

# Personal Income by State

## Third Quarter 2001

By G. Andrew Bernat, Jr.

IN the third quarter of 2001, most States experienced weak personal income growth, reflecting the continued slowing of the economy since late 2000 and the effects of the September 11<sup>th</sup> terrorist attacks (see the box “Adjustments to State Personal Income for the September 11<sup>th</sup> Terrorist Attacks”). Personal income decreased slightly in Washington and Delaware and increased less than 1.0 percent in 33 States.<sup>1</sup> In Iowa, the fastest growing State, personal income increased only 1.4 percent (table A). As a result, the difference between the growth rates of the fastest growing State and the slowest growing State was 1.6 percentage points—the smallest in 20 years.

- Personal income grew the slowest in Washington, Delaware, Nevada, Connecticut, New Jersey, and Michigan.

1. In this article, percent changes from the preceding quarter are expressed at quarterly rates.

*NOTE. The quarterly estimates of State personal income are prepared by the Regional Economic Measurement Division.*

- Personal income grew the fastest in Iowa, Nebraska, Maine, Wyoming, and New Mexico.

The contributions of the three major components—net earnings; dividends, interest, and rent; and transfer payments—to third-quarter growth varied among States. Net earnings contributed the most to personal income growth in more than two-thirds of the States and the District of Columbia.<sup>2</sup> Dividends, interest, and rent accounted for nearly 18 percent of total

2. Net earnings is calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

Net earnings is used to analyze changes in the composition of personal income; earnings by place of work is used to analyze changes in the industrial structure of earnings. Net earnings by industry is not available, because the source data used to adjust earnings to a place-of-residence basis are not available by industry and because personal contributions for social insurance are not estimated by industry. For the definitions of the components of earnings, see U.S. Department of Commerce, Bureau of Economic Analysis, *State Personal Income, 1929–97* (Washington, DC: U.S. Government Printing Office, 1999), or go to BEA's Web site at <[www.bea.doc.gov/bea/mp.htm](http://www.bea.doc.gov/bea/mp.htm)>, and look under “Regional programs” for “State Personal Income, 1929–97.”

### Adjustments to State Personal Income for the September 11<sup>th</sup> Terrorist Attacks

The third-quarter estimates of State personal income include the effects of the terrorist attacks on the World Trade Center and on the Pentagon on September 11<sup>th</sup>, 2001.<sup>1</sup> Most of the effects of disasters on personal income are reflected in the regularly incorporated source data. For certain components, however, BEA prepares adjustments to account for effects not captured in the source data.

The estimates of wages and salaries were adjusted because the regular source data on employment, hours, and earnings, from the Bureau of Labor Statistics (BLS) monthly employment survey, cover the midmonth pay period; thus for September, these data did not fully reflect the changes to labor markets following the September

11<sup>th</sup> attacks. BEA's adjustments to national wages reflected decreased hours due to work interruptions, decreased employment due to layoffs, and increased hours due to overtime work. These adjustments lowered private wages and salaries for September by \$3.3 billion and raised government wages and salaries by \$0.9 billion. By State, the largest downward adjustments to private wages and salaries were for New York (\$1.0 billion), New Jersey (\$0.4 billion), Virginia (\$0.2 billion), and Maryland (\$0.2 billion). The largest upward adjustments to government wages and salaries were for the same four States—New York (\$0.4 billion), New Jersey (\$0.1 billion), Virginia (\$0.1 billion), and Maryland (\$0.1 billion).

In April, BEA will revise the third-quarter State estimates to incorporate more comprehensive BLS tabulations of wages and salaries of employees. These tabulations will more fully capture the effects of the attacks, so the explicit State adjustments described here will be removed.

1. For information on the effects of the attacks on the BEA's national and international estimates, see the box “Adjustments for the Terrorist Attacks of September 11<sup>th</sup>,” *SURVEY OF CURRENT BUSINESS* 81 (November 2001): 2–3; and the box “Effects of September 11<sup>th</sup> Terrorist Attacks on U.S. International Transactions,” *SURVEY* 82 (January 2002): 31.

personal income but contributed very little to personal income growth (table B).

Transfer payments usually make a minor contribution to personal income growth. In the third quarter, however, transfer payments accounted for almost 40 percent of overall growth. Growth in transfer payments were the most important contributor to personal income growth in 15 States.

Overall earnings growth slowed further to 0.5 percent in the third quarter from 1.0 percent in the second. By industry, the weakness was widespread: Earnings declined in manufacturing and grew by 1.6 percent or less in all the other industries except farms (table C).

Farm earnings grew the fastest (8.7 percent), with growth rates above 10 percent in many States. However, because farms account for a very small share of total earnings in most States, the relatively rapid growth of farm earnings contributed substantially to total earnings growth only in North Dakota, Kentucky, Iowa, and New Mexico (table D).

