# Test Story

Description

An adult, Nitika Vally, comes to the clinic on Aug. 14, 2012 for an annual checkup. The clinic staff collects basic identifying information, including name, birth date, and sex. The clinic staff reviews the patient's vaccination history and determines that the patient needs a Hep A (Varivax) vaccination. The clinic staff gives the patient a Vaccine Information Statement for Hepatitis A published by the CDC on Oct 25, 2011 to review. After reading the VIS the patient agrees to receive the vaccination. The clinic staff prepares a Hep A vaccination dose, Merck and Co Lot #190FV, from the clinic private vaccine stock and administers it to the patient in the right arm. The clinic staff enters the patient demographic information, VFC status, VIS information, and vaccination administration information into the EHR and transmits it to the IIS.

Pre Condition

NO PreCondition.

Post Condition

NO PostCondition.

Test Objectives

This test case examines the ability of an EHR to create a VXU message for single vaccination administered to an adult in the annual checkup. A typical populated message is tested for relevant "required", "required or empty" and "conditional" elements. The message must provide; -Patient demographic information in the PID segment -VFC status and VIS information in the OBX segments -Vaccination administration in the RXA and RXR segments. The test case provides an example of all the relevant elements.

Notes to Testers
