertising firms. The world's largest advertising agency, in terms of annual billings, was formed by the acquisition of several large U.S. advertising firms by a London-based advertising firm. The combination re-

* Less than \$500,000.

1. OPEC is the Organization of Petroleum Exporting Countries. Its members are Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, Venezuela, and the United Arab Emirates.

2. European Communities (12) comprises European Communities (10), Portugal, and Spain.

Note.—Where more than one investor participated in a given investment, each investor and each investor's outlays are classified by the country of each individual ultimate beneficial owner.

flects the recent trend among advertising agencies to form international alliances in the face of increasing competition for multinational accounts. In another transaction, the parent company of a British advertising firm acquired two New York-based advertising firms, one of which will operate in New York, Los Angeles, and Atlanta and the other in Boston, Pittsburgh, and Chicago.

The largest single outlay in services was for the acquisition of a U.S. television network, which included several television stations and a film studio, acquired by a U.S. affiliate of an Australian concern. The acquisition followed several others in earlier years by the Australian company, which began in publishing but expanded to several other media.

Outlays in petroleum were \$0.8 billion, down substantially from 1984 and 1985. The largest acquisition in petroleum was of a 50-percent interest in the refining unit of a U.S. petroleum company by a state-owned crude oil producer in Venezuela. The Venezuelan firm's strategy in the acquisition was to gain access to U.S. customers. The transaction gave the Venezuelan company an integrated oil company—combining Venezuelan oil reserves with U.S. refining capabilities.

In finance and insurance, outlays were \$1.5 billion each and were substantially higher than in recent years. In finance, a large Japanese bank established a New York-based finance and leasing company. In insurance, a large British insurance company acquired a Michigan-based life insurance company through its U.S. subsidiary. The British firm was attracted by the U.S. firm's history of developing profitable products and its advanced computer technology.

In mining, outlays were \$0.3 billion, and in wholesale trade, \$0.8 billion. In both industries, outlays changed only slightly from 1985.

Country

Outlays are classified by country of ultimate beneficial owner (UBO) in table 5.² European UBO's accounted

for \$17.1 billion, or 54 percent, of total outlays. Outlays were 12 percent higher than in 1985, mainly because of sizable outlays attributable to UBO's in the Netherlands. A large share of the Netherlands outlays was accounted for by the previously mentioned acquisition of a Connecticut-based manufacturer of chemical products by the U.S. affiliate of a Netherlands manufacturer of consumer products. Several other sizable acquisitions by Netherlands UBO's may partly reflect the substantial appreciation of the guilder against the dollar in 1986.

British UBO's accounted for \$6.5 billion of outlays, the largest total for any single country. Almost one-half of these outlays were in manufacturing (tables 6A and 6B). The largest increase from 1985, however, occurred in services and was mostly for the acquisition of the U.S. advertising companies mentioned earlier.

Outside Europe, outlays for 1986, as well as the increase in outlays from 1985, were concentrated among UBO's in Canada, Japan, and Australia. For both Canada and Australia, a single UBO accounted for most of the outlays. For Japan, a number of UBO's had large outlays. Japanese real estate investments surged, accounting for 56 percent of the outlays by Japanese UBO's. A number of factors contributed to the surge. The sharp appreciation of the yen against the dollar lowered the purchase price to Japanese investors. The prospect of stabilized exchange rates late in 1986, as well as the U.S. tax law changes mentioned earlier, gave impetus to the large number of acquisitions made in November and December. Finally, the substantial increase in Japanese real estate prices in 1986 widened the gap between after-tax yields on U.S. and on Japanese real estate investments. The gap results from differences in the cost structures of investment in combination with differences in tax laws and land availability in the two countries. In Japan, most of the purchase price of real estate is represented by the land as opposed to the building. The opposite is true in the United States, where land is much more abundant. Because land is not depreciable for tax purposes in either country, an investment in the United States yields a larger depreciation expense than one in Japan. Also, depreciation schedules in the United States, although lengthened, are still more favorable to investors than those in Japan.

Most of the outlays in real estate by Japanese investors in 1986 were for office buildings in New York and California. A privately held real estate developer, which already held numerous U.S.-based properties, purchased four large office buildings in New York, Boston, and Los Angeles in 1986. The purchases were part of a long-term strategy to diversify. In another transaction, a jointly owned Manhattan office building was acquired by a subsidiary of a Tokyo-based real estate development concern. One of the owners, an oil company, wanted to sell its interest as part of the restructuring of its worldwide operations in response to the 1985-86 decline in crude oil prices.

Selected Operating Data

Total assets of the U.S. businesses acquired or established in 1986 were \$52.0 billion, up from \$36.1 billion in 1985 (tables 7A and 7B). Increases were largest in retail trade, finance, and petroleum.

U.S. businesses acquired in 1986 had assets of \$41.2 billion. The assets were concentrated in petroleum, chemicals, finance, and retail trade. Single acquisitions accounted for a majority of the total assets in each industry. In chemicals and retail trade, the acquisitions were the same as those, mentioned earlier, that accounted for a majority of outlays in these industries; they were, respectively, the acquisition of a Connecticut-based chemical producer by the U.S. affiliate of a Netherlands company and the acquisition of a department and specialty store chain by the U.S. affiliate of a Canadian company.

Acquired businesses had 320,000 employees; almost one-half of the employees were in retail trade. In retail trade, the previously mentioned U.S. department store chain acquired by the U.S. affiliate of a Canadian company was the largest employer. Acquired businesses owned 1,098,345 acres of U.S. land, of which 75 percent were owned by the manufacturer of paperboard containers, also mentioned earlier, that was acquired by the U.S. affiliate of a Netherlands company.

U.S. businesses established in 1986 had assets of \$10.7 billion, employed 11,047 workers, and owned 132,487 acres of land. Nearly one-half of the acres were owned by businesses in real estate; most of the remainder were owned by businesses in agriculture.

2. Investment outlays can be classified by country of foreign parent, as well as by country of UBO. The foreign parent is the first foreign person in the ownership chain of the acquired or established U.S. business; the UBO is the person in the ownership chain, beginning with the foreign parent, that is not owned more than 50 percent by another person. The country of UBO may be the same as that of the foreign parent, a different foreign country, or the United States. The data classified by country of foreign parent are available in a set of supplementary tables (see box).

^D Suppressed to avoid disclosure of data of individual companies.

* Less than \$500,000 (\pm).

1. Sales, or gross operating revenue, excluding sales taxes.

NOTE.—Data for 1986 are preliminary. For acquired businesses, data are for, or as of the end of, the fiscal year preceding the year of acquisition; for newly established businesses, data are projections for, or as of the end of, the first full year of operation.

