Product information, including uses/applications and source(s) of imports:

The subject mixture is a synthetic organic chemical used as a “hindered amine” light stabilizer (hals) for plastic articles. Hals do not absorb UV radiation, but act to inhibit degradation of the polymer, thus extending its durability. Each of the two components can also be used individually as light stabilizers for different specific plastics materials.³

This chemical mixture is imported from Germany. The individual chemicals are also available from a supplier in China.⁴ There is no known domestic production of the individual products or the mixture.

² Access to an electronic copy of this memorandum is available at www.usitc.gov/tata/hts/other/rel_doc/bill_reports/index.htm.

³ If the individual products were imported, they would not enter under the same HTS subheading as the mixture (3812.30.90).

Technical comments:⁵

The Commission suggests that the article description as provided on page 1 of this report be used in the proposed new heading in order to correct several spelling errors in the chemical name.

⁵ The Commission may express an opinion on the HTS classification of a product to facilitate consideration of the bill. However, by law, only the U.S. Customs Service is authorized to issue a binding ruling on this matter. The Commission believes that the U.S. Customs Service should be consulted prior to enactment of the bill.
