

Borrow

The U.S. Army Corps of Engineers, New Orleans District is in the midst of an unprecedented search for clay material to rebuild and reinforce the Greater New Orleans Hurricane and Storm Damage Risk Reduction System (HSDRRS) in southeast Louisiana.

Earthen levee construction requires a specific type of clay material which compacts well and prevents seepage. This material needs to contain specific amounts of sand, organic material, etc.

Before borrow material can be used for levee construction, soil borings, testing, and environmental clearance needs to be completed. Borrow site investigation can take as long as six to nine months to complete.

Borrow material is normally acquired from a landowner through a real estate transaction. However, the alternative methods of securing borrow, Contractor Furnished or Supply Contract, can be utilized when found to be in the best interest of Government.

Currently the Corps is aggressively pursuing three methods for acquiring borrow material:

Government Furnished - Utilizing this method, the Corps first identifies the borrow source location, then investigates and approves the borrow material as suitable for use. The acquisition of the real estate interest over the land may be in the name of the non-Federal sponsor.

Contractor Furnished – When using this method, the Corps requires a contractor to provide their own borrow material. The Government may provide the contractor with a list of “Contractor Furnished Sites,” but the contractor is ultimately responsible for providing the borrow material for construction. The contractor enters into a contractual agreement with the landowner, not with the Corps, to acquire the borrow material.

Supply Contract – This method allows supply contractors to bid on task orders for the supply of borrow material to be used by the Corps and other contractors for construction of the HSDRRS.

IER: Individual Environmental Report.
National Environmental Policy Act compliance for the HSDRRS takes the form of multiple IERs that examine smaller portions of the proposed HSDRRS. The work will culminate in a Comprehensive Environmental Document that will integrate the findings of all the previously prepared IERs, describe the work being completed as a system, and examine how each project is interrelated to the overall work being done. Groups of proposed borrow areas are investigated in each IER.

* Borrow site does not meet Corps geotechnical criteria, and will not be used for the HSDRRS.