U.S. Affiliates of Foreign Companies: Operations in 1985

THIS article presents estimates of the operations of nonbank U.S. affiliates of foreign companies in 1985. The estimates were obtained by expanding to universe totals sample data collected in BEA's annual survey of foreign direct investment in the United States.¹

Highlights for 1985 include:

• Total assets of U.S. affiliates were \$736 billion, up \$134 billion from 1984. By industry of affiliate, almost \$80 billion of the increase was in "finance, except banking." By country of ultimate beneficial owner (UBO), the largest increase (\$52 billion) was attributable to affiliates with UBO's in Europe.²

NOTE.—The annual survey from which the estimates in this article were derived was conducted under the supervision of James L. Bomkamp, Chief, Direct Investment in the United States Branch, International Investment Division. Beverly A. Feeser was project leader for editing and processing the forms. Richard Mauery and Arnold Gilbert designed the computer programs for data retrieval and analysis.

1. A U.S. affiliate is a U.S. business enterprise in which a single foreign person owns or controls, directly or indirectly, 10 percent or more of the voting securities if an incorporated business enterprise or an equivalent interest if an unincorporated business enterprise. Estimates presented in this article cover nonbank U.S. affiliates; data for bank affiliates are published by the Federal Reserve Board in the *Federal Reserve Bulletin*.

The estimates in this article are on a fiscal year basis. An individual affiliate's 1985 fiscal year is its financial reporting year that ended in calendar year 1985.

In terms of employment, data reported by the sample accounted for 89 percent of the universe estimate for 1985. A table presenting sample coverage for earlier years by industry of affiliate and country of ultimate beneficial owner appeared in "U.S. Affiliates of Foreign Companies: Operations in 1984," SURVEY 66 (October 1986):32. In that table, the values for 1983 are typical of the sample coverage of the revised estimates for a given year. The values for 1984, which are typical of the sample coverage of the preliminary estimates for a given year, are, in most instances, slightly lower.

2. The UBO is that person, proceeding up a U.S. affiliate's ownership chain, beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The foreign parent is the first foreign person in the affiliate's ownership chain. Unlike the foreign parent, the UBO of an affiliate may be located in the United States.

This article is dedicated to the memory of William K. Chung, formerly a senior economist with the International Investment Division. Mr. Chung made significant contributions to the analysis of international direct investment and was a frequent contributor to the SURVEY.

- Sales by U.S. affiliates were \$630 billion, up \$37 billion from 1984. By industry of affiliate, the largest increases were in wholesale trade (\$11 billion) and manufacturing (\$9 billion). By country of UBO, the largest increase was for affiliates with Japanese UBO's (\$15 billion).

- Net income of U.S. affiliates was \$5 billion, down \$4 billion from 1984. By industry of affiliate, the largest drop (\$3 billion) was in manufacturing. By country of UBO, affiliates with UBO's in Canada had the largest drop (\$2 billion).

- Employment of U.S. affiliates was 2,854,000, up 189,000 from 1984. Employee compensation was \$80 billion, up \$7 billion.

- U.S. affiliates owned 15 million acres of U.S. land, an increase of 1 million acres from 1984. The gross

This article presents estimates of selected items from BEA's 1984 and 1985 annual surveys of foreign direct investment in the United States. Sets of tables giving additional information—including estimates of U.S. affiliate's balance sheets and income statements; external financial position; property, plant, and equipment; employment and employee compensation; U.S. merchandise trade; research and development expenditures; and U.S. land owned and leased—will be available in June for each year separately in *Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Revised 1984 Estimates* and *Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Preliminary 1985 Estimates*. The estimates are disaggregated by industry of affiliate, country and industry of ultimate beneficial owner, and for selected items, by State.

Comparable estimates are also available for 1977–83. For 1977–80, see *Foreign Direct Investment in the United States: Operations of U.S. Affiliates, 1977–80*; for 1981, see *Foreign Direct Investment in the United States: Annual Survey Results, Revised 1981 Estimates*; for 1982, see *Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Revised 1982 Estimates*; and for 1983, see *Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Revised 1983 Estimates*.

The publication containing the 1977–80 estimates may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402; price \$7.00; stock number 003-010-00156-9.

The publications containing the 1981 through 1985 estimates may be obtained from Economic and Statistical Analysis/BEA, U.S. Department of Commerce, Citizens and Southern National Bank, 222 Mitchell Street, P.O. Box 100606, Atlanta, GA 30384; price \$5.00 for the publication for each year. Estimates for all years, 1977–85, are also available on computer diskette, at \$40.00 (two diskettes) for each year, at the same address. When ordering, specify title and accession number of publication, or accession number of the diskette, and enclose a check payable to "Economic and Statistical Analysis/BEA." The accession numbers are:

Publications	Diskettes
1977	BEA IID 87-403
1978	BEA IID 87-404
1979	BEA IID 87-405
1980	BEA IID 87-406
1981 BEA IID 84-101	BEA IID 86-407
1982 BEA IID 85-101	BEA IID 87-408
1983 BEA IID 86-101	BEA IID 86-401
1984 BEA IID 87-101	BEA IID 87-401
1985 BEA IID 87-102	BEA IID 87-402

In addition, tables presenting estimates of U.S. affiliates' gross product for 1977–85 will be available later this year. The tables are \$5.00 and may be obtained from Economic and Statistical Analysis/BEA at the address cited above.

book value of U.S. affiliates' property, plant, and equipment was \$294 billion, up \$24 billion.

• U.S. exports shipped by affiliates were \$56 billion, down \$2 billion, and U.S. imports shipped to affiliates were \$112 billion, up \$11 billion.

Employment in 1985

Although the accompanying tables present other key items on U.S. affiliates' operations, the remainder of this article focuses on employment. Employment was chosen because changes

in it are not directly affected by inflation and, thus, tend to correspond more closely than the other available items to changes in real economic activity.

Employment of U.S. affiliates increased 5 percent, to 2,854,000, in

	Change in employment of large affiliates resulting from:		
2	New investments.....	178,804	214,830
3	Expansions of existing operations.....	76,019	60,460
4	Sales or liquidations of businesses.....	-66,088	-108,871
5	Cutbacks in existing operations.....	-57,783	-56,151
6	Combinations of new investments and sales or liquidations of businesses.....	6,275	13,623
7	Change not accounted for in lines 2-6.....	30,554	15,404

NOTE.—Lines 2-6 cover large affiliates only—that is, affiliates with more than 500 employees. Coverage is limited to large affiliates because a large number of small affiliates changed their organizational structures and, in such cases, it is difficult to determine reasons for changes in employment.

All of the change in an individual affiliate's employment is shown on a single line, even if the change was not entirely attributable to that factor, because it was impossible to disaggregate the change in an individual affiliate's employment by source of change.

For new affiliates and for affiliates that were liquidated or sold, employment was classified in "new investments" and "sales and liquidations," respectively. For all other affiliates, classification depended on (1) whether the affiliate's employment increased or decreased, (2) whether the affiliate acquired another business during the year, or (3) whether the affiliate sold a business or business segment during the year.

Line 2 equals the sum of the yearend employment of affiliates that were acquired or established during the year plus the change in employment of existing affiliates that had an increase in employment and had acquired another U.S. business during the year.

Line 3 equals the change in employment of affiliates that did not acquire another U.S. business, but had an increase in employment.

