

GeoPrisms Program

PROGRAM SOLICITATION NSF 12-537

REPLACES DOCUMENT(S): NSF 07-546

National Science Foundation

Directorate for Geosciences
Division of Ocean Sciences
Division of Earth Sciences

Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):

July 02, 2012

July 1, Annually Thereafter

IMPORTANT INFORMATION AND REVISION NOTES

GeoPRISMS (Geodynamic Processes at Rifting and Subducting Margins) is the successor to the MARGINS Program.

Important Reminders

A revised version of the *NSF Proposal & Award Policies & Procedures Guide* (PAPPG), [NSF 11-1](#), was issued on October 1, 2010 and is effective for proposals submitted, or due, on or after January 18, 2011. Please be advised that the guidelines contained in [NSF 11-1](#) apply to proposals submitted in response to this funding opportunity. Proposers who opt to submit prior to January 18, 2011, must also follow the guidelines contained in [NSF 11-1](#).

Cost Sharing: The PAPPG has been revised to implement the National Science Board's recommendations regarding cost sharing. Inclusion of voluntary committed cost sharing is prohibited. In order to assess the scope of the project, all organizational resources necessary for the project must be described in the Facilities, Equipment and Other Resources section of the proposal. The description should be narrative in nature and must not include any quantifiable financial information. Mandatory cost sharing will only be required when explicitly authorized by the NSF Director. See the PAPP Guide Part I: *Grant Proposal Guide (GPG)* [Chapter II.C.2.g\(xi\)](#) for further information about the implementation of these recommendations.

Data Management Plan: The PAPPG contains a clarification of NSF's long standing data policy. All proposals must describe plans for data management and sharing of the products of research, or assert the absence of the need for such plans. FastLane will not permit submission of a proposal that is missing a Data Management Plan. The Data Management Plan will be reviewed as part of the intellectual merit or broader impacts of the proposal, or both, as appropriate. Links to data management requirements and plans relevant to specific Directorates, Offices, Divisions, Programs, or other NSF units are available on the NSF website at: <http://www.nsf.gov/bfa/dias/policy/dmp.jsp>. See [Chapter II.C.2.j](#) of the GPG for further information about the implementation of this requirement.

Postdoctoral Researcher Mentoring Plan: As a reminder, each proposal that requests funding to support postdoctoral researchers must include, as a supplementary document, a description of the mentoring activities that will be provided for such individuals. Please be advised that if required, FastLane will not permit submission of a proposal that is missing a Postdoctoral Researcher Mentoring Plan. See [Chapter II.C.2.j](#) of the GPG for further information about the implementation of this requirement.

SUMMARY OF PROGRAM REQUIREMENTS

General Information

Program Title:

GeoPRISMS Program

Synopsis of Program:

GeoPRISMS (Geodynamic Processes at Rifting and Subducting Margins) is the successor to the MARGINS Program. GeoPRISMS will investigate the coupled geodynamics, earth surface processes, and climate interactions that build and modify continental margins over a wide range of timescales. These interactions cross the shoreline and have applications to margin evolution and dynamics, construction of stratigraphic architecture, accumulation of economic resources, and associated geologic hazards and environmental management. The GeoPRISMS Program includes two broadly integrated science initiatives (*Subduction Cycles and Deformation* and *Rift Initiation and Evolution*), linked by five overarching scientific topics and themes, where transformative advances are likely to occur in the next decade, and where a focused scientific program could be most effective. These overarching

science topics include 1) Origin and evolution of continental crust; 2) Fluids, magmas and their interactions; 3) Climate-surface-tectonics feedbacks; 3) Geochemical cycles; and 5) Plate boundary deformation and geodynamics. Each of the initiatives has identified primary sites for focused investigations, as well as thematic studies that will complement primary site studies

Further information and a science plan for the program detailing each initiative and the associated thematic studies, as well as the overarching themes, can be found on the GeoPRISMS website at <http://www.geoprisms.org/>.

The expected level of funding will be approximately \$5 million per year for the foreseeable future.

