

DOMESTIC SAMPLING RESULTS

SCHEDULED SAMPLING – EXPOSURE ASSESSMENTS (CONDENSED AND REFORMATTED RESULTS)

Condensed and reformatted domestic scheduled sampling results – exposure assessments are presented in two tables for each compound class tested unless there is only one compound in the class, then the second table is not necessary. The first table (a) states the total number of animals analyzed (or the number of composite samples in the case of poultry), the number of non-violative positives (compounds detected at a level equal to or below the established tolerance), the number of violations, and the percent violations for each compound class. Since analyses for multiple compounds can be performed on the same sample, one sample (one animal or a composite from one poultry flock) could have more than one violation. The second table (b) presents the specific compounds that were detected within the compound class.

ANTIBIOTICS (7-plate bioassay)

FSIS analyzed 2,370 samples for antibiotic residues. Sixty-one (61) non-violative positives and 31 violations were detected. The residue violations consisted of 26 neomycin, four (4) gentamycin, and one (1) penicillin. Table 4a, *Antibiotics*, presents the results of the testing by production class. Table 4b, *Specific Antibiotic Violative Residues*, presents the specific antibiotics detected.

SCHEDULED SAMPLING – EXPOSURE ASSESSMENTS DATA FROM FSIS DATABASE

Tables 12a to 128 identify information as received from the FSIS Database System, Microbiological and Residue Computer Information System (MARCIS). (An explanation of Tables 33 to 128 can be found on page 68.)

PRODUCTION CLASS DATA

Tables 12a to 32a present the tissues analyzed, number of samples analyzed, number of violations, and the range for the amount detected for each compound tested in each production class. The number of positives and violations are reported in intervals, with the lowest interval being 0.01-0.10 ppm or 0.01-0.10 ppb. If samples did not contain detectable residues, then the samples are categorized under “None” for “Amount in Sample.” The no-detect level varies for each analyte and is not <0.01 ppm or <0.01 ppb for every analyte. The limits of detection may be found in Appendix I (Analytical Methods, 2005 National Residue Program). The last two columns indicate instances when samples were analyzed and residues were detected but not quantitated.

Tables 12b to 32b present the number of samples analyzed, number of violations, percent violative samples, and the upper 95% confidence limit for each compound class in each production class. The columns “Percent Violative Samples” and “Upper 95% Confidence Limit” provide an estimate of the percent violations and the associated upper 95% confidence limit on the percent of specified animals (groups of six animals for poultry) with a violation in at least one compound in the residue compound class listed.

SCHEDULED SAMPLING - EXPOSURE ASSESSMENTS DATA FROM FSIS DATABASE

COMPOUND CLASS DATA

Tables 33 to 128 present the tissues analyzed, number of samples analyzed, number of violations, and the range for the amount detected for each compound tested in each production class.

In Tables 33 to 128, the number of positives and violations are reported in intervals, with the lowest interval being 0.01-0.10 ppm or 0.01-0.10 ppb. If samples did not contain detectable residues, then the samples are categorized under “None” for “Amount in Sample.” The no-detect level varies for each analyte and is not <0.01 ppm or <0.01 ppb for every analyte. The limits of detection may be found in Appendix I (Analytical Methods, 2005 National Residue Program).

SCHEDULED SAMPLING - EXPLORATORY ASSESSMENTS

BERENIL

FSIS has designed and initiated an exploratory assessment for berenil, an antiprotozoal drug widely used in veterinary practice for the treatment of the tick-borne diseases trypanosomiasis and babesiosis. Although berenil is not approved for use in food producing animals, it has a potential for misuse because of its high degree of effectiveness for many tick-borne diseases in tropical regions (e.g., Puerto Rico), where tick infestation is a major concern. Table 129, *Berenil*, contains laboratory data of the samples collected and analyzed in 2005.

SCHEDULED SAMPLING - EXPLORATORY ASSESSMENTS (*continued*)

ENVIRONMENTAL CONTAMINANTS

FSIS conducted an exploratory assessment to survey the prevalence of heavy metals, lead and cadmium in steers. Samples with cadmium levels less than 10 ppb or lead levels less than 25 ppb are represented by a zero (0) in tables 130 and 131.

SCHEDULED SAMPLING - EXPLORATORY ASSESSMENTS (continued)

EQUINE

FSIS continued an alternate testing strategy to ensure equine products exported from the U.S. meet European Union testing requirements in 2005. The horse samples were tested for antibiotics, avermectins, chlorinated hydrocarbons/chlorinated organophosphates (CHCs/COPs), phenylbutazone, and sulfonamides. Table 132a, *Horses*, presents testing results by compound class. Table 132b, *Specific Violative Residues in Horses*, presents the specific residue detected.