Line 4 equals the employment at the end of the prior year of affiliates that were liquidated or sold during the year plus the change in employment of affiliates that had a decline in employment and sold a business or business segment during the year.

Line 5 equals the change in employment of affiliates that did not sell a business or business segment, but had a decline in employment.

Line 6 equals the change in employment of affiliates that both acquired and sold a business or business segment during the year.

Line 7 equals the change in employment of large affiliates not accounted for in lines 2-6 plus all changes in employment for affiliates with fewer than 500 employees.

1985, after increasing 7 percent in 1984 (table 1). Growth slowed mainly because of an increase in the number of employees lost due to sales or liquidations of U.S. affiliates and a decrease in the number added due to expansions in the operations of existing affiliates.

The number of employees lost due to sales or liquidations of affiliates increased from 66,000 to 109,000 (table 2, line 4).³ Three particularly large affiliates—each with more than 10,000 employees—were sold to U.S. buyers in 1985. The number of employees added because of expansions in the operations of existing affiliates dropped from 76,000 to 60,000 (table 2, line 3). This drop mirrored a slowdown in growth of the employment of all U.S. businesses and probably re-

flects weaker growth in the U.S. economy in 1985. Partly offsetting these changes was an increase—from 179,000 to 215,000—in the number of employees added because of new investments (table 2, line 2).⁴ Substantial numbers of employees were added as a result of acquisitions of U.S. companies in retail trade, paper and food manufacturing, and "services."

Employment in the 1982-85 Period

The slow growth in total employment in 1985 continued a pattern that began in 1982. During the 1982-85 period, growth averaged only 4 percent per year and the rate of growth for a single year never exceeded 7 percent. In contrast, during the 4 years before 1982, growth averaged 19 percent per year and the rate of growth for a single year was never less than 16 percent. Because 1985 continued the pattern that began earlier, the remainder of this article discusses the entire 1982-85 period, rather than 1985 alone.

The slow growth in 1982-85 was attributable to several factors. First, the worldwide economic recession in 1982 weakened the financial condition of foreign multinational companies, limiting their ability to make new direct investments in that and later years. The recession also forced many existing affiliates to cut employment.

Second, several U.S. industries—such as petroleum and some manufacturing subindustries—in which affiliate employment was relatively large experienced excess capacity and weak profits because of shifts in demand patterns (for example, the shift toward more energy-efficient cars), changes in technology, and increased international competition. In these industries, both U.S. affiliates and other U.S. companies discontinued or reduced the size of their operations.

4. New investments are (1) acquisitions of a 10-percent-or-more ownership interest in existing U.S. business enterprises either directly by foreign direct investors or indirectly through the investors' existing U.S. affiliates, or (2) the establishment of new U.S. affiliates by foreign direct investors.

Data on increases in employment associated with new investments are also available from another BEA survey covering U.S. business enterprises newly acquired or established by foreign direct investors. Data from that survey were not used in table 2 because of differences in methodology, timing, and coverage. Revised results of the 1985 survey of new acquisitions and establishments appear in "U.S. Businesses Acquired or Established By Foreign Direct Investors in 1986," in this issue.

Third, the appreciation of the U.S. dollar that began in late 1980 and that continued through 1985 may have dampened the pace of new investment activity, mainly by raising the foreign currency cost of acquiring U.S. businesses. It may also have reduced the U.S. dollar cost of imports, which would have made production abroad a relatively more attractive means of serving U.S. markets.

Fourth, disinvestment by foreign parents probably increased in 1982-85, as some of the many acquisitions made during the 1978-81 period proved unprofitable. Also, foreigners tended to restructure companies acquired in 1982-85 by immediately selling off unprofitable operations or unwanted lines of business. Sometimes, operations were sold to obtain funds to repay loans used originally to finance the acquisition. Thus, even if the acquisition was large, the number of employees ultimately added to the direct investment universe may have been relatively small.

By industry

Among major industries, the pattern of growth for affiliates closely followed that for all U.S. businesses in 1982-85. Employment of both affiliates and other U.S. businesses grew slowly or declined in most goods-producing industries—such as manufacturing, mining, and petroleum—and grew comparatively fast in services-producing industries—notably, finance and "services"—and in retail trade.⁵ There were some exceptions to this pattern, however. In construction, for example, affiliate employment declined substantially but all-U.S. business employment increased.

The declines in employment in goods-producing industries contributed significantly to the slow growth in total affiliate employment during the period. In construction, affiliate employment declined 17,000. Most of the decline was in the employment of affiliates that build structures—such as refineries, pipelines, and marine terminals—for the oil industry. Construction of this type dropped sharply with the slowdown in the U.S. oil industry. Employment by several affiliates

5. "Services-producing industries" is broadly defined to include, in addition to the narrowly defined "services" division of the Standard Industrial Classification a number of other industries that produce services. Wholesale and retail trade and construction, however, are considered goods rather than services producing. For further discussion, see "U.S. Sales of Services to Foreigners," SURVEY 67 (January 1987):27.

3. In table 2, all of the change for a given affiliate is shown on a single line, even if the change was caused by more than one of the factors shown. See the note to table 2 for a more detailed description of the procedures used to derive the estimates.

ates in other nonresidential construction also declined substantially, even though, for the United States as a whole, growth in such construction was strong during the period. Employment by these affiliates may have declined because the affiliates were located in areas of the country that did not share in the strong growth.

Affiliate employment also declined substantially in industrial chemicals and nonelectrical machinery manufacturing (24,000 and 22,000, respectively). The declines coincided with significant declines for other U.S. businesses in the same industries. Weak demand and increased international competition pushed rates of return in these industries well below those in other manufacturing industries and caused businesses to sell or liquidate operations. In some cases, the decreases in affiliate employment may also have resulted from foreign parents selling all of their interests in their affiliates to U.S. buyers.

Affiliate employment in metals wholesale trade declined 21,000. The decline largely reflected the long-term slump in the U.S. metals industry. A number of large affiliates classified in metals wholesale trade, but that also had significant metals manufacturing operations, made substantial cuts in the latter during the period. In addition, a major affiliate with both large international metals trading and investment banking operations substantially cut its metals trading activities and sharply expanded its investment banking operations. As a result, its classification—and that of all of its employees—shifted from metals wholesale trade to “finance, except banking” in 1984.

As noted earlier, in 1982–85, affiliate employment grew relatively fast in “finance, except banking,” services, and retail trade. Among these industries, the most employees (136,000) were added in retail trade. Of this total, 97,000 were added in “retail trade other than food stores and eating and drinking places.” This growth was largely due to acquisitions of U.S. businesses by foreign investors. The largest such acquisitions were of jewelry, department, and book store chains and of a firm that sells and develops photographic film.

In “services,” affiliates added 93,000 employees. This increase, like that in retail trade, occurred largely as a result of acquisitions. A few of the acquired companies were sizable, par-

ticularly those engaged in building cleaning and maintenance, nursing home services, and operating a chain of beauty salons. Most of the increase in “services,” however, reflected a large number of smaller acquisitions. These acquisitions included firms providing personal, health, and business services.