Cognizant Program Officer(s):

Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Bilal U. Haq, Program Director, Marine Geosciences Section, Division of Ocean Sciences, telephone: (703) 292-8581, email: bhaq@nsf.gov
- Jennifer Wade, Program Director, Earth Processes Section, Division of Earth Sciences, telephone: (703) 292-4739, email: jwade@nsf.gov
- James Beard, Program Director, Ocean Drilling Program, Division of Ocean Sciences, telephone: (703)292-8581, email: jbeard@nsf.gov

Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):

- 47.050 --- Geosciences

Award Information

Anticipated Type of Award: Standard Grant or Continuing Grant

Estimated Number of Awards: 10

Anticipated Funding Amount: \$5,000,000 pending the availability of funds

Eligibility Information

Organization Limit:

Proposals may only be submitted by the following:

- Proposals for postdoctoral fellowships must be submitted by a US academic institution. For all other proposals, the categories of proposers identified in the [Grant Proposal Guide](#) are eligible to submit proposals under this program solicitation.

PI Limit:

None Specified

Limit on Number of Proposals per Organization:

None Specified

Limit on Number of Proposals per PI:

None Specified

Proposal Preparation and Submission Instructions

A. Proposal Preparation Instructions

- **Letters of Intent:** Not Applicable
- **Preliminary Proposal Submission:** Not Applicable
- **Full Proposals:**
 - Full Proposals submitted via FastLane: NSF Proposal and Award Policies and Procedures Guide, Part I: Grant Proposal Guide (GPG) Guidelines apply. The complete text of the GPG is available electronically on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg.
 - Full Proposals submitted via Grants.gov: NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov Guidelines apply (Note: The NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide)

B. Budgetary Information

- **Cost Sharing Requirements:** Inclusion of voluntary committed cost sharing is prohibited.
- **Indirect Cost (F&A) Limitations:** Not Applicable
- **Other Budgetary Limitations:** Not Applicable

C. Due Dates

- **Full Proposal Deadline(s)** (due by 5 p.m. proposer's local time):

July 02, 2012

July 1, Annually Thereafter

Proposal Review Information Criteria

Merit Review Criteria: National Science Board approved criteria. Additional merit review considerations apply. Please see the full text of this solicitation for further information.

Award Administration Information

Award Conditions: Standard NSF award conditions apply.

Reporting Requirements: Standard NSF reporting requirements apply.

I. INTRODUCTION

Like the MARGINS Program, GeoPRISMS is a community-driven Program that will enhance understanding of the complex processes governing global continental margin evolution. Mechanical, chemical, biological and fluid processes act in concert to drive the initiation, evolution and eventual destruction of continental margins, as well as the accumulation of resources in these regions. GeoPRISMS will expand the dimensions of the original program in several fundamental ways: (1) integration of scientific emphases, defining two initiatives (*SCD* and *R/E*), rather than the four within MARGINS, (2) explicit inclusion of surface processes and their feedbacks in the evolution of continental margins, (3) consideration of ancient and exhumed margins to understand parts of the system that are not accessible at active margins, (4) implementation of science objectives through a combination of focus-sites (now termed primary sites) and thematic based investigations, (5) further integration through overarching scientific themes that cross-cut tectonic categories, (6) increased attention to US margins and facilities such as EarthScope and the Cascadia Amphibious Array, (7) expanded emphasis on issues with direct societal impact, and (8) a vertically-integrated education and outreach program supporting development from K-12 to early career scientists. GeoPRISMS will continue to emphasize multidisciplinary research and studies that cross the shoreline, recognizing that the shoreline is where much of continental evolution takes place, and is also where the dynamics of the solid Earth have the largest impact on human populations.

The GeoPRISMS Program is jointly supported by the Divisions of Earth and Ocean Sciences of the Directorate for Geosciences.

II. PROGRAM DESCRIPTION

The National Science Foundation (NSF) invites proposals directed towards the program elements listed below in the special-focus

section. NSF funding will be provided by the Divisions of Earth and Ocean Sciences.

