

# CENTER FOR CORPORATE CLIMATE LEADERSHIP

---

**T**he Center for Corporate Climate Leadership will serve as EPA's new virtual resource center to help establish norms of climate leadership by encouraging companies with emerging climate objectives to identify and achieve cost-effective GHG emission reductions, while helping more advanced companies build their climate leadership activities into their supply chains and beyond.

Co-sponsored with its Partners—The Climate Registry, the Center for Climate and Energy Solutions, and the Association of Climate Change Officers—the 2012 Climate Leadership Awards will serve as a cornerstone of the new Center, alongside other activities such as:

CLIMATE  
LEADERSHIP  
AWARDS

- Offering GHG management tools and technical resources for a wide range of companies
- Providing learning opportunities and materials such as webinars and white papers
- Engaging and assisting NGOs and others to develop sound and practical GHG accounting guidance for green power and supply chains
- Working with other federal agencies to help reduce the government's impact on the climate

The EPA Center for Corporate Climate Leadership will build on the successes and legacy of the former Climate Leaders program—as well as EPA's other voluntary partnership programs—while expanding EPA's corporate GHG accounting and management work to a larger and more diverse group of organizations.