In “finance, except banking,” affiliates added 28,000 employees. Acquisitions of major U.S. investment banking and securities firms accounted for most of the growth. The shift, from wholesale trade to finance, in the industry classification of the large affiliate with both metals trading and investment banking operations also boosted employment.⁶

By country

The 4-percent average annual employment growth rate in 1982–85 for affiliates in all areas combined largely reflected the relatively slow growth—3 percent a year, on average—in the employment of affiliates with UBO’s in Europe. The slow growth for these affiliates had a large impact on overall growth because they accounted for about two-thirds of total affiliate employment. Employment of affiliates with UBO’s in most other areas grew much faster. Growth was particularly rapid for affiliates with UBO’s in Latin America (13 percent), “other Africa, Asia, and Pacific” (12 percent), and Japan (11 percent). Employment of affiliates with Canadian UBO’s grew at a 5-percent rate.

The slow growth for affiliates with European UBO’s reflected declines in the employment of French- and Netherlands-owned affiliates and slow growth (2 percent per year) for German-owned affiliates. Growth rates for Swiss- and British-owned affiliates were comparatively high—7 and 5 percent, respectively.

This uneven pattern of growth among affiliates with European UBO’s partly reflected differences in

6. This change in industry classification had a much greater effect on assets than on employment because, compared with other affiliates in finance, the assets of this affiliate were proportionately much larger than its employment. As a result, affiliates’ assets in “finance, except banking” increased more than 80 percent in 1984, much faster than in 1983, even though growth in employment slowed. Growth in these affiliates’ assets was also fast—over 50 percent—in 1985. The 1985 growth reflected exceptionally strong increases by several of the largest investment banking and securities affiliates. Sharp jumps in these affiliates’ holdings of U.S. Government securities during 1985 accounted for a major portion of the increases.

the distribution of affiliate employment by industry. For example, affiliates with Netherlands UBO’s were relatively heavily concentrated in petroleum and paper manufacturing; those with German UBO’s, in industrial chemicals; and those with French UBO’s, in paper manufacturing—all U.S. industries that had comparatively weak economic performance during this period. Affiliates of UBO’s in Switzerland and the United Kingdom, however, were more concentrated in the faster growing U.S. industries—affiliates with Swiss UBO’s, in food manufacturing and “services,” and affiliates with British UBO’s, in retail trade, food manufacturing, and “services.”

The uneven pattern of growth also partly reflected differences among European countries in the pace of their new direct investment in the United States in 1982–85. Spending by British and Swiss investors to acquire or establish new U.S. affiliates was significantly higher than that by investors in other European countries.⁷ The particularly strong spending by British investors may have occurred mainly because more rapid economic growth in Britain than in other major European countries left British companies with more funds available for foreign investment. In addition, Britain relaxed controls on foreign exchange transactions in 1979, which made it easier for British companies to invest abroad.

The high growth rates for the employment of affiliates with UBO’s in Latin America and “other Africa, Asia, and Pacific” partly reflect the relatively small base from which the rates were calculated; in 1981, employment of these affiliates was only 75,000 and 17,000, respectively. The growth for affiliates with UBO’s in Latin America was largely attributable to those with UBO’s in Panama and Bermuda; in “other Africa, Asia, and Pacific,” it was largely attributable to affiliates with UBO’s in Hong Kong.

The rapid growth in employment of affiliates with Japanese UBO’s reflects two main factors: (1) Strong growth in Japanese exports to the United States, which, in turn, induced increases in the employment of U.S. affiliates engaged in the wholesale distribution of these products within

7. See “U.S. Business Enterprises Acquired or Established” in this issue.

the United States, and (2) the startup or expansion of manufacturing operations here by several Japanese companies, partly because of U.S. pressure on Japan to restrain its exports, particularly of automobiles, to the United States.

A large share of the growth in the employment of Japanese-owned affiliates, unlike that of most other affiliates, was in goods-producing industries, mainly wholesale trade. Growth in motor vehicles and "other durable

goods" wholesale trade was particularly strong. In motor vehicles, the growth was largely attributable to the startup and expansion of motorcycle, automobile, and light truck manufacturing operations. (These affiliates were classified in wholesale trade through 1985 because revenue from their wholesale trade operations exceeded that from their manufacturing operations.) In "other durable goods," the growth in employment resulted largely because affiliates expanded their distribution operations in the

United States to support increased exports from their foreign parents, particularly of consumer electronic goods and office machinery. Also, as in motor vehicles wholesale trade, some affiliates either started or expanded manufacturing operations.

Employment by Japanese-owned affiliates also increased significantly in primary metals manufacturing and retail trade. In each, a single acquisition accounted for most of the increase.

Table 3.—Employment of Nonbank U.S. Affiliates, 1981-85, by State

By U.S. region and State

Among U.S. regions, affiliate employment declined in the Rocky Mountains and grew relatively slowly in both the Mideast and the Plains (table 3). The most rapid growth was in the Great Lakes; growth was also relatively strong in the Southeast and the Far West. Growth in New England and the Southwest was at about the same rate as the average for all affiliates. Except for the Rocky Mountains and the Great Lakes, this pattern parallels that of all U.S. businesses.

In the Rocky Mountains, although affiliate employment declined in four of the five States in the region, most of the decline resulted from a cutback in an affiliate's large copper mining operation in Utah.

In the Great Lakes, affiliate employment grew faster, but all-U.S. business employment grew slower, than in any other region. The rapid growth for affiliates was largely concentrated in Ohio and Illinois. In both States, many existing affiliates cut their employment because of comparatively weak economic conditions,

but these cuts were more than offset by increases in employment due to new acquisitions or establishments.

By State, growth rates ranged from 15 percent in the District of Columbia to a negative 11 percent in Utah. Among the States with the largest affiliate employment, that is, those with more than 50,000 employees in 1981, growth rates ranged from 8 percent in Ohio and Georgia to less than 1 percent in Wisconsin. In terms of numbers of employees added, the largest increases were in California (51,000) and Ohio (38,000).

STATISTICAL TABLES

This publication presents the estimates of the national income and product accounts (NIPA's) that resulted from the comprehensive revision released in late 1985. The revision incorporated definitional and classificational changes, statistical changes reflecting newly available source data and new estimating procedures, and updating of the base year for calculating real GNP to 1982. The complete set of 130 NIPA tables, in nine parts, are included. The nine parts are:

1. National Product and Income
2. Personal Income and Outlays
3. Government Receipts and Expenditures
4. Foreign Transactions
5. Savings and Investment
6. Product, Income and Employment by Industry
7. Fixed-Weighted Price Indexes and Implicit Price Deflators
8. Supplementary Tables
9. Seasonally Unadjusted Estimates

NIPA estimates are also available on Diskettes. For more information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230

CURRENT BUSINESS STATISTICS

The statistics here update series published in **BUSINESS STATISTICS: 1984**, a statistical supplement to the **SURVEY OF CURRENT BUSINESS**. That volume (available from the Superintendent of Documents for \$13.00, stock no. 003-010-00160-7) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1981 through 1984; annually, 1961-84; for selected series, monthly or quarterly, 1961-84 (where available).