Proposals submitted to the GeoPRISMS Program should include a statement (upfront in the Introduction) addressing the relevance of the proposed study to the overall goals of the program and the connections of the research to initiative primary sites and/or thematic studies. Proposals will be reviewed in accordance with established NSF procedures and the criteria described in the GPG (<http://www.nsf.gov/pubs/ods/getpub.cfm?gpg>) and the additional solicitation specific review criteria. Competition for GeoPRISMS funding will take place once a year and proposals will be evaluated by a joint Earth and Ocean Sciences panel. The proposal deadline is July 1 of each year for funding in the following fiscal year. Proposals can be submitted to any of the two programs named below, depending on their degree of relevance to marine or onshore work. In addition, proposals can also be submitted to the Ocean Drilling Program, but these should contain a section that addresses the potential of the proposed research to enhance the effectiveness or planning of proposed drilling activities. Questions regarding proposal preparation and deadlines should be directed to the program officers listed in this solicitation for the following programs: Marine Geology and Geophysics and Ocean Drilling in the Division of Ocean Sciences, and Petrology and Geochemistry in the Division of Earth Sciences. Proposals for some of the overarching science topics can also be submitted, with prior program-officer concurrence, to Core programs and other special programs in these two Divisions.

Scientific Objectives of the GeoPRISMS Program

The GeoPRISMS science objectives were established by the broader geosciences community through a series of community workshops with the aim that GeoPRISMS will carry out interdisciplinary investigations of the coupled geodynamics, earth surface processes and climate interactions that build and modify continental margins over a wide range of time scales. These interactions cross the shoreline and have applications to margin evolution and dynamics, construction of stratigraphic architecture, accumulation of economic resources, and associated geologic hazards and environmental management. GeoPRISMS investigations should be aimed towards a comprehensive understanding of the observable system properties, and can include theoretical, numerical and experimental studies, as well as field investigations. GeoPRISMS objectives must be achievable with existing technological capabilities or reasonable increments beyond present capabilities, but should be open to a range of integrative and interdisciplinary community experiments. Finally, broader impacts such as societal relevance, contribution within the discipline, and education and outreach are important elements of the GeoPRISMS Program.

The GeoPRISMS Initiatives

Subduction Cycles and Deformation (SCD)

The *SCD* initiative takes a holistic approach to the deformation processes and material cycles governed by subduction. It integrates and expands the former SEIZE and SubFac initiatives of the MARGINS Program, building on a growing recognition that the two systems are tightly linked and responding to many of the same forcing functions, although manifest in different ways. The *SCD* Initiative focuses on the coupled processes responsible for both long-term margin evolution and material transfer and short-term plate boundary deformation and volcanism. For example, *SCD* studies can examine the properties, mechanisms, and manifestations of strain build-up and release along the plate boundary, the transport and release of volatiles such as H₂O and CO₂ through the thrust zone and sub-arc mantle, and the ways in which these processes affect the long-term growth and evolution of continents. In so doing, *SCD* will provide fundamental scientific understanding of the processes that generate some of the largest natural hazards on the planet, including great earthquakes, tsunamis, and explosive volcanic eruptions.

The primary sites identified by the GeoPRISMS research community for this initiative include: the Aleutians, Cascadia and New Zealand margins.

Details of the *SCD* initiative, including objectives of primary sites and associated thematic studies can be found on the GeoPRISMS web site at <http://www.geoprisms.org/>.

Rift Initiation and Evolution (RIE)

The *RIE* initiative provides a new and broad perspective on the processes by which continents break apart. It expands the former RCL (Rupturing Continental Lithosphere) initiative of the MARGINS Program to include all stages of continental breakup, with increased emphasis on the interaction between surface processes, sedimentation, and continental evolution. It includes early-stage rifts, but also the study of passive margins, which archive the entire history of rift zone construction and evolution. This approach provides direct relevance to understanding both mineral and hydrocarbon resources. The *RIE* initiative seeks to determine the parameters and physical properties that control the processes of continental evolution, with particular emphasis on the initiation of continental rift zones, feedbacks between tectonics, magmatism and surficial processes, and the resulting stratigraphic and tectonic architecture of rifted margins.

The primary sites identified by the GeoPRISMS research community for this initiative are the Eastern North American Margin (ENAM) and East African Rift System (EARS).

Details of the *RIE* initiative, including the objectives of primary sites and associated thematic studies can be found on the GeoPRISMS web site at <http://www.geoprisms.org/>.