Earnings growth in construction was only slightly above that in the second quarter. Earnings growth ex-

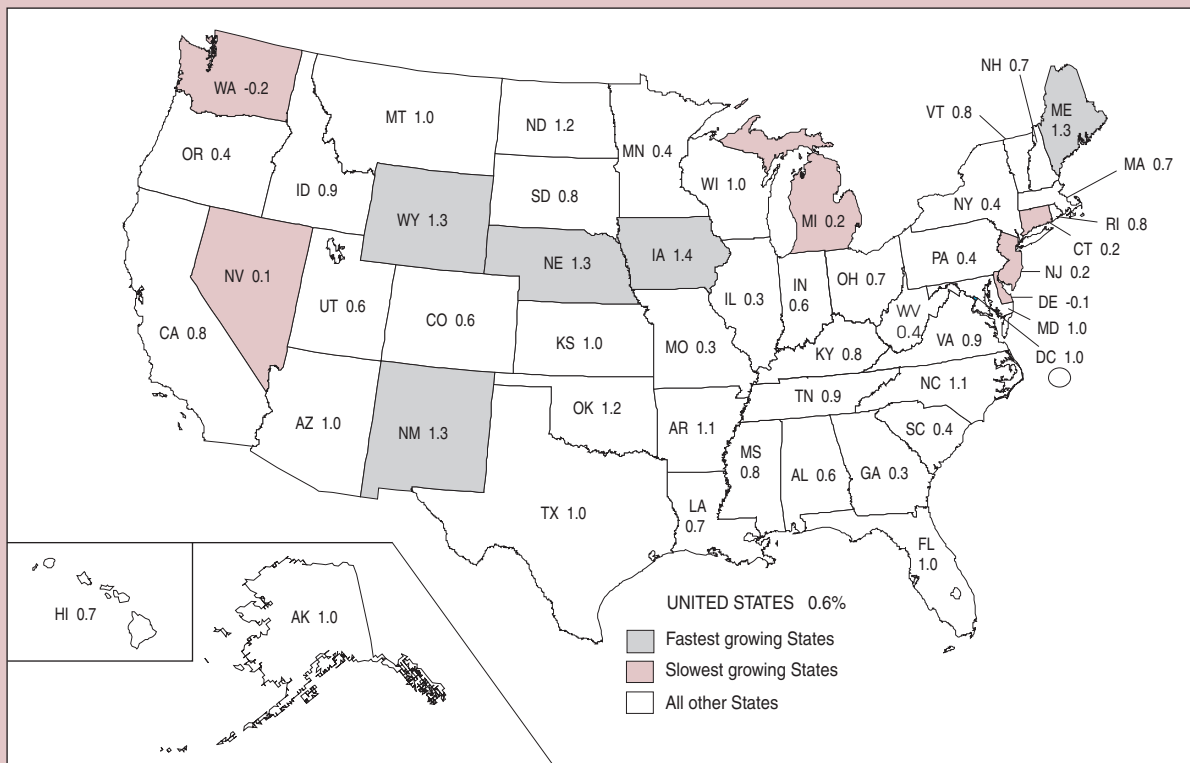

ceeded 4.3 percent in Idaho, Rhode Island, and South Dakota, but it declined in 12 States and grew weakly in California, New York, Pennsylvania, and Illinois.

Earnings in both durables and nondurables manufacturing declined as the yearlong weakness in manufacturing continued into the third quarter. Earnings in durables manufacturing declined in 37 States and the District of Columbia and in all 8 BEA regions (table C). The Mideast region had the sharpest decline (-1.9 percent) as earnings declined in all five States and the District of Columbia. The earnings decline in nondurables manufacturing was smaller and less pervasive than that for durables. Again, the Mideast region had the sharpest decline (-1.9 percent), but both the Plains and the Rocky Mountain regions recorded slight growth, primarily the result of growth in food processing industries.

**Slowest growing States.** In the third quarter, Washington (-0.2 percent), Delaware (-0.1 percent), Nevada (0.1 percent), Connecticut (0.2 percent), New Jersey (0.2 percent), and Michigan (0.2 percent) had the slowest growth in personal income (chart 1). As a group, these six States accounted for 12.1 percent of

**CHART 1**

**Personal Income Growth 2001:II-2001:III**

U.S. personal income and contributed only 2.5 percent of the \$56.4 billion of U.S. growth. In Washington, the decline in personal income largely reflected a return to a more normal level after unusually large lump-sum payments (such as bonus payments and exercised stock options) in services (primarily software-related services) boosted growth in the second quarter. Declines in manufacturing earnings contributed to the weak growth in the other States. In Nevada, a large decline in transportation and public utilities earnings also contributed to a decline in earnings. In Connecticut, a decline in construction earnings also contributed to a decline in earnings.

**Fastest growing States.** In the third quarter, personal income grew fastest in Iowa (1.4 percent), Nebraska (1.3 percent), Maine (1.3 percent), Wyoming (1.3 percent), and New Mexico (1.3 percent). As is

frequently the case, the fastest growing States were relatively small, accounting for 2.5 percent of U.S. personal income and contributing 5.2 percent of the \$56.4 billion of U.S. growth. The growth in these States was primarily accounted for by increases in net earnings. Manufacturing earnings increased in all five States. In Iowa, earnings grew faster than average in most industries; services and farms contributed the most to earnings growth. In Nebraska, services and nondurables manufacturing contributed the most to earnings growth. In Maine, government and services contributed the most; in Wyoming, government and construction contributed the most; and in New Mexico, services, government, and farms contributed the most.

1. Net earnings is earnings by place of work—the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income—less personal contributions for social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

2. Dollar changes are expressed at annual rates.  
NOTE: Estimates may not add to totals because of rounding.