The sources of the series are given in **BUSINESS STATISTICS: 1984**; they appear in the main methodological note for each series, and are also listed alphabetically on pages 143-144. Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers, and are subject to their copyrights.

Unless otherwise stated in footnotes below, data through 1984 and methodological notes are as shown in BUSINESS STATISTICS: 1984	Units	Annual		1986												1987

General Notes for all Pages:

r Revised.
p Preliminary.
e Estimated.
c Corrected.

Page S-1

^f Revised series. The estimates of personal income have been revised as a part of the annual revision of the national income and product accounts (NIPA's) released in July 1986 and as part of the comprehensive revision of the NIPA's released in 1985. Articles describing those revisions appear in the July 1986 and December 1985 issues of the SURVEY. See tables 2.6-2.9 in the July 1986 SURVEY for revised estimates for 1983-85. Pre-1983 estimates appear in *The National Income and Product Accounts of the United States, 1929-82: Statistical Tables*. For order information see the box at the beginning of the National Income and Product Accounts Tables in this issue of the SURVEY.

^g Includes inventory valuation and capital consumption adjustments.

^h Monthly estimates equal the centered three-month average of personal saving as a percentage of the centered three-month moving average of disposable personal income.

[◇] See note "◇" for p. S-2.

Page S-2

1. Based on data not seasonally adjusted.

[◇] Effective with Sept. 1986 SURVEY, the industrial production index has been revised back to Jan. 1984. These revisions are available upon request.

[#] Includes data not shown separately.

[†] Effective April 1987 SURVEY, data have been revised, in some cases, back to January 1982. Revised data appear in the report "Manufacturing and Trade Inventories and Sales" CB-87-69 available from the Bureau of the Census.

[§] Revised series. Data for inventories are available from 1959; sales and ratios 1967 forward. Revisions are available upon request.

Page S-3

[#] Includes data for items not shown separately.

[‡] See note "‡" for p. S-2.

[§] See note "§" for p. S-2.

[†] Revised series. Data have been revised back to 1982. A detailed description of the changes appear in the report "Manufacturers' Shipments, Inventories, and Orders: 1982-86" M3-1(86), available from the Bureau of the Census, Washington, DC 20233.

Page S-4

1. Based on data not seasonally adjusted.

[#] Includes data for items not shown separately.

[‡] Includes textile mill products, leather and products, paper and allied products, and printing and publishing industries; unfilled orders for other nondurable goods industries are zero.

[◇] For these industries (food and kindred products, tobacco, apparel and other textile products, petroleum and coal, chemicals and allied products, and rubber and plastics products) sales are considered equal to new orders.

[†] See note "†" for p. S-3.

Page S-5

1. Based on unadjusted data.

2. Effective with the Mar. 1986 SURVEY, the reporting frequency has been changed from monthly to 3-month intervals.

[†] Compiled by Dun & Bradstreet, Inc. Monthly data from 1984 to 1985 for failures and liabilities, are available upon request, but are not comparable to the earlier years. The failure annual rate data will be available at a later date.

[#] Includes data for items not shown separately.

[§] Ratio of prices received to prices paid (parity index).

[‡] See note "‡" for p. S-4.

[†] Effective with the July 1986 SURVEY, data (back to 1983, for some commodities) have been revised. Effective with the Feb. 1987 SURVEY, data (back to 1984, for some commodities) have been revised. These revisions are available upon request.

[◇] See note "◇" for p. S-6.

^{††} See note "††" for p. S-3.

Page S-6

[§] For producer price indexes of individual commodities, see respective commodities in the Industry section beginning p. S-19. All indexes subject to revision four months after original publication.

[#] Includes data for items not shown separately.

[†] Beginning with January 1987 data, the consumer price indexes are being calculated on a revised basis, using 1982-84 expenditure patterns and updated population weights. Additional information regarding the revised basis is available from the Bureau of Labor Statistics, Washington, DC 20212. Seasonally adjusted data have been revised as follows: back to 1981, effective with the Feb. 1986 SURVEY and back to 1982, effective with the Mar. 1987 SURVEY. These revisions are available upon request.

[‡] Effective with the Feb. 1986 SURVEY, data back to 1981 have been revised. Effective with the Feb. 1987 SURVEY, data back to 1982 have been revised. These revisions are available upon request.

Page S-7

1. Computed from cumulative valuation total.

2. Index as of May 1, 1987: building, 373.4; construction, 406.5.

[#] Includes data for items not shown separately.

[§] Data for May, July, and, Oct. 1986 are for five weeks; other months four weeks.

[◇] Effective Feb. 1987 SURVEY, data for seasonally adjusted housing starts have been revised back to 1984. Effective Feb. 1986 SURVEY, data for seasonally adjusted housing starts have been revised back to 1983. These revisions are available upon request.

[†] Effective May 1987 SURVEY, data for seasonally adjusted building permits have been revised back to Jan. 1985. Effective May 1986 SURVEY, data for seasonally adjusted building permits have been revised back to Jan. 1984. These revisions are available upon request.

[@] Effective July 1986 SURVEY, data have been revised. In addition to the normal revisions, a number of important changes have been made, including the elimination of the "Nonhousekeeping" residential category, which has been replaced for the most part by a new "Hotels and Motels" category in nonresidential buildings; the inclusion of residential major replacements in "Additions and Alterations," which is renamed "Improvements;" and significant historical revisions to estimates for one-unit residential buildings, railroads, electric, gas, and Federal industrial buildings. Due to these changes, much of the data have been revised back to 1964 and are available from the Construction Statistics Division at the Bureau of the Census, Washington, D.C. 20233.

[‡] Effective July 1986 SURVEY, this index has been revised to a new comparison base of 1982=100. Revisions back to 1964 are available upon request.

Page S-8

1. Advance estimate.

^{*} New series effective Sept. 1985 SURVEY. All activity reported on a gross basis (i.e., the entire amount of loan) including refinancings and combination construction—purchase loans. Revised data are now available back to Jan. 1984. Earlier data will be available later.

[◇] Home mortgage rates (conventional first mortgages) are under money and interest rates on p. S-14.

[§] Data include guaranteed direct loans sold.

[†] Effective April 1987 SURVEY, wholesale trade data have been revised back to Jan. 1980. Revised data and a summary of changes appear in the report *Revised Monthly Wholesale Trade Sales and Inventories* BW-13-86S, available from the Bureau of the Census, Washington, D.C. 20233; \$1.25 per copy.

[‡] Effective May 1987 SURVEY, retail trade data have been revised. Estimates of retail sales have been revised back to Jan. 1977 and estimates of retail inventories have been revised back to Jan. 1980. Revised data and a summary of changes appear in the report *Revised Monthly Retail Sales and Inventories* BR-13-86S, available from the Bureau of the Census, Washington, D.C. 20233; \$4.50 per copy.

[#] Includes data for items not shown separately.

