*For the Northeast multispecies fishery, the values for the most recent fishing mortality rates and biomass levels that were used to determine the status of the stocks in the Northeast Multispecies Fishery Management Plan (with the exception of silver hake, red hake, and offshore hake; and those stocks included in the Advisory Report on Stock Status [The 36th Northeast Regional Stock Assessment Review Committee (36th SARC), January 2003] are those indicated in the documents titled "Groundfish Assessment Review Meeting" (Northeast Fisheries Science Center Reference Document 01-16). The Northeast multispecies fishery is currently being managed under a Federal Court order, and a Settlement Agreement among various parties. In light of these circumstances, the biomass and fishing mortality thresholds utilized for determinations in this report were those contained in the above document, and not the approved Amendment 9 parameters. Unless otherwise noted, biomass thresholds were 50% Bmsy and fishing mortality thresholds were Fmsy (or proxies).

**Exact rebuilding time period unspecified in FMP. Rebuilding may take decades.

*** Pre-SFA Rebuilding Plan with a timeline defined.

**** Pre-SFA Rebuilding Plan with no timeline defined.

1. A formal rebuilding program was not required or submitted because either no fishing is allowed in this fishery, or incidental harvest is limited to levels necessary to meet Endangered Species Act (ESA) requirements. A recovery plan under the ESA is being developed.
2. While the biomass level is known, determining whether the stock is approaching an overfished condition requires an additional level of analysis which has not been done.
3. Fishery in the EEZ is closed; therefore, fishing mortality is very low.
4. The full name for this FMP is the Coral, Coral Reefs, and Live / Hard Bottom Habitats of the South Atlantic Region.
5. On July 11, 2003, NMFS partially approved the FMP for this stock. Although one of the disapproved provisions included the MFMT, a component of the overfishing definition, an examination of the rate of harvest (currently zero), relative to the approved MSY level (100,000 mt), indicates that overfishing is not occurring. In addition, no directed fishery for this stock currently exists. This species has the capacity to increase its biomass through vegetative growth by as much as 10 percent per day, thus doubling its biomass every two weeks. Therefore, it is unlikely that this stock is overfished.
6. The full name for this FMP is the Coral and Coral Reefs of the Gulf of Mexico.
7. The full name for this FMP is the Reef Fish Fishery of Puerto Rico and the U.S. Virgin Islands.
8. The full name for this FMP is the Queen Conch Resources of Puerto Rico and the U.S. Virgin Islands.
9. The full name for this FMP is the Corals and Reef Associated Invertebrates of Puerto Rico and the U.S. Virgin Islands.
10. The Salmon FMP contains three exceptions to the application of overfishing criteria and subsequent Council actions for stocks or stock complexes with conservation objectives: Exceptions: (1) hatchery stocks, (2) stocks for which Council management actions have inconsequential impacts, and (3) stocks listed under the ESA.
11. The Smith River Chinook is not part of the California Coastal Chinook ESU, which includes the Eel, Mattole, and Mad River stocks. However, there are no conservation objectives defined for the northern coastal chinook stocks. These stocks are managed consistent with NOAA Fisheries jeopardy standard / recovery plans for the California Coastal Chinook ESU. The Smith River stock is therefore also managed under the NOAA Fisheries jeopardy standard / recovery plans.

12. Amendment 14 to the Salmon FMP added these stocks to the list of stocks managed under the FMP but did not identify conservation objectives. The PFMC has not yet developed an objective. Prior to Amendment 14, Klamath River spring chinook were regarded as one of several sub-basin stocks protected by the Klamath River fall chinook objective. The NOAA Fisheries chinook status review included Klamath River fall and spring chinook as part of the same ESU.

13. The PFMC manages these fisheries consistent with provisions of the Pacific Salmon Treaty. These stocks originate from either U.S. or Canadian waters and are managed as mixed stock fisheries.

14. A recent court ruling (National Resource Defense Council, Inc. v. Evans) determined that rebuilding plans under the Pacific Coast Groundfish Fishery Management Plan (FMP) must be in the form of FMP amendments or proposed regulations. Therefore, portions of Amendment 12 to the FMP that provided a framework for rebuilding plans were set aside. Rebuilding plans for bocaccio, cowcod, widow rockfish, and yelloweye rockfish are expected to be developed by the Pacific Fishery Management Council (PFMC) in 2004. In the interim before Amendment 16-3 is implemented, this overfished species is being managed based on a rebuilding analysis and associated rebuilding measures adopted by the PFMC.