Overarching Themes

In addition to the two initiatives listed above, a suite of five overarching themes has been identified by the science community that will serve as the basis for integrative studies and provide a framework for cross-initiative programs: (1) Origin and Evolution of Continental Crust; (2) Fluids, Magmas and Their Interactions; (3) Climate-Surface-Tectonic Feedbacks; (4) Geochemical Cycles; and (5) Plate Boundary Deformation and Geodynamics. Details of the overarching scientific topics and themes can be seen in the science plans posted on the GeoPRISMS web site at <http://www.geoprisms.org/>.

Continued Community Input

While the geosciences community has made substantial effort to produce the draft science plans for the two initiatives of the GeoPRISMS Program, it nevertheless represents only a broad outline of science priorities and future directions. The details of the studies, including possible community experiments at each of the primary sites for the two initiatives (i.e., the operations plans), must be developed further in special focus community fora, leading to revisions of the science and implementation plans. Several such planning workshops have already occurred or will take place in the near future (see GeoPRISMS web site at <http://www.geoprisms.org/>). The extensive science objectives and the numerous primary research sites identified by the community also will require that the research be phased, in order to focus the limited available resources in a practical and cost-effective manner for a small number of objectives and site(s) at one time. The community will continue to provide recommendations to the Foundation through community workshops and the GeoPRISMS Steering and Oversight Committee (GSOC). Based on this input, program funding priorities and focus will continue to evolve, and each year, at least three months before the proposal deadline, the new focus and other special requirements for proposals (if any) will be announced to the community through the GeoPRISMS web site. The GSOC is tasked with continually monitoring the operations and reviewing progress towards the stated goals within each initiative's science plan, as well as developing the next set of priorities with the community's involvement, while encouraging attempts

at integration and syntheses of results.

Postdoctoral Fellowship Program

GeoPRISMS Postdoctoral Fellowship program is aimed at providing opportunities for early-career scientists to solidify research skills, build a track record, establish peer relationships, and acquire professional self-confidence. NSF's GeoPRISMS Program provides support for postdoctoral researchers to conduct up to two years of multi-disciplinary research at higher education institutions in the United States. The intention is to encourage individuals, typically within five years after award of their Ph.D., to diversify their expertise relative to that used in their thesis research.

The GeoPRISMS Postdoctoral Fellowship is designed so that recipients can choose the research environment most beneficial for their scientific development and that of the GeoPRISMS Program. To this end, applicants are encouraged to establish a relationship with a proposed advisor (mentor) well in advance of proposal submission.

Although awards must be held at U.S. institutions, there is no citizenship requirement and nationals of countries involved in the NSF-GeoPRISMS Program are encouraged to apply. It is expected that candidates will write their own materials for submission, except where otherwise required. There is no fixed dollar amount for a postdoctoral proposal; rather, the budget should be for the candidate's direct work only and should be appropriate to the postdoctoral research project, including salary commensurate with the experience of the candidate, institutional standards and local cost of living.

GeoPRISMS Postdoctoral Fellowship proposals are subject to the same submission and review criteria as other proposals for GeoPRISMS funding. Submissions should state that the proposal is for a GeoPRISMS Postdoctoral Fellowship and must be submitted by the institution to which an award would be made. In addition to the standard NSF proposal requirements, applicants should also include: a short abstract of your dissertation research and planned publications (not to exceed one single-spaced page); any fellowships, scholarships, teaching, and other positions relevant to your field held since entering college/university; any academic honors you have received relevant to your major field of study; your native language and fluency in other languages; and a statement of your long-term career goals and (particularly for international fellowship candidates) the ways the GeoPRISMS Fellowship will lead to development of long-term collaborative activities in GeoPRISMS science.

The proposal should also be supported by four (4) letters of reference sent directly to the lead program officer at NSF for the GeoPRISMS Program (currently, Dr. Bilal Haq, GeoPRISMS Fellowship References, National Science Foundation, National Science Foundation, 4201 Wilson Blvd., Arlington, VA 22230). It is anticipated that one of your referees will be your Ph.D. thesis adviser, and another the sponsoring/collaborating scientist at the proposed host institution. The latter reference should state that your proposed mentor and institution are willing to host you and can accept the GeoPRISMS Fellowship award. Other referees should be faculty members or researchers with current knowledge of your academic and/or professional experience.

