### Advance Statistics on GDP by Industry for 2010

By Teresa L. Gilmore, Edward T. Morgan, and Sarah B. Osborne

**D**URABLE-GOODS manufacturing and retail trade were among the leading contributors to the upturn in U.S. economic growth in 2010, according to preliminary statistics on real gross domestic product (GDP) by industry from the Bureau of Economic Analysis. The economic recovery was widespread: 20 of 22 industry groups contributed to real GDP growth.

The advance statistics on GDP by industry were released by the Bureau of Economic Analysis (BEA) on April 26, 2011. These statistics reflect preliminary source data on the distribution of growth in real GDP and inflation by industry.

Highlights for 2010 include the following:

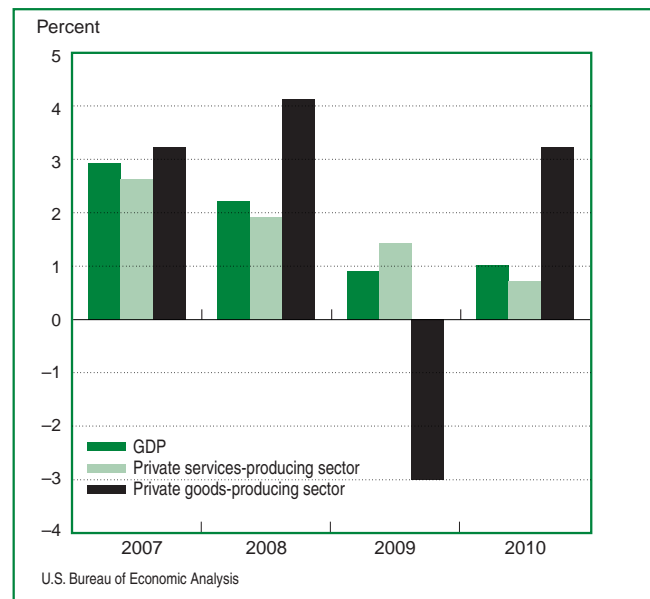

- Value added, which measures an industry's contribution to GDP, for the private goods-producing sector rose 3.2 percent in 2010 after falling 6.4 percent in 2009 (chart 1); manufacturing value added rose 5.8 percent. All major goods-producing industry groups except construction contributed to GDP growth. The sector's share of current-dollar GDP rose to 18.1 percent in 2010.
- Value added for the services-producing sector grew 2.8 percent in 2010. Retail trade value added grew 5.2 percent, reflecting increased consumer purchases after 2 consecutive years of contraction.
- Growth in the GDP price index rose slightly to 1.0 percent (chart 2). Growth in value-added prices for the goods-producing sector turned up, increasing 3.2 percent after decreasing 3.0 percent in 2009; the upturn reflected a sharp upturn in prices for mining and agriculture. Growth in value-added prices for the private services-producing sector, which accounts for more than two-thirds of GDP, decelerated in 2010, increasing 0.7 percent after increasing 1.4 percent in 2009.

These preliminary statistics were prepared for major industry groups using a methodology that incorporates summary source data from the March 2011 update of the national income and product accounts

**Chart 1. Annual Growth in Real GDP**

**Chart 2. Annual Growth in Value-Added Prices**

(NIPAs). In addition, this release incorporates expanded Quarterly Services Survey data for the following industries: air transportation; warehousing and storage; rental and leasing services; ambulatory health care services; social assistance; arts, entertainment, and recreation; and other services.

The advance statistics provide reliable information on the direction of change in real growth for major industry groups and an indication of whether industries' real growth was well-above, well-below, or about average with respect to overall GDP growth.

The statistics presented in this article will be revised as part of the 2011 annual revision of the annual industry accounts. This annual revision will incorporate more detailed industry source data and the results from the 2011 annual NIPA revision.

### Data Availability

The advance statistics on value added by industry are presented in current dollars, chained (2005) dollars, chain-type quantity indexes, and chain-type price indexes.

Annual input-output accounts for 2010 will be available in the fall of 2011. The statistics for 2010 and the full set of annual industry accounts are available interactively on BEA's Web site. For more information, visit [www.bea.gov/industry/index.htm#annual](http://www.bea.gov/industry/index.htm#annual).

For a guide to the annual industry accounts, see "Measuring the Nation's Economy: An Industry Perspective: A Primer on BEA's Industry Accounts" [www.bea.gov/industry/pdf/industry\\_primer.pdf](http://www.bea.gov/industry/pdf/industry_primer.pdf).

### Acknowledgments

Edward T. Morgan, Chief of the Inter-Industry Statistics Branch of the Industry Applications Division (IAD) supervised the preparation of the statistics. Brian C. Moyer, Deputy Director of the Bureau of Economic Analysis, Nicole M. Mayerhauser, Chief of the Industry Sector Division (ISD), and Erich H. Strassner, Chief of IAD, provided overall guidance. Thomas F. Howells III, Chief of the Input-Output Systems Branch in IAD, managed the economic information systems used to produce and review the statistics.

The statistics for 2010 were prepared by Brian M. Lindberg. The following staff provided guidance and contributed to the preparation of the industry statistics and analysis: Kevin J. Muck, Chief of the Goods and Distributive Services Branch in ISD, Sherlene K.S. Lum, Chief of the Information and Business Services Branch in ISD, and Patricia A. Washington, Chief of the Personal Services and Government Branch in ISD. Robert J. McCahill, Program Coordinator in ISD, Gabriel W. Medeiros in IAD, and William H. Nicolls IV in IAD provided valuable assistance. Maxine V. Tiggler and Pat A. Wilkinson provided administrative and program assistance.