15. Fishery in the EEZ has been closed since 1999; fishing mortality is virtually zero.

16. The full name for this FMP is the Precious Corals Fishery of the Western Pacific Region.

17. There has been no fishing for this stock in the EEZ since 2001; fishing mortality is virtually zero.

18. Post-SFA overfishing/overfished definitions were approved for pelagic armorhead in 2003, but determinations have not yet been made relative to those new definitions. The fishery for pelagic armorhead in the EEZ has been closed since 1986.

19. This stock was previously listed as not overfished because it was assessed on the basis of pre-SFA criteria. A new definition has been adopted and approved that is in conformance with SFA guidelines, but a new assessment has not yet been made relative to this criteria.

20. Under Amendment 10 to the Western Pacific Pelagics FMP, a final rule for which was issued February 24, 2004 (69 FR 8336), the "pelagic sharks" stock group will be identified as 9 separate stocks, as specified in the amendment. Of those stocks, a recent assessment of blue sharks, using data from 1999, has indicated that overfishing is not occurring ($F/F_{MSY}=0.01$) and the stock is not overfished ($B/B_{MSY}=1.9$) (P. Kleiber, Y. Takeuchi, and H. Nakano. Calculation of plausible maximum sustainable yield (MSY) for blue sharks (*Prionace glauca*) in the North Pacific. Southwest Fisheries Science Center Administrative Report H-01-02, February 2001).

21. The fishing mortality rate determination for this species complex (Shallow Water Flatfish complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.

22. The fishing mortality rate determination for this species complex (Pelagic Shelf Rockfish complex) is “not being subjected to overfishing” based on Dusky Rockfish; no fishing mortality rate determination can be made about the individual species.
23. The fishing mortality rate determination for this species complex (Demersal Shelf Rockfish complex) is “not being subjected to overfishing” based on Yelloweye Rockfish; no fishing mortality rate determination can be made about the individual species.
24. The fishing mortality rate determination for this species complex (Thornyhead Rockfish complex) is “not being subjected to overfishing” based on Shortspine Thornyhead; no fishing mortality rate determination can be made about the individual species.
25. The fishing mortality rate determination for this species complex (Sharks complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
26. The fishing mortality rate determination for this species complex (other Skates complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
27. The fishing mortality rate determination for this species complex (Sculpins complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
28. The fishing mortality rate determination for this species complex (Octopus complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
29. The fishing mortality rate determination for this species complex (Squid complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
30. The fishing mortality rate determination for this species complex (Other Flatfish complex) is “not being subjected to overfishing” based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
31. The fishing mortality rate determination for this species complex (Other Rockfish complex) is “not being subjected to overfishing” based on Longspine Thornyhead and Shortspine Thornyhead; no fishing mortality rate determination can be made about the individual species.
32. The fishing mortality rate determination for this species complex (Skates complex) is "not being subjected to overfishing" based on abundance estimates for the complex; no fishing mortality rate determination can be made about the individual species.
33. A rebuilding plan for this stock was published in the Federal Register on 12/18/03 (68 FR 70484), with a comment period that ended on 2/17/04.
34. For the overfished North Atlantic blue and white marlins, Amendment One to the Atlantic Billfish FMP established a foundation to develop an international rebuilding plan. An international rebuilding plan with a two-phase approach was adopted in 2000 by ICCAT; Phase I has been implemented, while the United States continues to work toward its full implementation. It should be noted that the ICCAT rebuilding program does not satisfy all the requirements of the Magnuson-Stevens Act. NOAA Fisheries is continuing to work domestically to monitor its fisheries and promote conservation. The SCRS conducted an assessment of white marlin in spring 2002.
35. For overfished sailfish, Amendment One to the Atlantic Billfish FMP established the foundation to develop an international 10-year rebuilding program. While steps have been taken internationally to pursue recovery of the overfished west Atlantic sailfish stock, an international rebuilding program has not yet been adopted. NOAA Fisheries is continuing to work through ICCAT to establish an international rebuilding program and is working domestically to monitor its fisheries and promote conservation.