Workshop, Theoretical Institute and Rapid Response Proposals

The GeoPRISMS Program will also continue to support science synthesis and planning workshops and Theoretical and Experimental Institutes, to facilitate integration within and between the initiatives. In addition, proposals that require rapid response to events that create opportunities (RAPID - see PAPPG for a description and guidance) for the study of extant processes at GeoPRISMS primary sites and are compatible with GeoPRISMS science plans will also be accepted. RAPID proposals may be submitted at any time.

III. AWARD INFORMATION

Under this solicitation, the program expects to make approximately 10 standard or continuing awards for up to five years. NSF anticipates having approximately \$5 million in fiscal year 2012, and annually thereafter, pending the availability of funds.

IV. ELIGIBILITY INFORMATION

Organization Limit:

Proposals may only be submitted by the following:

- Proposals for postdoctoral fellowships must be submitted by a US academic institution. For all other proposals, the categories of proposers identified in the [Grant Proposal Guide](#) are eligible to submit proposals under this program solicitation.

PI Limit:

None Specified

Limit on Number of Proposals per Organization:

None Specified

Limit on Number of Proposals per PI:

None Specified

V. PROPOSAL PREPARATION AND SUBMISSION INSTRUCTIONS

A. Proposal Preparation Instructions

Full Proposal Preparation Instructions: Proposers may opt to submit proposals in response to this Program Solicitation via Grants.gov or via the NSF FastLane system.

- Full proposals submitted via FastLane: Proposals submitted in response to this program solicitation should be prepared and submitted in accordance with the general guidelines contained in the NSF Grant Proposal Guide (GPG). The complete text of the GPG is available electronically on the NSF website at: http://www.nsf.gov/publications/pub_summ.jsp?ods_key=gpg. Paper copies of the GPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov. Proposers are reminded to identify this program solicitation number in the program solicitation block on the NSF Cover Sheet For Proposal to the National Science Foundation. Compliance with this requirement is critical to determining the relevant proposal processing guidelines. Failure to submit this information may delay processing.
- Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov. The complete text of the NSF Grants.gov Application Guide is available on the Grants.gov website and on the NSF website at: (http://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide). To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via the NSF FastLane system. Chapter II, Section D.4 of the Grant Proposal Guide provides additional information on collaborative proposals.

In addition to the standard NSF guidelines, proposals submitted to the GeoPRISMS Program should also include a statement addressing the relevance of the proposed study to the overall goals of the GeoPRISMS Program and their relationship to initiative objectives, primary sites, or thematic studies, as well as identified special-focus experiments. Proposals submitted for support from the Ocean Drilling Program should contain a section that addresses the potential of the proposed research to enhance the effectiveness or planning of proposed drilling activities.

Data Management Requirements: Proposals must include a section outlining how the project will comply with the GeoPRISMS data management policy (see GeoPRISMS web page for copy of the policy at <http://www.geoprisms.org/>).

B. Budgetary Information

Cost Sharing: Inclusion of voluntary committed cost sharing is prohibited

C. Due Dates

- **Full Proposal Deadline(s)** (due by 5 p.m. proposer's local time):
 - July 02, 2012
 - July 1, Annually Thereafter

D. FastLane/Grants.gov Requirements

- **For Proposals Submitted Via FastLane:**

Detailed technical instructions regarding the technical aspects of preparation and submission via FastLane are available at: <https://www.fastlane.nsf.gov/a1/newstan.htm>. For FastLane user support, call the FastLane Help Desk at 1-800-673-6188 or e-mail fastlane@nsf.gov. The FastLane Help Desk answers general technical questions related to the use of the FastLane system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

Submission of Electronically Signed Cover Sheets. The Authorized Organizational Representative (AOR) must electronically sign the proposal Cover Sheet to submit the required proposal certifications (see Chapter II, Section C of the Grant Proposal Guide for a listing of the certifications). The AOR must provide the required electronic certifications within five working days following the electronic submission of the proposal. Further instructions regarding this process are available on the FastLane Website at: <https://www.fastlane.nsf.gov/fastlane.jsp>.

