

## Center Mapping Automation Program

- Designed for Air Route Traffic Control Centers (ARTCC) to print controller charts on demand and customized for operational requirements.
- Generated from a seamless U.S. airspace map, with options to include aeronautical information such as: military training routes currently not published on controller charts, sector boundaries, holding patterns, and approach control boundaries.
- Used in conjunction with the other pertinent information, to create overhead displays on a backlit panel above the controllers radar display.
- Not available for public sale
- Updated every 56 days