MARKET HOGS AT VERY SMALL SLAUGHTER PLANTS

This project assessed the sulfonamide and antibiotic residue violation rate in very small market hog slaughter plants. The information obtained from this project will be used to determine if the sulfonamide and antibiotic violation rate in market hogs slaughtered at very small slaughter plants differs from the violation rate of market hogs slaughtered at large slaughter plants. Table 133a, *Market Hogs*, presents testing results by compound class. Table 133b, *Specific Antibiotic and Sulfonamides Violative Residues in Market Hogs*, presents the specific antibiotic or sulfonamide detected.

NON-STEROIDAL ANTI-INFLAMMATORY DRUGS (NSAID)

FAST-positive samples collected from dairy cows and market hogs were additionally analyzed for the following NSAIDs: flunixin, phenylbutazone, and dipyrone. The goals of the project were: 1) to examine the feasibility of including flunixin, phenylbutazone, and dipyrone in enforcement testing along with antibiotics and sulfonamides; and 2) to demonstrate that dairy cows exhibiting inflammatory conditions are at risk of being violative for flunixin, phenylbutazone, dipyrone, antibiotics and sulfonamides. Table 134a, *Non-steroidal anti-inflammatory compounds*, presents testing results by compound class. Table 134b, *Specific Non-steroidal anti-inflammatory Compounds Residues*, presents the specific residue detected. Both, Table 134a and Table 134b contain laboratory data of the samples collected and analyzed in 2005.

INSPECTOR GENERATED SAMPLING- SUSPECT ANIMALS

Inspector generated sampling results are presented in two tables for each specific analysis unless there is only one compound tested. The first table (a) states the total number of animals analyzed, the number of violations, and the percent violations for each production class. Since analyses for multiple compounds can be performed on the same sample, one sample (one animal) could have more than one violation. The second table (b) identifies the results for specific compounds that were detected within the compound class.

SWAB-TEST ON PREMISES (STOP)

FSIS used STOP to screen 3,749 animals for antibiotic, and sulfonamide residues. FSIS laboratories confirmed 17 violations in 17 animals. There were four (4) gentamicin, 11 penicillin, one (1) tilmicosin, and one (1) sulfadimethoxine residue violations. Table 135a, *Swab Test on Premises*, presents the screening test results by production class. Table 135b, *Specific STOP Violative Residue*, presents specific results for antibiotic, sulfonamide, and non-steroidal anti-inflammatory drug residues.

FSIS used FAST to screen 125,981 animals for antibiotic, and sulfonamide residues. In addition, samples found to be FAST positive for antibiotics or sulfonamides were further analyzed for flunixin, a non-steroidal anti-inflammatory compound. FSIS laboratories confirmed 1,015 violations in 917 animals. There were five (5) amikacin, six (6) ampicillin, one (1) chlortetracycline, 10 dihydrostreptomycin, 107 gentamicin, three (3) kanamycin, 132 neomycin, 52 oxytetracycline, 359 penicillin, 20 tetracycline, 35 tilmicosin, one (1) tylosin, one (1) spectinomycin, 119 sulfadimethoxine, 40 sulfamethazine, seven (7) sulfamethoxazole, one (1) sulfathiazole, and 116 flunixin residue violations. Table 136a, *Fast Antimicrobial Screen Test*, presents the screening test results by production class. FSIS analyzed samples from 83 animals for antibiotics and sulfonamides. FSIS laboratories confirmed five (5) violations in three (3) animals. There were two (2) gentamycin, one (1) penicillin, one (1) neomycin, and one (1) sulfadimethoxine residue violations. Table 137a, *Antibiotics and Sulfonamides*, presents testing results by production class. Table 137b, *Specific Antibiotic and Sulfonamide Violative Residues*, presents specific results detected within the class.

Analyses were conducted in one (1) formula-fed veal, one (1) chicken, and six (6) young turkey samples and no violations were found.

INSPECTOR GENERATED SAMPLING – SUSPECT POPULATIONS

FSIS conducted testing of suspect populations for sulfonamides in market hogs; sulfonamides and antibiotics in bob veal; and antibiotics, sulfonamides, *beta*-agonists, ractopamine, and flunixin in show animals.

FAST ANTIMICROBIAL SCREEN TEST (FAST) ON BOB VEAL

The FAST was used to screen 16,643 bob veal for antibiotics and sulfonamides. The total bob veal tested included both testing of a suspect population and testing of suspect animals. Of the animals tested, FSIS laboratory confirmed 155 violations in 131 animals. The residue violations consisted of one (1) chlortetracycline, one (1) dihydrostreptomycin, seven (7) gentamicin, 105 neomycin, eight (8) oxytetracycline, 16 penicillin, one (1) tetracycline, one (1) spectinomycin, five (5) sulfadimethoxine, two (2) sulfamethazine, seven (7) sulfamethoxazole, and one (1) sulfathiazole.

SHOW ANIMALS

FSIS conducted analyses for *beta*-agonists on 12 steers, two (2) heifers, 13 market hogs, two (2) goats, and 11 lambs, and no violations were found. No violations were found in two (2) lambs, one (1) heifer, and two (2) market hogs tested for antibiotics and sulfonamides.