- **For Proposals Submitted Via Grants.gov:**

Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources webpage: http://www07.grants.gov/applicants/app_help_reso.jsp. In addition, the NSF Grants.gov Application Guide provides additional technical guidance regarding preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-518-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this solicitation.

Submitting the Proposal: Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to the NSF FastLane system for further processing.

VI. NSF PROPOSAL PROCESSING AND REVIEW PROCEDURES

Proposals received by NSF are assigned to the appropriate NSF program where they will be reviewed if they meet NSF proposal preparation requirements. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with the oversight of the review process. Proposers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal.

A. NSF Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board (NSB)-approved merit review criteria: intellectual merit and the broader impacts of the proposed effort. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two NSB-approved merit review criteria are listed below. The criteria include considerations that help define them. These considerations are suggestions and not all will apply to any given proposal. While proposers must address both merit review criteria, reviewers will be asked to address only those considerations that are relevant to the proposal being considered and for which the reviewer is qualified to make judgements.

What is the intellectual merit of the proposed activity?

How important is the proposed activity to advancing knowledge and understanding within its own field or across different fields? How well qualified is the proposer (individual or team) to conduct the project? (If appropriate, the reviewer will comment on the quality of the prior work.) To what extent does the proposed activity suggest and explore creative, original, or potentially transformative concepts? How well conceived and organized is the proposed activity? Is there sufficient access to resources?

What are the broader impacts of the proposed activity?

How well does the activity advance discovery and understanding while promoting teaching, training, and learning? How well does the proposed activity broaden the participation of underrepresented groups (e.g., gender, ethnicity, disability, geographic, etc.)? To what extent will it enhance the infrastructure for research and education, such as facilities, instrumentation, networks, and partnerships? Will the results be disseminated broadly to enhance scientific and technological understanding? What may be the benefits of the proposed activity to society?

Examples illustrating activities likely to demonstrate broader impacts are available electronically on the NSF website at: <http://www.nsf.gov/pubs/gpg/broaderimpacts.pdf>.

Mentoring activities provided to postdoctoral researchers supported on the project, as described in a one-page supplementary document, will be evaluated under the Broader Impacts criterion.

Additional Solicitation Specific Review Criteria

Proposals submitted to the GeoPRISMS program will also be evaluated for relevance of the proposed study to the overall goals of the GeoPRISMS initiatives and their relationship to identified special-focus experiments.

NSF staff also will give careful consideration to the following in making funding decisions:

Integration of Research and Education

One of the principal strategies in support of NSF's goals is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions provide abundant opportunities where individuals may concurrently assume responsibilities as researchers, educators, and students and where all can engage in joint efforts that infuse education with the excitement of discovery and enrich research through the diversity of learning perspectives.

Integrating Diversity into NSF Programs, Projects, and Activities

Broadening opportunities and enabling the participation of all citizens -- women and men, underrepresented minorities, and persons with disabilities -- is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.

B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to formulate a recommendation to either support or decline each proposal. The Program Officer assigned to manage the proposal's review will consider the advice of reviewers and will formulate a recommendation.

After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to the cognizant Division Director whether the proposal should be declined or recommended for award. NSF is striving to be able to tell applicants whether their proposals have been declined or recommended for funding within six months. The time interval begins on the deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director accepts the Program Officer's recommendation.

A summary rating and accompanying narrative will be completed and submitted by each reviewer. In all cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the proposer will receive an explanation of the decision to award or decline funding.

In all cases, after programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants and Agreements for review of business, financial, and policy implications and the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement signed by the NSF Grants and Agreements Officer does so at their own risk.

VII. AWARD ADMINISTRATION INFORMATION

A. Notification of the Award

Notification of the award is made to *the submitting organization* by a Grants Officer in the Division of Grants and Agreements. Organizations whose proposals are declined will be advised as promptly as possible by the cognizant NSF Program administering the program. Verbatim copies of reviews, not including the identity of the reviewer, will be provided automatically to the Principal Investigator. (See Section VI.B. for additional information on the review process.)

