**Product information, including uses/applications and source(s) of imports:**

The subject product is a styrene-divinylbenzene copolymer in translucent spherical bead form having a low ash content, and which will not melt at elevated temperatures. Its primary use is as a unique precision filler in lost wax mold casting applications, and other specialty filler applications. Lost wax casting involves making an exact replica of the part to be molded, placing the filled wax part in a sand mold, melting out the wax and casting with molten metal. The subject product burns out leaving a clean molded part. The proponent imports this product from its affiliate in Italy.
