

DoD 4160.21-M

(b) Sale of this property through the RRRP will be conducted in accordance with the guidelines established in Chapter 7, Sales/RRRP.

3. The DRMO is responsible for accepting and processing nonsalable material and shall ensure that disposition is by the most economical and practical method possible. The following methods should be considered:

- a. The possibility of sale if the property were re-lotted and re-advertised.
- b. The possibility of donation under the criteria of paragraph B3, Chapter 8, A/D.
- c. The disposal of property in a sanitary fill. Small volumes of some types of property may be disposed of through refuse and trash collection service under the existing ISA.
- d. Service contract. This method should be applied as a last resort when all other alternatives are not possible or are not economically practicable.

4. Accountability of property which is not disposed of through RTDS may not be returned to the generating activity, except as specified in Chapter 4, Property Requiring Special Processing. HP shall be processed on HW disposal service contracts. Other property shall be downgraded to scrap, processed for A/D, or disposed by a DRMS service contract.

5. Usable property shall be turned in as individual line items with their assigned, valid National Stock Number (NSN), except as indicated below (unless authorized for batch lotting as stated in paragraph 6 below).

a. Property may be turned-in without a valid NSN when the material cannot be identified to a valid NSN in FED LOG, is considered lost, abandoned, or unclaimed privately owned personal property, confiscated, or captured enemy material. At a minimum, record positions 8 through 22 of the DTID (DD 1348-1A) will contain the Federal Supply Class (FSC), NATO Codification Bureau Code, and noun/nomenclature and/or part number.

b. Due to national security concerns, the FSCs listed in Attachment 2 require a higher degree of documentation. When these items are not assigned an NSN, the DTID must include the appropriate FSC, the valid part number and manufacturers name, nomenclature which accurately describes the item, the end item application, and a clear text statement explaining why the NSN is not included. This information may be annotated directly on the DTID or securely attached to the DTID.
