

- **NAVAID Naming Protocol (AJV-11):**

Status: The DCPs for changes for FAAO 7110.65 were out for comment within OSG with a December 28th due date. I have asked for a status update on the disposition of comments. Should there be significant changes to the DCPs because of the comments received there will need to be another comment period. If there are no significant changes, the proposal can be finalized for NOTICE format. AFS has verbally responded to the OSG memorandum that requested help with solutions to the problem. It appears the changes to FAA Order 7110.65 will resolve the issues raised to AFS. A response to the memorandum is forthcoming.

Action:

- ✧ Issuance of a NOTICE and associated DCP to clarify the descriptions contained in 7110.65, Chapter 2, Section 5 and clarify Chapter 4, Section 3. The required documentations is in development. Update: DCPs are going out for comment, and the OSG is looking at between 90 and 100 days from mid October complete process and generate Notice.

- ✧ Tasking the Service Centers to study the magnitude of the problem and estimate costs for modifications. The estimate was due by September 30, 2010. No current update.

- ✧ Examine whether the guidance in 7400.2 concerning NAVAID naming requires modification concerning the co-locations of NAVAIDs on airports and the allowable distances. No current update.