The following staff also contributed to the preparation of the advance statistics:

Durable-goods manufacturing and retail trade were among the leading contributors to GDP growth in 2010; 20 of 22 industry groups contributed to real GDP growth.

Durable-goods manufacturing accounted for over 25 percent of the upturn in real GDP in 2010, after contributing nearly 35 percent to the downturn in 2009.

Retail trade turned up in 2010 and accounted for over 7 percent of the upturn in real GDP growth.

Professional and business services accounted for 17 percent of the upturn in GDP growth in 2010. This sector accounted for 38 percent of the downturn in 2009.

Information-communications-technology-producing industries accounted for 24 percent of real GDP growth in 2010.

Growth in the GDP prices increased slightly in 2010, reflecting an acceleration in value-added prices for private industries that was partly offset by a deceleration in value-added prices for government.

Value-added prices for agriculture, forestry, fishing, and hunting turned up in 2010, rising 14.7 percent after falling 21.0 percent in 2009. This upturn primarily reflected strong increases in prices for crops.

Value-added prices for mining turned up, rising 13.4 percent after falling 40.4 percent in 2009.

Value-added prices for construction turned down for the first time since 1992, decreasing 2.3 percent after increasing 2.1 percent in 2009.

Manufacturing price growth slowed in 2010, increasing 2.5 percent after increasing 5.3 percent in 2009. The slowdown reflected a slowdown in durable-goods manufacturing that was partly offset by a pickup in nondurable-goods manufacturing.

Retail price growth turned up in 2010, increasing 0.1 percent after decreasing 0.5 percent.

Value-added prices for information declined for the eighth time in 9 years.

Value-added prices for the private goods-producing sector turned up sharply after a steep downturn in 2009.

Value-added prices for the private services-producing sector decelerated, reflecting the downturn in real estate and rental and leasing.

The largest private-industry contributors to the 1.0 percent increase in the GDP price index were manufacturing, mining, and educational services, health care, and social assistance.

Mining contributed 0.23 percentage point to GDP price growth in 2010 after subtracting 0.99 percentage point in 2009. The strong increase in value-added price growth was primarily due to the increase in oil and gas prices driven by the widespread economic recovery.

Nondurable-goods manufacturing contributed 0.23 percentage point to the growth in the GDP price index.

Wholesale trade subtracted from the growth in the GDP price index for the second consecutive year.

The private goods-producing sector contributed 0.56 percentage point to the price growth of GDP.

Value-added prices for information-communications-technology-producing industries have subtracted from GDP price growth every year since 1992—19 consecutive years.

Private industries' share of current-dollar GDP recovered slightly, but it is still its second lowest share since 1995.

Construction's share of current-dollar GDP shrank to 3.4 percent, its lowest level since 1947, the first year for which these statistics are available.

Manufacturing's share of current-dollar GDP rebounded, primarily reflecting an increase in the share of durable-goods manufacturing.

Real estate and rental and leasing's share of current-dollar GDP fell to 12.7 percent in 2010, returning to 2007 levels.

Government's share of GDP fell, reflecting a decrease in the share of state and local government.

The information-communications-technology-producing industries sector's share is at its highest level since 1987, the first year for which statistics on this sector are available.

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

3. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

## Methodology for the Advance Statistics

The advance statistics for 2010 were prepared for broad industry groups using a methodology that was developed to incorporate summary source data. The advance statistics are published at approximately the two-digit sector level of the 2002 North American Industry Classification System (NAICS). The preparation of the statistics uses a methodology that draws heavily on data from the national income and product accounts (NIPAs) for both current-dollar and real value added by industry statistics. This methodology and level of industry detail differ from the methodology and level of detail found in the annual industry accounts.<sup>1</sup>

### Current-dollar statistics

The advance statistics on current-dollar value added by industry for 2010 are prepared by extrapolating the major components of value added by industry, compensation of employees, “taxes on production and imports less

subsidies,” and gross operating surplus for 2009 forward, using published and unpublished industry source data from the NIPAs, from other government agencies, and from private institutions. Statistics for farms and general government are obtained directly from the NIPAs.

### Real statistics

The advance statistics on chain-type price and quantity indexes and the advance statistics on chained-dollar value added by industry are prepared using the single-deflation method. An industry’s current-dollar value-added statistics are divided by the industry’s gross output price index.<sup>2</sup> A Fisher aggregation of the detailed industries yields the chain-type price and quantity indexes for industry groups. The gross output price indexes for detailed industries are implicit price deflators that are computed as current-dollar gross output divided by chained-dollar gross output.

1. The annual industry accounts for 1998–2009 are published at the NAICS three-digit industry level using a more comprehensive methodology. For more information, see Tameka R.L. Harris, William A. Jolliff, Amanda S. Lyndaker, and Matthew B. Schroeder, “Annual Industry Accounts: Revised Statistics for 2007–2009,” *SURVEY OF CURRENT BUSINESS* 91 (January 2011): 16.

---

2. Single deflation approximates the results obtained by double deflation when the prices of an industry’s intermediate inputs increase at about the same rate as its output prices. For more information, see Robert E. Yuskavage, “Gross Domestic Product by Industry: A Progress Report on Accelerated Estimates,” *SURVEY* 82 (June 2002): 21.

1. Chained (2005) dollar series are calculated as the product of the chain-type quantity index and the 2005 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of the "Not allocated by industry" line reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

3. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.