[@] Series revised effective April 1987 SURVEY. Data now include mutual savings banks.

Page S-9

1. Advance estimate.

2. Data beginning Jan. 1986 are not strictly comparable with earlier data because of a change in estimation procedures.

[‡] See note "‡" for p. S-8.

[#] Includes data for items not shown separately.

[◇] Effective with the January 1987 SURVEY, the seasonally adjusted labor force series have been revised back to January 1982. The January 1987 issue of *Employment and Earnings* contains the new seasonal adjustment factors, a description of the current methodology, and revised data for the most recent 13 months or calendar quarters. Revised monthly data for the entire 1982-86 revision period will appear in the February 1987 issue of *Employment and Earnings*.

[†] The participation rate is the percent of the civilian noninstitutional population in the civilian labor force. The employment-population ratio is civilian employment as a percent of the civilian noninstitutional population, 16 years and over.

[@] Data include resident armed forces.

Page S-10

[◇] See note "◇" for p. S-9.

[§] Effective June 1986 SURVEY, data have been revised back to April 1984 (not seasonally adjusted) and January 1981 (seasonally adjusted) to reflect new benchmarks and seasonal adjustment factors. The June 1986 issue of *Employment and Earnings* will contain a detailed discussion of the effects of the revisions.

Page S-11

[‡] This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision.

[◇] Production and nonsupervisory workers.

[§] See note "§" for p. S-10.

Page S-12

1. This series is not seasonally adjusted because the seasonal component is small relative to the trend-cycle and/or irregular components and consequently cannot be separated with sufficient precision. Use the corresponding unadjusted series.

§ See note "§" for p. S-10.

◊ Production and nonsupervisory workers.

‡ Earnings in 1977 dollars reflect changes in purchasing power since 1977 by dividing by Consumer Price Index.

§§ Wages as of May 1, 1987: Common, \$16.72; Skilled, \$21.94.

@ New series. The Employment Cost Index (ECI) is a quarterly measure of the average change in the cost of employing labor. See p. S-36 of the August through October 1984 issues of the SURVEY for a brief description of the ECI.

† Excludes farm, household, and Federal workers.

‡‡ See note "‡" for p. S-11.

Page S-13

1. Average for Dec.

2. Reported annual; monthly revisions are not available.

‡ Effective January 1984, series revised due to changes in the reporting panel and in the item contents. The new panel includes 168 banks that had domestic office assets exceeding \$1.4 billion as of December 31, 1982. Beginning Jan. 1985, data are as of the last Wednesday of the month. Earlier data are as of the Wednesday nearest the end of the month or year (meaning some data are as of the first Wednesday of the next month).

Includes data for items not shown separately.

‡‡ Reflects offsetting changes in classification of deposits of thrift institutions. Deposits of thrifts were formerly grouped with deposits of individuals, partnerships, and corporations, instead of with deposits of commercial banks in the United States.

* "Transaction balances other than demand deposits" consists of ATS, NOW, super NOW, and telephone transfer accounts, which formerly were classified with savings deposits. "Nontransaction balances" reflects the combination of deposits formerly reported separately as time deposits and the savings deposits remaining after deduction of the items now reported separately under "transaction balances."

§ Excludes loans and federal funds transactions with domestic commercial banks and includes valuation reserves (individual loan items are shown gross; i.e., before deduction of valuation reserves).

◊ Securities of Federal agencies and corporations have been shifted out of "other securities" and are now combined with U.S. Treasury securities. Also, loan obligations of States and political subdivisions have been shifted out of "other securities" and are now shown separately among the loan items.

@ Insured unemployment (all programs) data include claims filed under extended duration provisions of regular State laws; amounts paid under these programs are excluded from state benefits paid data.

@@ Insured unemployment as a percent of average covered employment in a 12-month period.

† Beginning with October 1984 data, the number of respondents in the bankers acceptance survey was reduced from 340 to 160 institutions, those with \$50 million or more in total acceptances. The new reporting group accounts for over 95 percent of total acceptances activity. Historical data are available upon request.

Page S-14

1. Data are for fiscal years ending Sept. 30 and include revisions not distributed to the months.

2. Weighted by number of loans.

† Effective with Mar. 1987 SURVEY, the consumer installment credit series have been revised for the period 1980 through 1986 to reflect updated seasonal adjustment factors and newly available historical information for depository institutions, finance companies, and retailers. Effective with Apr. 1986 SURVEY, the consumer installment credit series have been revised for the period 1975 through 1985.

* New series. Effective with Apr. 1986 SURVEY, data for savings institutions (includes savings and loan associations, mutual savings banks, and federal savings banks) are shown for the first time.

Includes data for items not shown separately.

◊ Adjusted to exclude domestic commercial interbank loans and federal funds sold to domestic commercial banks.

‡ Rates on the commercial paper placed for firms whose bond rating is Aa or the equivalent.

Courtesy of Metals Week.

@@ Average effective rate.

§ Effective May 1987 SURVEY, data have been revised back to Dec. 1972 and are available from the Banking Section, Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

@ Revised for periods between October 1986 and February 1987. During this interval, outstanding gold certificates were inadvertently in excess of the gold stock.

Page S-15

† Effective Feb. 1987 SURVEY, the money stock measures and components have been revised and are available from the Banking Section of the Division of Research and Statistics at the Federal Reserve Board, Washington, D.C. 20551.

‡ Composition of the money stock measures is as follows:

M1.—This measure is currency plus demand deposits at commercial banks and interest-earning checkable deposits at all depository institutions—namely NOW accounts, automatic transfer from savings (ATS) accounts, and credit union share draft balances—as well as a small amount of demand deposits at thrift institutions that cannot, using present data sources, be separated from interest-earning checkable deposits.

M2.—This measure adds to *M1* overnight repurchase agreements (RP's) issued by commercial banks and certain overnight Eurodollars (those issued by Caribbean branches of member banks) held by U.S. nonbank residents, money market mutual fund shares, and savings and small-denomination time deposits (those issued in denominations of less than \$100,000) at all depository institutions. Depository institutions are commercial banks (including U.S. agencies and branches of foreign banks, Edge Act corporations, and foreign investment companies), mutual savings banks, savings and loan associations, and credit unions.

M3.—This measure equals *M2* plus large-denomination time deposits (those issued in denominations of \$100,000 or more) at all depository institutions (including negotiable CD's) plus term RP's issued by commercial banks and savings and loan associations.

L.—This broad measure of liquid assets equals *M3* plus other liquid assets consisting of other Eurodollar holdings of U.S. nonbank residents, bankers acceptances, commercial paper, savings bonds, and marketable liquid Treasury obligations.

Includes ATS and NOW balances at all depository institutions, credit union share draft balances, and demand deposits at thrift institutions.

◊ Overnight (and continuing contract) RP's are those issued by commercial banks to the nonbank public, and overnight Eurodollars are those issued by Caribbean branches of member banks to U.S. nonbank customers.

