Subject: Position Limits on Commodities

Now is the time to put an end to the widespread abusive practices we see in the commodities markets under your oversight, and presumably with your knowledge.

Please consider setting a limit in each commodity, of one percent of worldwide production. That should not put a crimp in productivity, but it should halt the egregious price manipulation that has plagued certain markets for longer than should have been tolerated. Having established fair limits, you should then see that violators are brought to justice.

In liberty,

Carl J. Strang, Jr.
Winter Haven, FL
