

The New Color of Money: Safer. Smarter. More Secure.

The United States government is issuing currency with new designs and security features beginning with the \$20 note in late 2003. New designs for the \$50 and \$100 notes will follow in 2004 and 2005. The new \$20 design retains three of the most important security features that were first introduced in the 1990s and are easy to check: a **watermark**, **security thread** and **color-shifting ink**.

Security Thread

Hold the bill up to the light and look for the security thread, or plastic strip, that is embedded in the paper and runs vertically up one side of the note. If you look closely, the words "USA TWENTY" and a small flag are visible along the thread from both sides of the note. This thread glows green when held under an ultraviolet light.

Color-Shifting Ink

Look at the number "20" in the lower right corner on the face of the note. When you tilt the note up and down the color-shifting ink changes color from copper to green.

Watermark

Hold the bill up to the light and look for the watermark, or faint image, similar to the large portrait of President Andrew Jackson. The watermark is part of the paper itself and it can be seen from both sides of the note.

ADDITIONAL DESIGN AND SECURITY FEATURES

Color

The most noticeable difference in the newly designed note is the addition of subtle background colors of green and peach added to both sides of the note. The words "TWENTY USA" have also been printed in blue in the background to the right of the portrait and small yellow 20s have been printed in the background on the back of the note.

Symbols of Freedom

Two new "symbols of freedom" — American eagles — have been designed on the front of the note. The large blue eagle in the background to the left of President Andrew Jackson's portrait is representative of those drawn and sculpted during his time period. The smaller metallic green eagle to the lower right of the portrait is a more contemporary engraving. The symbols of freedom will differ for each denomination.

Portrait and Vignette

The oval borders and fine lines surrounding the portrait of President Andrew Jackson on the front, and the White House vignette on the back, have been removed. The portrait has been moved up and shoulders have been extended into the border. Additional engraving details have been added to the vignette background.

Microprinting

Because they are so small, microprinted words are hard to replicate. The redesigned currency features microprinting on the face of the note in two new areas: the inscription "USA20" is printed along the border of the first three letters of the blue "TWENTY USA" ribbon to the right of the portrait; and the words "THE UNITED STATES OF AMERICA 20 USA 20" appear in black in the border below the Treasurer's signature.

Low-Vision Feature

The large numeral "20" in the lower right corner on the back of the bill is easy to read.

Paper

Currency paper is one-fourth linen and three-fourths cotton and contains red and blue fibers.

Federal Reserve Indicators

A universal seal to the left of the portrait represents the entire Federal Reserve System. A letter and number beneath the left serial number identifies the issuing Federal Reserve Bank.

Serial Numbers

The unique combination of eleven numbers and letters appears twice on the front of the note.