@ Small time deposits are those issued in amounts of less than \$100,000. Large time deposits are those issued in amounts of \$100,000 or more and are net of the holdings of domestic banks, thrift institutions, the U.S. Government, money market mutual funds, and foreign banks and official institutions.

Includes data for items not shown separately.

§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

Page S-16

1. The Aaa public utility average was suspended Jan. 17, 1984, because of a lack of appropriate issues. The average corporate and the Aaa corporate do not include Aaa utilities from Jan. 17 to Oct. 12. The Aaa utility average was reinstated on Oct. 12; the Oct. monthly average includes only the last 14 days of the month.

2. Effective with Jan. 1986 data, the practice of adjusting exports and imports for seasonal and working-day variations was discontinued.

§ Number of issues represents number currently used; the change in number does not affect the continuity of the series.

‡ For bonds due or callable in 10 years or more.

Includes data for items not shown separately.

@ Data may not equal the sum of the geographic regions, or commodity groups and principal commodities, because of revisions to the totals not reflected in the component items.

* Effective April 22, 1987, "New York City banks" are classified as "money center banks," and "outside N.Y.C. banks" are classified as "major regional banks." Two banks formerly in "outside N.Y.C. banks" were transferred to "money center banks." In addition three substitutions were made in "major regional banks."

* New series. See note on p. S-36 of this issue of the SURVEY. Historical data are available upon request.

Page S-17

1. See note 2 for p. S-16.

Includes data not shown separately.

§ Data may not equal the sum of geographic regions, or commodity groups and principal commodities, because of revisions to the totals not reflected in the components.

Page S-18

1. Annual total; quarterly or monthly revisions are not available.

2. Restaurant sales index data represent hotels and motor hotels only.

3. For month shown.

Includes data for items not shown separately.

§ Total revenues, expenses, and income for all groups of carriers also reflect nonscheduled service.

† The threshold for Class I railroad status is adjusted annually by the Interstate Commerce Commission to compensate for inflation.

◊ Average daily rent per room occupied, not scheduled rates.

Data represent entries to a national park for recreational use of the park, its services, conveniences, and/or facilities.

† Before extraordinary and prior period items.

Page S-19

1. Reported annual total; monthly revisions are not available.

2. For month shown.

3. Less than 500 short tons.

Includes data for items not shown separately.

§ Data are reported on the basis of 100 percent content of the specified material unless otherwise indicated.

* New series. Access lines are a communication circuit that connects a customer location to a switching center.

† Because of deregulation, carriers are free to enter both domestic and international markets. Previously, carriers were limited either to domestic or overseas markets. Separate data for domestic or overseas are no longer available.

‡ Data for 1984 (and for some commodities, 1985 and 1983) have been revised and are available upon request.

† Effective with 1985, data are reported on the basis of 100 percent content of ethyl acetate material.

◊ Beginning January, 1986, data are not directly comparable to earlier periods because the data represent only companies that have annual revenues over \$100 million.

Page S-20

1. Reported annual total; monthly or quarterly revisions are not available.
- § Data are not wholly comparable from year to year because of changes from one classification to another.
 - ◊ Data for 1982-85 have been revised and are available upon request.
 - † Data for 1983-85 have been revised and are available upon request.
- # Effective with the Sept. 1985 SURVEY, monthly data have been restated back to Jan. 1984 to include consumption for Hawaii. Prior to 1984, consumption for Hawaii is reflected in annual totals only.
- ‡ Revised data for 1983-85 (and 1981, for revenue from sales to ultimate customers) are available upon request.
- * New series, first shown in the January 1987 SURVEY. Data (formerly included with the "industrial" class) are reported separately, beginning with 1st Qtr. 1985.
- @ Includes less than 500 electric generation customers not shown separately.

Page S-21

1. Previous year's crop. Through 1985, new crop is not reported until Oct. (crop year: Oct. 1-Sept. 30). Beginning 1986, new crop is reported beginning Sept. (crop year: Sept. 1-Aug. 31).
 - 2. Crop estimate for the year.
 - 3. Stocks as of June 1.
 - 4. Stocks as of June 1 and represents previous year's crop; new crop not reported until June (beginning of new crop year). Beginning with 1986, quarterly stock estimates for barley and oats are no longer available. However, June 1 stocks will continue to be available and published here in the May and Annual columns each year.
 - 5. Less than 50,000 bushels.
 - 6. See note "@" for this page.
 - 7. Stocks as of Dec. 1.
 - 8. Based on a 10-month average.
 - 9. Prices are no longer available.
 - 10. Effective with 1986 reporting, coverage has been reduced to 21 selected States, representing approximately 85 percent of U.S. production. Comparable data for 1985 are available upon request.
 - 11. May 1 estimate of 1987 crop.
 - § Excludes pearl barley.
 - # Bags of 100 lbs.
- @ Effective with the Mar. 1987 SURVEY, data have been restated to reflect a change in reporting periods. The quarterly data, available back through 1976, now represent the 3-month periods Dec.-Feb., Mar.-May, June-Aug., and Sept.-Nov. The annual data, also available back through 1976, now represent Dec.-Nov.

Page S-22

1. Figure covers 20 selected States, representing approximately 84 percent of U.S. production.
 - § Cases of 30 dozen.
 - ◊ Bags of 60 kilograms.
- * This series, first shown in the January 1987 SURVEY, is from the Bureau of Labor Statistics International Price Program and provides a measure of price change for coffee purchased from other countries by U.S. residents. Prices are based on the cost, insurance, and freight (c.i.f.) value at the U.S. port of importation; they include the other costs associated with bringing the product to the U.S. border, but do not include duty charges. To the extent possible, the data gathered refer to transactions completed during the first 2 weeks of the third month of each calendar quarter—March, June, September, and December. Annual data back to 1978 and quarterly data back to 2d Qtr. 1977 are available upon request.

Page S-23

- ◊ Effective Sept. 1985 SURVEY, the footwear production series have been revised for 1983 and 1984.

Page S-24

1. Annual data; monthly revisions not available.
2. Less than 500 tons.
3. Beginning January 1985, data have been revised because of a new estimation procedure and may not be comparable to earlier periods.
4. See notes 1 and 3 for this page.
- * New series. Historical data are available upon request.

Page S-25

1. Annual data; monthly revisions are not available.
2. For month shown.
- + Beginning January 1982, data represent metallic (mostly aluminum) content. Data for 1981 and prior years represent aluminum content only.
- ◊ The source for these series is now the Bureau of Mines.
- § Source: *Metals Week*.
- * New series. Refined copper is recovered from leach solution by electrolysis.

Page S-26

1. Annual data; monthly revisions are not available.
2. Less than 50 tons.
3. Beginning 1st quarter 1984, data have been revised because of a new sample and may not be comparable to earlier periods.
4. Total for 8 months; no data for March, April, September, and October.
5. Total for 10 months; no data for November and December.
6. Beginning July 1986, data are not comparable with earlier periods.
7. Total for 5 months; data for May, June, Sept., Nov., and Dec.
8. Total for 10 months; no data for Jan. and Feb.
- ◊ Includes secondary smelters' lead stocks in refinery shapes and in copper-base scrap.
- @ All data (except annual production figures) reflect GSA remelted zinc and zinc purchased for direct shipment.
- ‡ Source for monthly data: American Bureau of Metal Statistics. Source for annual data: Bureau of Mines.
- # Includes data not shown separately.
- § Beginning with the Aug. 1985 SURVEY, unadjusted fluid power shipments indexes are shown. Seasonally adjusted indexes are no longer available.
- * New series. For an explanation of material handling equipment shipments and historical data, see p. S-35 of the Dec. 1985 SURVEY.

