CHANGING COMPENSATION COSTS IN THE WASHINGTON-BALTIMORE-NORTHERN VIRGINIA METROPOLITAN AREA – JUNE 2012

Total compensation costs for private industry workers increased 2.0 percent in the Washington-Baltimore-Northern Virginia, D.C.-Md.-Va.-W.Va., metropolitan area for the year ended June 2012, the U.S. Bureau of Labor Statistics reported today. Sheila Watkins, the Bureau's regional commissioner, noted that one year ago, Washington-Baltimore experienced an annual gain of 1.5 percent in total compensation costs. Locally, wages and salaries, the largest component of total compensation costs, advanced at a 1.9-percent pace for the 12-month period ended June 2012. Nationwide, both total compensation costs and wages and salaries rose 1.8 percent over the year. (See chart 1 and table 1.)

Washington-Baltimore is 1 of 15 metropolitan areas in the United States, and 1 of 5 areas in the South region of the country, for which locality compensation cost data are now available. Washington-Baltimore ranked fourth, tied with Houston and Minneapolis, in growth rate in total compensation costs. For the other areas, growth rates in total compensation ranged from 2.7 percent in Atlanta to 0.3 percent in Detroit. The Washington-Baltimore area was also fourth, along with Houston, in wage and salary gains from June 2011 to June 2012. For the other areas, growth rates in wages and salaries ranged from 2.6 percent in Detroit to 0.8 percent in Boston and Dallas. (See chart 2.)

Comparing the annual increases in total compensation costs among the five metropolitan areas in the South, Washington-Baltimore's growth rate (2.0 percent) was well below that for Atlanta (2.7 percent), but identical to Houston's. Both Miami (1.7 percent) and Dallas (1.4 percent) had growth rates lower than Washington's. Similarly, Washington-Baltimore's 1.9-percent gain in wages and salaries over this 12-month period was below Atlanta's 2.2-percent gain, but identical to Houston's. Miami (1.7 percent) and Dallas (0.8 percent) both had growth rates lower than Washington's. (See table 2.)

Locality compensation costs are part of the national Employment Cost Index (ECI), which measures quarterly changes in total compensation costs, including wages, salaries and employer costs for employee benefits. In addition to the 15 locality estimates provided in this release, ECI data for the nation, 4 geographical regions, and 9 geographical divisions are available. (Geographical definitions for the metropolitan areas mentioned in this release are included in the Technical Note.)

In addition to the geographic data, a comprehensive national report is available that provides data by industry, occupational group, and union status, as well as for both private, and state and local government employees. The ECI for the nation, regions, and divisions for September 2012 will be released on Wednesday, October 31, 2012 at 8:30 a.m. (ET). Information from the Employment Cost Index program is available to sensory impaired individuals upon request. Voice phone: 202-691-5200, Federal Relay Services: 1-800-877-8339.

Technical Note

The Employment Cost Index (ECI) is a measure of the change in the cost of labor, free from the influence of employment shifts among occupations and industries. The total compensation series includes changes in wages and salaries and employer costs for employee benefits.

Wages and salaries are defined as straight-time average hourly earnings or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions, excluding premium pay for overtime, work on weekends and holidays, and shift differentials. Production bonuses, incentive earnings, commission payments, and cost-of-living adjustments are included in straight-time earnings, whereas nonproduction bonuses (such as Christmas or year-end bonuses) are excluded. Also excluded are such items as payments-in-kind, free room and board, and tips.

Selection of areas

Based on available resources and the existing ECI sample, it was determined that estimates would be published for 14 metropolitan areas. Since the ECI sample sizes by area are directly related to area employment, the areas with the largest private industry employment as of the year 2000 were selected. For each of these areas, 12-month percent changes and associated standard areas were computed for the periods since December 2006. (Note: The Seattle-Tacoma-Olympia area was added to the list in September 2009 to make a total of 15 metropolitan areas.)

The metropolitan area definitions of the 15 published localities are listed below.