B. Award Conditions

An NSF award consists of: (1) the award letter, which includes any special provisions applicable to the award and any numbered amendments thereto; (2) the budget, which indicates the amounts, by categories of expense, on which NSF has based its support (or otherwise communicates any specific approvals or disapprovals of proposed expenditures); (3) the proposal referenced in the award letter; (4) the applicable award conditions, such as Grant General Conditions (GC-1); * or Research Terms and Conditions * and (5) any announcement or other NSF issuance that may be incorporated by reference in the award letter. Cooperative agreements also are administered in accordance with NSF Cooperative Agreement Financial and Administrative Terms and Conditions (CA-FATC) and the applicable Programmatic Terms and Conditions. NSF awards are electronically signed by an NSF Grants and Agreements Officer and transmitted electronically to the organization via e-mail.

*These documents may be accessed electronically on NSF's Website at http://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF. Paper copies may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-7827 or by e-mail from nsfpubs@nsf.gov.

More comprehensive information on NSF Award Conditions and other important information on the administration of NSF awards is contained in the NSF *Award & Administration Guide* (AAG) Chapter II, available electronically on the NSF Website at http://www.nsf.gov/publications/pub_summ.jsp?ods_key=aag.

C. Reporting Requirements

For all multi-year grants (including both standard and continuing grants), the Principal Investigator must submit an annual project report to the cognizant Program Officer at least 90 days before the end of the current budget period. (Some programs or awards require more frequent project reports). Within 90 days after expiration of a grant, the PI also is required to submit a final project report, and a project outcomes report for the general public.

Failure to provide the required annual or final project reports, or the project outcomes report will delay NSF review and processing of any future funding increments as well as any pending proposals for that PI. PIs should examine the formats of the required reports in advance to assure availability of required data.

PIs are required to use NSF's electronic project-reporting system, available through FastLane, for preparation and submission of annual and final project reports. Such reports provide information on activities and findings, project participants (individual and organizational), publications, and other specific products and contributions. PIs will not be required to re-enter information previously provided, either with a proposal or in earlier updates using the electronic system. Submission of the report via FastLane constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report must be prepared and submitted using Research.gov. This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

VIII. AGENCY CONTACTS

Please note that the program contact information is current at the time of publishing. See program website for any updates to the points of contact.

General inquiries regarding this program should be made to:

- Bilal U. Haq, Program Director, Marine Geosciences Section, Division of Ocean Sciences, telephone: (703) 292-8581, email: bhaq@nsf.gov
- Jennifer Wade, Program Director, Earth Processes Section, Division of Earth Sciences, telephone: (703) 292-4739, email: jwade@nsf.gov
- James Beard, Program Director, Ocean Drilling Program, Division of Ocean Sciences, telephone: (703)292-8581, email: jbeard@nsf.gov

For questions related to the use of FastLane, contact:

- FastLane Help Desk, telephone: 1-800-673-6188; e-mail: fastlane@nsf.gov.

For questions relating to Grants.gov contact:

- Grants.gov Contact Center: If the Authorized Organizational Representatives (AOR) has not received a confirmation message from Grants.gov within 48 hours of submission of application, please contact via telephone: 1-800-518-4726; e-mail: support@grants.gov.

IX. OTHER INFORMATION

The NSF Website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this Website by potential proposers is strongly encouraged. In addition, National Science Foundation Update is a free e-mail subscription service designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF Regional Grants Conferences. Subscribers are informed through e-mail when new publications are issued that match their identified interests. Users can subscribe to this service by clicking the "Get NSF Updates by Email" link on the [NSF web site](#).

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding opportunities may be accessed via this new mechanism. Further information on Grants.gov may be obtained at <http://www.grants.gov>.

ABOUT THE NATIONAL SCIENCE FOUNDATION

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is "to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering."

NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.

NSF receives approximately 40,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Arctic and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See Grant Proposal Guide Chapter II, Section D.2 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Website at <http://www.nsf.gov>

PRIVACY ACT AND PUBLIC BURDEN STATEMENTS

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by awardees will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/grantees to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding applicants or nominees as part of a joint application review process, or in order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See Systems of Records, [NSF-50](#), "Principal Investigator/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004), and [NSF-51](#), "Reviewer/Proposal File and Associated Records," 69 Federal Register 26410 (May 12, 2004). Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Division of Administrative Services
National Science Foundation
Arlington, VA 22230
