What are Network Pricers?

The Network Pricers are a set of Web-based tools that provide convenient access to the Network prices and other significant information. The tools help agencies make informed decisions on their telecommunications procurements.

These tools efficiently produce accurate price comparison analysis. The tools include:

Public Unit Pricer — finds current year unit prices and totals for all services across all vendors. Available to agencies, vendors, and general public.

Agency Unit Pricer — finds current and future year unit prices and totals for services. Available to authorized agency users only.

Agency Inventory Pricer — calculates total price of agency inventory (Jan 2008) with current and future year prices. Available to authorized agency users only.

The Network Pricers are valuable resources which are useful to helping you achieve best value outcomes from the Network Universal or Enterprise contracts.

What are the Features?

How do I use Unit Pricers?

1. Select a vendor(s)
2. Choose a CLIN
 - Service group
 - Service
 - Category
 - Select speed
3. Choose location(s) if required
 - City and state
 - Building address
4. Choose data range
 - Pre-defined ranges
 - Specify own range
5. Pricing options
 - Adjust any applicable pricing parameters — quantity or bandwidth
 - Input desired number of circuits for that location
6. Activating
 - Price selected CLIN button

Benefits

- Empowers buyers with full pricing visibility across multiple vendors and contracts
- Identifies high cost drivers in your agency's network
- Simplifies the Fair Opportunity Process selection process
- Allows scenario planning to improve quality of service
- Improves budget estimates and cost forecasts to reduce risk
- Validates invoices

Pricers Help Your Agency Make Better Decisions with Network

For More Information