Page S-27

1. Data are for five weeks; other months 4 weeks.
2. Beginning January 1986, data have been restated because a new methodology has been adopted.
 - # Includes data for items not shown separately.
 - § Includes nonmarketable catalyst coke.
 - ◊ Includes small amounts of "other hydrocarbons and alcohol new supply (field production)," not shown separately.
- † Effective with the Oct. 1985 SURVEY, coal production data for 1984 have been revised. Effective with the July 1986 SURVEY, coal consumption and stocks for 1985 have been revised. Effective with the Oct. 1986 SURVEY, coal production data for 1985 have been revised. Effective with the April 1987 SURVEY, coal consumption and stocks back through 1985 have been revised. These revisions are available upon request.
- @ Includes U.S. produced and imported microwave ovens and combination microwave oven/ranges.
- ‡ "Tractor shovel loaders" includes some front engine mount wheel tractors that had previously been included in "Tractors, wheel, farm, and nonfarm."
- @@ Effective with the July 1986 SURVEY, data for 1985 have been revised and are available upon request.

Page S-28

1. Reported annual totals; revisions not allocated to the months.
2. Effective with the Jan. 1985 price, gasoline that contains alcohol as an additive is included.
 - # Includes data for items not shown separately.
 - † Except for price data, see note " @" for p. S-27.
- ‡ Effective with June 1985, indexes reflect price movements through the middle of the month for which they are shown. Indexes prior to June 1985 were based on prices for the previous month; reflecting a one-month lag in pricing.

Page S-29

1. See note 1 for p. S-28.
- ◊ Source: American Paper Institute. Total U.S. estimated consumption by all newspaper users.
- # Compiled by the American Newspaper Publishers Association.
- * New series. This index is from the Bureau of Labor Statistics International Price Program and provides a measure of price change for natural rubber purchased from other countries by U.S. residents. The data gathered refer to prices that are "free on board" (f.o.b.) foreign port. The prices refer to transactions completed during the first 2 weeks of the third month of each calendar quarter—March, June, September, and December. Data back to December 1983 are available upon request.

Page S-30

1. Reported annual total; revisions not allocated to the months.
2. Crop for the year.
3. Data cover five weeks; other months, four weeks.
4. Beginning with 1985, value of shipments for rolled and wire glass is excluded. Comparable data for 1984 and earlier periods, which exclude such shipments, are not available.
 - # Includes data for items not shown separately.
 - ◊ Cumulative ginnings to the end of month indicated.
 - § Bales of 480 lbs.
- ‡ Monthly revisions for 1984-85 are available upon request.
- † Monthly revisions for 1985 are available upon request.
- * New series, first shown in the Oct. 1986 SURVEY. Monthly indexes are available back to Dec. 1984.
- ** New series, first shown in the January 1987 SURVEY. Monthly data are available back to Jan. 1985.

Page S-31

1. Less than 500 bales.
 2. Annual total includes revisions not distributed to the months.
 3. Average for crop year; Aug. 1-Jul. 31.
 4. For five weeks; other months four weeks.
- ◇ Based on 480-lb. bales, preliminary price reflects sales as of the 15th; revised price reflects total quantity purchased and dollars paid for the entire month (revised price includes discounts and premiums).
- # Includes data not shown separately.
- § Bales of 480 lbs..
- * New series.

Page S-32

1. Annual total includes revisions not distributed to the months.
2. Production of new vehicles (thous. of units) for Apr. 1987: *passenger cars*, 654; *trucks and buses*, 325.
3. Effective with 1984, data are reported on an annual basis only. The annual/end of year figure for 1982 has been revised and is available upon request.
4. Data are no longer available.

5. Effective with the July 1986 SURVEY, data have been revised back to 1984 and are available upon request.
 6. Effective with the Feb. 1987 SURVEY, data have been revised back to 1984 and are available upon request.
 7. Effective with 1987, frequency of reporting has been changed from a monthly to a quarterly basis.
- # Total includes backlog for nonrelated products and services and basic research.
- § Domestic cars comprise all cars assembled in the U.S. and cars assembled in Canada and imported to the U.S. under the provisions of the Automotive Products Trade Act of 1965. Imports comprise all other cars.
- ◇ Courtesy of R.L. Polk & Co.; republication prohibited. Because data for some states are not available, month-to-month comparisons are not strictly valid.
- † Excludes railroad-owned private refrigerator cars and private line cars.
- ‡ Monthly revisions for 1984-85 are available upon request.
- @ Effective with the Feb. 1986 SURVEY, retail inventories of trucks and buses have been revised back to 1967. These revisions, which were made to reflect updated factors, are shown on p. S-35 of the Feb. 1986 SURVEY.
- * New series. GVW: gross vehicle weight. For an explanation of methodology and historical data for retail sales of trucks and buses, see p. S-36 of the July 1986 SURVEY.
- †† Data for 1983-86 have been revised and are available upon request.

NASD Stock Price Indexes and Sales Value and Volume

SOURCE: National Association of Securities Dealers, Inc. The National Association of Securities Dealers Automated Quotations (NASDAQ) System included securities of 4,417 over-the-counter companies with a total market value of \$362.2 billion at the end of 1986. The NASDAQ National Market System (NASDAQ/NMS), which covers NASDAQ securities that meet certain market and financial criteria (such as shares outstanding and asset size), includes nearly all of the more than 2,600 larger NASDAQ companies.

NASDAQ price indexes include all NASDAQ/NMS equities (except warrants) and other NASDAQ domestic common stocks not designated on NMS. They are market-value weighted and are not adjusted for cash dividends. The monthly indexes are averages of daily closing values. For NASDAQ/NMS equities, all indexes use the last sale; for non-NMS equities, the indexes use the highest bid.

NASDAQ indexes were set equal to 100 on February 5, 1971, and NASDAQ/NMS indexes were set equal to 100 on July 10, 1984.

For NASDAQ/NMS issues, total daily volume of shares sold for each issue is the sum of the volume of the reported transactions. This same concept is used by the principal exchanges. For non-NMS issues, the volume of shares sold is calculated by summing the higher of the buy or sell number of shares for each issue as entered by each NASDAQ marketmaker. This is equivalent to the net change in the marketmaker's inventory plus the number of shares that the marketmaker has both bought and sold. The market value is the monthly total of daily dollar volume for all trading days in the month. The daily dollar volume is the sum of each issue's daily share volume multiplied by the last sale price for NASDAQ/NMS issues and the closing high bid for non-NMS issues.
