

# Indiana Flood Fact Sheet

## SPRING & SUMMER FLOODS

*Fast melting snow combined with severe storms and heavy rainfall has the potential to cause extensive flooding this spring—particularly in Indiana. With bodies of water throughout the state such as the Ohio River, Indiana is at a heightened flood risk in the spring and summer months. Property owners and renters need to be aware of these risks, and financially prepare for the damage floods can cause.*

*Now is the time for home and business owners to be reminded of the dangers of flooding and the importance of protecting their homes, businesses and assets with flood insurance – before the spring flooding season begins and it's too late.*

### INDIANA FLOOD RISKS

**Snow Melt.** Spring thaw can produce large amounts of runoff in a short period of time, as each cubic foot of compacted snow contains gallons of water. Because the ground is hard and frozen, water cannot penetrate and be reabsorbed. The water then runs off the surface and flows into lakes, streams and rivers, causing excess water to spill over their banks.

**Flash Flooding.** A flash flood is a rapid flooding of low-lying areas in less than six hours, which is caused by intense rainfall from a thunderstorm or several thunderstorms. Flash floods can also occur from the collapse of a man-made structure or ice dam.

### INDIANA FLOOD FACTS

In the past five years, Indiana experienced six federally declared flood disasters. For example, in May and June 2008, after months of heavy precipitation, a number of rivers overflowed their banks in the Midwest, including the Ohio and many of its tributaries in Indiana. The storm and flooding damage resulted in more than \$175 million given in disaster assistance.

Residents may also remember, early 2005, when heavy rains fell on soil already saturated from snowmelt, resulting in statewide flooding. Ninety percent of Indiana counties were declared federal disaster areas, with more than \$7 million in flood insurance claims paid to Indiana property owners.

Currently there are about 32,500 flood insurance policies in force in Indiana, approximately 22,000 of which are in high-risk areas. **However, many state residents remain at risk as less than two percent of households are covered by a flood insurance policy.**

Residents need to be reminded that **most homeowners' policies do not cover flood damage** - only flood insurance policies provide financial protection from flooding. Flood insurance policies typically take 30 days to become effective, so the time to get protected is now!

### BE FLOODSMART – REDUCE YOUR RISK

A flood does not have to be a catastrophic event to bring high out-of-pocket costs, and you do not have to live in a high-risk flood area to suffer flood damage. Indiana property owners should remember to:

- Purchase a flood insurance policy if you do not already have one or review your current insurance policy to ensure your home and contents are adequately covered.
- Not rely on disaster assistance. This is usually provided in the form of a loan, which must be paid back with interest.
- Make a flood plan. Plan evacuation routes. Keep important papers in a safe, waterproof place. Conduct a home inventory; itemize and take pictures of possessions.
- Visit **FloodSmart.gov** (or call **1-800-427-2419**) to learn more about individual flood risk, explore coverage options and to find an agent in your area. Flood insurance may be more affordable than you think. An average flood policy costs around \$570 a year, and rates start as low as \$129 a year for homes in moderate-to-low risk areas.
